After the war Magoffin attempted to resume his trading activities in Mexico, but he found the business environment too hostile. In 1849 he consequently settled on the American side of the Rio Grande and established a settlement he called Magoffinville, better known as El Paso. His impressive hacienda, where he regularly entertained army officers and business officials, became a prominent local landmark. Magoffin also enlarged his business empire by expanding into agriculture, freighting, and merchandising

and by serving as sutler to nearby Fort Bliss. In 1861 he threw his support behind the Confederacy, and the following year he supported the southern campaign to conquer New Mexico. After the Civil War, Magoffin withdrew with the defeated Confederates. He took up residence in San Antonio, where he died in relative obscurity on September 27, 1868.

## **Maine Law** (1851)

The Maine Law was an early attempt at prohibition. The territory of Maine possessed a strong temperance streak, and as early as 1815 the city of Portland boasted the Total Abstinence Society, the world’s first. The religious revival movement known as the SECOND GREAT AWAKENING only increased public awareness and support for prohibition. Many middle-class Protestants grew alarmed by the rapid effects that the Industrial Revolution and increased IMMIGRATION brought to their new state. The Irish and Germans, culturally heavy drinkers and usually consigned to low-wage menial jobs, were singled out as examples of who or what behavior to avoid.

In time, the state’s prohibition campaign crystallized around Neal Dow, a former Quaker who had organized the Maine Temperance Union in 1838. Through his ceaseless agitation, his native city of Portland adopted a citywide prohibition of all alcoholic beverages in 1842, which passed by a two-to-one margin. Four years later, Dow spearheaded a petition drive that collected 4,000 signatures on a 59-foot-long petition, which he delivered to the state legislature.

This document called for no less than a complete statewide ban on all alcoholic substances in amounts of less than 28 gallons, a quantity too costly for most people to afford.

But the defining moment in Maine's temperance efforts happened in 1851, when Dow was elected mayor of Portland. He used his political clout with the state legislature to have them pass the so-called Maine Law on May 31. Subsequently signed by Governor John Hubbard on June 2, 1851, this statute was the first law in the nation to expressly forbid the ownership or consumption of alcoholic beverages other than for medicinal purposes. Moreover, the law granted state authorities the right of search and seizure following the complaint of three citizens. The Maine Law exerted immediate national influence. By 1855 all of the New England states were likewise "dry," and similar laws were put on the books in New York, Michigan, Indiana, Iowa, and Delaware, along with the Minnesota and Nebraska territories.

In Maine, however, the law's popularity declined following the so-called Portland Rum Riot of June 2, 1855, when Mayor Dow called in the militia to suppress an anti-prohibition protest and an Irish immigrant was killed. Consequently, the Maine Law was repealed in 1856 with little ceremony, although minor restrictions on alcohol remained. By 1861, when only Maine, Vermont, and Connecticut had prohibition laws of any kind still in effect, temperance as a national issue had been completely overtaken by secession. Still, Maine's experience in the 1850s was a precursor of what would happen nationally with the ratification of the Eighteenth Amendment in 1920.

## Manifest Destiny

Throughout the first half of the 19th century, it was the ambition of both U.S. citizens and the federal government to expand the nation's borders west to the Pacific, north into present-day Canada, and south to the Rio Grande. In July 1845, John O'Sullivan, editor and publisher of the pro-Democratic Party *United States Magazine and Democratic Review*, gave this American expansionist urge a name and an ideological definition: Manifest Destiny. This was the belief that the United States had the divinely ordained responsibility to expand its borders across the entire North American continent and, in the process, to spread its democratic principle and its Christian civilization to less-developed and unenlightened people.

O'Sullivan represented the pro-expansionist wing of the DEMOCRATIC PARTY, commonly referred to as the "Young America" Movement. In his newspaper he published the works of Walt Whitman, Edgar Allan Poe, and Nathaniel Hawthorne, among others, and trumpeted the Democratic cause. In his 1839 treatise, "The Great Nation of Futurity," O'Sullivan declared that the young republic was "the nation of human progress," and he arrogantly queried, "who will, what can, set limits to our onward march?" Six years later, in "Annexation," a manifesto demanding that the U.S. government annex the independent state of TEXAS, he was even more blatant in his declaration. He argued that it was America's "Manifest Destiny to overspread the continent allotted by Providence for the free development of our yearly multiplying millions." Yet Texas, according to O'Sullivan, was not enough; CALIFORNIA, he insisted, was also the just right of U.S. conquest.

Inspired by this mission statement, Americans continued to pursue expansion with both impressive zeal and ruthless violence. O'Sullivan and other pro-expansionists found a willing agent to carry out their aims in Democratic president JAMES K. POLK, who was elected to the nation's high office in 1844. Polk echoed O'Sullivan's desires, asserting that "The jurisdiction of our laws and the benefits of our republican institutions should be extended" to American settlers who had staked claims in western territory beyond current U.S. dominion. With Polk as its chief proponent, what Manifest Destiny meant in terms of national policy was a near-war with Great Britain over the Oregon Territory and a two-year war with Mexico.

Although tension existed between the United States and Great Britain over the territory of Oregon since the Americans had acquired portions of it from Russia in the 1820s, both nations had accepted joint occupancy of it. However, in the early 1840s, pressure was brought to bear on the U.S. government to claim the territory for its own by an increasing number of Oregon settlers. After assuming office in 1845, President Polk took up the Oregon cause and sought to claim all of Oregon below the 54th parallel (54° 40') solely of the United States. Despite shouts of "Fifty-four forty or fight" from such extreme expansionists as Missouri senator THOMAS HART BENTON, Polk resisted armed conflict and sought a diplomatic solution. Although negotiations between the two nations were at times thorny and precarious, peace was maintained through the OREGON TREATY OF 1846. The United States agreed to the establishment of the 49th parallel as the permanent U.S.-Canada border. In exchange for this concession, the Americans allowed the British to keep control of Vancouver Island.

Although the situation with Britain was resolved short of war, no such compromise could be reached between the United States and Mexico over Polk's claims for territory that Mexico called its own. His justification for armed con-

flict was the U.S. annexation of Texas, which the Mexican government bitterly contested. The 1836 defeat of General ANTONIO LÓPEZ DE SANTA ANNA's Mexican army by the forces of SAM HOUSTON secured Texas's independence from Mexico. By 1845 Texans were seeking annexation, and Polk and Congress obliged, disregarding Mexico's protests. The federal government annexed Texas out of expansionist desires; concerns about foreign influence, namely the British; and to further provoke Mexico into a military encounter. This was because Polk had larger designs than Texas. He was determined to acquire, by force if necessary, large portions of northern Mexico, including the territory of California and what would become New Mexico. Although the Mexican government refused to recognize Texas's annexation, it also refused direct military confrontation with its belligerent and aggressive neighbor to the north. Nevertheless, using as provocation the dispute with Mexico over Texas and a dubious act of Mexican military aggression, the United States invaded its southern neighbor in May 1846. After a string of victories, U.S. troops pushed easily down to Mexico City and forced the Mexican government to surrender, ending the MEXICAN-AMERICAN WAR. According to the terms of the TREATY OF GUADALUPE HIDALGO (1848), Mexico ceded to the U.S. two-fifths of its territory (including Texas, California, and New Mexico) for \$15 million. Whether they wanted it or not, the inhabitants of these lands were incorporated into the United States.

The victory over Mexico only whetted the American appetite for territory. Bolstered by its success on the southern border, the federal government shifted its manifest-destiny ambitions in other directions. Expansionists began to covet lands beyond the North American continent and turned their attention toward Central America and the Caribbean. CUBA, for example, was, by the 1840s, a sought-after gem for pro-expansionists like O'Sullivan. A like-minded Polk, who was not completely satisfied with the acquisitions from Mexico and Great Britain, offered Spain as much as \$100 million for the archipelago in 1848. The Spanish rejected his offer, and France and Britain diplomatically blocked it. President Franklin Pierce made a similar offer to the Spanish government for Cuba and even threatened the use of force to compel the sale. He withdrew this intimidating offer, however, because of negative domestic public reaction. Pierce's successor, President James Buchanan, also supported the acquisition of Cuba and urged Congress to pass a bill for its purchase. Only the election of Abraham Lincoln in 1860 put the issue of Cuba to rest. Lincoln opposed any purchase because he thought it part of a southern states' plot to extend slavery beyond its current borders.

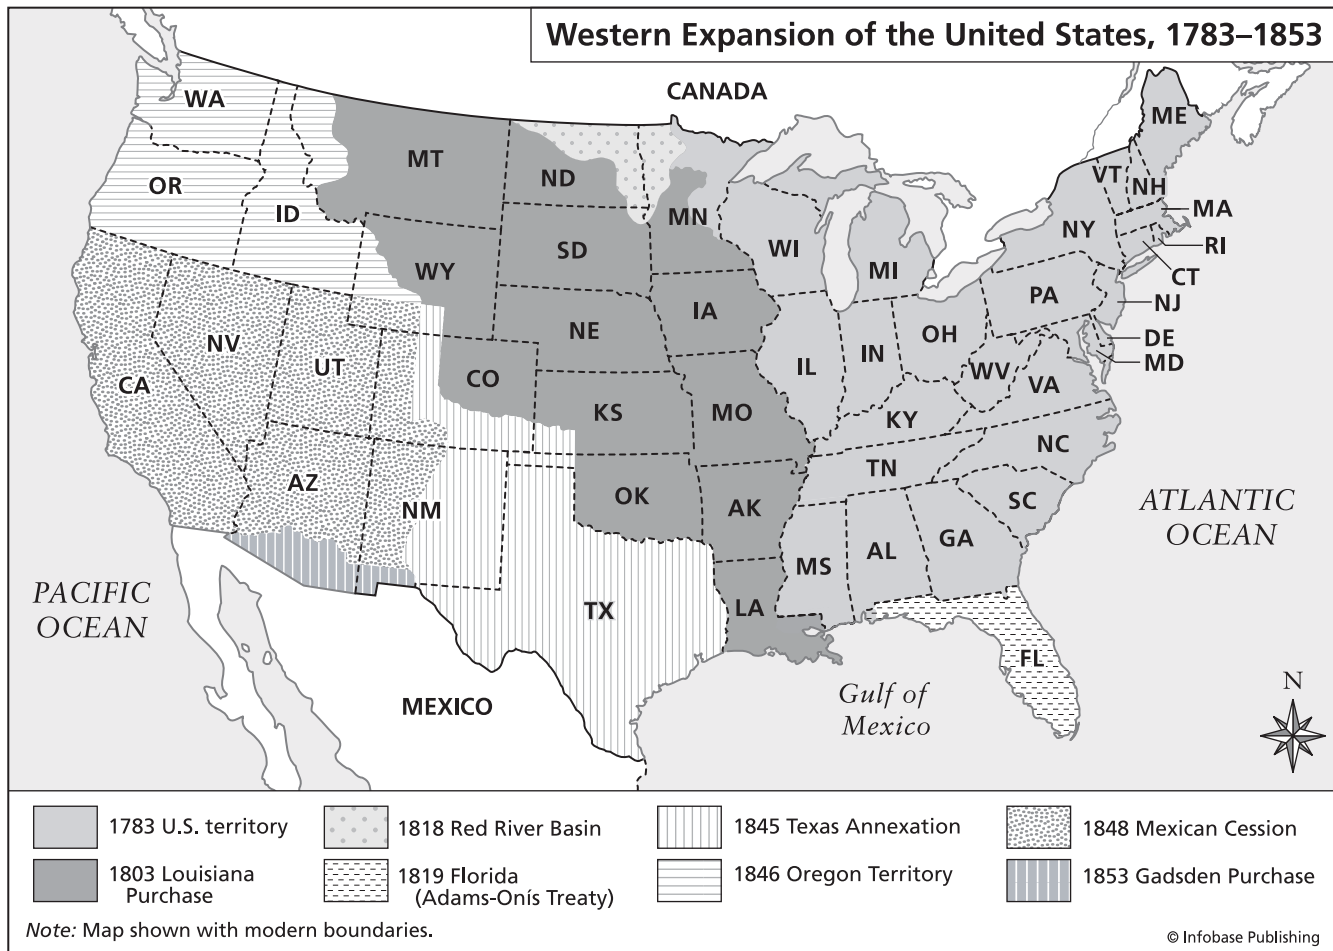

The expansionist lust of some Americans spurred them on to seek territory in the Caribbean and Central America as private enterprises. During the early 1850s, these adven-

This engraving depicts an American settlement with school, church, and a railroad train, ca. 1868 (*Library of Congress*)

turesome Americans, also called "filibusters," attempted to invade and conquer Cuba, Nicaragua, and even parts of Mexico. Ardent proslavery southerners who professed the doctrine of Manifest Destiny, these filibusters hoped to increase the power and influence of the slave states through conquest. None of the private filibuster expeditions was successful, including an attempted invasion of Cuba in 1850 by, among others, John L. O'Sullivan. The ruthless Tennessean William Walker was able to seize control of and rule the rudderless Nicaragua periodically between 1855 and 1860. In 1856, the Pierce administration even briefly recognized one of Walker's Nicaraguan governments before it collapsed. Four years later, Walker was executed by the government of Honduras for his filibustering. Despite the filibusters' failures to seize new lands and U.S. presidents to buy them, Americans hungered for much of what they saw south of Mexico throughout the remainder of the century.

U.S. expansionist desires and Manifest Destiny was not restricted to the Western Hemisphere. In an effort to establish a presence in the Pacific, promote commerce, find coaling stations and protect shipwrecked American sailors, President Pierce sent U.S. Navy Commodore MATTHEW CALBRAITH PERRY to "open" Japan. In 1853, four U.S. warships, two of them intimidating, steam-powered vessels that belched black smoke, dropped anchor off the coast of Japan. Perry's efforts and determination to fulfill his orders produced a commercial trade treaty with Japan in 1854. The Tokugawa Shogunate rulers of Japan capitulated to Perry's demands because of superior U.S. military power. They also hoped to avoid the humiliating domination several European powers exercised over other Asian nations like India and China. The opening of Japan was only a beginning of direct U.S. interest in Asia and the Pacific.

With the outbreak of the Civil War at Fort Sumter in 1861, U.S. expansionism took secondary importance as Americans became consumed with this costly, bloody, and tragic domestic crisis. However, manifest-destiny sentiments were only temporarily replaced by this more immediate concern. Following the defeat of the Confederacy in 1865, the U.S. government once again returned to an expansionist foreign policy. For the next half-century and beyond, the concept of Manifest Destiny encouraged U.S. commercial and territorial desires well beyond national borders and onto the global stage. It provided the battle cry for the 1898 Spanish-American War, legitimized the seizure of the HAWAIIAN ISLANDS, justified the colonization of the Philippine Islands, and motivated continued economic domination and political manipulation in Latin America. At the close of the 19th century, the pro-expansionist Republican senator Albert J. Beveridge, drawing on the ideas of John L. O'Sullivan, argued for U.S. empire. According to the bellicose senator, "[God] has marked the American people as his chosen nation to finally lead in the regeneration of the world" and "[t]his is the divine mission

of America." In 1898, as the United States was embarking on a war with Spain, President William McKinley was more direct in his reference to O'Sullivan, arguing that U.S. expansion into the Pacific and Asia "is Manifest Destiny."

**Mann, Horace** (1796–1859) *education reformer*

As an educational reformer, Horace Mann was responsible for improving the educational system in the antebellum United States. He was born on his family farm in

Franklin, Massachusetts, on May 4, 1796. The product of a strict Puritan upbringing, his education proved episodic, although he displayed a great aptitude for learning. Mann disliked farming, so he prevailed upon his mother to hire personal tutors to study geometry, Greek, and Latin. Consequently, in 1816 he gained admittance to prestigious Brown University in Providence, Rhode Island. He graduated with honors three years later and, after serving as a tutor and librarian at Brown, subsequently studied law under Tapping Reeve in Litchfield, Connecticut.

Mann was admitted to the Boston bar in 1823 and gained election to the General Court of Massachusetts (the state legislature) four years later. In this capacity he quickly established himself as an activist Whig reformer, championing prison reform and better treatment for the mentally retarded. In concert with DOROTHEA DIX, he created the state's first mental hospital. Mann was also active in promoting the TEMPERANCE MOVEMENT through moral suasion, and in 1831 he sponsored the state's first liquor-licensing regulations. However, it was in the field of EDUCATION reform, an area in which he had previously displayed little interest, that Mann exerted his biggest influence.

As a legislator, Mann had become aware that barely a third of school-age children in Massachusetts received any instruction. The public-school system was in a shambles and generally avoided by families affluent enough to afford private academics. Moreover, the curriculum was either outdated or imperfectly taught, and the buildings themselves were usually dilapidated. In 1837, Mann pushed through legislation creating the Massachusetts School Board of Education, for which he resigned from politics to become secretary. It was Mann's belief from the start that common schools, as public institutions, could serve as a great equalizer for all classes, extending positive influences into fields of morality and social mobility. As such, he placed great emphasis on teacher education, creating three of the first normal schools to train teachers in the nation. Moreover, he standardized the curriculum, spent state money on a variety of instructional texts, and doubled the wages of teachers. Mann was also the first educator to recognize the importance of personal hygiene and physical fitness. As a result, Massachusetts students became the first to spend one hour each day either studying or practicing these topics. Most important of all, Mann formally extended the school year to six months and made it compulsory for all Massachusetts children.

Mann toured his state incessantly and lectured public officials on the direct connection between public learning and public morality. As a reflection of his treatment of education as a profession, he compiled and published annual education reports that statistically reflected progress and anticipated problems statewide. He also founded the *Common School Journal*, one of the earliest educational peri-

odicals, and served as its editor for a decade. During his tenure no less than 50 new public schools were founded, replete with new textbooks and school libraries. Through all these expedients, Mann single-handedly revolutionized both the quality and the concept of public education in America. He made an indelible impact on the educational process in Massachusetts for over a decade, with dramatic and sustainable results. His methods were also exported to other states and abroad to other countries, granting him considerable renown.

In 1848 Mann resigned from the educational board to run for the U.S. House of Representatives as a Whig. He was elected and proved a vocal opponent of the extension of slavery. However, Mann was unprepared for the enmity this stance engendered, and in 1852 he declined to run again. That year he made an unsuccessful bid to become governor of Massachusetts as a FREE-SOIL PARTY candidate. Afterwards, he accepted the presidency of Antioch College in Ohio. Mann applied himself vigorously to his charge and was active in creating a curriculum and teaching program. He further distinguished himself among contemporaries by insisting on equal treatment for female students. However, the school failed financially and was ultimately sold.

Mann died of exhaustion in Ohio on August 2, 1858, only two weeks after exhorting Antioch's graduating class to win "some victory for humanity." His strong belief in

Horace Mann (Hulton/Archive)

the virtues of public education, coupled with an unyielding determination to enhance it for the benefit of all citizens, established him as an influential social reformer of the 19th century.

### marriage and family life

Few social institutions were of greater importance to antebellum Americans than marriage and family. Though the United States was comprised of different cultural groups holding different beliefs, the basic family structure was valued by many of these communities. Marriage is basically a contractual agreement between consenting individuals, but the individual roles assigned to man and wife were closely prescribed and virtually unalterable from a legal standpoint. States, which had a vested interest in the survival and regulation of marriage, concocted legislation to reinforce existing norms.

Several hundred Native American nations existed in North America in the 19th century, and each held a set of culturally specific beliefs about family. Family was defined by reference to the taboos, rights, privileges, and respect owed to members of an individual's household, clan, moiety, or band. Residency patterns emphasized the expansive nature of such kinship systems. While husbands and wives in some northern and western nations maintained their own homes, most Native American households consisted of extended family groups, including married couples and their brothers, sisters, parents, cousins, and children. Some cultures allowed men to marry several wives; a handful permitted women to do the same in reverse. Multiple marriages were usually a sign of a household's high status or rank, indicating the family's wealth as well as its obligation to provide hospitality and support to others in the community. Child care was usually a shared responsibility. Among the nomadic bands of the northern plains, for example, grandparents took particular responsibility for childcare, freeing their own adult sons and daughters to engage in the labor necessary to maintain the economic health of the nation.

Clan membership linked men and women together across household and community lines. Individuals were

prohibited from marrying members of their own clan, so each household would contain representatives from at least two. Clan obligation resulted in a network of father and mother figures in every child's life. Among matrilineal societies such as the Hopi of the Southwest, for example, children traced their clan membership through their mother. While their biological father had a significant place in their life, children considered their mother's brothers of equal importance, especially in learning clan-appropriate behavior.

For most Native American groups, kinship was not limited to relationships between humans. The physical world in which communities existed, the animal and plant life found there, elements such as wind and water, and manifestations of the spiritual world were frequently addressed in kinship terms such as father, mother, grandparent, or cousin. Taboos, traditions, and rites governed these relationships as much as those between the human members of an individual's nation.

Kinship practices became a major source of conflict between Euro- and Native Americans as the 19th century progressed. (This despite the fact that Europeans and Native Americans had been intermarrying on the frontier for at least two centuries with little fanfare, and that their offspring, steeped in either culture, invariably enjoyed useful employment as translators and facilitators.) To many non-Indians, the observation of extended kinship, the recognition of obligation beyond the nuclear family, and female-centered households represented moral, economic, and political disorder. Missionaries, government officials, and voluntary organizations all considered the reorganization of family structures to be central to "civilizing" Native Americans. These groups brought pressure to bear on Native communities through the establishment of churches and schools, the provision of domestic goods and agricultural equipment in treaty settlements, and the administrative regulations of government agencies. These efforts would culminate in the Dawes Act of 1887, which divided reservations into individual parcels of land to be distributed to households that reflected Euro-American definitions of "family." Many Native kinship systems were drastically disrupted by such practices, yet family also became the locus of resistance and cultural continuity. The recognition of extended kinship ties and responsibilities survives among Native communities to this day.

For enslaved men and women, the creation and maintenance of family was a complex endeavor. Anglo-American law classified slaves as property, lacking the legal capacity to enter into contracts. Committed relationships between enslaved men and women were therefore never recognized as marriage by law. Without this legal protection, parents and children could be sold or traded away from

one another without any consideration to family ties. Working and living conditions compounded the difficulty of this situation. Many parents lived on neighboring but separate farms and plantations. Enslaved women were often the targets of sexual abuse by the men who owned them, and their children were considered slaves even if the father was free. Poor nutrition and heavy labor during pregnancy caused many women to miscarry, while numerous children died in infancy for want of food and medical care. Those children who survived were put to work at a very young age.

Yet enslaved men and women resisted the attempts of individuals and institutions from outside the slave community to define (or undermine) their idea of family. Enslaved families were variously united through African tradition, Christian belief, and the everyday exchange of neighborly obligation and support. Blood relations, sexual companions, neighbors, and friends could all be counted as family, and kinship traced through mothers as much as fathers. Customs such as “jumping the broom” solemnized marital relationships even as federal or state law denied their legality. Family provided enslaved Americans with the opportunity to forge an identity separate from that ascribed to them by the law. These kinship ties would ultimately survive the rigors of the institution that bound them and sustain the African-American community through the dislocations of the Civil War and the national upheaval that marked Reconstruction.

Interracial marriages were another point of contention in the highly charged racial atmosphere of 19th-century America. Such unions were far from rare in places such as French and Spanish Louisiana, where little stigma was attached among the Creole population. As the century progressed, however, more and more states forbade interracial unions, and antiscegenation legislation reached its peak during Reconstruction. Farther west, similar state statutes were adopted to prevent black-white and Indian-white marriages, as well as marriages between whites and newly arrived Asians. In 1855 Congress joined the rising tide of intolerance by passing a law that granted citizenship to all foreign women who married American men, provided that they were neither of African nor Asian descent.

For free people, Anglo-American common law governed the form and function of family life and prescribed specific responsibilities for husbands and wives. Upon marriage, women surrendered most of their legal capabilities to their husbands. Husbands controlled their wives' property, any income they earned, their ability to sue, their ability to contract, and sexual access to their body. Wives who committed a crime, signed premarital agreements, had trusts created in their name, or appealed to a court with equity jurisdiction could find exceptions to this general rule. In the words of English jurist Sir William Blackstone, however, a wife was ideally considered to be under the legal

“wing, protection, and *cover*” of her husband during marriage. Men, in turn, were expected to provide economic support to their wives, and act as their representatives in political matters.

Throughout the 19th century, courtship rituals were an essential precursor to legal union. In middle-class white culture, courtship entailed the notion of romantic love and wooing, but overt sexual relations were deplored. Contact between males and females, when it occurred at all, took place in a controlled setting with little opportunity for intimacy. This was a radical change from earlier notions of sex: In colonial and 18th-century America, one in three brides was pregnant. For most of the 1800s, restraints on sexual contact reduced the number of pregnant brides to roughly one in five. Parents played a small but significant part in the process, as it was usually deemed necessary for the would-be groom to get the approval of the bride-to-be's father. Courtship involved the newly developed practice of giving an engagement ring to one's betrothed and the now-common bridal custom of wearing a white veil and gown during the marriage ceremony. Urban and southern whites were less likely to observe any of these formalities, however. More frequently than their peers elsewhere in the United States, unmarried couples engaged in public displays of affection that culminated in common-law marriage.

Marriage was meant to be a lifetime contract. While divorce did exist within the American legal system, it was not intended to remedy general unhappiness. Instead, the law's function was to protect “innocent” husbands and wives from moral or physical abuse by their partners. A husband or wife who committed adultery, for example, was considered to have revealed their fundamentally immoral character. As such, it was only proper that their blameless spouse should be able to petition for a divorce, and dissolve the connection between them. Should both partners commit adultery, however, their moral characters were considered equally blemished, and their petition for divorce was likely to be denied. Couples who actively worked together to try and arrange the dissolution of their marriage were similarly penalized. Collusion was one of the primary reasons that legislatures and judges turned down petitions for divorce.

Faced with an inflexible legal system, many husbands and wives chose to separate rather than seek a divorce. Separation was a common occurrence for even the happiest couples in the 19th century, as war, financial crises, and the search for work forced many husbands and wives to spend months, even years, apart. For couples who had come to the conclusion that they could not happily live together, however, separation offered relief where the law could not. Some spouses fled, abandoning their families to move to a different state and begin again. Others did their best to formalize the process through separation agreements, docu-

ments that were generally unenforceable at law but laid out the terms and conditions by which unhappy husbands and wives would try to live. Such agreements often contained financial provisions and made custodial arrangements for children.

Over time the American legal system did make room for formal changes in the institution of marriage. From 1839 onward, states and territories passed a series of married women's property acts, allowing women to retain ownership of their property even after marriage. These acts were not intended to equalize the position of men and women within marriage but to offer some relief to families hit hard by the PANIC OF 1837. By allowing a married woman to own property separately from her husband, legislators prevented a wife's assets from being seized to pay for her husband's debts. Over the course of the 19th century, divorce also became easier to obtain, with states such as Indiana and Utah gaining a reputation for allowing couples to divorce on a whim. While the reality was less titillating, many states and territories did add to the grounds on which couples could petition for the dissolution of their marriage. South Carolina, however, did not sanction divorce until 1868.

Anglo-American law dealt with ideals. Marriage was the taking up of specific responsibilities—the knowing adoption of privileges and obligations, one with the other. Wives were ideally dependent on their husbands, husbands ideally provided for their wives, and once married, they were faithful to one another. Marriage was intended to last for a lifetime, and children were meant to be born within its protective bounds. This legal ideal reflected and supported popular Victorian culture, which idealized the domesticity of women and the economic and political accomplishments of men. It remained, however, a model. For the vast majority of free Americans, it did not describe their daily life.

While husbands and wives regularly adopted different responsibilities within marriage, those obligations were not discrete. In rural America, for example, men and women carried out their marital responsibilities in the same physical space. The house in which women cooked, washed, spun cloth, made soap, and raised children was the same house in which men conducted trade and managed the farm. Husbands, wives, and children were also likely to work alongside each other in planting, raising, and harvesting crops. In the cities, factory owners employed men and women in separate spaces for different tasks, but the low wages earned by most working men made it impossible for them to support a wife and family on their own. The work of maintaining the family economy was a collective venture, dependent on the wages earned by wives and children as well as husbands. The comforts of home were unlikely to be a poorer woman's primary concern. Even if she pos-

sessed the inclination to attain the standards of housekeeping lauded by Victorian culture, her home was likely to be a space shared with other families, without easy access to water, the benefit of a functioning sewer system, or the most basic concepts of privacy.

For wealthier Americans, especially members of the new industrial middle class, husbands and wives did occupy seemingly separate worlds. It was a mark of prestige for a husband to be able to earn enough money for his wife and children to stay out of the workforce. Creating and maintaining social prestige was a joint venture, however, reinforced by the labor of wives within their households. Wives stretched their husbands' financial contributions by their housekeeping skills, and reinforced the reputation of their families as members of the "leisure class" by their modes of dress, fashion, home decoration, and entertainment. While these activities were labor intensive, and helped create and maintain a family's high social status, they were rarely considered "work." As America became more and more industrialized, work became synonymous with earning wages, and the labor of wives within the home was increasingly ignored.

Many journalists, educators, members of religious organizations, and everyday middle-class men and women acknowledged there to be a crisis of the family in the 19th century. Birth rates fell, divorce rates rose, middle-class women agitated for the right to enter professions rather than confine themselves to the home, and the practice of POLYGAMY was adopted by the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS in 1843. Despite these fears, however, monogamous marriage continued to be the defining act of adulthood for millions of Americans. Family remained important to every community, defined in different times and places in vastly different ways, but in each instance providing the most basic building block upon which society was founded, both for good and for ill.

The rights and obligations of marriage, as disadvantageous as they were to women, did not remain fixed throughout the 19th century. As more and more middle-class women became active in such reforming crusades as temperance and abolition, there arose a cry to end coverture and allow for greater equity in marriage. In 1848 the SENECA FALLS Women's Rights Convention promulgated its "Declaration of Sentiments," which protested, among other things, the "civilly dead" status of married women. Elizabeth Cady Stanton agitated loudly against women's second-class status in matrimony, which she maintained amounted to little more than slavery, and in 1848 she convinced the New York legislature to pass laws protecting women's property from their husbands' creditors, while simultaneously recognizing women's right to manage that property. The drive for equality gained traction as the decades passed, and by 1865 no fewer than 29 states had

passed laws allowing wives to legally own property in their own names. But the smothering patriarchal imbalance inherent in married life would not be fully addressed by legislatures and courts until the 20th century.

**Mason, Richard B.** (1797–1850) *military officer, governor of California*

Richard Barnes Mason was the military governor of CALIFORNIA at the time of the CALIFORNIA GOLD RUSH. Born in Fairfax County, Virginia, on January 16, 1797, Mason was a grandson of the noted constitutional scholar George Mason. He joined the U.S. Army as a second lieutenant in 1817 and made the military his lifelong career.

In 1832 Mason commanded an infantry company during the BLACK HAWK WAR. He gained the reputation as a capable and honest military administrator, but also a draconian disciplinarian. In 1833 he was promoted to major in the newly created 1st U.S. Dragoons, the army's first cavalry unit since the WAR OF 1812. This was considered the army's elite organization, and selection to command in it was a mark of distinction. In this capacity Mason accompanied many dragoon expeditions into the southern plains to impress upon tribes living there the military power of the United States. Afterward he commanded Fort Gibson in Indian Territory (Oklahoma) for many years.

In 1846 Mason was ordered to New York on recruiting service, and that June he was promoted to colonel of the regiment. He soon set sail on a naval vessel to California, where he was to relieve General STEPHEN W. KEARNY, formerly his regimental superior. Mason arrived in California in November 1846 to find the province in political turmoil. Though the United States had technically conquered California six months earlier, American political authority there had been shattered in a dispute between Kearny and Colonel JOHN C. FRÉMONT, who also claimed to be governor. In May 1847, after the two feuding officers had left

California to settle their dispute, Mason was appointed to replace them as both civil and military governor.

Mason took a conservative approach to governance and allowed the Mexican system of *alcaldes* (municipal officials) to administer affairs at the local level, although he appointed the majority of them. But governance became greatly complicated by the gold rush of 1849, which prompted a large influx of fortune hunters. The American inhabitants clamored for a civil administration, and his adjutant, Lieutenant Henry W. Halleck, had actually drawn up a law code for the territory. But Mason was reluctant to impose any code of law without congressional approval. Congress, meanwhile, was grappling with whether to even allow California into the Union as a free state, so it never addressed the issue of civilian rule during Mason's two-year tenure. At length he was replaced by Colonel Bennett Riley and ordered to Jefferson Barracks, Missouri. Mason died there of cholera shortly after his arrival on July 27, 1850, an earnest but essentially flawed military administrator.

## Massachusetts Emigrant Aid Society

The Emigrant Aid Society was an organization that promoted organized antislavery immigration to the Kansas territory from the Northeast. It was formed shortly before the Kansas-Nebraska Act became law on May 30, 1854. The opening of these territories to white settlement had long been a controversial subject in Congress as the North and South fought to keep a balance of representation in Washington. As a compromise, the doctrine of POPULAR SOVEREIGNTY was included in the new law, which meant that residents of the territories should be allowed to choose for themselves whether SLAVERY would be permitted when the time for statehood arrived.

There was little question that Nebraska would prohibit slavery, for presumably it was too far north for the institution to survive. The South assumed that Kansas was destined for slavery. However, the early activities of northern abolitionists, who were determined not to let Kansas go by default, spurred both the North and South to send in every settler they could.

In the North, one of the organizations created to encourage abolitionist settlement of Kansas was the Massachusetts Emigrant Aid Company. Incorporated under the guidance of Eli Thayer of Worcester in April 1854, the company was a venture designed both for benevolence and

moneymaking. Its aims were to secure reduced transportation fares to the West for emigrants traveling in groups organized and directed by the company and to provide temporary accommodations, in the form of boarding or receiving houses, while settlers located and built their own homes. The society also looked to build or buy steam saw and grist mills "and such other machines as shall be of constant service in a new settlement," to aid settlers in building homes and feeding families; and to establish a weekly newspaper in Kansas to act as the voice of the company and be an "index of the love of freedom and of good morals, which it is hoped may characterize the state now to be formed."

In February 1855 a new charter changing the name to the New England Emigrant Aid Company and making organizational improvements was secured. In March the company was reorganized, and business began in earnest as mills were established in Lawrence, Topeka, Manhattan, Osawatomie, Burlington, Wabaunsee, Atchison, Batcheller (now Milford) and Mapleton. In Kansas City, the Gillis House was purchased and renamed the American Hotel. Many other Kansas aid societies were subsequently formed throughout the North (e.g., the Kansas Emigrant Aid Society of Northern Ohio and the New York Kansas League), but the New England group was preeminent in the field, and the name Emigrant Aid Company is associated exclusively with it. Amos A. Lawrence served as treasurer of the company, which, despite its earnest soliciting of the support of clergymen throughout New England, remained in bad financial condition until November 1855, when a notably successful campaign to raise money was launched.

For Thayer, who was vice president of the company, the venture was not only philanthropic but profitable. The company planned to make a profit on its investments by purchasing the land on which its hotels and mills stood and, when settlement had increased and land values correspondingly elevated, selling to the eventual benefit of the stockholders. As stock-subscription agent, he received 10 percent of all the money he collected, provided he gathered \$20,000 or more. Thayer easily exceeded that figure, and by May 1856 the company had received over \$100,000.

The first party sent to Kansas left Massachusetts even before the company had been completely organized. This pioneer party arrived at the site of Lawrence on August 1, 1854. That summer and fall, five other parties arrived in Kansas, bringing the total of aid-company settlers to about 450. The following spring, seven more groups brought about 800 persons. All told, the company sent out an aggregate of 1,250 settlers under agents such as Charles Robinson, who founded Lawrence and other towns in Kansas. Southerners, at first confident that Kansas was safe for slavery, were moved to organize similar, though proslavery, societies of their own. However, such ill-advised actions by

the proslavery societies as the sacking (on May 21, 1856) of the town of Lawrence only stimulated the Kansas aid movement further. Once the territory of Kansas was admitted as a free state, the directors were to dispose of all the company's interests and declare a dividend to the stockholders. The company was then to choose a new area of operation and commence the program again, until another free state had been admitted to the Union.

The backers of the company hoped to raise \$5 million and send 20,000 settlers into Kansas. The plan received wide publicity in the newspapers of Horace Greeley, William Cullen Bryant, Thurlow Weed, and others. The company itself issued descriptive pamphlets, and its advocates toured New England lecturing on the benefits to be derived.

As the company's influence waned, some of its agents remained to continue their active roles in Kansas territorial and early state history. Prominent among them were Charles Robinson, who became the state's first governor; Samuel C. Pomeroy, one of its two initial United States senators; and Martin F. Conway, its first representative in Congress.

In spite of the company's initial spurt of activity, there is some question as to its total contribution toward the settling of Kansas. After June 1855, company emigrant parties became smaller and less frequent. Instead of the \$5 million it hoped to have, the company actually accumulated only about \$190,000. In terms of persons relocated in Kansas, it has been estimated that the company was directly responsible for only about 2,000, of whom perhaps a third returned to the East.

Delegates from 12 states and Kansas convened at Buffalo, New York, in July 1856 and formed a National Kansas Committee. Its goal of establishing Kansas aid committees in every state, county, and town throughout the North was never realized. For one thing, the national committee was divided; one group, in which Amos Lawrence was most conspicuous, advocated peaceful protest against proslavery excesses in Kansas and financial help to the Free Staters; while the other, led by extreme abolitionists such as Gerrit Smith and the Reverend Thomas W. Higginson, urged the creation of state military forces to be used against Union troops in Kansas if necessary. This group also proposed disunion at a convention in Worcester, Massachusetts, in January 1857.

Kansas was admitted to the Union in January 1861, and the following year the stockholders of the New England Emigrant Aid Company ordered that all its properties in Kansas and Missouri be sold. When this was eventually accomplished, the company realized a total of \$16,150, which was just about enough to pay outstanding debts.

After 1861 the company transferred its activities to other areas. In 1864 and 1865, it promoted the migration of

working women to Oregon; and from 1866 to 1868, it was active in settling northerners in Florida. By 1870, however, the company had fallen idle and never again was active in emigrant aid. No more meetings of the stockholders were held until 1897, when an extension of the charter was requested and granted. That year the company presented its single asset—a claim against the U.S. government for loss of the Free-State Hotel at Lawrence in 1856—to the University of Kansas, and for all practical purposes it ceased to exist thereafter. The extended charter expired on February 19, 1907, and the company was no more.

In spite of its financial failure, the principal stockholders seemed well pleased with the results of the society's operations. Under its influence, several important towns were founded, schools were established, churches were built, and the cause of freedom was served. Indeed, there is some evidence that investors purchased stock knowing full well they would never see their money again. Amos A. Lawrence, a principal stockholder and treasurer of the company, had advised his associates not to invest any more than they felt they could afford to lose.

**McCormick, Cyrus Hall** (1809–1884) *inventor of the mechanical reaper*

Cyrus Hall McCormick was the inventor of the world's first effective mechanical reaper, which helped to transform American AGRICULTURE. He was born in Rockbridge County, Virginia, on February 15, 1809. His father owned a large farm and had invented some minor farm machinery, although without commercial success. McCormick, the product of a stern Presbyterian upbringing, enjoyed little formal education, but he proved adept in mechanical tinkering. In 1831, his talents manifested themselves in the creation of a hillside plow for uneven ground. That same year also gave rise to the famous McCormick reaper, a horse-drawn device that allowed wheat and other grains to be harvested mechanically and with greater efficiency. Over the next few years, McCormick continued improving on his device and sold several units to neighboring farms. In 1836, he acquired the Cotopaxi Iron Works and discontinued small-scale manufacturing in favor of other pursuits. However, when the ensuing PANIC OF 1837 drove McCormick's firm into bankruptcy, he resumed perfecting his reaper. This was accomplished over the objection of Obed Hussey, who had invented a similar machine, and resulted in a long series of bitterly disputed court actions. Ultimately, the

patent for McCormick's famous device entered into the public domain.

By 1843 McCormick had finally realized that the small-scale farms of Virginia and New England did not represent the optimum market for his product. He then licensed production of his reaper to various subsidiaries in New York and Ohio. However, when these products turned out to be inferior to his own, McCormick decided to centralize production under his personal supervision. In 1847, he relocated his thriving business to Chicago and began catering to the bigger farming interests in Ohio, Illinois, and the Midwest. Chicago—being centrally located, affording greater access to water transport, and on the verge of becoming a major railroad hub—was destined to serve as the center of midwestern agriculture. Accordingly, McCormick established his own factory, adopted a modern mass-production system, and stocked it with the latest time-saving industrial technology to boost productivity. His workforce, which eventually numbered 1,500, were also among the best-trained and most highly paid in the nation.

As the prairies were settled and converted into farmland, the sale of reapers grew exponentially. In 1848, McCormick sold 700 units; by 1860 that number had risen to 5,000 annually. Despite continuous lawsuits, he failed to have his patent secured, and he faced stiff competition from nearly 100 other firms marketing reapers. He countered by developing the best business organization available, completely outpacing his contemporaries. McCormick initially relied upon an extensive series of distributors, who handled sales, repairs, and credit arrangements individually. However, the depression of 1870 forced him to centralize operations, which allowed him to maintain tighter control on subordinates. Moreover, regional offices were established across the country to better coordinate business matters with an extensive network of dealers. In this manner, McCormick pioneered creation of a sales organization to support and monitor dealers, who made the actual sales. The company was also unique in offering generous credit arrangements for customers, and it sponsored one of the first money-back guarantees in business history. The high quality of McCormick's reapers, coupled with consumer satisfaction, made the firm a giant among America's early industrial efforts.

Early on, McCormick tried marketing his revolutionary device in Europe through various farm and trade shows. His reaper won several competitions, but the small size of European farms mitigated against their popular use. Nonetheless, the numerous prizes accrued were subsequently utilized in marketing and advertising campaigns, along with printed testimony from satisfied customers. By the outbreak of the Civil War in 1861, McCormick was uniquely situated to make enormous contributions to

Cyrus McCormick, depicted with his factory at Chicago and his mechanical reaper (Granger Collection)

national development. At that time, an estimated 80,000–90,000 of his reapers were in use throughout the Midwest. Being very efficient compared to manual labor, they allowed farmers to collect harvests in less time, leading to greater yield and higher profits than before. This, in turn, released large numbers of farm workers from the field, who then transferred their energies to either urban industry or military service. The South, by comparison, was equally agrarian but largely unmechanized, so their quest for sufficient foodstuffs always competed with increasing demands for military manpower. Moreover, the North produced such a surplus that it kept both its population and military victuals, and it also exported food to Europe, which helped to fund the war effort. Simply put, the McCormick reaper was a significant but overlooked factor in the ultimate Union victory of 1865.

Not surprisingly, McCormick, southern-born and bred, was outspoken in his support for the DEMOCRATIC PARTY and the Confederacy. He ran for Congress in 1864 on a peace ticket, but lost. He exerted far greater influence in religious matters through his close association with the Presbyterian Church. McCormick was a devout advocate of the Old School, and he used his great wealth to finance the McCormick Theological Seminary of Chicago. This was an important theological body that sought to curtail expansion of the New School doctrines, which McCormick felt were spiritually unsound. McCormick himself largely personified the strict Calvinistic approach to life, being hard-working and pious and refraining from drinking or smoking. His conservative approach to theology, coupled with a willingness to invest part of his fortune to promote it, renders him a pivotal influence in the history of his church.

McCormick died in Chicago on May 13, 1884, one of the most successful and far-sighted entrepreneurs of his day. His reaper, which he continually updated and improved throughout his life, made possible the rapid settlement of the western frontier and also contributed to the overall accumulation of national wealth. In 1878, he received the Legion of Honor from the prestigious French Academy of Sciences, which extolled him for “having done more for the cause of agriculture than any other living man.”

### ***McCulloch v. Maryland* (McCulloch v. Maryland, 1819)**

*McCulloch v. Maryland* was one of the leading early SUPREME COURT DECISIONS establishing the scope of Congress’s power to legislate under the Constitution. It was also an important early example of the Court’s invalidation of a state statute. The case arose from the State of Maryland’s attempt to tax the Bank of the United States. First chartered by Congress in 1791, the bank was a public/private concern tasked with holding and investing the nation’s money and issuing national banknotes. Controversial from the start and routinely charged with looking more to the interests of its shareholders than the public good, the bank’s charter was allowed to lapse in 1811.

A SECOND BANK OF THE UNITED STATES was chartered in 1816, when the United States’s experience with the difficulties of noncentralized finance during the WAR OF 1812 (1812–15) persuaded Congress that even if evil, a national bank was necessary. The Second Bank moved aggressively into a thriving ECONOMY, establishing branches in the various states. Many of these branches engaged in speculation and were run by corrupt officers, a situation brought to light in 1818 when a drop in the cotton market caused a financial panic and many bank customers were unable to get their money out. Several states responded by regulating the bank branches. Maryland imposed a tax on all notes issued by all non-state-chartered banks, including the Bank of the United States. James McCulloch, cashier for the Baltimore branch of the Bank of the United States, refused to pay, and Maryland sued in a case that was argued before the Supreme Court in 1819.

Daniel Webster, William Wirt, and William Pinkney argued the case for the bank; Luther Martin, Joseph Hopkinson and Walter Jones appeared for Maryland. Two issues were foremost: Did Congress have the power to create the bank in the first place? If so, did the state of Maryland have the power to tax it? Resolving the first question required the Court to interpret Article I, Section 8 of the U.S. Constitution, which set forth Congress’s powers. Nothing in the section explicitly authorized Congress to create a bank. Nevertheless, the Court found the section did authorize Congress to do a lot of things that would be easier to accomplish with a national bank in place—raise armies and regulate commerce, for example. The existence of the bank made transferring federal funds from one part of the country to another far easier. And Section 8 closed with the “Necessary and Proper Clause,” which authorized Congress to exercise powers not listed in Section 8 if the exercise of those additional powers was “necessary and proper” to the exercise of the listed powers. If the words “necessary and proper” were expansively interpreted, they might be held to allow

for the creation of the Bank. That is precisely what the Court did.

*McCulloch* thus saved the bank. More important, it also expanded the permissible scope of Congress's broad power to legislate. The federal government was indeed a government of limited and defined powers, but "[l]et the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the constitution, are constitutional." As for the state's imposition of the tax, the Court held it unconstitutional. "The power to tax," Chief Justice Marshall wrote, "involves the power to destroy." The structure of the federal union denied the power of one state to destroy an enterprise constitutionally created by the federal Congress. James McCulloch was therefore not liable for the tax.

Marshall delivered the *McCulloch* opinion for the Court on March 7, 1819, inspiring an immediate hostile backlash. Virginians in particular identified the opinion as a major blow to states' rights. Among other things, the case stood for the proposition that the federal court could decide the constitutional scope of the federal Congress's authority. This doctrine was unpalatable to those who viewed the Constitution as a compact among sovereign states. The debate engendered by *McCulloch* would not go away. In the near term, the Court battled with states throughout the 1820s, staving off, among other threats, efforts by opponents to lodge the ultimate judicial review power in the U.S. Senate. In the longer term, the broader questions raised in *McCulloch* were at the forefront of the constitutional component of the secession debate of the 1850s.

Maryland and the Foundation of Federal Authority in the Young Republic* (New York: Oxford University Press, 2007); Mark Robert Killenbeck, *McCulloch v. Maryland: Securing a Nation* (Lawrence: University Press of Kansas, 2006); G. Edward White, *The Marshall Court and Cultural Change, 1815–1835* (New York: Oxford University Press, 1991).

—Lindsay Robertson

**McGuffey, William Holmes** (1800–1873) *educator*  
Best known for his popular *Eclectic Readers* for schoolchildren, William Holmes McGuffey was an influential university professor who helped shape American EDUCATION in the 19th century. He was born in 1800 in Washington County, Pennsylvania, to Alexander McGuffey, a former Indian fighter, and Anna Holmes. In 1802 the McGuffeys moved to Connecticut's Western Reserve in what is now

northeastern Ohio, settling on a homestead near Youngstown. William spent the next 16 years at his family's farm. Like most rural children at this time, he attended school in fits and starts between the growing and harvesting seasons. His mother also instructed him at home. When McGuffey was a teenager, his parents sent him to study Latin in Youngstown. His teacher was immediately impressed with his intelligence and his remarkable ability to memorize large portions of the Bible. After his success in Youngstown, McGuffey left home in 1818 to attend the Old Stone Academy in Darlington, Pennsylvania. He then entered Washington College, graduating in 1826. During his college years, he also taught school intermittently, mostly in Kentucky.

In 1826 McGuffey joined the faculty of Miami University in Oxford, Ohio, as a professor of languages. He soon married Harriet Spinning, with whom he had five children. While engaged as a professor, he also received a license to preach in the Presbyterian Church. During the years of his professorship at Miami, he preached every week at a local church.

In 1836 McGuffey became the president of Cincinnati College. After years of teaching and preaching, he was becoming well known for his eloquent lectures on morality and the Bible. He was also heavily involved in the effort to establish a public school system in Ohio. In 1839, he was elected to the presidency of Ohio University in Athens, which he administered until the school temporarily closed in 1843 due to financial disputes. He returned briefly to Cincinnati, teaching at Woodward College until he was elected to a professorship in moral philosophy at the University of Virginia in 1845.

McGuffey continued to promote public education in his new home, persisting in what became his most important endeavor: creating educational readers for children. He began compiling the *Eclectic Readers* while at Miami. The First and Second Readers were published in 1836, the next two in 1837. The Fifth Reader was published in 1844, and the Sixth in 1857. McGuffey's brother, Alexander Hamilton McGuffey, contributed the *Eclectic Spelling Book* in 1846. These volumes were used in all the states, in the kinds of public schools McGuffey worked so hard to establish. Over 122 million copies of his books were eventually sold.

McGuffey's Readers instructed schoolchildren through a simple, effective format. Making use of the "phonic," "word," and "alphabet" educational methods, McGuffey presented morally instructive literary selections designed to gain children's attention. His readers also included appealing illustrations, and dealt with a variety of subjects, including art, philosophy, economics, history, and science. His selections were unabashedly patriotic, promoting virtue, duty, and love of country. The advanced readers contained selections from the most revered English writers,

thus introducing millions of students to the classics of world literature. The *Eclectic Readers* became intellectual building blocks for the nation, remaining extremely popular until the end of the 19th century. While his work as a college professor and education advocate was acknowledged during his lifetime, his lasting reputation derives from the elementary textbooks that became a shared experience for millions of American children.

William Holmes McGuffey remained at the University of Virginia for the rest of his life. Harriet Spinning McGuffey died in 1853, and he remarried Laura Howard four years later; the couple had one daughter who died in childhood. During the Civil War, McGuffey was known for his philanthropy toward the poor, both black and white. He continued to teach philosophy in Charlottesville until a few weeks before his death in 1873.

—Eleanor H. McConnell

**McIntosh, William** (ca. 1778–1825) *principal chief, ally of Americans*

The Creek chief William McIntosh (Wetumpka) was an American ally and signer of the Treaty of Indian Springs, which ceded the last vestiges of Creek lands to the United States. McIntosh was born in the Lower Creek village of Coweta, Georgia, around 1778, the son of a Creek woman and a Scottish military officer. He parlayed his mixed-race heritage to his advantage, becoming fully immersed in both cultures. He gradually rose to the rank of war chief, and by 1796 he fell under the sway of Indian Agent Benjamin Hawkins. In this way he became a leading proponent of the “White Sticks,” or pro-American party.

In 1805 McIntosh gained a measure of national recognition by negotiating a land cession treaty with President Thomas Jefferson, but at a rate of 10 cents per acre, not one cent as proposed by the U.S. Senate. Thereafter the Americans considered McIntosh a nominal ally, especially during a period of growing restlessness among the Upper Creek. These tribesmen had been induced by the Shawnee leader Tecumseh to join his anti-American confederacy, and in August 1813 they launched a surprise attack on Fort Mims, Alabama, massacring the inhabitants. The ensuing Creek War proved disastrous to the Creek, but McIntosh, whom the government made a major in the U.S. Army, fought on the side of General ANDREW JACKSON with a contingent of warriors. In August 1814 Jackson and the Creek signed the

Treaty of Fort Jackson. The treaty stripped the Creek of 20 million acres of land, whether they fought for the United States or not. Despite this, McIntosh joined Jackson as a brigadier general to fight in the FIRST SEMINOLE WAR of 1818–19, commanding 1,500 Creek warriors. For his cooperation he received 1,640 acres of land, upon which he built a lavish resort hotel and lived in relative luxury.

The postwar period proved increasingly difficult for the Creek, because state authorities in Georgia were determined to seize all their remaining territory and ship them west of the Mississippi River. McIntosh realized this, but he considered it more realistic to sell the land for money than have it expropriated by force. On February 7, 1825, he and five lesser chiefs traveled to Washington, D.C., to sign the Treaty of Indian Springs, which effectively stripped his people of all their land. Consequently, the Upper Creek council sentenced him to death. On April 30, 1825, McIntosh was attacked and killed in his home by a party of Creek warriors under Menawa. His plight was considered typical of chiefs struggling to preserve a threatened way of life while holding off avaricious whites as long as possible.

**McLoughlin, John** (1784–1857) *Canadian-born fur trader*

Physician and fur-trade official, John McLoughlin was chief agent of the Hudson's Bay Company in the COLUMBIA RIVER region. He was also one of the most important figures in the FUR TRADE and a towering figure in the early European occupation of the Pacific Northwest. Born in Riviere-du-Loup, Quebec, Canada, McLoughlin was connected on his mother's side to the Frasers, one of Canada's leading fur-trading families. Under the influence of his uncles, Simon and Alexander Fraser, the young John McLoughlin began a career in medicine. After he was licensed to practice in 1803, however, he became interested in employment with the North West Company, a leading company of the fur trade at the turn of the century. McLoughlin first served as resident company physician at Fort William. Even as he performed his duties as physician, he became fascinated with the trading dimension of life at the fort. From his earliest contact, he showed great rapport with Indian peoples, especially in attracting their trust, a necessary dimension of the fur-trade enterprise. These qualities were the more important as the North West Company was engaged in a

struggle with the Hudson's Bay Company for the allegiance and trade of Indian groups.

In recognition of his skills, the North West Company made McLoughlin a partner in 1811. He continued in this capacity for another decade, and in 1821, when Parliament forced a merger of the North West Company and the Hudson's Bay Company (taking the latter's name), McLoughlin was made a chief factor, working under Governor George Simpson. McLoughlin administered the border district from 1822 to 1824 with his usual ability, always mindful of the company's interest in profits. In July 1824, Simpson appointed him superintendent of the huge Columbia District, a domain much larger than Great Britain itself. McLoughlin assumed his responsibilities at FORT VANCOUVER on the Columbia River in early 1825. He remained the most important European figure on the coast of the Pacific Northwest for the next 20 years.

McLoughlin had two main responsibilities. His first allegiance was to the Hudson's Bay Company and his need to support and enhance the profitability of their trading enterprise. But since the Oregon Country was the center of a dispute between the United States and Great Britain, he also needed to keep imperial considerations in mind. His responsibilities in this area were enhanced by the Oregon Joint Occupation Treaty of 1827, which opened the territory to the unrestricted settlement by citizens of both nations. McLoughlin had to manage the Columbia Department to protect both the profits of the company and the national interests of Great Britain. His duties were the more challenging because he had no control over the U.S. citizens within his purview. As he worked to make the Oregon Country a profitable supplier of furs, he supplemented his department's economic prospects by organizing an agricultural enterprise that would also provide profits for the company.

JEDEDIAH STRONG SMITH represented the competition in the fur trade. His generous terms and loose financial arrangements attracted several Hudson's Bay Company employees to his standard. The influence of WILLIAM HENRY ASHLEY and the annual American RENDEZVOUS were among the difficulties McLoughlin faced. He worked with some success to persuade the Hudson's Bay Company to offer more flexible arrangements to its trappers. Under his leadership, the trade of the Columbia Department continued to be profitable through the 1820s and into the 1830s.

The decade of the 1830s brought another challenge in the form of missionaries from the United States. Jason Lee arrived in 1834 with a party of Methodist missionaries, and two years later, Marcus and Narcissa Whitman. Lee's party settled along the Willamette River, an attractive agricultural area removed from McLoughlin's trading operations. The Whitmans settled in Walla Walla on the

Columbia, a more central location. McLoughlin freely provided information and supplies to the missionaries, and, in turn, their widely reprinted reports praising the agricultural settlement possibilities of the Oregon Country increased overland immigration to Oregon. Even as the missionaries received reinforcements in the form of people, supplies, and money, the OREGON TRAIL had become the route of growing annual caravans.

McLoughlin continued to believe in the continuing presence of the Hudson's Bay Company on the Columbia, but imperial and company interests increasingly favored evacuation to the north. After 1841, Governor George Simpson himself favored moving the company's base of operations to Vancouver Island. At the same time, the fur-trade revenues had declined in McLoughlin's Columbia Department, as they were declining everywhere. McLoughlin retired in 1845 and died 12 years later.

**Further reading:** William R. Sampson, *John McLoughlin's Business Correspondence, 1847–1848* (Seattle: University of Washington Press, 1973).

## medicine

As the 19th century began, Americans had witnessed many revolutionary changes in their lives, but medicine had not kept pace. Medical practices differed little from those of the 18th century. Citizens of antebellum America were faced with a life filled with DISEASES AND EPIDEMICS, poorly trained doctors, unsafe cures, poor diet, and generally unsanitary living conditions.

Scientific medicine at the beginning of the century was heroic medicine. All diseases resulted from an excess of fluids, and the cure was to relieve the body of the excesses through bloodletting and purging. The basic scientific knowledge necessary to disprove such beliefs was slow to develop in America. The generation of men like Franklin and Jefferson, who dominated the intellectual life of the country from 1750 to 1800 and promoted scientific research, was largely gone by 1800. Besides, the country had little time and little use for such aristocrats as it was swept up in the Age of Common Man. As Alexis de Tocqueville commented, the combination of democracy and economic opportunity in the Jacksonian era placed an emphasis on profitable technology over basic science. As a consequence, medical science based on empirical research suffered too.

Contributing to the stagnation of scientific advances in the 19th century was the philosophical movement that dominated American society: Romanticism. Romanticism came to America from Europe between 1812 and 1861 as a revolt against the Age of Reason. Rather than rational empirical thought, Romanticism emphasized feeling, sensitivity, and the supernatural. As this philosophy mixed with

Jacksonian democracy in the 1820s and 1830s, it developed many uniquely American traits, one of them being religious evangelism.

By the mid-1800s, scientific medicine had taken a back seat to quackery. Scientific medicine was hampered by poor training, the continued practice of heroic medicine despite patient protests, and quarreling among the brightest physicians. Proprietary medical schools and their common practice of grave-robbing to obtain dissection specimens did little to improve the public's image of the medical profession.

These factors combined in the 1820s and 1830s with a wave of Jacksonian democracy, producing an egalitarian America with no use for aristocratic physicians. The public came to believe that anyone could cure the ill if they applied the common-sense principles promoted by quack doctors. Physician licensing, once commonplace, was abolished in most states in the 1840s, so anyone was free to practice. Scientific medicine was rapidly replaced by quackery such as hydropathy, patent medicines, phrenology, and mesmerism. When quackery became inextricably linked to the religious revivalism and social reform movements sweeping the country at mid-century, it was unstoppable.

Since the scientific community was doing little to improve medicine, and the public was rebelling against the painful and debilitating treatments of heroics, a void developed in medical treatment. With no organizing body or set of standards for physicians to follow, few could agree to what constituted appropriate practice. Lay health reformers and practitioners, filled with the millennial, democratic spirit, rushed in with theories of their own. Their treatments included water, electricity, manipulation of animal magnetism, and vegetable compounds. Many of the quack theories took on qualities of social reform and religious revivalism to become movements of their own. Each practitioner claimed to be from a specific "school" of medicine. The result was a wide selection of treatments for patients from which to choose. Almost all doctors were "general" practitioners, with very few specializing in one area, such as surgery.

Meanwhile, a new European movement began in Paris. French doctors who caught the spirit of their country's revolution did not feel confined by the writings of the "masters" and instead observed for themselves how patients reacted to disease. Dubbed the French Clinical School, it emphasized both clinical and pathological observations to determine treatments. Doctors collected statistical evidence such as temperatures and pulse rates. Diagnostics were stressed over heroics. Some 700 of the best American doctors traveled to France to study between 1820 and 1860. Yet despite the opposition of those who returned from abroad, heroic medicine continued to be practiced, and eventually the public developed a deep skepticism of doctors and an increased interest in quackery.

The United States produced some of the best surgeons, many of whom studied in France. The rigors of life on the frontier also stimulated the advancement of surgical techniques, as doctors living there often had no alternative to surgery, because they lacked drugs and access to the latest medical advances. Surgery was the last resort because it was often fatal and always painful. Performed with no regard for cleanliness, doctors wore filthy coats—often directly from the autopsy room to the operating room—with pride. This practice spread deadly infections like septicemia or gangrene. The only anesthetics were opium and alcohol. In the 1840s, chloroform, nitrous oxide, and ether began to be used as social drugs by the upper classes, and were eventually applied to surgery. Anesthetics removed the pain of surgery, allowing for longer, more complex and delicate operations.

Three doctors who emphasized diagnostics over heroics were especially influential. Dr. Daniel Drake lived most his life on the frontier rather than on the East Coast, where medical training was centered. Realizing that the frontier lacked adequate facilities to train doctors, he started the Medical College of Ohio in Cincinnati in 1819. He is best known for his exhaustive study *Systematic Treatise on the Principal Diseases of the Interior Valley of North America*. The work not only examined disease but detailed geography, climate, and frontier society. Dr. William Beaumont used an unusual method to study how the digestive system worked. An army doctor at Fort Mackinac, he encountered a patient with a severe stomach wound that would not heal. Beaumont used the opening in the unfortunate victim as a window into the gastrointestinal tract, and his 1833 work *Experiments and Observations on the Gastric Juice and Physiology of Digestion* explained the chemical process of digestion. The work of Dr. Samuel Gross to improve surgical techniques resulted in *A System of Surgery; Pathological, Diagnostic, Therapeutic, and Operative*, used by Gross in his lectures at the Jefferson Medical College in Philadelphia, and by many other medical schools.

This was also the era when women would start to gain a foothold in the medical profession. The prevailing stereotype at the time defined women as sympathetic and nurturing, making them ideally suited to care for children. Women had a long tradition as midwives and lay practitioners, but they were not considered suitable for professional medicine, given their irrational and delicate sensibilities. During the 1840s, supporters of the training of female physicians received a boost from a controversy surrounding midwives and childbirth. Male doctors were starting to claim that only they had the medical training and the instruments (namely forceps) that could safely deliver a child. However, many doctors were accused of interfering too much in the process of delivery, sometimes injuring the mother or child (or both). Supporters of female medical training used the

This lithograph depicts the first ovariectomy (removal of an ovary) being performed by Dr. Ephraim McDowell in 1809 in Danville, Kentucky. During the operation, McDowell successfully removed a 20-pound tumor from his 45-year-old patient—without anesthesia. (*National Library of Medicine*)

resultant backlash to argue that it was immoral for men to be involved in gynecological and obstetric practice. As a result, several schools started to allow women into their programs. In 1849, Elizabeth Blackwell graduated from Geneva Medical College in New York to become the first woman anywhere to receive a medical degree. Blackwell's achievement spurred further advances for women in the medical field, such as the establishment of women's medical colleges. The first such institution was the Women's Medical College of Pennsylvania, which opened in Philadelphia in 1850.

In 1847 the American Medical Association (AMA) was established by Nathan Davis Smith, and for the first time a code of medical ethics and educational standards for physicians was published in an effort to improve and standardize medical practice. The AMA also launched an investigation into quack remedies in an effort to enlighten the public in regard to the nature and dangerous tendencies of such remedies. Soon many medical schools were also involved

in standardizing medical education, and physicians were now engaged in clinical teaching and research in hospitals. New medical institutions were emerging to provide a more scientific approach to medicine, and new instruments were being developed to assist doctors in treating patients. The 19th century started out with a bleak outlook for American medicine, yet by mid-century it had entered an age of improvement and reform.

### **Mexican-American War (1846–1848)**

The war between the United States and Mexico, which lasted for less than two years, resulted in the United States

gaining a huge swath of territory from the defeated Mexicans. Its origins were based in part on a dispute about the proper boundary between the two nations and the United States's annexation of TEXAS, formerly a state in the Republic of Mexico, in 1845. Texas had broken away from Mexico in 1836, defeating the Mexican army after the siege at THE ALAMO and establishing itself as a republic in its own right. American president ANDREW JACKSON of Tennessee, where many Texans were originally from, immediately recognized Texas, although Mexico did not. Soon thereafter, Texas applied for statehood; most Texans had migrated from the United States, and many of them desired to join the new republic to their former country. However, new president MARTIN VAN BUREN, a northerner, was cool to the idea, believing correctly that northern states might object to admitting another state that permitted slavery, as Texas did. The United States therefore passed on its first opportunity to admit Texas into the Union.

When the WHIG PARTY, which was increasingly opposed to the expansion of slavery, elected its first president, WILLIAM HENRY HARRISON, in 1840, it looked as though any U.S. annexation of Texas would be postponed for some time. However, Harrison died soon after taking office and was replaced by Vice President JOHN TYLER, a southerner and former Democrat. In the United States at that time was a growing belief in the idea of MANIFEST DESTINY, which held that the nation was destined to rule all of North America, including much of Mexico. This idea was tinged with racial and cultural superiority, with some Americans believing that Anglo-Saxons were entitled to lands that the darker-skinned (and Catholic) Mexicans were not using properly: the vast territories of New Mexico and CALIFORNIA. The Mexican government, for its part, continued not to recognize the independence of Texas, although Great Britain and France later did. Mexico itself was struggling as an independent nation and suffered from unstable government, with rule by dictators. It had failed to establish a republican form of government, although this had been its goal when it won independence from Spain in 1821. Few people lived in its northern provinces of California and New Mexico; California had only 15,000 Americans of European ancestry and 24,000 American Indians living on missions. (The total Indian population was much higher.) Many in the United States coveted these territories to complete national expansion. Yet despite its internal problems, Mexico was determined to keep all of its sovereignties intact.

Northern and southern states began to line up on different sides of the question of admitting Texas, due to the problem of SLAVERY. Some proslavery southerners even hoped to divide the massive territory into several smaller slave states so as to increase the power of slaveholders in Congress. South Carolina, the most militantly proslavery

and antiabolition state, went so far as to declare that if Texas was not admitted into the United States, then southern states should secede from the Union. There were not enough votes in the Senate, however, to get the needed two-thirds of the votes to ratify a treaty that would result in admitting Texas to the Union. But in the final days of his administration, President Tyler persuaded Congress to pass a joint resolution on the matter, which needed only a simple majority to pass. Tyler promptly extended the offer of statehood to Texas on his last day in office. Opponents of the measure argued that annexation would provoke a war with Mexico. Certainly the Mexican government was outraged; it had stated plainly in 1843 that it would regard any annexation of Texas as a declaration of war by the United States on Mexico. In response to the formal annexation in 1845 that occurred when Texas accepted the American offer of statehood, Mexico broke off diplomatic relations with the United States.

The new president, JAMES K. POLK, had been nominated by the Democrats over Van Buren in 1844 in part because Polk had favored annexation, and the issue contributed to his victory in the general election over Whig candidate HENRY CLAY, who opposed it. Committed to expansionism, Polk was especially interested in acquiring California, which he offered to buy from Mexico. The southern nation refused, however, and also declined to negotiate with the United States about the boundary between the two nations. Mexico had maintained that the proper border was the Nueces River, which had been generally recognized as the boundary of Texas since the 18th century. Polk, pressing his expansionist agenda, contended that it was the river further south, the Rio Grande, which marked the true border between Mexico and the United States. To make the point that he was serious about the matter, in January 1846 he sent an army led by General ZACHARY TAYLOR to occupy the land in question between the Nueces and Rio Grande. The reason he gave to justify the action was that the soldiers were needed there to protect the new American state from a Mexican attack. However, Mexico saw this as a provocation and moved troops of its own into what it believed to be its territory by right.

Now face to face, soldiers of the two armies clashed and exchanged fire, with the Americans suffering 16 casualties in winning two encounters with the Mexicans, even though they were outmanned. Polk used the incident to ask Congress for a declaration of war against Mexico, charging that it had "invaded our territory and shed American blood on American soil." Some in Congress, especially Whigs, remained skeptical of the whole business; first-term congressman Abraham Lincoln of Illinois famously asked Polk to specify where exactly U.S. sovereignty had been violated. There was other vocal opposition to war, especially in the Northeast; the Massachusetts legislature passed a

Engraving of the Battle of Buena Vista, February 23, 1847  
(Library of Congress)

resolution opposing it. Nevertheless, led by the Democrats, Congress went along with the president and declared war on Mexico on May 13, 1846. There was an especially great outcry of support for the decision in the South and West. It was from the states closest to Mexico, including Texas, that most of the military volunteers came—49,000 in all. Along the eastern seaboard, there was much less enthusiasm; the original 13 states contributed only about 13,000 volunteers.

In the conflict that followed, the United States won a series of military victories. Its initial strategy was to launch a two-pronged invasion of Mexico. Zachary Taylor's goal was to invade central Mexico, and on the way he scored some victories in the northeastern part of the country, including capturing the crucial city of Monterrey. The American advance was slowed by severe problems with illness, as many U.S. soldiers fell sick and died from subtropical diseases to which they had no immunity. Taylor also halted progress until his army could receive further supplies, making the American army vulnerable to a Mexican attack. Fortunately for the Americans, though, the Mexican leadership was in chaos, as the government of President Mariano Paredes was overthrown and replaced by one led by the controversial former dictator, ANTONIO LÓPEZ DE SANTA ANNA. He had been in secret negotiations with the Americans and had promised that if he regained control of the Mexican government, he would seek to negotiate a peace treaty under which Mexico would cede territory to the United States.

Polk ordered the American navy and army to let Santa Anna, who had been living in exile in Cuba, pass through a naval blockade. The Mexican general landed and proceeded safely to Mexico City, where he proclaimed himself the new president of Mexico. Having done this, he quickly forgot the promise he had made to the United States and

instead began to rally his nation to recommit to the war. He organized a large army of about 20,000 and led them north out of Mexico City toward the American position at Monterrey. Along the way he made the rash statement that he would defeat Taylor's army, march all the way to Washington, and sign his peace treaty there. Many of Taylor's men had been withdrawn from Monterrey and sent to Veracruz to take part in a seaborne landing led by General WINFIELD SCOTT. This left the remaining force under Taylor's command at a 3-1 disadvantage to Santa Anna's army as it took up defensive positions at Buena Vista. A fierce battle ensued with both sides suffering heavy casualties—especially the Mexicans, who were defeated despite their superior size. Among the American soldiers who distinguished themselves in this battle was Mississippi colonel Jefferson Davis, later president of the Confederate States of America.

Meanwhile, a second American force, led by Colonel STEPHEN KEARNY, occupied New Mexico, including Santa Fe, and continued west into California, where it met with American naval forces to complete the conquest of that state. Kearny's expedition was very successful, as he met with only token resistance from the inhabitants of those states, most of whom accepted the American victory.

Determined to capture Mexico City and bring the war to a successful conclusion, Polk ordered the opening of a third front. Winfield Scott led an army of volunteers, including some of Taylor's men, in a coastal landing and proceeded to bombard the city of Veracruz; 1,500 Mexican civilians died in the attack. After inflicting heavy casualties on the Mexican army in street fighting, Scott's forces marched on to Mexico City. The Mexican capital was well defended, and the U.S. Army, which included junior officers such as future Civil War generals Robert E. Lee, Ulysses S. Grant, and George McClellan, regrouped outside of the city to plan their assault. On the approach to Mexico City, the Americans met stiff resistance, but after heavy fighting they captured the Mexican capital in September 1847. Scott and his officers entered the presidential palace, over which the American flag was raised.

One of the Mexican units that inflicted the most punishment on the Americans was the San Patricio battalion, which consisted largely of Irish-American deserters from the U.S. Army. In all, more than 10 percent of American soldiers, many of whom were poor and some of whom were recent immigrants, had deserted from the all-volunteer army.

The American capture of Mexico City effectively ended the war. The relatively swift and decisive U.S. victory was due in large part to some important advantages in the areas of transportation and communications; the Americans had put telegraph, railroads and steamboats to good use in their

military effort. In winning the war, the United States had suffered only about 1,700 combat-related deaths, although 11,000 more soldiers died of disease and related health problems.

In the postwar negotiations, the United States was represented by Nicholas Trist. Dealing from a position of strength, Trist persuaded the Mexican government to sign a treaty highly favorable to U.S. interests. Under the provisions of the *TREATY OF GUADALUPE HIDALGO*, signed in February 1848, the Rio Grande was established as the boundary between Mexico and Texas. Mexico also ceded New Mexico and most of California, recognized Texas as part of the United States, and received about \$15 million in compensation. Some expansionist Democrats in the Senate demanded that all of Mexico be brought under the American flag, but Polk rebuffed that idea and was content with the astonishing gains agreed to in the treaty. In all, the United States gained 529,000 square miles from Mexico, including the part of California where the gold rush soon began, bringing people to that territory from around the nation and the world. The victory turned out to be a mixed blessing, however, as northerners and southerners began to disagree strenuously over whether the lands gained from Mexico would be slave or free. It took the Civil War to finally settle the question.

## migration

The era between the American Revolution (1775–83) and the Civil War (1861–65) saw large tracts of territory added to the United States. The country's expansion attracted pioneers and settlers in a westward drive across the continent that became the dominant feature of American migration in the early 19th century—a drive that was encouraged by the U.S. government. A distinct pattern, entrenched since the 18th century, continued to play out: Waves of new and restless immigrants arrived in North America and headed west to acquire cheap land and new lives. These pioneers usually made the trip in groups linked by kinship, business interests, or accepted proximity in their former communities. For most, the principal motivation for migration was economic gain, but those with strong religious convictions, such as Shakers or Mormons, frequently sought out isolated communities based upon their own religious and social

ideals. Migrants cannot be exclusively ascribed to any one part of the social stratum, although the vast majority were basically middle or lower middle class and determined to improve their lot.

Westward expansion was a spontaneous, disorderly swarming of people along the trails and rivers leading into the interior of the continent and finally to the Pacific coast. This frontier raised basic questions: Who owned the land? How should it be surveyed, sold, and settled? The federal government responded to these questions with policies for Indian removal, land disposal, and the territorial system. The *INDIAN REMOVAL ACT* of 1830 allowed the government to move *NATIVE AMERICANS* off large areas of land, thereby making it available to white settlers. The government's *PUBLIC LAND POLICY* had the greatest impact on the flow of people to the West. Between 1800 and 1860, the federal government enacted a series of laws that were generally advantageous to settler families. This legislation included providing large parcels of land to settlers at very low prices, as long as they agreed to farm the land. Congress also established a system for surveying new territories and organizing governments within them.

This new domain was still not enough to satisfy America's hunger for new lands. The Louisiana Purchase of 1803 nearly doubled the area of the United States available for settlement, and control of the Mississippi greatly facilitated both the flow of barge-borne commerce and the first influx of settlers into the region. Roads, however, were slower to manifest, and it took nearly two decades for the region to become fully developed. Early 19th-century farmers and settlers viewed the unforested plains west of the Mississippi as an uninviting wasteland that lacked timber for building homes and towns, navigable rivers for shipping their goods to markets, and adequate rainfall for the crops they raised. In the first decade of the 19th century, the country was experiencing economic turmoil, and—contrary to what might be assumed—hard times in the East slowed westward movement. Renewed Indian warfare in the Ohio Valley and the *WAR OF 1812* further discouraged settlers from heading west. However, the rate of settlement increased rapidly after 1815, as the economy in the Northeast improved and America resumed normal trading relations with England. *WILLIAM HENRY HARRISON*'s triumph over *TECUMSEH* north of the Ohio River and *ANDREW JACKSON*'s victorious campaigns against the Creek in the South had forced many Native Americans to vacate those territories, opening up millions of acres of land to white settlement. This period of increased settlement is known as the Great Migration.

At first, the major thrust of settlement beyond the Appalachians was heavily concentrated in Kentucky and Tennessee. This was shortly followed by immigrants coming into the Old Northwest, north of the Ohio River, which served as a way into the interior. Although settlers

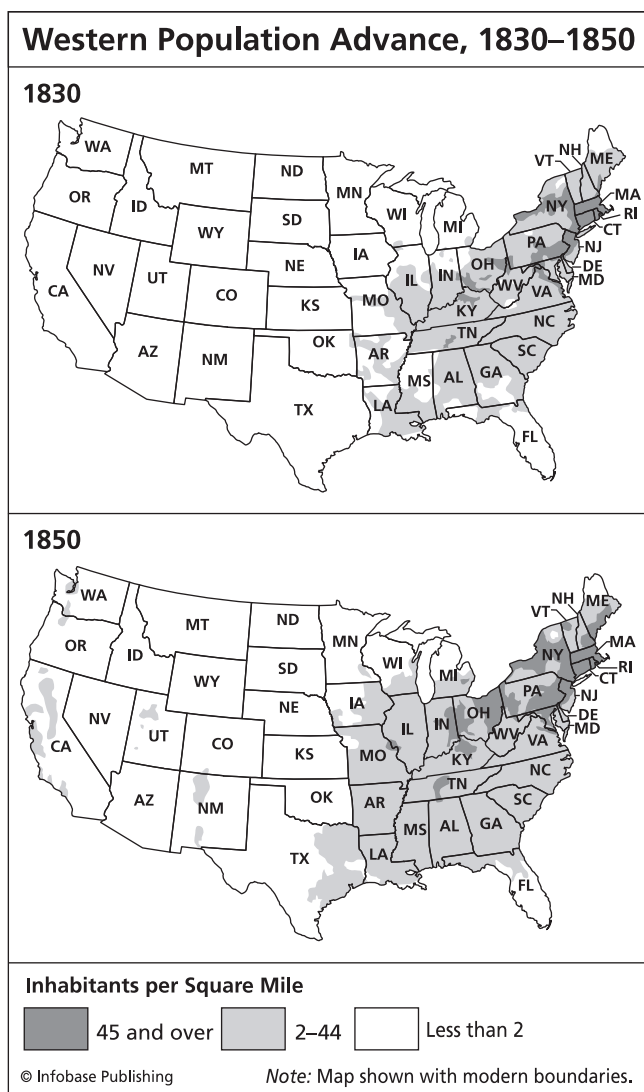

came from every state in the Union, the majority of early pioneers of Indiana, Illinois, and Ohio were southerners from Kentucky and Tennessee. Improved transportation played a major role in bringing on the Great Migration. In 1818, the NATIONAL ROAD stretched from Cumberland, Maryland, to Wheeling in what is now West Virginia. This road, along with other new and improved routes, provided an all-weather pathway for westbound emigrants. Steamboats were another major innovation in transportation, helping spur the rapid development of the region between the Appalachians and the Mississippi. The ERIE CANAL, completed in 1825, opened a new water route to the West. It was now possible, cheaply and conveniently, to board a barge on the Hudson River, float all the way to Buffalo in the western reaches of the state, and then catch a steam vessel for transit across Lake Erie to Detroit or Chicago and the frontier.

The impact of the Great Migration was also felt in the southern territories. This region was primarily settled by planters engaged in expanding the COTTON CULTURE. The pressure of soil exhaustion in the southern Atlantic states and the attraction of fertile soil in the Gulf plains combined to produce a swelling westward movement of southerners and cotton production. Settlers poured into the country along the southern Mississippi River region and as far west as western Mississippi and eastern Arkansas territory. Louisiana also saw a great influx of newcomers, most of them wealthier than their northern counterparts, who poured into Louisiana to found new plantations and spread the slave economy of the Southeast.

The PANIC OF 1819 brought a sudden end to the Great Migration. Nevertheless, it had made some tremendous changes in the distribution of the nation's population. According to the 1820 census, there were 1,140,000 more people living west of the Appalachians than had lived there in 1810. Ohio, with 600,000 inhabitants, was the most populous of the trans-Appalachian states. By 1820, roughly one-quarter of the nation's population was living in the West.

By the mid-1820s, great numbers of settlers were advancing into the Lake Plains of the Old Northwest. Settlers from Kentucky and the Northeast sought the fertile land of northern Illinois and present-day southern Michigan and Wisconsin. Migration into the Great Lake plains also came from the South. Farmers of smaller holdings in Georgia, Alabama, and Mississippi, unable to compete with the expanding plantation economy, were attracted by the affordable lands of the public domain. In the South itself, Native Americans found themselves surrounded as settlement advanced into the lands of western Georgia, Florida, Alabama, and Mississippi. In order to clear the way for settlement of these lands, the federal government began enacting legislation such as the Indian Removal Act, which relocated Native Americans to reservations further west, in present-day Kansas and Oklahoma. Contrary to the government's intentions, the establishment of an Indian Country west of the Mississippi did little to stem the nation's rapid westward movement. Instead, it created a two-pronged advance, with the stream of migrating settlers deflected northwestward to the Oregon Country and southwestward into TEXAS.

In 1840 most of Iowa and Wisconsin were still unsettled, and only a few people had advanced into Minnesota. Further south, the westward movement had reached the edge of the PERMANENT INDIAN FRONTIER. Rather than risk entering hostile territory, settlers aimed their sights on Oregon and CALIFORNIA. The overland migrations to the Pacific coast began in 1841, when 69 settlers set out from Missouri along the OREGON TRAIL. In the succeeding years, the volume of migration increased to more than a thousand persons annually. Some went to California, but

a majority of them followed the Snake River and COLUMBIA RIVER to the Willamette Valley, which seemed to have a better chance of becoming a part of the United States. By 1845, the American population of the Oregon Country, most of it centered in the Willamette Valley, had grown to more than 6,000. The steady procession of covered wagons into Oregon helped to strengthen American claims to that region, which for a generation had been dominated by the British, specifically the Hudson's Bay Company. To pioneers bound for Oregon and California, the region beyond the Rockies seemed hostile to habitation. Yet this isolated aspect attracted the Mormons, who settled the Salt Lake region of Utah and made a failed attempt to establish their own state along Mormon lines, known as the STATE OF DESERET.

California's rapid transformation from Mexico's sparsely populated northern province in 1847 to its incorporation into the United States in 1850 marked the culmination of half a century of American interest and settlement. Settlement, however, was slow growing, until the discovery of gold in California in 1848, which set off the greatest gold rush in history; thousands headed to the West Coast from all points in the United States and from foreign lands as well. More than 75,000 "Forty-niners" crossed the Great Plains and Rocky Mountains to California, the population of which had exploded from 20,000 to 100,000 by the end of 1849. Within three years, a steady stream of new arrivals, mostly overlanders, would more than double that figure.

By mid-century, the westward movement was abetted and accelerated by a transportation revolution: rail travel. RAILROADS opened up wide swaths of inhospitable terrain to rapid transit and connected migrants to greater opportunities on the Pacific Coast, which by now constituted the de facto "national frontier." Railroad companies were central to the process. They bought up all available land along their routes, then sold the surplus to farmers at a profit. The newcomers, once settled, conveniently found themselves adjacent to ready-made transportation routes capable of sending their products back east. The completion of the Transcontinental Railroad in 1869 was the final step in the process of westward migration, begun three decades earlier, and led to the final conquest and settlement of the prairies, Great Plains, and Rocky Mountain regions.

Less heralded than westward migration but equally significant was the trend toward urbanization in the East and Midwest. Immigrants who were too poor to move West usually found work in new, steam-powered factories or other facets of the Industrial Revolution. Affluent middle-class residents, who were invariably Protestant, came to view the horde of non-English-speaking migrants as sources of crime and immorality. Their wealth enabled them to relo-

cate to newly flourishing suburbs, while still using newly developed train, trolley, and subway lines to commute to the city for work. By the end of the century roughly one-third of the U.S. population was clustered in and around cities, now thriving industrial and cultural centers.

The growth of the United States in the first half of the 19th century, propelled by the doctrine of MANIFEST DESTINY, was viewed as a success for white settlers. However, it exacted a human cost. With California, Oregon, and the Southwest as part of the United States, the Permanent Indian Frontier came to be ignored as a geographic boundary; the people it protected were viewed as an inconvenient obstacle. There was a political price as well. Although overland migrations across the Great Plains continued, all pioneers were not headed for the Far West. Public lands newly open to settlement and available at low cost drew thousands of settlers into the eastern prairie regions between the Mississippi and Missouri Rivers. Territories were created to meet the needs of the new population in these areas and also prepare the way for transportation intended to cross the continent. The creation of new territorial governments in the nation's Midwest would reignite the controversy over the spread of SLAVERY. The issue would grow to threaten the survival of the Union.

### Missouri Compromise (1819–1821)

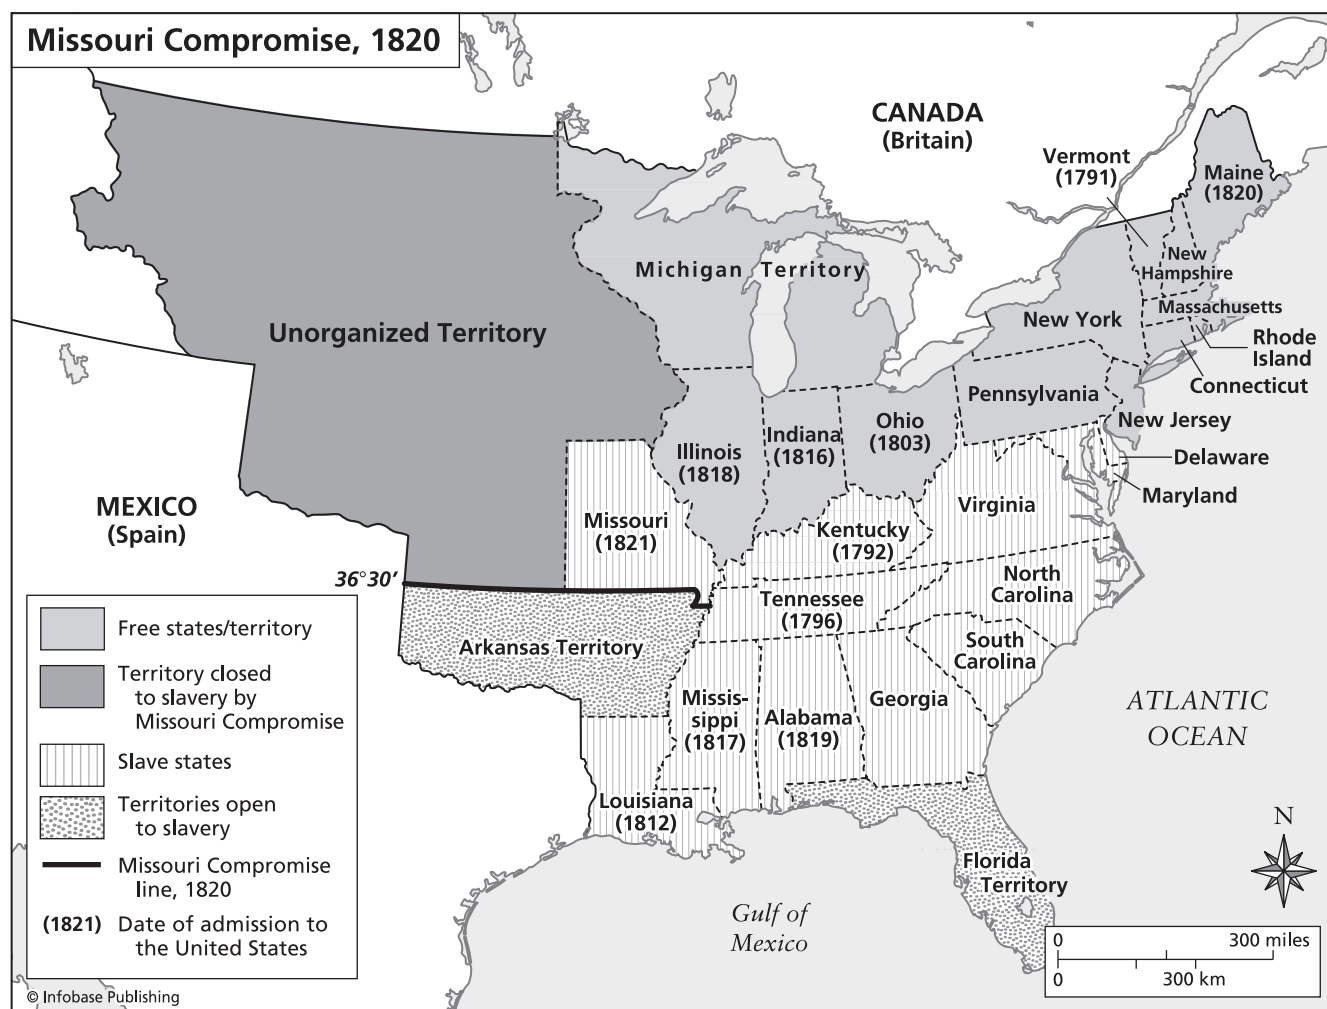

A series of events and debates concerning the admission of Missouri to statehood and the question of whether SLAVERY should be allowed to extend into the western territories resulted in the Missouri Compromise. In 1818, the legislature of Missouri Territory petitioned Congress for statehood. By this time, the territory had gained sufficient population to become a state, with most of its residents hailing from the South. Many of these settlers had brought

slaves with them; slavery had also existed in the territory when it was a French colony. Thus, the territorial legislature wanted Missouri to be admitted to the Union as a slave state. In February 1819, Representative James Tallmadge of New York proposed an amendment to the Missouri statehood bill. The Tallmadge amendment banned the importation of slaves to Missouri and called for the gradual emancipation of slaves already living there. Southern opposition to his amendment was immediate and nearly universal. The issue of slavery had not caused such tension since the Constitutional Convention of 1787. As was the case in 1787, the new controversy over slavery centered on a battle for power between free northern states and southern states with slave economies. Northern politicians were still bitter about the constitutional compromise, which allowed southern states to count each slave as three-fifths of a person for the purpose of representation. Because northern politicians already believed the southern states possessed an unfair advantage in representation in Congress, the prospect of Missouri

entering the Union as a slave state further threatened northern power.

But the battle over slavery during the Missouri controversy was not only about political representation. On the proslavery side, the increased passion with which southern slaveholders defended the slave system was due to the increasing value of their slaves. After the invention of the cotton gin in 1793 and given the expansion into new territories with a climate ideal for growing cotton, the profitability of the slave system (previously believed to be on the wane) soared. Thus, slaveholders began to respond to any anti-slavery proposals with increased vehemence. Tallmadge's proposal triggered intense debate in Congress, dividing the North and the South into sectional interests—an early version of the ideological and economic divide that would lead to war four decades later.

The Tallmadge amendment eventually passed in the House but was defeated in the Senate. Southern senators passed another version of the statehood bill, omitting the

Tallmadge Amendment. Thus, negotiations began about how to reconcile the two bills. The heated debates centered on two central problems: maintaining a balance of power between slave and free states in Congress and whether the Northwest Ordinance of 1787, which prohibited slavery north of the Ohio River, applied to Missouri. Concerning the first point, by 1819 there were 11 free states and 11 slave states. Northerners were concerned that admitting Missouri as a slave state would upset this balance of power in Congress and give southern interests control over the federal government. The problem of a shift in the balance of legislative power was temporarily solved when Maine petitioned for statehood as a free state in 1820. With the addition of Maine, northerners' fears of a southern-controlled Congress were temporarily allayed.

Confronting the second point of contention proved more difficult. Because Missouri was part of the 1803 Louisiana Purchase and therefore not covered under the Northwest Ordinance, debates arose over whether the 1787 law applied to this territory. (The constitutional compromise had been to allow slavery to continue in the South but ban it from the territories north of the Ohio River through the Northwest Ordinance of 1787.) A settlement was eventually reached in which Missouri would be a slave state, but all other parts of the Louisiana Territory north of the 36°30' line (roughly the extension of the border between Missouri and Arkansas) would be free. Although this element of the compromise is usually attributed to HENRY CLAY, it was actually proposed by Senator J. B. Thomas of Illinois. The admission of Maine as a free state and the designation of Thomas's compromise line seemed to put an end to the conflict, until Missouri proposed a constitution that banned free blacks and mulattoes from the state. This new provision rekindled northern anger. Henry Clay proposed another compromise, offering a vaguely worded resolution stating that this exclusionary clause in the Missouri constitution should never be interpreted so as to violate the rights of any citizen. This resolution implicitly weakened the ability of free blacks to claim the rights of citizenship—a handicap that would become increasingly oppressive in the following decades. But this last compromise resolution succeeded in saving the larger agreement. The compromise legislation finally passed on February 26, 1821. One week later, Missouri was admitted into the Union as a slave state.

This sectional divide over the Missouri question brought to the surface the elemental problem that the founding fathers had failed to resolve in the constitutional debates—namely, how to reconcile the creation of a free republic with a society that relied on and sanctioned slavery. Were the provisions in the Constitution allowing for slavery in the South meant to imply that slavery should expand into new territories or simply be maintained as custom in the places where it was firmly entrenched? Did the

Constitution's framers intend to allow slavery to expand or just to exist where it already was? Was society in the newly settling West going to be controlled by slaveholding southerners or by nonslaveholding northerners? These crucial, divisive questions would only temporarily be addressed by the compromises reached in 1820 and 1821. The underlying problems would continue to fester, coming to a head again during the controversies surrounding FUGITIVE SLAVE LAWS and the COMPROMISE OF 1850. The Thomas Proviso prohibiting slavery north of the compromise line was repealed by the Kansas-Nebraska Act of 1854 and by the Supreme Court's decision in the Dred Scott case of 1857. The bitter conflict over the extension of slavery into the West finally exploded in the violent upheaval of the Civil War, which broke out in 1861. While it failed to provide a permanent solution to the conflict over slavery, the Missouri Compromise temporarily eased the tensions between rival states and established a pattern for the future entrance of slave and free states into the Union.

### Missouri Fur Company (1807–1825)

The first of the important St. Louis fur companies, the Missouri Fur Company opened the trade of the upper Missouri River, but throughout its precarious existence, it struggled against hostile Indians and against formidable rival fur companies.

Inspired by the explorations of the Lewis and Clark Expedition (1804–06), Manuel Lisa and his partners—William Morrison and Pierre Menard—founded the St. Louis Missouri Fur Company in 1807. They were all veterans of the fur trade. In that same year, the three partners financed a fur-trading expedition by keelboats into the upper Missouri River. The boats and their crews penetrated to the Yellowstone River, where Lisa supervised the construction of a trading post at the mouth of the Bighorn River. From this base of operations, the company sent out several trapping expeditions into the northern Rocky Mountains. In 1809, Lisa and his partners enlarged the company. The fur-trapping and trading ventures made contact with local Indian peoples, but several nations were hostile, and the

distances of the trading posts from St. Louis made reinforcement and resupply difficult and expensive. The most important result of the first years of the enterprise was the vastly expanded geographic knowledge of the region. Exploration in these remote areas was always difficult, and the enterprise confronted almost constant hostility from some Indian nations, especially the Blackfeet.

The outbreak of the WAR OF 1812 made the conduct of the fur trade especially dangerous, since it involved NATIVE AMERICANS allied with the Americans and the British. The company reorganized with three partners—Lisa, Clark, and Sylvestre Labbadie—in 1812, changing its name to the Missouri Fur Company. In 1814, the American government appointed Lisa as Indian subagent, requiring him to use his influence to hold the loyalties of the western tribes. Although Lisa proved useful in this regard, the company was out of business by 1814.

With the close of the war, the rivalries of the fur trade resumed, intensified by the growing reach of the Hudson's Bay Company to the north and the AMERICAN FUR COMPANY on the Pacific coast. In 1819, the Missouri Fur Company reorganized again, in search of new partners and fresh capital. When he died in 1820, Lisa left a legacy of exploration and entrepreneurial activity that had captured the attention of the first generation of American fur traders.

Under the leadership of Joshua Pilcher, the Missouri Fur Company embarked on a new set of expeditions along the upper Missouri. The company initially did well, but a series of attacks by the Blackfeet in 1823 killed several veteran trappers and severely damaged the company's strength. The business threats posed by WILLIAM HENRY ASHLEY and JOHN JACOB ASTOR made the Missouri Fur Company increasingly unprofitable. The company employed some of the foremost veteran trappers of the fur trade, but these men were inexperienced in business at a time when the trade was increasingly competitive and business experience had become as important as skill in the field. Ashley's use of the RENDEZVOUS was an innovative step in the trade's evolution to which the Missouri Fur Company had no answer. Astor's scale of operations further dwarfed the small, almost intimate nature practices of the Missouri Fur Company traders. In 1825, the company failed and went out of business. Pilcher formed another company, but it was never successful, and in 1833 he joined the American Fur Company. In a sense, the failure of the Missouri Fur Company signaled the decline of the fur trade.

### **Monroe, James** (1758–1831) *fifth U.S. president*

A Democratic-Republican and lifelong public servant, James Monroe served two terms as president of the United States from 1817 to 1825 during the ERA OF GOOD FEELINGS. Born in Westmoreland County, Virginia, on April 28, 1758, he was the oldest of four children. His parents, Spence and Elizabeth Jones Monroe, raised their children on a farm in Orange County in the Piedmont region, and Monroe began attending Campbelltown Academy at age 11. He entered the College of William and Mary in June 1774, following the death of his father and his subsequent inheritance of all family property. At 16, he also found himself responsible for his mother and the care of his siblings until they reached maturity.

Caught up in the volatile political climate of Williamsburg, the capital of colonial Virginia, Monroe often allowed his studies to take a back seat to the excitement fostered by the coming of the Revolutionary War (1775–83). With the war in full swing by spring 1776, he enlisted in the Third Virginia Infantry Regiment under the command of Colonel Hugh Mercer to fight for independence from Great Britain. Monroe was trained by General Andrew Lewis, quickly commissioned a lieutenant, and saw his first action at the Battle of Harlem Heights (September 16, 1776) in New York. He later fought in the Battle of Trenton (December 26, 1776), where he was shot in the shoulder while fighting Hessian soldiers after crossing the icy Delaware River; it took three months for him to recover from his wounds. Afterward he was promoted to captain and participated in the Battles of Brandywine (September 11, 1777) and Germantown (October 4, 1777) in Pennsylvania. He then received a promotion to major and served as an aide-de-camp to William Alexander, also known as Lord Stirling.

After suffering through the infamously difficult winter at Valley Forge with George Washington and the rest of the Continental Army in 1777–78, Monroe's final military engagement took place at the Battle of Monmouth Court House (June 28, 1778). Increasingly frustrated in subsequent months because he never received his own command, he left Stirling's staff and the army for good in December. Monroe returned to his academic pursuits in Virginia and studied law under Thomas Jefferson, who became his lifelong mentor. He took a brief hiatus from his legal studies in 1780 when he was appointed a special military agent for Virginia, and in that capacity he helped establish a communications system to monitor British movement.

The future president began his political career when he was elected to the Virginia legislature in 1782. Between 1783 and 1786, he served in the congress formed under the Articles of Confederation. As a member of the Confederation Congress, he chaired a com-

President James Monroe (Library of Congress)

mittee in 1785 that eventually called for the framing of a new constitution, but Monroe did not participate in the Constitutional Convention of 1787. Suspicious of concentrated power, he believed the Constitution gave too much power to the federal government. He did, however, serve as a senator from 1790 to 1794 and remained a vocal opponent of the Federalist Party and many policies of the Washington administration. Despite his political disagreements with President Washington, he served as ambassador to France from 1794 to 1796, until his opposition to the Jay Treaty (1794) led Washington to revoke his appointment. Monroe returned to Virginia and was elected governor, serving from 1799 to 1802. He was politically aligned with his mentor, Thomas Jefferson, who was elected president in 1800. During the Jefferson administration, Monroe helped negotiate the Louisiana Purchase (1803). He also served as minister to France, Spain, and England. His record continued to grow as he was elected for a second time as governor of Virginia in 1811. He resigned the same year when President James Madison appointed him secretary of state, a post he held until 1817. Praised for his foresight when he predicted that the British would assault Washington, D.C., during the WAR OF 1812 (1812–15), Monroe also served as secretary of war between 1814 and 1815.

Monroe's long and distinguished public career culminated in his election as the fifth president of the United States in 1816. As president, he enjoyed great popularity, and he came just one vote short of being unanimously elected to his second term in office in 1820. His two-term presidency is often described as the "Era of Good Feelings" because of the general climate of domestic tranquility and political harmony in the United States. Optimism had swept the nation after the War of 1812, and it marked Monroe's presidency, which lacked serious political opposition due to the demise of the Federalist Party.

A strong nationalist, Monroe supported an economic nationalism that led to the creation of the SECOND BANK OF THE UNITED STATES in 1816. He signed the legislation for the MISSOURI COMPROMISE, although he never quite felt comfortable with the idea of the federal government having the power to limit the expansion of SLAVERY. Other notable accomplishments of his administration include the acquisition of FLORIDA from Spain in 1819 and the issuance of the famous MONROE DOCTRINE in 1823, which warned European powers to stay out of the Western Hemisphere and pledged that the United States would not interfere in European internal affairs.

After leaving office, Monroe served as a regent of the University of Virginia from 1826 to 1830. He passed away at the age of 73 on July 4, 1831. His death marked the end of an era, for he was the last revolutionary war hero to be elected president.

## Monroe Doctrine

The Monroe Doctrine, named after the president who announced it, JAMES MONROE, has been an enduring principle of American FOREIGN POLICY since the 1820s, especially with regard to Central and South America. Its origins lie both in the Old World and the New. Between 1815 and 1822, the weakened Spanish Empire in the Americas all but collapsed, resulting in the creation of several new republics. The United States in 1822 recognized the independence of its new sister republics of Mexico, Chile, Peru, Colombia, and La Plata (later Argentina). Working with his able and experienced secretary of state, JOHN QUINCY ADAMS, President Monroe was anxious to defend and advance American interests, including economic ones, in the face of new political conditions that were emerging in the western hemisphere. One of the origins of the Monroe Doctrine, however, came from an

unlikely source: Great Britain. The British, who had just concluded their second war with the United States less than a decade earlier, had benefited economically from the crumbling of the Spanish Empire in the New World. They did not want to see Spain, and possibly its old rival France, rebuild their colonial empires in the western hemisphere. In 1823, France invaded Spain and replaced that nation's liberal government with a more conservative one. This led to speculation that the two nations would combine their military might and undertake an invasion of the Americas in order to reclaim sovereignty over Spain's former colonies. The United States was also concerned that the Holy Alliance, which consisted of Russia, Austria and Prussia, and was based on the shared ideals of Christianity and monarchy between them, would support such a move by Spain and France. The British foreign minister, George Canning, thereby tried to convince the U.S. government that the interests of the two nations were in concert with regards to the Spanish and other continental European powers. Canning suggested that the United States and Britain formulate an official, joint, policy opposing any possible moves by European powers in the Americas. The United States wished to see Britain recognize the independence of the new republics in the western hemisphere, but Britain, not wanting to encourage republicanism in Ireland, refused to do so. Monroe and Adams consulted with former presidents Thomas Jefferson and James Madison, who advised that the United States accept Canning's offer. The president and secretary of state expected, however, that whether or not the United States issued a joint pronouncement with Britain or acted unilaterally, the powerful British navy would back up that policy. They also cooled to Canning's offer when they realized that Britain would not recognize any acquisition of territory by the United States that currently was part of the Spanish Empire. Many in the United States hoped, and indeed expected, that CUBA would at some point become one of the United States, and so it became clear that American and British interests in the New World were not necessarily one and the same. Monroe and Adams further concluded that such a joint U.S.-British policy would not be politically popular with the majority of the American people. The Monroe administration also wanted to maintain the American foreign policy tradition of avoiding formal alliances with European nations if at all possible.

In addition to being concerned about a possible threat from Spain, the United States was also alarmed by an expanding Russian presence in the northwestern part of North America. Russia had an interest in Alaska dating back to the first decades of the 18th century. In 1799, the czar's government had established the Russian-American Company, to which it granted exclusive rights to trade

and to make settlements in the parts of northwest North America not claimed by any other nation. American traders, however, did not recognize the rights of the Russian-American Company, and they resisted its mandate from Moscow, trading with the Native peoples, and selling them guns and ammunition, among other items. This activity by American citizens generated diplomatic protests from the czar's government to Washington. Russians had begun moving southward from Alaska, their possession; at one point there were Russian settlers in what is now CALIFORNIA, in the vicinity of present-day San Francisco. The U.S. government was concerned that the Russian expansion in the Pacific Northwest might conceivably lead to Americans becoming, at least formally, colonial subjects of the Russian Empire. In 1821, Czar Alexander I, in renewing the monopoly privileges of the Russian-American Company, set their domain at a point further southward than it had been previously, and sent a ship of the Russian navy to protect that claim. When Adams protested in a diplomatic note in 1823, the czar's government responded by dismissing the power of "expiring republicanism." Russian actions in the early 1820s in North America alarmed not just the United States, but Great Britain as well. Even so, the United States decided to reject Britain's offer of formal cooperation and act on its own. As Secretary Adams put it, "it would be more candid, as well as more dignified, to avow our principles explicitly to Russia and France, than to come in as a cockboat in the wake of the British man-of-war."

The actual pronouncement that became known as the Monroe Doctrine was included in the president's message to Congress on December 2, 1823. Although not known for the quality of his mind or breadth of vision in the way that his two Virginia predecessors, Jefferson and Madison, had been, Monroe's own view of the world was a factor in making this policy. He had been a firm advocate of republicanism in his own right, and maintained a strong belief that the institutions of the United States were worthy of emulation by other nations, especially the new republics to the south. From his first year in the White House, 1817, he had expressed a particular solidarity with the struggles of the peoples of America to break free from the Spanish Empire. He was supported in these views by his secretary of state, who joined Monroe in his dislike for European monarchies and their claims on America.

In his message to Congress, Monroe developed two main points. The first was his assertion that the era of European colonization of the New World was over, and that all of the Americas from that point forward should be considered off limits to the nations of Europe who sought to establish new colonies or claim existing ones. That meant that the United States would not accept any European state transferring one of its colonies to another. His second point

involved the general principle of nonintervention. Monroe declared that the United States would not involve itself in general European wars, such as the last of the Napoleonic Wars, which had ended just eight years previously. As the political systems of Republican America differed from those of the European nations, this would be inappropriate. At the same time, Monroe also bluntly warned the European nations that they must respect the sovereignty of the newly independent states of South America and not interfere in the hemisphere with military power. The Monroe Doctrine, as it was stated, did not have the force of law; in fact, European nations were openly skeptical and even contemptuous of it. In retrospect, it is not likely that the European powers would have embarked on any large-scale efforts to lay claim to the former American colonies of Spain. Even so, the nationalist and patriotic overtones of Monroe's message proved to be quite popular within the United States. In real terms it was not binding on any nation, as it was a unilateral declaration and not a treaty. What was more, the United States failed to back up the doctrine with force when Britain acquired some possessions in Central America and as well as the Falkland Islands off the coast of Argentina later in the 19th century. As a result of Monroe's pronouncement, however, Russia agreed not to pursue the acquisition of any territory in northwestern North America below a point satisfactory to the United States. This agreement essentially ended any chance that Russia would emerge as a power, colonial or otherwise, in North America.

The Monroe Doctrine, as it became known in the later 19th century, was not immediately recognized as having long-term significance. It became relevant during the crisis that led to the MEXICAN-AMERICAN WAR of the 1840s. President JAMES K. POLK in 1845 invoked the Monroe Doctrine when criticizing continued British claims to parts of the Oregon Territory that the United States considered to be rightfully theirs. As the United States grew into a world power in the 20th century, it became much easier for it to act in explicit defense of the principles first articulated by Monroe in 1823. Critics of the Monroe Doctrine have labeled it as providing a cover for American economic and military domination of the entire Western Hemisphere. The U.S. government, however, has never revoked the Monroe Doctrine as a general principle, finding occasion to both distance itself from the doctrine, and to invoke it, when it suited its interests in specific instances.

## Mormon Trail

On their overland emigrations from the towns on the Mississippi and Missouri Rivers to the Mormon settlements in Utah, members of the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS followed what came to be known as the Mormon Trail. The first, shortest, and most briefly used segment of the trail ran from Nauvoo, Illinois, to Winter Quarters, Nebraska (near present-day Omaha). In winter 1845–46 the Mormon Community in Nauvoo, under the leadership of BRIGHAM YOUNG, faced the rising hostility of the surrounding countryside. Young had hoped to arrange a truce that would allow the church to emigrate in spring 1846, but armed mobs surrounding the city refused to give him such respite. Instead, as early as late autumn 1845, they began raids on outlying Mormon settlements and soon near the city of Nauvoo itself. Young now directed that the emigrations begin immediately, and in the middle of winter, carefully organized groups of Mormon families crossed the ice on the frozen Mississippi and moved across the Territory of Iowa toward the West.

Advance parties, designated “pioneers,” marked the trail, built log cabins for shelter, established a mail service, dug wells, and even planted fields of corn to be harvested by later bands of Mormons. By October 1847 some 12,000 Mormons had reached Winter Quarters, near Omaha on the Missouri River. Winter Quarters was a temporary resting place, but the onset of winter demanded the rapid organization of the community and preparations for the changing season. Work parties built shelter, while others fanned out into the countryside to purchase supplies of food. In spite of the energetic preparations, the winter season was a difficult one. Some 600 Mormons died from exposure and disease.

Even as he struggled to provide for the Mormon encampment in the face of winter, Young and his counselors were planning the emigration to the West. Building on their successful experience in crossing Iowa, he designated pioneers to mark the route and provide support. He then divided the entire Mormon community into bands of tens, fifties, and hundreds, each group with a designated leader. The chain of command ran up to Young himself. He also issued instructions for driving the wagons, managing the livestock, and maintaining security in camping at night. The Sabbath was to be strictly observed, and in the tradition of looking to the future, Young directed that records of the overland journey to the West be kept and carefully preserved.

In April 1847, the “Pioneer Band” of 148 persons set out from Winter Quarters. The well-marked and well-used OREGON TRAIL followed the south bank of the Platte River, but Young did not follow this trail, probably concluding that any parties encountered would be hostile to the Mormons. Instead, he established a new route along

the north bank of the Platte that would become known as the Mormon Trail. The advance party reached FORT LARAMIE in early June, then followed the Oregon Trail for some 400 miles to Fort Bridger. At this point, Young and his party left the Oregon Trail and struck across the Wasatch Range into the Valley of the Great Salt Lake. It was at the entrance to the valley that Young called his party together and announced the site as the future gathering of Zion.

Young now returned east to make preparations for the emigration of the main body of the church to the valley. Using the revised Mormon Trail and supported by the planning of church leaders and the work of the pioneers, the church gradually moved west. Some 1,600 members arrived in 1847, and another 2,500 in 1848. The costs proved daunting, even with the funds acquired from enlisting the Mormon Battalion, a military unit organized by Brigham Young, for the MEXICAN-AMERICAN WAR. In order to economize, Mormon leaders introduced a plan under which emigrants would push handcarts across the plains to the Valley of the Great Salt Lake. The first of the handcart companies departed from Coralville, Iowa, in spring 1856, and over five years, almost 3,000 emigrants pushed or pulled handcarts to the valley. The handcart expeditions were arduous and risky. Two of the first five companies departing in 1856 failed to reach the crest of the mountains before the first major snowfall, and numerous

Mormons lost their lives. Eventually the church dispatched supply wagons to accompany the handcart companies. This expedition of the handcart companies was one of the most remarkable stories of the overland migration across the plains.

The Mormon Trail remained in use through the 1860s, although the numbers using it declined steadily. With the completion of the transcontinental railroad in 1869 and its extension into Salt Lake City, railroad travel became the standard means of transportation to the Mormon settlements in Utah. Over its life, approximately 70,000 Mormons followed the trail. It was an important chapter in overland travel to the West.

**Further reading:** Wallace Stegner, *The Gathering Zion: The Story of the Mormon Trail* (Salt Lake City: Westwater Press, 1964).

### Mormon War (1857–1858)

The Mormon War was a conflict between the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS and the federal government that led to the invasion and occupation of Utah Territory by the U.S. Army. The war had its origins in 25 years of continuing hostility between the Mormon Church and its neighbors and eventually American society as a whole. These ongoing clashes led to Mormon emigra-

tions from Kirtland, Ohio, to western Missouri; from western Missouri to Nauvoo, Illinois; and, finally, from Nauvoo to the Valley of the Great Salt Lake in Utah.

By the time the main body of the church, under its leader BRIGHAM YOUNG, arrived in Utah in 1847, public distaste for the church had transformed to violent hostility. The original Mormon prophet, JOSEPH SMITH, JR., had been assassinated by a mob in Carthage, Illinois, in 1844. Attacks on Mormons and their property had forced them to move from Nauvoo to the West. The primary causes of the hostility were Mormon growth and prosperity, in-group loyalty and identification at the expense of outsiders, and issues of local and state politics. To these issues were added stories of peculiar Mormon religious rituals and, beginning in 1842, rumors of POLYGAMY among Mormon leaders. These continuing conflicts forced Smith's successor, Brigham Young, and the church to flee west to the Valley of the Great Salt Lake.

Once arrived in the valley, Young organized the landscape and the community to serve the needs of the church. When the U.S. Congress organized Utah Territory as a part of the COMPROMISE OF 1850, Young was appointed governor of the territory; this recognized that the residents of the territory were predominantly Mormon in character. Along with a governor, the Northwest Ordinance, still the organic law for organizing new territories, provided for three judges to be appointed. The judges would form the supreme court of the territory, and the judges and the governor would draft a code of law for the new territory. In company with Young as governor, the president appointed three non-Mormon judges from the East. It would prove to be an awkward mix.

Suspicion of and antagonism toward Mormons experienced a strong revival in 1852 with the public announcement that polygamy, long practiced in secret, was indeed a fundamental belief of the church. To Mormons, polygamy was a holy doctrine, commanded by the Lord through the words of Joseph Smith. To non-Mormons, polygamy was the ultimate proof of the immorality of the church and its leaders, whose real purpose in its promulgation was lust and lawlessness. Certainly adherence to the doctrine of polygamy laid the basis for the revival of conflict that would continue for a half-century.

When the newly appointed federal judges arrived in Utah Territory, they found a large church community organized as a theocracy, with church leaders in control of the natural resources (land and water) of the territory, dominant in political life, and influential in issues of law. Residents were obedient to church doctrine and leaders at every level. Young saw the judges as meddling outsiders, distant from and perhaps even hostile to the Mormon community. The judges saw themselves as representatives of the authority of the national government, whose pres-

ence was alternately ignored or circumvented. Young and the church leaders actively schemed to bypass the federal courts and handle cases in local courts, where the influence of the church was paramount.

The judges complained to Washington that the authority of the federal government was being undermined and even contravened by the church. As anti-Mormon sentiment rose with the public outcry over polygamy, politicians and parties moved to condemn the Saints. The REPUBLICAN PARTY platform of 1856 singled out for condemnation "those twin relics of barbarism—polygamy and slavery." The DEMOCRATIC PARTY won the election, but the administration of President James Buchanan faced an unending series of insoluble problems associated with sectionalism and SLAVERY. Mormon behavior in the Utah Territory became one of the few issues on which anything like a national consensus could be found. In 1857, Buchanan issued a proclamation accusing the Mormons of rebellion against the constituted authority of the U.S. government. In order to put down this rebellion, the president sent a military expedition to reestablish the American government's authority.

News of the dispatch of an armed expedition heightened the suspicion and hostility of the church and its leaders against non-Mormons. The arrival of an armed expedition produced bombastic rhetoric from church pulpits: Mormons were being subjected to another in a series of persecutions, and the community must defend itself. As war fever swept across the territory, Young and church leaders organized for a spirited armed defense. Soon, however, Young decided in favor of a more passive response. The church leadership went into hiding, and bands of volunteers raided the supply wagons of the advancing federal army. The Mormons burned Fort Bridger, fearing that the outpost would be of assistance to the troops. They also set fire to the grasslands, intent on denying the federal troops the use of forage for livestock.

In late June 1858, the invading army passed through a largely deserted Salt Lake City. It established Camp Floyd some 40 miles away. The two sides now settled down to maintaining a continuing federal presence, while various individuals tried to draft some kind of truce between the two sides. An accommodation of sorts was eventually reached, but armed forces continued to occupy portions of Utah Territory. After much initial suspicion and even hostility, the opposing parties began communicating, and federal officers started buying supplies from Mormon farmers. The federal troops and the Mormon community never entirely accepted one another, but they did meet on a regular basis for mutual benefit. The occupation of Utah as a permanent feature of life in the territory came to an end with the outbreak of the Civil War (1861–65). The elements of the army withdrew.

By this time, Young had been removed as governor of Utah Territory, but discord over authority in Utah Territory continued. In 1862, during the civil conflict over the future of the Union, the government dispatched another armed force to Utah to observe the activities of the church and its leaders. The second expedition was withdrawn later that year, but the conflict between the church and the nation would continue for another 30 years, ending only when the church issued a revised doctrine that outlawed polygamy and Utah was admitted to the Union in 1896.

**Morse, Samuel F. B.** (1791–1872) *inventor of the telegraph*

Artist and inventor of the telegraph, Samuel Finley Breese Morse was born in Cambridge, Massachusetts, on April 27, 1791, the eldest son of a Calvinist minister. He was educated at the elite Phillips Academy in Andover before attending Yale College. Morse proved an indifferent student, but while at Yale he displayed considerable artistic talent and painted miniature portraits. This brought him to the attention of noted artist Washington Allston, who convinced him to study at his studio in England. Morse quickly gained renown as a promising painter, winning several awards. However, he had less success following his return home in 1815 and subsequently returned to painting miniatures. Morse married Lucretia Walker in 1818, and eventually settled in New York City, where he helped establish the National Academy of the Arts of Design in 1826.

Morse endured a hardscrabble existence as a painter, talented but lacking sufficient patronage to thrive. Following the deaths of his wife, father, and mother in 1826–28, he spent some time in Europe. While returning home in 1829, he met inventor Charles Thomas Jackson, who convinced him of the practicality of sending messages with electrical impulses. This notion subsequently became the driving force in Morse's life. He eventually found work as a painting and sculpture instructor at the fledgling University of the City of New York (later New York University), investing all of his spare time and money making electromagnetic signals a reality. At length he acquired two partners—Leonard Gale, a chemistry professor; and Alfred Vail, a talented mechanic—in 1837. Together, the three men came up with a viable scheme for sending signals over wire through a transmitter and a receiver. The mechanism

employed a system of dots and dashes, combinations of which represented a number or letter, making it possible to decipher messages quickly. This eventually became known as the Morse Code.

Although Morse's telegraph worked and had practical applications, it generated very little enthusiasm. He initially proffered it to the federal government in 1837, but they displayed no interest. Despite his acquisition of a government patent, the telegraph languished from lack of funding. It was not until 1844 that Congress appropriated \$30,000 for Morse to lay down a 40-mile telegraph line between Washington, D.C., and Baltimore, Maryland. On May 24, 1844, Morse tapped out the cryptic message "What has God wrought?"—and a communications revolution began. In fact, the telegraph made an indelible impact on the course of subsequent American history. The device accompanied the railroad lines westward and, through instantaneous transmission of messages, conquered distance. For the first time a network of wires could connect even the remotest frontier settlement with large urban centers on the East Coast, promoting a greater sense of national unity. Telegraphs were also extensively employed

Samuel F. B. Morse (Hulton/Archive)

by both sides during the Civil War, proving useful for communications and intelligence work.

Morse founded the Magnetic Telegraph Company in 1845, although the company struggled and he ultimately merged with the Western Union Corporation in 1866. Within a few years, telegraphs were being employed throughout the world. Morse eventually retired to his home in Poughkeepsie, New York, to reap a fortune in licensing fees. He died on April 2, 1872, having ushered in the age of global communications.

**Mott, Lucretia** (1793–1880) *abolitionist, women's rights activist*

Born January 3, 1793, into a Quaker family on Nantucket, Lucretia Coffin Mott was a lifelong activist for abolition and women's rights. The daughter of Anna Folger and Thomas Coffin, Mott credited her childhood with the formation of her independent character. She was surrounded by strong female role models from an early age. Since most men on the island gained their livelihood from the sea, women frequently spent long periods of time alone, raising families and running businesses in the absence of their fathers, husbands, and brothers. "The exercise of women's talents in this line," Mott later wrote, "tended to develop their intellectual powers and strengthen them mentally and physically."

In 1804 the Coffin family left Nantucket for Boston, where she attended a series of public and private schools. At the age of 14, she and a sister left home to attend a coeducational Quaker boarding school near Poughkeepsie, New York. The following year, Lucretia Coffin was asked to become an assistant teacher, and at 16 she joined the staff full-time. It was there that she became friends with another teacher, James Mott, whom she married on April 10, 1811.

Mott remembered the early years of her marriage as a time of considerable difficulty. The WAR OF 1812, her father's death, and general economic uncertainty in the United States presented the couple with a number

of financial challenges. To survive, the Motts taught, ran a school for a period of time, and operated a dry-goods business. They welcomed their first child into the world in 1812 and would go on to have five more before 1828. While deeply involved in the raising of her children, Mott confessed later in life that she always read books rather than apply herself to the "unnecessary stitching and ornamental work" that occupied many other women of her class.

At the age of 25, Mott began to take on a more active role within the Society of Friends, becoming a minister in 1821. Following a split in the society in 1827, the Motts became Hicksite Quakers. They believed in a liberal interpretation of the Bible and the power of each individual to understand God on their own terms. Throughout these years, Mott worked diligently on a variety of social issues. She was a devout believer in the TEMPERANCE MOVEMENT, campaigned on a variety of working-class concerns, and became an increasingly vocal participant in the ABOLITION MOVEMENT.

In 1833 Mott organized the Female Anti-Slavery Society of Philadelphia. Early members of the society included ANGELINA GRIMKÉ AND SARAH GRIMKÉ, sisters who would themselves go on to prominent careers as public abolitionists. In 1837, Mott helped to organize the Anti-Slavery Convention of American Women. In 1838, two days after the annual convention had been held at Pennsylvania Hall, Philadelphia, the meeting rooms were burned by opponents of the abolition movement. The protestors tried to attack the Motts' home later the same night.

In 1840 Mott traveled to London with her husband to attend the World Anti-Slavery Convention. Despite attending as an elected delegate of the AMERICAN ANTI-SLAVERY SOCIETY, she was refused entry to the convention because she was a woman. Five other female delegates were also turned away. Mott noted in her diary that she and the other women were treated politely by the organizers of the convention. This did not, however, lessen her offense at having been turned away. Many prominent male delegates to the convention argued that having women in attendance would trivialize their cause and open them up to ridicule. Mott and her allies countered that the same arguments were used in the United States by those who believed black men and women should not attend public meetings.

This was not the first time that Mott had been confronted by prejudice toward her sex. Female teachers at the Quaker boarding school where she had finished her education earned only half the salary of their male colleagues. Later in life, she had established the Female-Anti Slavery Society of Philadelphia because women were initially prohibited from joining William Lloyd Garrison's American Anti-Slavery Society. Mott had also been heckled and threatened for speaking in public and for daring to address

mixed crowds, activities considered by many Americans to be improper.

These past experiences were compounded by the situation at the London convention. There Mott met Elizabeth Cady Stanton, the wife of another American delegate, who expressed her sympathies and outrage at the turn of events. In conversation, the two women decided that legal and cultural inequalities suffered by women in the United States must end. They began to plan a convention at which women could meet one another, become educated, and adopt a course of activism to win the rights they had long been denied.

In 1848 the first women's rights convention was held at SENECA FALLS, New York. It was the product of Mott and Stanton's 1840 conversations, their ensuing friendship, and the assistance of many other reform-minded women. The convention was the beginning of a long-term women's rights movement in the United States. It was also the beginning of a new chapter in Mott's life. For the remainder of her years, she worked tirelessly for WOMEN'S STATUS AND RIGHTS. In 1850, she published *Discourses on Women*, a pamphlet that argued there was nothing natural about woman's subordination to man. Instead, argued Mott, the inequities women experienced were created by laws, customs, and a lack of education. All three things, she asserted, needed to be changed.

Throughout the 1850s, Mott lectured and attended women's rights conventions across the United States. Still fiercely abolitionist, she and her husband also opened their home to enslaved men and women escaping the institution of slavery on the Underground Railroad. She remained a devout pacifist and was severely discomfited by the Civil War. Her religious beliefs condemned violence, but she hoped, like many others, that the conflict would bring SLAVERY to a final end. Mott continued to be active in Quaker circles, and she preached regularly for the rest of her life. She died on November 11, 1880.

## mountain men

Following the Lewis and Clark expedition (1804–06), fur trappers began moving into the mountains of the West, where they pursued a free and unstructured life. Over time, they became known as mountain men.

The FUR TRADE was among the earliest profitable enterprises for early Europeans in the New World. They

traded with Indian peoples who brought them furs; they then took the goods to England and Europe, where there was a ready market. With the development of great European empires, the fur trade took on national as well as economic meaning, and each nation centralized its operations. Eventually the fur trade became dominated by national monopolies. The British government pursued its interests through the Hudson's Bay Company and the upstart North West Company (of Montreal origin); the two companies merged in 1821. The American entrepreneur JOHN JACOB ASTOR and his AMERICAN FUR COMPANY rounded out the field with a few independent traders, such as Manuel Lisa and the CHOUTEAU FAMILY, operating out of St. Louis. Almost all trappers and traders were affiliated with one of these organizations. The fur-trade enterprise involved long journeys over distant uncharted landscapes and interactions with Indian peoples, some of them hostile: while there were great profits, there were also great risks. Therefore the support of a large organization that could provide both safety in numbers and credit was deemed necessary.

After the WAR OF 1812 (1812–15), American fur traders began to provide stiff competition for the previously dominant British. Mountain men were an important part of the process. In February 1822, WILLIAM HENRY ASHLEY advertised in the *St. Louis Gazette* for "Enterprising Young Men . . . to ascend the Missouri to its source, there to be employed for one, two, or three years." Ashley's first expedition brought together the fur trade's most celebrated figures, those men who would become the most famous of the mountain men. They included JEDEDIAH STRONG SMITH, JAMES BRIDGER, Thomas Fitzpatrick, JIM BECKWORTH, and Milton and WILLIAM SUBLETTE. These men were independent trappers and traders who functioned within a system established by Ashley known as the RENDEZVOUS. Trappers would assemble annually in the summer at an agreed-upon location, while Ashley came from St. Louis with supplies. In a four-week-long event, the trappers would trade their annual harvest of furs to Ashley for guns, powder, knives, metal tools, and whiskey. An enterprising mountain man might have 400 beaver pelts and perhaps more. The trade would produce a balance sheet that favored both sides: Ashley received the furs, the trapper the necessary supplies to remain in the field for another year.

The rendezvous was more than a market; it was also a social occasion of great importance. Trappers isolated by solitary lives in the mountain landscape of the West gathered to meet one another in what amounted to a celebration marked by eating and drinking to excess, contests of skill, gambling, and occasional fights.

Mountain men adopted an identity and mastered the wilderness skills necessary to the life they pursued. In appearance and dress, they were much like the NATIVE AMERICANS in the regions where they lived and trapped.

American mountain man with his pony laden with luggage (Hulton/Archive)

A typical mountain man wore a long hunting shirt, leggings, moccasins, and long shoulder-length hair. Many married Indian women, sometimes to keep peace with their Native American neighbors; some had more than one wife. Observers commented that they often adopted the habits and gait of the Indians with whom they shared the landscape. The mountain man's life was sometimes viewed as romantic, but it was also highly dangerous. Trappers were killed by Indians, mauled by grizzly bears, and frozen to death in the savage winters of the Rocky Mountains.

The long list of mountain men's deaths and injuries emphasized the mortality of the fur trade itself. Independent trappers and contract trappers from the Hudson's Bay Company and the American Fur Company were exceptionally skillful at their trade. Whether individually or in groups called brigades, they trapped the beaver in the most distant reaches of the mountains. As a result the annual harvest of beaver went into a dramatic decline, and it was eventually replaced by trade in buffalo hides. The year 1840 marked the last official rendezvous. Mountain men who still survived settled down to run outfitting stations on the OREGON TRAIL and CALIFORNIA TRAIL, or they became professional guides and explorers.

The exploits of the mountain men helped to open up the West as they found new paths to the Pacific Coast and charted previously unexplored regions. But they represented only a fleeting part of the West's history as their economic enterprise and lifestyle became doomed to extinction.

### **Murrieta, Joaquín** (ca. 1830–1853 or 1878) *rebel*

A legendary figure from the California goldfields, Joaquín Murrieta (or Murieta) was a Mexican bandit and revolutionary who fought against the U.S. incursion into CALIFORNIA. Murrieta's life was intertwined with myth and fact. The first record of his presence was a baptismal certificate dated 1830 in Sonora, Mexico, identifying him as the son of a laborer in a silver-mining camp. His mother traced her heritage to Cadiz, Spain. The young Murrieta grew up in a world charged with violence. The province of Sonora was in constant turmoil, rebelling against the new, independent Republic of Mexico. The Mayo and Yaqui Indians, laborers in the silver mines, were in revolt against the mine owners.

When he was 13, in about 1843, young Murrieta enrolled in a Jesuit school in Alamos but did not stay long. Leaving the school, he married the daughter of a local laborer and went to work. In 1848, responding to news of the discovery of gold, the young couple joined the CALIFORNIA GOLD RUSH, as thousands of Sonorans migrated north. Indeed, during the early months of the rush, Mexican miners dominated the goldfields of the Sierra Nevada, where their presence was characterized by large numbers and mining skills that they shared with arriving neophyte miners from the United States and, soon, around the world. Murrieta found work on a ranch near Stockton, where he worked with the horses used for transportation of supplies to the mines. In 1850, officials in Stockton arrested him on robbery charges; he was jailed and subsequently released as innocent. Murrieta then moved with his wife to Sonora, the center of the Mexican population in the goldfields. In a gold camp named Saw Mill Flat, he built a cabin and staked a claim.

Murrieta and his wife now fell victim to the growing hostility of American miners toward foreign miners, especially those who did not speak English. The Mexican

miners were among the first targets, for they were alien in culture, present in large numbers in the southern mines, and had possession of some of the richest claims. At a time of increased competition in the mines, the Mexicans became the first and most obvious victims of discrimination. The institutional lever was the Foreign Miners Tax of 1850, sometimes called the “Greaser Act” because Mexicans were the acknowledged targets. Passed by the legislature and signed by the governor in 1850, the act soon drove Mexican miners out of the goldfields. However, unlike other foreign nationals—the Chileans, Peruvians, and French, for example—Mexicans always had the option of returning south to home, and most of them did.

At about this time, according to the popular story of Murrieta’s life, a band of American miners came to Murrieta’s claim, raped his wife, and drove him away. Murrieta now took refuge in the hills and turned to banditry, which was both an economic advantage and an act of revenge for the outrages committed against him and his family. Some came to describe him then and later as a revolutionary, leading an armed insurrection against officials and citizens of the State of California. Whatever the truth, his first attempts at banditry were awkward. But other dispossessed Mexican miners flocked to his standard, along with occasional professional thieves. Within a year, Murrieta commanded a large band, perhaps even several bands, which raided throughout the San Joaquin Valley. In the style of bandits with a political agenda, Murrieta’s gang found refuge with the old Californio families in the valley, the group that had been victimized by the arrival of the waves of American miners and lawyers in response to the discovery of gold.

As Murrieta’s legend grew, so did demands for his capture and trial. The legislature offered a large reward for him, dead or alive. In July 1853, the California Rangers, a vigilante organization, claimed to have captured, tried, and beheaded Murrieta. His raids ceased about that time, but over the years, his presence reemerged in the California sierra. According to legend, the so-called “Ghost of the Sonora” had escaped his pursuers, and he was ranching in the mountains of Sonora or living in a village. As late as the 1870s, reports of him continued to appear. A final note recorded that he died in 1878 and was buried in an old Jesuit cemetery high in the Sierra Madre.

The political dimension of Murrieta’s banditry grew with time, moving him along a path from bandit to rebel to revolutionary. This transition received its fullest statement by a cousin of Murrieta in 1932: “To the Mexicans, he was a great liberator, come out of Mexico to take California back from the hands of the gringos. They did not call his ‘looting’ and ‘killing’ banditry. They called it ‘war.’” Thus, Murrieta became a rallying cry for a revolution, a war of liberation.

## music

Americans in the first half of the 19th century had few musical resources but a great urge to incorporate music into their daily lives. They wanted to hear good tunes and be entertained. This desire, combined with the rapidly increasing population of the United States, created a mass market for music. Consequently, music creators profited from a ready audience, and America began to develop a national musical culture.

The United States in 1813 was a nation of few musical instruments and little formal musical training. A few professional musicians had by then emigrated from Europe, but music-making remained largely an amateur proposition. Amateurs fervently pursued their interest, however, even—or especially—when times did not favor the pursuit. For example, pioneers traveling west of the Mississippi River reported not only the dangers and privations of the journey but also the determined music-making of the travelers. Likewise, miners in the CALIFORNIA GOLD RUSH of 1848–49 eagerly sought sheet music and whatever musical instruments were available—accordions, violins, guitars, flutes, horns—to entertain themselves in camp after each long, tiring day of panning for gold. Throughout the United States, cheap instruments such as Jew’s harps could be had and frequently were. Those too remote to buy instruments sometimes fashioned their own, occasionally inventing new kinds of instruments if, due to isolation, they did not know what existing instruments elsewhere looked and sounded like. Music-making was equally ubiquitous in more favorable environments: Saloons everywhere tried to provide music; and singing on trains was so common as to be unavoidable.

The most common form of music to be found in the United States as of 1813 was vocal music. Since the arrival of the first New England settlers, vocal music had been an important form of worship. Hence, sacred songbooks were in demand throughout the United States in the early 19th century. Lowell Mason knew this when he prepared the *Boston Handel and Haydn Society Collection of Church Music*, published in 1821. Yet the degree of demand astounded even him; the collection was an extraordinary success, going through 22 editions and making Mason a very rich man. Competition grew for the sacred music market; in 1836, for example, came *The Billings and Holden Collection of Ancient Psalmody*, which claimed to republish pioneer song “as originally written,” in contrast to Mason’s versions, which he had “improved” to elevate the public

taste. Meanwhile, music had acquired all the trappings of “big business”: First, composers could now get rich from sales of their work to the public, a novel development. Second, American mass production and distribution techniques had become sophisticated enough to permit broad dissemination. Finally, sensational advertising and promotion of composers’ work propelled sales.

By the 1820s, local manufacture of musical instruments commenced in response to public demand for the means to make music. As the availability of popular sheet music and musical instruments expanded, so did the variety of music performance available in the United States. Half a century before, when professional musicians were especially scarce, the semiprivate subscription concerts of “gentlemen” amateurs had been among the few skilled performances available. By contrast, in the early to mid-19th century, assorted performers toured communities of all sizes. The minister Robert Kemp, for example, tapped into the vogue for “authentically American” music in the 1830s with a series of “Old Folks Concerts,” in which singers dressed in 18th-century clothing and sang old-fashioned hymns and ballads; these concerts flourished well into the 1860s and reached millions, almost throughout America. Family groups such as the famous Hutchinson Family Singers were acclaimed for their republican approach to music: Dressed in ordinary clothes, the three brothers and one sister sang hymns and popular ballads both in concert halls and in common taverns all through the 1840s. The family singers genre became so well-known and successful that it was parodied mercilessly by the end of the decade.

The most successful of all mid-19th-century American entertainments, however, was the minstrel show. This form, which entered northern theaters in about 1840, is believed to be an imitation of the plantation shows mounted by slaves on days when they were not permitted to work. Consisting of singing and dancing by both individuals and groups, plantation shows drew large crowds in the South. The imitation—and later, burlesque—that was the minstrel show was a variety show composed of dancing, singing, and skits. Performers entered ceremonially and seated themselves in a semicircle, with musicians spaced for antiphonal effect. All wore blackface (even black performers) except for the master of ceremonies or “interlocutor,” who wore whiteface. The skits borrowed some stock characters—the “Negro type,” for example, was a variation of the standard Irish buffoon—and developed some of its own, such as Jim Crow and Zip Coon. Performers sang comic songs and sentimental ballads, known as “Ethiopian songs,” in a style imitating African-American idiom. Audiences moved spontaneously to the rhythmic music. By the mid 1840s, the minstrel show was the most popular entertainment in the United States, drawing racially and economically diverse

crowds. As time went on, minstrelsy presented increasingly derisive depictions of African Americans before being surpassed in popularity by vaudeville in the 1870s.

Despite Americans’ professed admiration for unpretentious performers, snob appeal was effective in drawing crowds, and musical performers and their managers frequently claimed high-class connections. The indefatigable showman P. T. Barnum was a master of such promotional finesse, convincing the public, for example, that the “Swedish nightingale” Jenny Lind was not only a singer of extraordinary ability but also the personification of womanly virtue. Crowds flocked to see Lind throughout her 1850–52 tour. They were not disappointed. Lind excelled in the art of “descriptive” singing, or dramatically acting out the story of a song while singing it. Such histrionic singing, performance of which often moved audiences to tears of pity, shrieks of terror, or gales of delighted laughter, was in great demand. An earlier master of “descriptive” performance was the English singer Henry Russell, who toured the United States in 1833–41. Russell attributed his inspiration to sing in this style to the politician and orator HENRY CLAY. “Why, if Henry Clay could create such an impression by his distinct enunciation of every word,” Russell reported having asked himself, “should it not be possible for me to make music the vehicle of grand thoughts and noble sentiments, to speak to the world through the power of poetry and song!”

Such dramatic performances were not limited to urban centers, and amateur performers likewise attempted to evoke the moods of the songs they sang at home with expression, diction, gesture, and often appropriate costuming. Besides modes of performance, private and public America shared the same tunes everywhere: Although class distinctions were still carefully noted in “republican” America, particularly in the antebellum South, the same melodies were as popular in the parlor as on the minstrel stage.

Popular music was thus a shared point of reference for Americans of diverse backgrounds in the first half of the 19th century. While somewhat anachronistic, better reflecting the tastes of Americans’ 18th-century European forebears than the new romantic style then emerging in Europe, American popular music of 1813–55 served as a touchstone of the developing national culture of the United States.

## National Road

The National Road refers to a highway constructed with the authorization of the U.S. government in the early 19th century that eventually connected the eastern seaboard with the Ohio River Valley and points west. Also known as the Cumberland Road and the National Pike, it began as a proposal in Secretary of the Treasury Albert Gallatin's plan for the federal government to support INTERNAL IMPROVEMENTS in 1808. Gallatin's plan was comprehensive but controversial, as no clear consensus existed in the government for the federal government to finance public roads. Consequently, state governments paid for the road's construction. Much of the financing came from the state of Ohio, whose 1803 state charter included a stipulation that the federal government and the state would share in the cost of road construction. Five percent of all proceeds from public land sales in Ohio were set aside from the construction of roads. Of this amount, Congress spent two-fifths, while three-fifths was spent by the Ohio legislature.

Construction began in 1811 in Cumberland, Maryland, along an old military road used in the French and Indian War (1754–63). The road connected to the privately built Baltimore Pike, providing a link to coastal roads. By 1818, the National Road cut through western Pennsylvania to Wheeling, Virginia. By 1833, it had reached Vandalia, Illinois. The road spurred western expansion and commerce, improving the ability of pioneers to cut through the Appalachian Mountains to the fertile river valleys and plains to the west. Towns such as Brownsville, Pennsylvania, and Wheeling, Virginia (now West Virginia), boomed with new taverns, blacksmiths, stables, and other businesses to aid travelers.

By 1820 the road had become an important link between the steamboat trade of the Ohio River Valley and the East Coast. It also had significant political implications because of concerns that the federal government did not have constitutional authority to finance its construction. Previously, Thomas Jefferson's initial response to Gallatin's original proposal had been to suggest that it needed a constitutional amendment. Momentum for all internal improvements increased between 1808 and 1825 as a consequence of the Embargo of 1807 and WAR OF 1812 (1812–15). Federal support for internal improvements (including road building) became a pillar of the AMERICAN SYSTEM for economic development pushed from 1816 to 1825 by national political leaders such as HENRY CLAY and JOHN C. CALHOUN. Yet James Madison was a steadfast opponent of federally funded roads and canals on constitutional grounds, and JAMES MONROE also had reservations about the constitutionality of such projects. The issue became prominent in 1817, when Madison vetoed the BONUS BILL, which would have provided federal funds for an array of new roads and canals around the country. In 1822, Monroe expressed his own principles when he vetoed a bill to provide national funding for road repairs. However, in his veto message Monroe also indicated that he would accept federal support for roads as long as the plans met with approval from the states that the roads cut across. Thus, in 1824 he signed the General Survey Act authorizing extensive federal plans for road and canal projects across the nation. Under the General Survey Act, Congress approved plans to extend the National Road across Illinois and the Mississippi River to central Missouri.

The establishment of the National Road saw thousands of travelers heading west over the Allegheny Mountains to settle the rich lands of the Ohio River Valley. Small towns along the road's path began to grow and prosper with the increase in population. Towns such as Cumberland, Maryland; Uniontown, Pennsylvania; Brownsville, Pennsylvania; Washington, Pennsylvania; and Wheeling, West Virginia evolved into commercial centers of business and industry. Uniontown was the headquarters for three major stagecoach lines carrying passengers over the National Road. Brownsville, on the Monongahela River, was a center for steamboat building and river-freight hauling. Many small towns and villages along the road contained taverns,

blacksmith shops, and livery stables. During the heyday of the National Road, traffic was heavy throughout the day and into the early evening. Almost every kind of vehicle could be seen on the road. The two most common vehicles were the stagecoach and the Conestoga wagon. Stagecoach travel was designed with speed in mind; stages would average 60–70 miles in one day.

By the early 1850s, technology was changing the way people traveled. The steam locomotive was being perfected, and soon railroads began to cross the Allegheny Mountains. The people of southwestern Pennsylvania fought strongly to keep the railroad out of the area, knowing the impact it would have on the National Road. In 1852, the Pennsylvania Railroad was completed to Pittsburgh and shortly after, the BALTIMORE & OHIO RAILROAD reached Wheeling. This spelled doom for the National Road. As the traffic quickly declined, many taverns went out of business. The National Road became part of U.S. 40 highway in 1926.

## Native Americans

At the opening of the 19th century, Native American cultures had already been under assault by disease and displacement for 200 years. The events of the next two generations would accelerate the conflicts between Native and Euro-Americans. Despite alternating periods of assimilation and fierce resistance, events culminated in the forced removal and relocation of virtually all eastern Native American nations across the Mississippi River. While many whites believed this was the only rational alternative to eventual annihilation, many more simply coveted their land and were determined to acquire it by whatever means available. The ensuing TRAIL OF TEARS came to symbolize the pervasive mistreatment that most Indians suffered at the hands of a callous and indifferent U.S. government.

When Meriwether Lewis and William Clark went west in 1804, their mission was to explore the new Louisiana Purchase, find a water route to the Pacific, and make contact with the great nations of the West. At that time, the U.S. government had scant influence over the nations inhabiting its new territory west of the Mississippi River. To the east of the great river, however, the balance between Native Americans and white Americans would be substantially altered by the WAR OF 1812. Up to the War of 1812, the United States's Indian policy had reflected recognition of Indian peoples as strong and independent and treated

them as equals in negotiations; after 1815, this policy increasingly treated Indian peoples as dependent on American guidance and authority. This change culminated in their removal from lands east of the Mississippi River. This change received institutional approval in the passage of the INDIAN REMOVAL ACT of 1830, a law identified with the views of ANDREW JACKSON. In the 15 years after the end of the War of 1812, the U.S. population had grown, and its settlers had continued to press to the west with undiminished enthusiasm. The demand for land was intense, and the Native Americans were seen as an obstacle to the white settlers' inevitable progress. Already, the Indians up to the edge of the Appalachians had been effectively expelled from their lands by disease, assimilation, and force. Over the next 30 years, the major nations east of the Mississippi would be removed from their homelands or destroyed altogether, while those of the Plains and Far West found their ways of life increasingly under assault. The Native peoples reacted in varied ways to these attacks on their lands and their cultures.

### Active Resistance

The 19th century opened with the leadership of Tecumseh (ca. 1768–1813), the most brilliant Native American leader since Pontiac and a remarkable force for Indian unity amidst the many varied tribal groups at the beginning of the 1800s. Tecumseh, a Shawnee, was to become the main symbol of opposition to white American expansion in this period, determined to keep the Ohio Valley, the traditional Shawnee homeland, in his people's hands. To that end, he was willing to create alliances with other Indian leaders and even with the British. In this respect his career closely parallels that of the great Miami chief Little Turtle. Little Turtle cobbled together a pan-Indian alliance to confront American expansion into Ohio, which came to grief at the hands of General Anthony Wayne in the Battle of Fallen Timbers (1794).

American settlers had surged into the territory northwest of the Ohio (or the Northwest Territory, as the Ohio-Great Lakes region was called at the time), after the Revolutionary War. The United States had signed various treaties guaranteeing specific tracts to Indian peoples, but in the face of illegal trespassing on Indian lands, the federal government did little or nothing to stop the encroachment. In response, Tecumseh engineered an alliance of the Shawnee, Delaware, Ottawa, Ojibwa, Kickapoo, and Wyandot in 1805. His goal was to create a permanent Indian state in which the members of the confederacy could govern themselves, free of U.S. influence.

WILLIAM HENRY HARRISON, the governor of Indiana Territory became the federal government's representative in making treaties of land cession with representatives of Indian peoples (or factions of tribal groups). He aggressively

pursued his mission over a decade, and in his determination to force land cessions by Native Americans, he often made illegal or quasilegal treaties with tribal members not authorized to make agreements for their nations. In this way, between 1803 and 1809 he made treaties that ceded 33 million acres of land to the United States. Despite Tecumseh's repudiation of these treaties and the Shawnee leader's growing outrage at the cession of land and the tactics used to achieve it, Harrison continued to pursue his policies of dividing nations and making treaties of cession with one or more factions. Tecumseh and Harrison finally reached the point where open conflict replaced talk. Encouraged by the British, Tecumseh called for attacks on isolated illegal settlements, even as he pursued his larger vision of a great Indian confederation. When the Shawnee chief went south in 1811 to enlist the support of the numerous and powerful nations there, Harrison organized a force to march on Prophetstown, the main Shawnee village on the Tippecanoe River. The Indian defense was led by Tecumseh's brother Tenskwatawa, known as the Shawnee Prophet. After an inconclusive battle, the Indian force retired from the field, and Harrison and his troops entered the village, burned it to the ground, and declared victory. This fragile military victory, immortalized in the slogan "Tippecanoe and Tyler too," would help Harrison win the presidency in 1840.

In response to the defeat, Tecumseh allied himself with the British. During the War of 1812, he was made a brigadier general and led both whites and Indians into battle. His group helped to capture Fort Detroit in 1813, forcing the surrender of the American force there. But despite the victory, over the next year, the British commander General Henry Procter pulled his forces back into Canada. Harrison pursued with 3,000 men. On October 5, 1813, Tecumseh's warriors, badly outnumbered, stood against Harrison's forces at the **BATTLE OF THE THAMES** in Ontario, where they were defeated and Tecumseh was killed. With him died much of the Indian resistance in the Northwest Territories. Over the next decades, the Ohio and Great Lakes nations would be confined to small reservations or removed altogether to Indian Territory (present-day Oklahoma).

Among the **CREEK** in Georgia and Florida, Tecumseh's message of resistance had gained a substantial, but not unanimous, following. The Upper Creek, called the Red Sticks for their battle insignia, wanted to forcefully end the creeping American settlement in their lands. The Lower Creek, or White Sticks, wanted peace, even if it meant cultural assimilation. In 1813, the Red Sticks attacked Fort Mims in southern Alabama, killing 350 Americans. The United States' response was massive: A force of 5,000 men under Andrew Jackson, joined by White Stick allies, attacked the Red Sticks at the **BATTLE OF HORSESHOE BEND**. At least 1,000 Red Sticks were killed. But as punishment, the entire Creek nation—Upper and Lower alike—

was forced to cede 20 million acres of land to the United States. In 1832, in the wake of additional treaties of questionable legitimacy, as well as the Indian Removal Act of 1830, the Creek lost all their southeastern lands and were removed to an Indian Territory reservation.

Tecumseh's doctrine of resistance to land cession and illegal white settlement was taken up by Black Hawk, the Sac leader who led the last major Indian resistance effort in the Northwest Territories. But the **BLACK HAWK WAR** of 1832 was a complete failure, leading to the massacre of Black Hawk's band at the Bad Axe River and the loss of much of the Sac and Fox's assigned reservation lands in the present State of Iowa.

Only the **SEMINOLE** in northern **FLORIDA** had any success in resisting the tide of American settlement, and their success was limited. Starting in 1817, the Seminole fought three separate wars against the United States. The first **SEMINOLE WAR** (1817–18) began with Andrew Jackson's invasion of Florida, which then still belonged to Spain (excepting Western Florida, which had been seized during the War of 1812). The incursion—ostensibly carried out to capture runaway slaves—was part of a scheme to force Spain to cede the remainder of Florida to the United States. This was finally accomplished in 1819, by means of the **ADAMS-ONÍS TREATY**. With the arrival of the Americans, Seminole resistance intensified. Even though they were forced to leave their farming lands on the Florida-Georgia border, they did not surrender; they merely retreated to the swamps of central Florida. From this base, they conducted the guerrilla operations known as the Second (1835–42) and Third (1855–58) Seminole Wars. The Seminole Wars reflected the alliance between the Seminole peoples and the many escaped African-American slaves, who fled bondage in the Lower South and made their way to the Seminole Nation, where they found acceptance and eventually a common cause against the American army. In some respects, the Second and Third Seminole Wars were as much black as Indian wars. Despite the death of their charismatic leader Osceola (ca. 1803–38) and the removal of most of the nation, a core of Seminole remained in Florida. They never formally surrendered or signed a treaty, and the Seminole Wars are regarded as a costly military failure for the United States. For Native Americans in general, this conflict exerted little or no influence on the pace of removal, which accelerated and was basically complete by 1840.

### ***Alliance and Assimilation***

Other nations attempted more subtle resistance strategies. Some, like the **CHOCTAW**, believed that Native traditions of reciprocity would hold true in their dealings with the Americans. This led them to make alliances with the United States, in the understanding that the relationship

would protect their culture and lands from incursion. The Choctaw fought on the American side in the War of 1812, and their help was decisive in Jackson's 1815 victory in the BATTLE OF NEW ORLEANS. Many Choctaw intermarried with whites and adopted Anglo farming methods, housing styles, and modes of dress. But when Jackson, newly elected president, signed the Indian Removal Act into law in 1830, the Choctaw were the first nation to be forced into Indian Territory. Their migration in 1830, in which a third of the nation died, was an ominous sign for the other eastern Native Americans.

The CHEROKEE hoped to maintain themselves as a nation by succeeding in economic and cultural terms that white America could understand. Many Cherokee willingly adopted American economic practices, opening profitable mills and farming in family groups rather than communally. A large number converted to Christianity. Members of the elite established plantations modeled on those of their neighbors in Georgia and North Carolina, even owning black slaves. The Cherokee could boast of some extraordinarily gifted people, most notably SEQUOYAH (1776–1843), who invented a Cherokee writing system in 1821; it was so elegantly usable that his people rapidly embraced the written word. By 1828, the Cherokee had their own Bible in translation and their own weekly newspaper.

But while Cherokee life and culture flourished, their homeland was under serious threat. The process began in 1817, when several Cherokee leaders signed a treaty that traded a large area of the nation's traditional land for a tract in Indian Territory. A few thousand Cherokee voluntarily moved to Indian Territory at this time, the first of the eastern peoples to arrive there. Meanwhile, the Cherokee back in Georgia became, in a sense, victims of their own success: the more their farms and businesses thrived, the more permanent they seemed and the more the Georgians coveted their land. In 1828, Georgia asserted authority over the Cherokee lands, nullifying federal authority. When gold was discovered in Cherokee country in 1829, the pressure intensified. The Cherokee sued to overturn the Georgia laws, attempting to use the American legal system to maintain their sovereignty. In 1832 the tribe took their case before the U.S. Supreme Court in the landmark *Cherokee Nation v. Georgia*, which was argued on their behalf by the distinguished attorney William Wirt. However, Chief Justice John Marshall countered by declaring that Native Americans were not sovereign nations, but rather a dependent people and wards of the federal government, and therefore unable to approach the court for redress. The U.S. Supreme Court eventually supported their legal position in *Worcester v. Georgia* (1832). But President Jackson refused to enforce the Court's ruling against Georgia. The state held a lottery and parceled the Cherokee lands out from under the nation. In 1838–39, they were forc-

ibly removed in a long and badly managed emigration that became known as the TRAIL OF TEARS. By the time the surviving remnants of the nation had reached Indian Territory, perhaps as many as a quarter of those who started the journey had perished. Ironically, all of the so-called Five Civilized Tribes successfully took root in their new homes and prospered economically, in part by using African-American slaves as forced laborers. This system undoubtedly induced them to join the Confederacy in 1861. The ensuing civil war and its aftermath led to yet another period of dislocation and hardship for these Indian people.

### *The Far West*

For most of the first half of the 19th century, few Americans imagined that the Native peoples west of the Mississippi would ever be of much concern to them. The removal policies of the 1830s were largely successful by the end of the decade, and the survivors had been placed in a landscape described in many maps as "The Great American Desert," removing them out of the way of American settlement and into a vast and mostly uninhabited and sterile land. But the inexorable westward movement of white America would not be halted at the Mississippi. By the mid-1840s, wagon trains on the OREGON TRAIL were bringing hundreds, and then thousands, of settlers to the Oregon Territory. The overland migrations of the Mormons to Utah increased traffic across the plains, and with the discovery of gold in CALIFORNIA in 1848, the rising trickle of immigration across the plains and the mountains became a flood.

The Indians of the mountains and coast were experienced traders, with a long history of economic contact with trappers and explorers of many nationalities. Some nations saw the overland migrants and the settlers primarily as a new market. The 1837 smallpox epidemic that destroyed the Mandan nation in North Dakota and the continuing assaults on Indian peoples in California after the arrival of the FORTY-NINERS suggested the hazards associated with any kind of contact with Anglo-Americans. It seemed that Native peoples west of the Mississippi River were no safer in their homelands than those in the East had been. The dangers were particularly acute for those Indian peoples who occupied lands that became the target of mining rushes. The goldfields in California became a killing ground as far as Indians were concerned, as they were systematically hunted down in the most remote reaches of the Sierra Nevada. And later, Indian peoples would come under systematic assault in mining strikes associated with Nevada (1858), Montana (1862), and Colorado (1858).

The federal government attempted to reshape its policies to accommodate immigration across the plains and increasing contact between groups of settlers and Indian peoples. At a large gathering at FORT LARAMIE in 1851, government representatives tried to persuade Plains Indi-

ans to accept boundaries to their lands, however vague. In exchange for these lines of maps, signatories solemnly guaranteed large tracts of the plains to the Sioux, Cheyenne, Arapaho, Crow, Arikara, Assiniboiné, and Gros Ventre nations. In future years, the government would deal separately with each of these groups for cessions and concessions. Resistance had already begun among certain groups. As early as 1846, the Apache in Arizona began campaigns to keep their lands clear of white settlement. It was a series of military confrontations that would stretch over a half-century and conclude with Geronimo's surrender and exile. Ominously, U.S. Army stations on the Great Plains began rubbing up against the various tribes of the powerful Sioux nation, setting the stage for a new round of open conflict. On August 19, 1854, a U.S. Army patrol near Fort Laramie, Nebraska, angrily confronted a large party of Brule Lakota about a missing cow and gunfire broke out. Chief Conquering Bear was killed outright, along with Lieutenant John L. Grattan and all 27 of his men. Predictably, this massacre drew a sharp response from the government. On September 3, 1855, a combined infantry and cavalry force under Colonel William S. Harney surprised a party of Lakota in their camp at Ash Hollow (Blue Water Creek), killing 86 Indians and capturing 70 women and children. The survivors quickly sued for peace on the promise of good behavior, and order was restored. But this initial bloodshed merely anticipated the much larger and costlier Sioux uprising of 1862.

Throughout the century, Americans saw it as their MANIFEST DESTINY to occupy their continent from coast to coast and to use the land in the ways they saw fit. Native Americans stood in the way of that vision, whether they were allies or enemies, Christian or "savage," accommodating or resistant. In the years from 1815 to 1860, the federal government as the representative of the American people used its growing power and authority to remove Indian peoples west of the Mississippi and then to lay the groundwork for expansion onto the plains and into the mountains.

## Native Americans in the War of 1812

The second war between the United States and Great Britain was the last conflict where the support or opposition of NATIVE AMERICANS played a significant role, though it broke the military power of nations east of the Mississippi River forever. The Indian conflict in the WAR OF 1812 (1812–15) helped to build the reputation of future American presidents such as ANDREW JACKSON, WILLIAM HENRY HARRISON, and ZACHARY TAYLOR.

The republic's expansion after the American Revolution (1775–83) put most Native Americans under pressure. Indian leaders tried a number of different strategies to deal with the ever-increasing demands for more land for white American settlers. Some of the Iroquois sold off their holdings and moved west or north into Canada. The Shawnee, under Tecumseh, wanted to put aside old tribal feuds and unite to stop the advancing Americans. In the South, Native peoples tried several solutions. The Creek Confederacy fought among themselves, with those who wanted to accommodate the United States pitted against those who thought they could best protect their people by allying with the British.

Before the United States entered hostilities with Great Britain, an army commanded by William Henry Harrison dispersed many of the warriors based around Prophetstown at the Battle of Tippecanoe (November 7, 1811). Tecumseh and his brother Tenskwatawa, better known as the Shawnee Prophet, had spent the previous few years preaching a political and religious revival to the nations west of the Appalachians. Many Native peoples flocked to the town in northwestern Indiana to practice their traditional lifestyles free from the corrupting influence of whiskey and manufactured trade goods.

Harrison used his position as the territorial governor of Indiana to persuade the federal government to allow him to strike at the town. A series of raids on Ohio and Indiana settlements launched from Prophetstown gave Harrison the evidence he needed to convince President James Madison to retaliate. The American government feared that the

British in Canada were encouraging the Native Americans to fight, since everybody was sure war was coming. Harrison's victory at Tippecanoe neutralized the threatened alliance between Native Americans and the British. Many warriors lost faith in Tenskwatawa's message and returned to their villages.

When the United States declared war on Great Britain in June 1812, the British quickly seized Mackinac in the northern Michigan Territory. The Americans responded by invading Canada across the narrow straits at Detroit. The American army commanded by General WILLIAM HULL fumbled the opportunity and found itself facing a well-led British and Native American force. Hull and his subordinates were not up to the job and were chased back into Michigan, where the British captured them.

Throughout the winter, the British and their allies raided the southern shores of the Great Lakes. At Fort Dearborn, many American prisoners met their deaths at the hands of their captors. Lurid tales of massacres helped to stir widespread support among the backwoods communities throughout the Ohio Valley and Tennessee. Harrison received a general's commission and raised an army. By spring 1813, the Americans stood ready to push into Canada once more.

Harrison's command was temporarily besieged at Fort Meigs in that spring. The attack was repulsed, and many of the Native Americans who followed Tecumseh during the siege deserted him. In a series of battles around Detroit, Harrison defeated the British forces and pushed them back into Canada. He followed them into British territory and defeated 800 Native Americans and 450 British troops at the BATTLE OF THE THAMES (October 5, 1813). Tecumseh died in the fighting, and the dreams of his great confederacy died with him.

Only a small number of Native Americans fought on for the British in the North after the battle. Some Mohawk led by John Brant (son of Joseph Brant) fought around Fort Niagara. Most other nations stayed out of the conflict or threw their lot in with the Americans. The Iroquois left on American territory followed the advice of Seneca chief Cornplanter and fought for the United States. The nations that had followed Tecumseh left the Indiana Territory and went back home to await the end of the war.

In the South, the War of 1812 sharply divided some of the nations. Many stayed neutral while others supported the United States against Britain. The Spanish in FLORIDA helped the British supply Native Americans who wanted to fight the Americans.

Tecumseh had visited the southern nations in October 1811 (at the same time Harrison was marching on Tippecanoe). He did not succeed in rallying the Choctaw or the Cherokee into supporting the confederation of Native peoples. However, he did convince many of the North-

ern Creek (Muskogee) to take up arms in defense of their homes. Tecumseh was reported to have given red sticks, or rods, to the Creek warriors who followed his advice to resist the Americans. The warriors were to throw away one stick each day until the last stick was gone; the last stick marked the day when they were to attack the white settlers in their part of the country. The practice gave rise to the name "Red Sticks" for those Creeks who took up the hatchet. Most of the southern Creek towns disagreed with Tecumseh and did not go to battle along with the northerners; this faction was called the "White Sticks."

The northern Creek carried out a series of isolated raids on settlements in lower Tennessee in 1812. The raiders attacked individual homesteads, which often resulted in the deaths of entire families. The American inhabitants of Tennessee reacted with threats to retaliate. Creek leaders caught and executed many of the raiders to keep the white settlers from seeking revenge against the entire nation. Far from solving the problem, though, this enraged the families and friends of the Red Sticks, who threatened to kill the White Stick leaders who had ordered the executions. The Creek Nation soon found itself divided into two camps, those who favored peace with the Americans and those who wanted bloodshed. The situation soon deteriorated into civil war between the two factions. Before long the entire region between the Mississippi and the Appalachians burst into guerrilla warfare.

The Cherokee wanted to stay neutral at first. Although some of their warriors favored siding with the British, most wanted to steer clear of any fighting; memories of the devastating American invasions during the Revolutionary War ran deep. The Cherokee also had a long and bitter rivalry with their neighbors, the Creek, and few wanted to see them grow stronger. When a band of Northern Creek murdered a Cherokee woman, the debate ended and the Cherokee joined the Americans in the Creek War.

Settlers and traders all over the Mississippi Territory feared for their lives. They stockaded themselves into small forts for protection. On the Alabama River, some settlers huddled behind the walls of Fort Mims. On August 31, 1813, more than 1,000 warriors under Creek leaders attacked and took the fort; almost all of the surviving whites were put to death. News of the disaster traveled fast. When Andrew Jackson heard the reports on Fort Mims, he left his sickbed to organize a counterattack. The Choctaw also agreed to fight against the Creek.

In autumn 1813, Jackson attacked the Northern Creek at Tallussahatchie and inflicted heavy casualties on them. Another column of Georgia volunteers under General John Floyd successfully stormed a Creek stronghold at Eccanachaca. Both Jackson and Floyd harassed the Creek for several months. After some inconclusive fighting, Jackson surrounded the Red Stick stronghold at Tohopeka on

March 28, 1814, with 2,000 men. General Jackson's force included 500 Cherokees. A thousand Creeks trapped in the fortified town refused to surrender; their religious leaders had assured them they would beat the Americans. Jackson and his men wiped out the entire village, sparing only the women and children in what came to be called the **BATTLE OF HORSESHOE BEND**.

After Tohopeka, some of the surviving Creek warriors slipped into Florida. The British arranged to help them with the permission of the Spanish government. General Jackson invaded Florida and defeated the British and Spanish at Pensacola. He threatened to make war on the Seminole in the interior of Florida if they dared to help the Creek. Meanwhile, the Americans defeated a British invasion of Mobile Bay aimed at aiding the Creek. The Creek's ability to resist was shattered. After the war, Jackson not only demanded territory from the warring Northern Creek, he also wanted land from his own allies the Southern Creek in order to prevent any more assistance from England or Spain.

The War of 1812 effectively ended the military power of all the Native peoples east of the Mississippi except for the Seminole deep in the forests and swamps of Florida. It also set the stage for the removal of all Native Americans to the Indian Territories in the Great Plains.

## Nauvoo

Located on the Mississippi River in central-western Illinois, the town of Nauvoo was home to the **CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS** (the Mormons) from 1839 to 1846. After moving his persecuted flock from New York to Missouri, violent local opposition in Missouri forced Mormon leader **JOSEPH SMITH, JR.**, and his followers to relocate to Hancock County, Illinois. They purchased a fledgling settlement on the Mississippi called Commerce and renamed it Nauvoo. The new name derived from Biblical sources, and, according to Smith, meant “a beautiful location, a place of rest.”

The Illinois legislature initially supported the new Mormon settlement, granting Nauvoo a municipal charter in 1840. The charter allowed the town to be incorporated as a city, with its own university and militia; the latter would prove a much-needed benefit for Mormons fearing mob persecution. Nauvoo grew rapidly, as Mormon missionaries encouraged converts from Canada and England as well as the United States to move to the new town. Though population figures for the era are inex-act—reflecting the desires of both Mormon boosters and

detractors—it is estimated that Nauvoo was, for a brief time, the biggest city in Illinois, with a population of 20,000 in 1845.

The influx of new residents created a housing shortage as builders struggled to keep up with the rising population. But more important to Joseph Smith than creating housing was constructing the Nauvoo temple, begun in 1841. With a design was inspired by Smith's visions, the temple cost well over \$1 million to build. Smith also promoted the construction of the extravagant Nauvoo House hotel, meant to be a monument to Mormon hospitality, but it was never fully completed. Nauvoo's rapid growth seemed to indicate that the Mormon settlement had been unaffected by the economic depression that hit the rest of the United States in the late 1830s and early 1840s. However, it is more likely that the cost of constructing prominent Mormon structures was heavily subsidized by wealthy Mormon leaders and the continuous contributions of church members. Thus, the community seemed prosperous, but the basis of this prosperity was shaky, depending on newcomers' contributions. The everyday local economy was more often based on barter, with tithed church members investing excess income in the church.

Mormon religion spread throughout the region, but non-Mormons were also a significant part of the community. As the Saints' political and economic clout grew, tensions between Mormons and non-Mormons grew. Mormon power over local government seemed almost absolute. The city charter, though not particularly unusual for the time, granted Nauvoo a municipal court. Joseph Smith acted as mayor and also sat as the chief justice, while his city aldermen doubled as associate justices. Thus, Smith served as the mayor, head of the city council, and head of the local court simultaneously. Non-Mormons felt that this blending of government function was antirepublican and caused abuses of power. The existence of the militia, called the Nauvoo Legion, also contributed to the appearance of corruption, since it was commanded by Smith and enlisted about 5,000 Mormon members.

In his efforts to establish a secure settlement for his followers, Smith became an astute follower of state politics. He ably courted both Democrats and Whigs in his attempts to secure self-government and safety from persecution for the Saints. But as a voting bloc, the Mormons had little influence over the state legislature, and Smith resorted to vote-trading to achieve his goals. By 1843, even internal Nauvoo politics involved rowdy conflicts. The following year, many of these conflicts came to a head. Hoping to reestablish a political base, Smith announced his candidacy for president, but dissenting community members established an anti-Smith newspaper, the *Nauvoo Expositor*. After the publication of the first issue, Smith and the city council declared the *Expositor* to be “a public nuisance” and

Mormon temple in Nauvoo, Illinois, where Joseph Smith preached (*Library of Congress*)

ordered the press and all copies of the paper destroyed. As tempers flared, Smith mobilized the militia and declared martial law. The Illinois militia arrested Smith and his brother Hyrum, incarcerating them in the jail at Carthage, about 10 miles away. Soon thereafter, both brothers were killed by an armed mob. Six months later, the Illinois legislature revoked the city charter. The Nauvoo economy was also in trouble, as the boom town's financial conditions deflated and poverty began to rise.

By 1845, with the charter gone and an increase in religious infighting and anti-Mormon mob violence, BRIGHAM YOUNG and the Quorum of the Twelve Apostles began to plan a new westward migration. Plans were made to evacuate the church from Nauvoo just as Smith's cherished temple was near completion. The building was rushed so that the Saints could receive their temple endowments, the financial contributions that had made the edifice possible. In 1846, under the threat of violence, a majority of the Saints left Nauvoo and began their migration to what would become their permanent settlement in Utah. Even without the anti-Mormon violence, Nauvoo was in danger of collapsing economically, and moving on seemed the best way to save the Mormon Church.

After the departure of most of the Saints in 1846, the elaborate temple was vandalized by anti-Mormon mobs. In 1848, the building was heavily damaged by fire, and soon after, the remains were knocked down by a tornado. Although the Mormon settlement at Nauvoo failed, it was an important interlude in the history of the Mormons, providing a key case study of religiously based settlements on the American frontier in the 19th century.

### Negro Convention movement

The National Negro Convention, which first convened in 1830 under the leadership of Richard Allen (1760–1831), Methodist preacher and founder of the African Methodist Episcopal Church in 1816, was the most successful of three efforts by African-American leaders to form a grand coalition uniting all the major ideological factions in the black community. The Negro Convention, which met off and on from 1830 to 1864, was the most successful because it lasted longer than the subsequent ones in the 1930s and 1970s. The 1830 convention, like the subsequent ones, included proponents of all the major ideological tendencies in African-American politics: conservatives and radicals, integrationists and nationalists, nonviolent “moral suasionists” and advocates of violence. It also attracted the leading African Americans of the time, including Frederick Douglass, Martin Delany, and Henry Highland Garnet. While these diverse personalities and ideologies provided strength to the convention they were also a source of its weakness and its ultimate collapse, since differences over ideology made it difficult for this and other conventions to reach a consensus for a black agenda. Delany and his followers favored emigration and back-to-Africa movements. Douglass was a leader in the ABOLITION MOVEMENT who favored integrationism, and nonviolence, and moral suasion, while Garnet called for violent slave revolts.

In addition to these differences over ideology and strategy, there were other, continuing disagreements, including the controversy over what the race should be called—African, Colored American, Negro, Oppressed Americans; debates over the merits of building separate black-community institutions such as schools, newspapers, and businesses; and arguments over whether whites should be allowed to participate in the convention. (Whites were included for a time, but eventually the convention voted

to exclude them based on principles of black nationalism.) There were also class and institutional conflicts between the middle-class black establishment of ministers, teachers, and businesspeople who tended toward conservatism and integration; and the more radical, less well-off persons who tended toward extremism and emigration. In 1854, the radical emigrationists formed their own convention and began to develop plans for emigration to Haiti and other places outside of the United States. Douglass condemned the emigration convention as providing “proof to the enemies of the Negro that they were divided in thought and plans.” By 1854, the divisions were plain for all to see, and the Negro Convention could not surmount them. The convention therefore dissolved, although it reconvened one last time in 1864 after the Civil War in order to develop plans for Reconstruction.

—Robert Smith

### New Madrid earthquake

The most powerful earthquake ever recorded within the continental limits of the United States was generally referred to as the New Madrid earthquake, although there were really three separate earthquakes. The first, on December 15, 1811, in New Madrid County, Missouri, was followed by a second on January 23, 1812, and a third on February 7, 1812. Later scientific analysis estimated that the first and greatest of these earthquakes measured between 8.4 and 8.8 on the Richter Scale (the San Francisco earthquake of 1906 was 8.3). These three major earthquakes were followed by more than 1,800 aftershocks. The quakes occurred along the New Madrid fault line, some 40 miles wide and 200 miles in length, running from the Illinois-Missouri border to Memphis, Tennessee.

The physical changes to the landscape were dramatic. In the aftermath of the first quake (1811), the town of New Madrid dropped more than 10 feet, and the Mississippi River swept in to flood the town. In an instant, houses were crushed, forests disappeared, and the course of the river was changed. For several hours after the original earthquake, the river ran north in a temporary channel. After the quakes, river traffic on the most important artery of communication and trade in the West was suspended for several months. Only gradually did the north-south axis reassert itself.

The New Madrid earthquakes were a disaster of enormous proportions for those who lived near the floods.

Towns were evacuated as residents fled for their lives, a panic confirmed by the two later earthquakes and the hundreds of aftershocks. The greatest natural disaster of the age called for massive assistance at a time when federal and state/territorial governments were ill-equipped by experience or ideology to give such aid. Finally, in 1815, Congress passed a law that permitted residents of the stricken area to relocate to tracts of equal size in the public domain. It was an appropriate response in an age when federal lands were far more plentiful than federal monies. The New Madrid grants were part of a PUBLIC LAND POLICY that offered land grants for many worthy projects. Speculators hastened to the scene of the disaster, where they bought the entry permits at low prices. As a result, one of the federal government's first large-scale attempts to deal with a natural disaster ended in confusion over land titles and outrage on the part of many earthquake sufferers, now further victimized by unscrupulous land agents. In 1820, Congress passed a second law to disallow the claims transferred from the original victims to third parties, further confusing the issue.

### New Orleans, Battle of (January 8, 1815)

Although it took place after the TREATY OF GHENT (1814) officially ended the WAR OF 1812 (1812–15), the Battle of New Orleans gave the United States a clear victory over Great Britain and boosted American national pride. The battle also made the American commander, ANDREW JACKSON, a national hero.

After the defeat of Napoleon Bonaparte in 1814, the British turned their attention to the conflict in North America. The United States remained an enemy and was threatening to invade Canada. With its armies freed from commitments on the European continent, Britain could send its best men to America. Their plan was to invade Louisiana, capture New Orleans, and march up the Mississippi Valley to link up with another force coming south from Canada. The British expected to get help from the NATIVE AMERICANS in the Southeast, particularly the Creek and the Seminole. After the disastrous performance of the American forces outside Washington, D.C., earlier that year, it seemed certain that veteran British troops would easily defeat the U.S. forces.

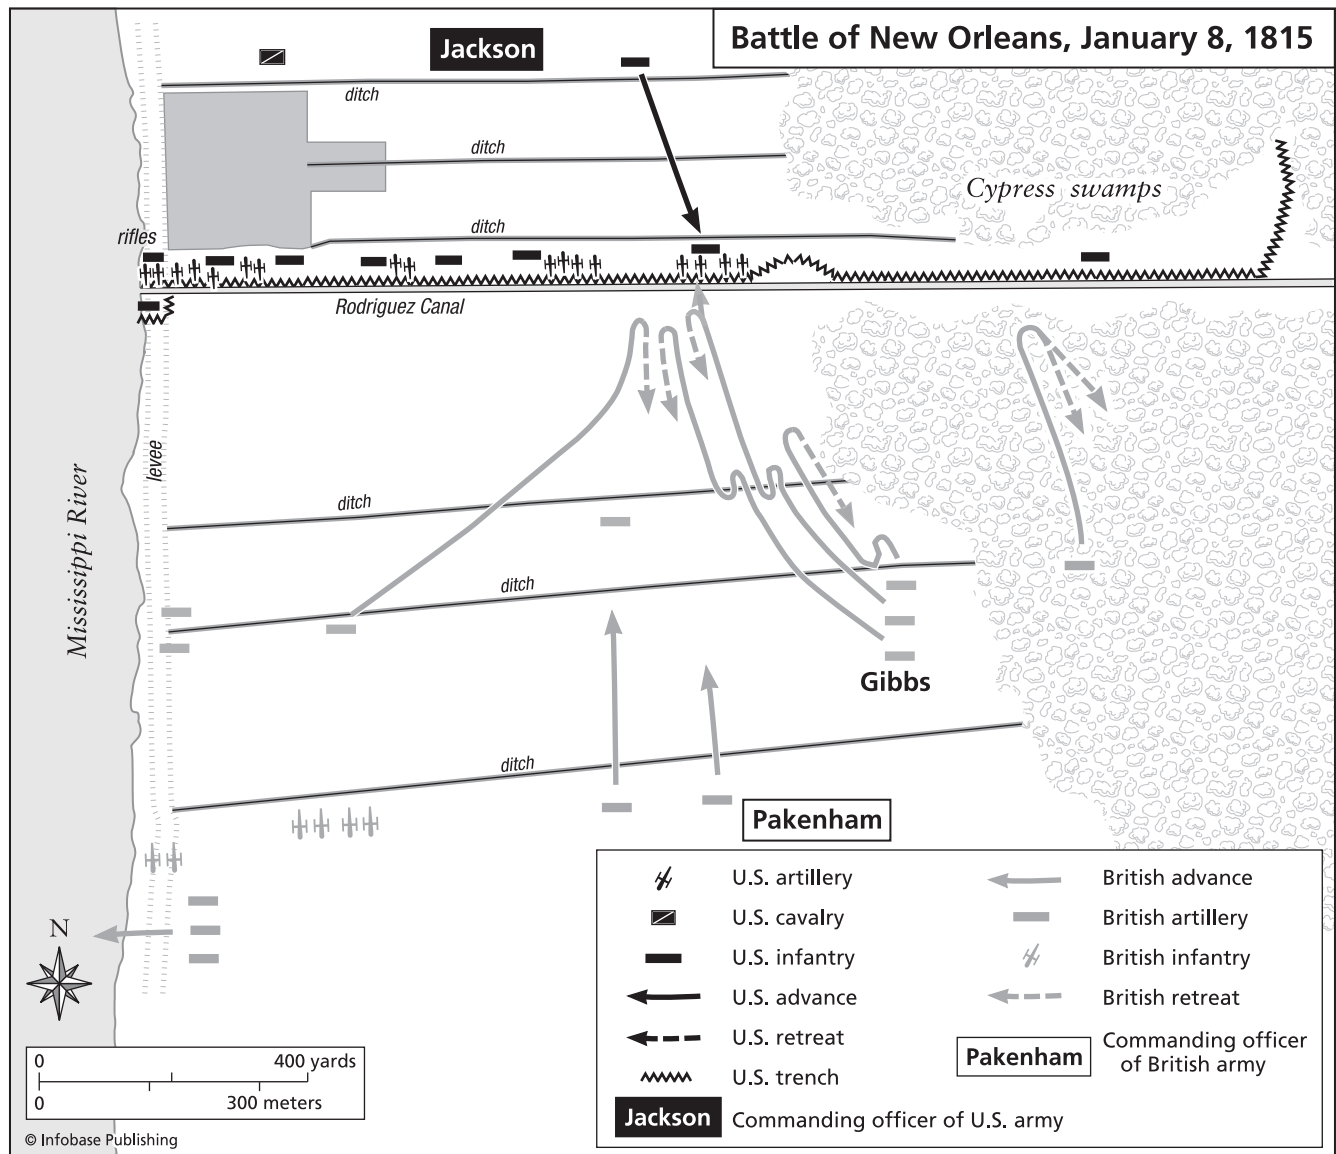

However, General Jackson's men were not raw militia. He gathered a collection of Kentucky and Tennessee

volunteers, experienced soldiers with several years of hard fighting against the Creek and Shawnee to their credit; a regiment of the regular army; pirates under JEAN LAFITTE; some armed slaves; and a band of Choctaw warriors led by the great chief Pushmataha. Although most of Jackson's men did not wear splendid uniforms or perform parade ground drills as well as the British, they were crack shots with their long-range rifles. The English and Scottish regiments, who fought with smoothbore muskets effective only for short distances, counted on discipline and the cold steel of their bayonets.

The British commander, General Edward Pakenham, landed more than 8,000 troops a few miles east of New Orleans in late December 1814. Jackson drew his 4,000 men into an entrenched line between the British and the

town of New Orleans on the grounds of Chalmette Plantation. The Mississippi River guarded one side of the position, while the other flank ended in a dense swamp where the Choctaw waited to stop any British soldiers from marching around the line.

After a few skirmishes and an artillery duel, Pakenham launched his main attack on January 8. Regiment after regiment marched forward in perfect ranks. The Americans waited for them behind their fortifications. Cannon balls tore huge gaps in the British ranks, and well-aimed volleys of rifle fire shattered their formations. In a few hours, thousands of British soldiers, including Pakenham, were dead or wounded. When the smoke cleared, it was apparent that the Americans had won a great victory at a very small price. The British suffered between 2,100 and 2,600

killed, wounded, and captured. Only 55 Americans died, with another 278 wounded or missing. A few days later, the British slipped back to their fleet. The United States could now feel that they had defeated their old enemy at last.

## Nullification Controversy

Nullification, in U.S. history, refers to the concept that a state may reject or ignore a federal law or regulation, refusing to allow its enforcement upon its citizens or within its boundaries. In the early decades of the United States, when the federal government and the states were in a continuing battle over sovereignty and power, nullification was central to the arguments of states'-rights advocates. Many of the nation's founders, fearful of tyranny and recognizing the need to check federal power, believed that nullification by the states could be a legitimate way of keeping the government in bounds.

The right of nullification took on significance when the new federal government provided for by the Constitution (drafted 1787, ratified 1789) supplanted the weak, ineffective structure mandated by the Articles of Confederation. Among its leading early proponents were James Madison and Thomas Jefferson, who asserted a state's right to nullify onerous or offensive federal laws in the Kentucky and Virginia resolutions of 1798 and 1799.

At times, nullification movements might be used by officials in the federal government itself to achieve controversial or contested political ends. In 1828, for example, the Georgia state legislature voted to take control of Cherokee tribal lands within the state, directly contravening several federal treaties that guaranteed the territory to the Cherokee. But the land had become extremely attractive to white settlers, since the Cherokee had adopted modern farming methods with great success, and gold had been discovered within the tribal lands in 1827. President ANDREW JACKSON was vigorously pursuing the policy of Indian removal, the frequently forcible moving of Native peoples from their traditional homelands in the eastern states to newly carved reservations west of the Mississippi River. The Cherokee were literate and increasingly assimilated; they had more allies in white society than did most nations, and they were stubbornly resistant to removal. Georgia's action, even though it nullified federal policy, coincided neatly with

Jackson's own aims, and so he refused to enforce the federal law. Even when the U.S. Supreme Court ruled against Georgia in the matter in 1832, Jackson would not intervene. "[Chief Justice] John Marshall has made his decision," he reportedly said, "now let him enforce it." Georgia parceled the Cherokee lands to white settlers, and the Cherokee were left with little choice but to leave their homeland. Thus, nullification led directly to the enforced removal known as the TRAIL OF TEARS.

The event widely known as the Nullification Controversy occurred in 1832. By this time, the nation was in the throes of continuous change. Industrialization had begun, international and domestic trade was expanding, and the business of individual states was becoming more and more intertwined. Legislators and opinion makers, particularly in the business-oriented northern states, clamored for increased federal power and protections. As the northern states were growing rapidly in population, they had begun to outstrip the South in political representation. In response to this outcry and this political influence, the U.S. Congress passed protective tariffs in 1828 and 1832, giving domestic manufactured products further protection from foreign competition. Of course, the lack of competition meant that southern consumers would often pay higher prices.

This federal intervention, so valued by northern business owners, was anathema to southern agriculturalists. The tariffs at once raised consumer prices of finished goods and depressed the value of cotton and other raw materials produced by southern farms. Southern legislators, aware that the old plantation system was a delicately balanced financial proposition even at the best of times, feared that tariffs would mean its doom. They were also concerned at what they regarded as the blatant economic favoritism made possible by increasing northern political strength, numbers would only grow in the future. Mobilized over what they regarded as a matter of principle, they loudly protested the new fees.

South Carolina's reaction went beyond protest. In November 1832, led by U.S. senator JOHN C. CALHOUN, Governor James Hamilton, Jr., and Robert Barnwell Rheet, the state called a special convention on the tariff matter. Calhoun published two papers in support of his position. The first reaffirmed and analyzed the doctrine of the concurrent majority, by which such divisive issues had to be approved by majorities from each section of the Union, not simply enacted through the majority representation of one section. The second argued that nullification was a legitimate means of redress for acts directed against a state, a means fully recognized by the Constitution. When the convention met in November 1832, the nullifiers (as they were called) were in a decisive majority. They quickly passed an ordinance nullifying the tariff acts of 1828 and 1832. The ordinance prohibited the federal government from collect-

ing tariff duties within the State of South Carolina after February 1, 1833. Furthermore, the ordinance mandated a test oath from all state officeholders to uphold the doctrine of nullification, and it forbade any appeal to the U.S. Supreme Court. Finally, if the federal government used military measures in an attempt to enforce the law, this use would be grounds for secession from the Union. The state legislature then passed laws to provide for raising an armed force and appropriating monies to defend the state against attack by the federal government.

President Jackson's reaction to South Carolina's nullification was as furious as his response to Georgia's had been passive. He denounced the convention's ordinance as treasonous, spurring some South Carolinians to speak openly of secession. While he urged Congress to lower the tariff, Jackson ordered the secretary of war to alert the federal forts in Charleston Harbor to defend themselves. He issued a "Proclamation to the People of South Carolina" in which he characterized nullification as an "impractical absurdity." He went on to assert in clear and direct terms the absolute supremacy of the indivisible federal government. Accordingly, no state could refuse to obey a law of the land and no state would leave the Union. To pursue disunion by armed force was "treason." It was a powerful statement. Jackson also persuaded the U.S. Congress to pass a force bill that would let the government use military action to collect the tariff in the port of Charleston. The debate over the bill produced a notable debate between Calhoun and Senator DANIEL WEBSTER on the nation and the rights of states.

South Carolina replied to Jackson's proclamation with defiance as the legislature adopted a series of hostile resolu-

tions. The new governor, Robert Y. Hayne, called for a convocation of southern states to consider relations between states and the federal government. Responses from the state legislatures generally condemned nullification and refused to consider secession. South Carolina would have to pursue its defiant course alone. While Jackson assumed a strong public posture in defense of federal authority and the Union, he privately reached out to southerners through Kentucky senator HENRY CLAY. With Jackson's support, Clay engineered the Compromise Tariff of 1833 to resolve the matter. When South Carolina learned of the forthcoming tariff compromise, the state suspended its implementation of the nullification ordinance and accepted the reduced tariff rates. Thus the most serious states-rights crisis in the history of the nation was resolved. In order to have the last word on matters of principle, though, the state of South Carolina adopted an ordinance nullifying the Force Bill.

The Nullification Controversy was a forerunner of the crisis over the balance of power between the federal government and individual states that would later lead to a secession movement by South Carolina in December 1860. No compromise would be forthcoming this time, and the state's secession would be followed by others, the establishment of the Confederate States of America, and four years of civil war.

## Oregon Trail

From the 1840s to the 1870s, the Oregon Trail was the primary westward route for some 200,000 Americans seeking new lives and opportunities in the West. The trail was generally considered to have begun in Independence, Missouri and ended in Oregon City, Oregon, with a length of about 2,000 miles. In practice, however, emigrants on the trail could join it at any of a number of “jumping-off points,” including St. Joseph, Missouri, and Council Bluffs, Iowa. They could also leave the trail to reach individual destinations in Utah, CALIFORNIA, and other spots in the western territories. Since so many settlers used the trail network to get to places other than Oregon, the Oregon Trail is sometimes called the Great Platte River Road, after the river it parallels for much of its length.

Much of the Oregon Trail incorporated routes that had for centuries been used by NATIVE AMERICANS for trade and communications. Other portions were blazed by French and British trappers in an area that had long been a matter of dispute between France and England. Once the United States asserted its own claims to the Oregon Territory, exploration became more systematic. After Thomas Jefferson purchased the Louisiana Territory from the French in 1803, one of his first acts was to dispatch an expedition to explore the vast region. Commanded by Meriwether Lewis and William Clark, the expedition followed rivers and mountain passes to reach the coast of the Pacific Ocean. Their return to St. Louis after 28 months (1804–06) marked the first official exploration of the region by the U.S. government. Within a few short years, American fur traders began moving over the same landscape. The most important of these early fur-trade parties were the overland and seagoing expeditions financed by JOHN JACOB ASTOR, whose employees founded the post of ASTORIA at the mouth of the COLUMBIA RIVER. Over the next 20 years, MOUNTAIN MEN, or independent trappers and traders, explored the region in search of furs, in the process blazing several shortcuts and alternate routes to the West.

In the 1830s the continuing dispute with the British over the ownership of the Oregon Country combined with the activities of Protestant missionaries in the region raised public awareness of Oregon. Adding to information about the routes west were exploring parties sent by the U.S. government. The most important of these was commanded by JOHN C. FRÉMONT, whose 1843 expedition generated favorable publicity for the Oregon Country as a place for settlement. Furthermore, Frémont’s report provided for a precise and accurate description of an overland route to Oregon for the first time. His report became the first handbook for immigrants.

The first overland migration of farming families to Oregon took place in spring 1842. Annual migrations followed, with ever-rising numbers. The route was soon known as the Oregon Trail, although the discovery of gold in California in 1848 led to the large immigration of FORTY-NINERS the following year along a variation known as the CALIFORNIA TRAIL.

Beginning in Independence or St. Joseph, the Oregon Trail first followed the Platte River to the west, crossing the river at several points. The first major landmark on the trek was FORT LARAMIE, some 665 miles from the starting point, where travelers paused for rest and resupply. Here too they sent mail to their families in the East and exchanged their fatigued draft animals for fresh stock, at a high price. Once more on the trail, immigrant parties followed the North Platte to the Sweetwater River, and thence by this river to SOUTH PASS. The pass was the level and gradual gateway across the Continental Divide to the interior of the continent. South Pass was about 950 miles from Independence, and it approximately marked the midway point in the overland voyage. Another 100 miles, and the trail came to Fort Bridger, where it turned northwest toward Fort Hall on the Snake River. Pioneers then trekked along the Snake to the valley of the Grande Ronde River, and then across the Blue Mountains to the Columbia River. The trail down the Columbia to FORT VANCOUVER was the

final stage. After reaching the fort, where they might be welcomed by JOHN MCLOUGHLIN, most of the pioneers traveled south down the Willamette River to the growing agricultural settlements around the Protestant missions.

Initially, the Oregon Trail was difficult to follow, and an experienced guide was a necessity. Within a few years, however, settlers could practically follow the wheel ruts carved by their predecessors' wagons all the way to the Pacific. (These marks can still be seen in places today.) Most emigrants used the Oregon Trail to bring west their entire families and all that they owned, and a special transport system accommodated their needs. The Conestoga wagon, or "prairie schooner," was the method of choice. This was a canvas-covered wooden wagon with a concave bottom, the better to retain its cargo on the bumpy, rutted route. The wagon had to be packed with six months' worth of provisions for each family, along with their tents, blankets, tools, clothing, and all their possessions. The immigrants typically walked the entire way so as not to burden the oxen or mules.

Travel over the Oregon Trail was, in many respects, routine. In confronting the challenges of the western half of the continent, however, the immigrants had to exercise care and judgment. There were few places to find help. To begin with, the travel window was limited. Parties had to depart Independence in May, after grass had begun to appear on the prairie, to support the livestock. They also had to cross the Blue Mountains before the first blizzards of October closed the mountain passes. Therefore the pace on the trail had to be continuous, since the wagon trains could count on only five months to make the journey. Foremost among the priorities was management of the draft animals, and ensuring their continuing health meant that the party needed to travel as lightly as possible.

The great popular danger of the Oregon Trail was always assumed to be Native Americans, but in fact Indian attacks on wagon trains were rare, despite the settlers' fears. Some of the Native peoples along the Oregon Trail saw trade opportunities in the newcomers' arrival; others were disturbed by the influx of white settlers in their lands, especially as their numbers grew. But for the overland immigrants on the Oregon Trail, a far greater danger than Indians was disease, for the exhausting trip left migrants vulnerable to many illnesses. Cholera was a particular danger, and epidemics on the trail in some years led to deaths from disease for several weeks after departure. Indeed, given the health dangers associated with river towns, the emigrants probably increased their chances of survival once they had left the towns and were on the trail west.

After 1869, when the Union Pacific Railroad completed its transcontinental line, the Oregon Trail began to fall into disuse. Any settler who could afford it preferred the ease and comfort of a two-week rail journey to a six-

month wagon trek. But for the less well-off, the Oregon Trail remained a viable route to the west even into the early part of the 20th century.

## Oregon Treaty of 1846

The Oregon Treaty of 1846 settled the boundary between British and American claims in the Pacific Northwest. In agreeing on this boundary, which had been unclear since the Louisiana Purchase in 1803, the United States avoided a war with Great Britain at the same time that it was approaching war with Mexico following the annexation of TEXAS in 1845.

Lying between the Rocky Mountains and the Pacific Ocean, the Oregon Country was bounded to the south by Spanish-controlled CALIFORNIA and to the north by Russian-controlled Alaska. In 1819, the ADAMS-ONÍS TREATY established the southern boundary of the U.S. claim on the West Coast at the 42nd parallel (the present-day southern boundary of the state of Oregon), and an 1824 treaty established the border between the U.S. claim in Oregon and Alaska at the line of 54 degrees, 40 minutes (the southernmost point in present-day Alaska) in the north. The other contender for supremacy in Oregon was the British in Canada, with the result that the border between U.S. and British claims required almost 30 years to resolve.

The primary disputed area lay between the COLUMBIA RIVER in the south and the 49th parallel in the north, a region that contained valuable forests, fur-trapping areas, and ports on Puget Sound. The Convention of 1818, which established the 49th parallel as the border between the United States and Canada from the Lake of the Woods (in northern Minnesota) west to the Rocky Mountains, failed to resolve the disputed Oregon boundary. The American negotiator, Richard Rush and Albert Gallatin, were willing simply to extend the line at the 49th parallel to the Pacific Ocean as the Oregon boundary. But the British contingent balked, preferring a boundary following the Columbia River from its mouth to the 49th parallel, then the 49th parallel for the remaining portion of the boundary, leaving the Columbia entirely under British control. Neither side felt much urgency about the Oregon issue in 1818, how-

ever. Few American settlers moved to the area at that time, partly because the Lewis and Clark Expedition (1804–06) had reported the territory inhospitable. Furthermore, the British North West Company controlled the fur trade in Oregon, having bought out JOHN JACOB ASTOR's interests in 1813; the North West Company would itself merge with the Hudson's Bay Company in 1821. Accordingly, the negotiators in 1818 agreed to a 10-year, joint American-British occupation of Oregon. As that agreement neared expiration in 1828, the two countries agreed to an indefinite extension of joint control, which could be terminated by either nation with one-year's notice to the other.

In subsequent years, various attempts failed to settle the issue permanently. The United States continued to offer the 49th parallel as a compromise border; the British continued to insist on the Columbia River, sweetening the deal by offering the United States a detached piece of territory on the Olympian peninsula, giving the Americans access to harbors in Puget Sound. However, by the 1840s, conditions had changed, requiring a long-term solution. Most important, several thousand American settlers had made homes in the Willamette Valley south of the Columbia River. This was territory the British never claimed, but clearly it was only a matter of time before American settlers in large numbers crossed into the disputed area. The negotiations that produced the 1842 WEBSTER-ASHBURTON TREATY, which settled other disputed borders between the United States and Canada, made little headway on the Oregon issue. Rumors that DANIEL WEBSTER had offered to trade northern Oregon in exchange for British pressure on Spain to surrender California to the United States caused a firestorm of criticism in the West, where many people believed the Americans should take both California and all of Oregon. The 1840s witnessed the flourishing of ideas of MANIFEST DESTINY, which in its most extreme form asserted that the United States had a divine right to possess the entire North American continent.

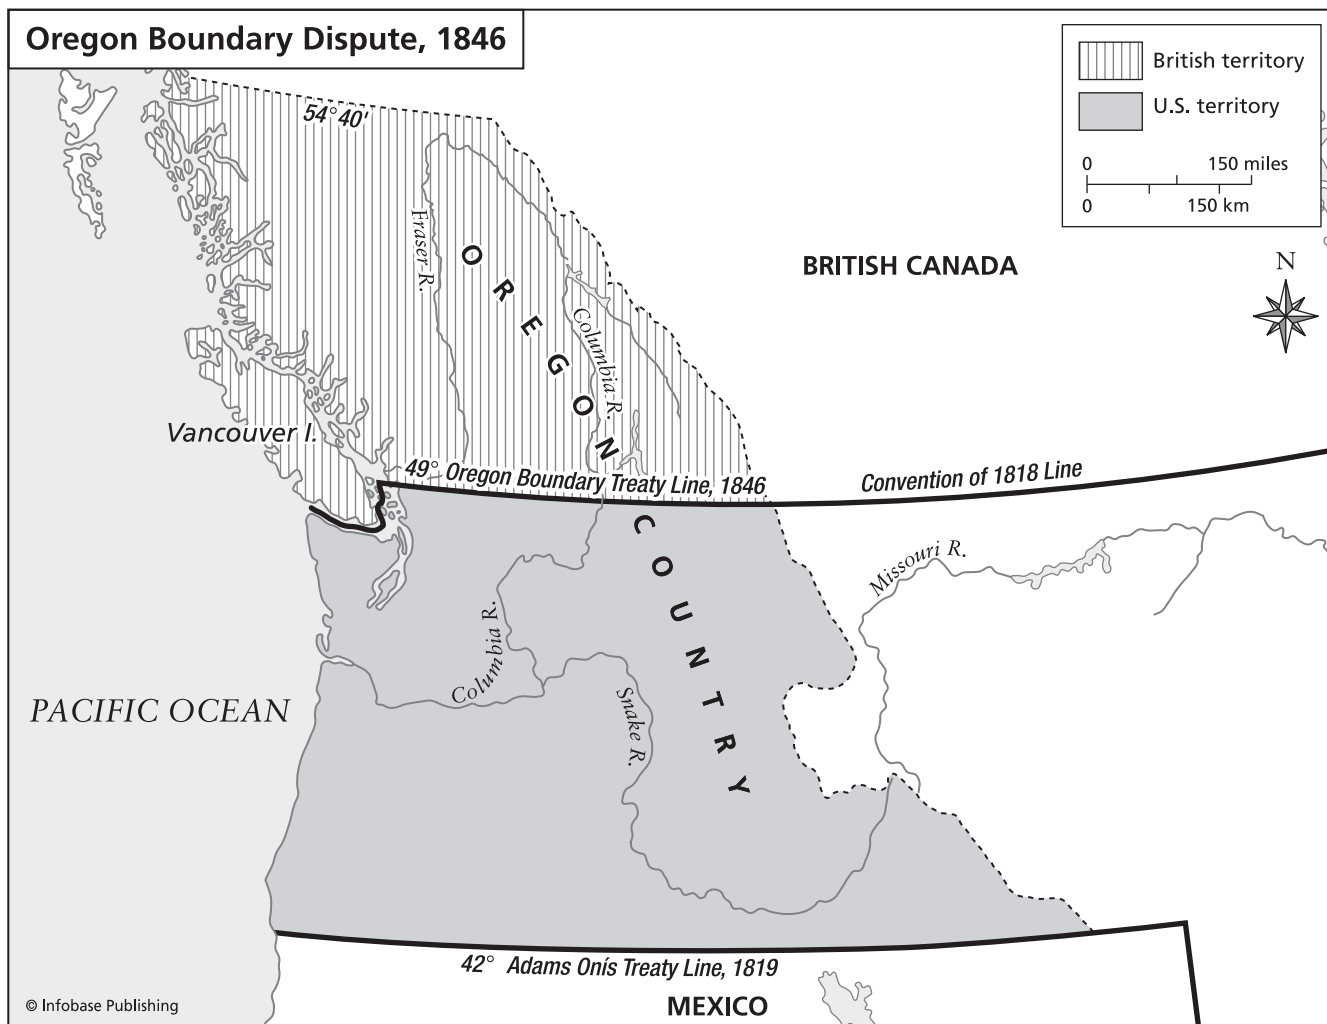

Oregon then became one of the important issues in the presidential election of 1844, an election largely contested over questions of expansion. Texas was the most important such question, and former president MARTIN VAN BUREN was denied the Democratic nomination because he opposed annexation of Texas. The nomination instead went to JAMES K. POLK, who ran on a platform favoring both Texas annexation and taking all of Oregon. The WHIG PARTY and its candidate, HENRY CLAY, were considered generally opposed to expansion, especially in Texas. Expansionists therefore considered Polk's electoral victory to be a mandate for their ideas. Following the election, Senator William "Foghorn Bill" Allen of Ohio coined the phrase "fifty-four forty or fight" to describe U.S. policy in Oregon. In essence, Allen asserted that the

United States would go to war rather than surrender any of Oregon to the British. Senators from other western states joined Allen to press Polk to secure all of Oregon by whatever means necessary.

Despite Polk's apparent support for the most belligerent position, upon taking office he directed his secretary of state, James Buchanan, to offer the British the same compromise Americans had been offering since 1818, namely a border to the Pacific at the 49th parallel. When the British again rejected this idea, Polk withdrew the offer and asked Congress to approve the necessary one-year's notice that the United States was terminating joint occupation and preparing to assert its claim to all of Oregon. In the meantime, the settlers in Oregon had established a provisional government and petitioned the United States to take control of the territory; the document creating the provisional government specified that it would expire as soon as U.S. authority was established over the territory. Polk knew, however, that opponents of the "fifty-four forty" position controlled the Senate. Southern Democrats had lost interest in Oregon after the annexation and subsequent admission of Texas as a state before the end of 1845. They no longer had anything to gain by supporting the extreme position in Oregon, and together with the less expansionist Whigs in the Senate, they could block any action on Oregon they did not like. With a fight brewing with Mexico, moreover, both southern senators and the president wished to avoid a simultaneous fight with Great Britain over Oregon. Hence, Polk left the door open for compromise, conveying to the British his willingness to submit any reasonable treaty for Senate approval and to accept any treaty that could gain the Senate's consent.

For their own reasons, the British were ready for a compromise by 1846. For one thing, the strong nationalism and belligerency expressed during and after the 1844 presidential campaign concerned the British government, which wanted to improve relations. With the Polk administration committed to lowering American tariffs and the Corn Laws limiting food imports in the United Kingdom about to be repealed, Britain sensed opportunities for increased trade that would be disrupted if the Oregon issue came to a crisis point. Further, the fur trade in Oregon had declined substantially, and for that reason and because of increased friction with settlers south of the Columbia River, the Hudson's Bay Company had moved its headquarters northward to Vancouver Island and out of the most hotly disputed area between the Columbia and the 49th parallel. Finally, the British foreign secretary, Lord Aberdeen, believed Oregon to be of little value to England and convinced Prime Minister Robert Peel that compromise was in Britain's interest. Aberdeen thus offered to extend the boundary at the 49th parallel to Puget Sound and thence around the southern end of Vancouver Island to the Pacific Ocean, giving the

British control over all of Vancouver Island. Aberdeen also insisted on protection for the property rights of the Hudson's Bay Company and other British subjects in the ceded territory and free navigation of the Columbia River to its mouth.

Though Polk personally rejected the last provision, he submitted the British proposal to the Senate. The Senate approved, and a formal treaty was soon negotiated and ratified by the Senate. The Oregon Treaty became official on August 5, 1846. Polk thus successfully resolved the last outstanding border disagreement with the British in Canada, even though his methods might be considered somewhat clumsy. By initially appearing to support the “fifty-four forty or fight” position, he raised the stakes in Oregon by encouraging extremists in the United States and almost provoking a war with Great Britain. On the other hand, it might also be argued that by raising the stakes, Polk focused British attention on the need to reach a final resolution of the Oregon question. In this view,

Polk's diplomacy appears less clumsy than shrewd. While making a show of belligerency in public, behind the scenes he promoted compromise by encouraging the British to make an offer he could get past the United States Senate. In the end, the compromise reached was almost precisely the position the United States had maintained since 1818, minus only the southern tip of Vancouver Island. And with the Oregon dispute settled, the United States could direct its martial resources undividedly to the war with Mexico on its southern border.

**Osceola** (ca. 1804–1838) *leader in the Second Seminole War*

The Seminole chief Osceola was an influential leader of the SECOND SEMINOLE WAR. Osceola was probably born around 1804 along the Tallapoosa River on the Georgia-Alabama border, a part of the Lower Creek nation. This group had been under duress in the face of white encroachment, and some members had relocated to Florida in concert with escaped African-American slaves, both to become part of the related SEMINOLE Nation. Little is known of his youth, but Osceola's name is most likely a corruption of the phrase *asi yohola* ("black drink crier"), a term with religious connotations.

Osceola apparently matured into a fine warrior with a commanding presence, and around 1832 he was recognized as a *tustenugge*, or war chief. In this capacity, Osceola railed against the continuing loss of land to the United States. Two years earlier Congress had approved the Indian Removal Bill, which ordered the forced relocation of NATIVE AMERICANS across the Mississippi River to new homes in Arkansas. But the bill violated an earlier treaty

signed in 1823, which granted the Indians the right to existing lands until 1832. Moreover, that year the government forced tribal elders to conclude the Treaty of Payne's Landing, whereby the Seminole were to surrender all their holdings in Florida and move to Arkansas. It also stipulated the surrender of all African-American refugees who had since been absorbed into the tribe. Because one of Osceola's two wives was a mulatto he refused to comply. In 1833 Indian Agent Wiley Thompson arrived in Florida with the Treaty of Fort Gibson, intending to enforce earlier agreements. In response Osceola reputedly drew his knife and stabbed the parchment in defiance of the Americans. He was then arrested and held in shackles for several days until, feigning a change of heart, he was released.

Once free, Osceola made immediate preparations for war. On December 28, 1835, he attacked the Indian Agency at Fort King, killing Thompson, while other Seminole massacred the army patrol of Major Francis L. Dade near Wahoo Swamp. This violence precipitated the Second Seminole War (1835–42), one of the costliest guerrilla conflicts ever waged by the United States. For seven years the Americans dispatched thousands of troops and militia and fought skirmishes large and small, but they failed to awe the Indians into surrendering. Osceola, for his part, was tricked into a parley by General Thomas S. Jesup and then treacherously captured on October 21, 1837. He was then transported to Fort Moultrie, South Carolina, where he was imprisoned and his portrait painted by GEORGE CATLIN. Despite public outrage over the manner in which the chief was taken, Osceola remained behind bars and died there of illness on January 30, 1838. He was buried with full military honors.

Despite Osceola's death, his Seminole compatriots waged an incessant partisan war until 1842, when a truce was signed. At that time the exhausted tribesmen decided to allow the government to deport 3,000 of their number to new homes in Arkansas. But at least 300 holdouts, inspired by Osceola's example, defiantly refused. The fact that Seminole still reside in Florida to this day is his greatest legacy.

**overland mail**

As settlement in the Far West increased in the years following the MEXICAN-AMERICAN WAR, Americans began

to call for a regular mail service to the Pacific Coast. In 1857, Congress authorized the creation of an overland mail service, run by private joint stock companies but subsidized by the federal government. The first of these companies, the Overland Mail Company, was founded by individuals already financially connected to express mail companies such as American; National; and Wells, Fargo and Company.

The postmaster general determined the two starting points that would be used for the transcontinental mail service. Routes leading from Memphis and St. Louis would meet at Fort Smith, Arkansas, where the route would extend through Texas, Arizona, Los Angeles, and San Francisco. The service along this route was supposed to be semiweekly, with the round-trip completed in 25 days. This southern route was over 2,500 miles long. Before any mail service could commence, the entire route needed to be surveyed and the road conditions improved. The company needed to position way stations along the route, buy and transport Concord stagecoaches, and stock the route with supplies and horses. Preparing the route took over a year. The first stagecoaches departed in September 1858, successfully completing the journey in only 21 days.

Soon the procedure for transporting people and mail along the line was firmly in place. The company maintained the route very efficiently in the more settled areas but required help from station guards in isolated stretches where Indians were a threat. The road was much rougher in the isolated areas as well, making stagecoach travel a jarring, unpleasant experience. Coaches could carry nine passengers inside, plus a few riding on the outside with the drivers. Mail was stored in the rear of the coach and on top. Passengers who wanted a break from the jolting coach could stop at way stations, some of which had bunks for sleeping. For many passengers, the possibility for stopping did not make up for the poor toilet facilities, overpriced food, and occasionally drunk drivers.

Customers and other commentators complained even more forcefully about the company's inadequate, circuitous route. Critics supported the construction of a new central route that would lead west from Missouri, through Denver, Utah, and on to CALIFORNIA. The Pony Express Company was created by backers of this new route, who promoted its greater speed and efficiency. Conflicts between Wells, Fargo representatives and Overland Mail Company president John Butterfield prevented the Overland Mail Com-

The overland mail starts from the East. Wood engraving from Leslie's Illustrated Newspaper, October 23, 1858 (Hulton/Archive)

pany from establishing a competing express service along the new central route. The company was reorganized in 1860 with Wells, Fargo shareholders occupying most of the seats on the board of directors.

Conflicts over which route to use were rendered moot with the beginning of the Civil War (1861–65). Because Texas was part of the Confederacy, overland mail operations had to be relocated to the central route. A new contract was awarded in 1861, granting both Pony Express service and stagecoach service to the Overland Mail Company. The company continued as sole operator of the line until 1864, when the contract was divided again between Overland Mail and the Holladay Overland Stage Company. Under the terms of the 1864 contract, only first-class mail and passengers would be carried overland, with newspapers and other documents transported by the much-longer sea route to California. Ownership of the line changed again in 1866, with Wells, Fargo assuming the control of all mail and transport operations in the West.

Stage travel to the West continued to be profitable until the completion of the transcontinental railroad in May 1869. The Wells, Fargo mail contract was canceled with the completion of the railroad line, thus ending the era of the Overland Mail Company. Stage travel continued to be viable for shorter trips for several years, but it eventually died out as railroads flourished. Until this point, the overland mail operation served as a key channel for communication, transport, and settlement across the continent.

**Owen, Robert** (1771–1858) *industrialist, social reformer*

An industrialist and social reformer known for his radical and unorthodox views of society, Robert Owen was born in Newtown, Wales, on May 14, 1771. Although he attended local schools only through the age of nine, he was nonetheless bright and inquisitive and reputedly borrowed and read a book a day. At the age of 10, Owen left home for Manchester to work in a textile store. By 1791, Britain's Industrial Revolution was starting to develop, and Owen was eager to play his part. That year, despite his youth, Owen became a partner in a small cotton mill. Shortly after, he was hired as the manager of a large cotton-spinning factory. An excellent organizer, his mill became renowned for high-quality work, and in 1795 he advanced to serve as manager and co-owner of the large Chorlton Twist Com-

pany. The owner was so pleased by his performance that he offered the 24-year-old Owen annual salary increases and a share of the profits.

In 1799 Owen married the daughter of industrialist David Dale and acquired his factories in New Lanark, Scotland. His wealth and position were now secure, but he became very aware of the dislocation and hardships occasioned by industrialization. Having now acquired the wherewithal, he was determined to address them personally. While at Lanark, he singlehandedly instituted wide-reaching reforms to ameliorate the usually horrid living and working conditions associated with the mills. Long hours and monotonous tasks created great unhappiness and a concomitant rise in alcoholism. Owen countered the drudgery with higher wages, better sanitation, and mandatory temperance. He also invested large sums of money in improving the housing situation for workers and providing schools for their children. Further, he purchased supplies in bulk and sold them to his miniature communities at very reduced prices. Consequently, the happy, healthy workforce at Lanark became one of the most productive in all of Britain. Owen had proved beyond all doubt that contented workers enhanced productivity.

In 1806 when his mills temporarily closed due to the American embargo, Owen furthered his reputation for benevolence by continuing to pay out wages. In 1813, he printed a pamphlet entitled *A New View of Society*, which called for all surplus profit to be spent for the benefit of workers and their children. His political influence crested with the passage of the 1819 Factory Act, which mandated improved working conditions, forbade children younger than 10 from working, and strictly regulated the hours of those under 18.

Owen's reforms garnered him international fame, but his influence as a reformer was marred by a number of radical, seemingly anti-institutional ideas, which were enunciated to promote his vision of a perfect, utopian society. Foremost among them was a determined attack on the existence of organized religion that basically gutted his credibility as a reformer. He also strongly believed that poverty could be eradicated by concentrating the poor in small, self-sustaining villages based on agriculture. For such a strategy to succeed, he insisted, cooperation would have to supplant competition as a guiding human principle. In 1825, Owen acted out his beliefs by purchasing the settlement of New Harmony, Indiana, which he stocked with 900 followers. This was intended as a nonreligious, socialist community but, despite the best of intentions and investment of most of his personal fortune, the experiment failed and closed in 1828. Owen tried implementing a similar scheme in Mexico that year before political instability convinced him to return to England.

Owen returned home somewhat dejected, but he remained a vocal advocate of utopian socialism. Ever attentive to the needs of workers, he was active in the establishment of the Grand National Consolidated Trades Union in 1833, which enjoyed half a million members. He also came to openly promote atheism and oppose the institution of marriage. By 1854, Owen had converted to spiritualism, which placed him even further on the fringes of the reform movement. He died in Newtown on November 17, 1858, a leading pioneer of social reform. Owen's efforts were beset by a tendency toward radicalism that alienated political support, but he functioned simultaneously as one of INDUSTRIALIZATION's greatest practitioners and its most strident critic. His pioneering views subsequently became the basis for socialist and cooperative ideologies of the later 19th century.

### panic of 1819

The panic of 1819 is generally considered to be the first major economic depression in the United States, although there had been some distress associated with the Embargo of 1807. After the WAR OF 1812, which the nation had survived intact and independent, there was a burst of patriotism and optimism. The United States enjoyed a postwar economic boom, as farmers sold more of their goods on the world market and trade with Europe opened up after the end of the Napoleonic Wars.

The PUBLIC LAND POLICY helped to fuel this boom as well. Under the Public Land Act of 1800, the federal government has been very generous in extending credit. In the South, many plantation owners left the exhausted soil of the Southeast for fertile lands in Mississippi and Alabama, where they hoped to grow cotton. Cotton prices had risen in these new southern states, and planters paid exorbitant prices for uncleared land in the expectation that prices would remain high. In the western United States, there was much speculation in public lands, as Americans were interested in developing their country but for the most part lacked the capital to do so. In response, many banks, both state and unchartered, sprang into existence. These “wildcat” banks fed the expansionist frenzy by printing enormous amounts of paper money. Western banks were often especially reckless in this regard. As the number of banks grew, so did prices, particularly that of real estate. Much of this apparently booming economy, however, was supported only by paper currency, without much hard currency, or specie, to support it.

Many individuals and businesses fell into heavy debt due to the mania for expansion and growth. For example, in 1819, \$22 million was owed to the federal government for debts on public lands. A good number of debtors also owed money to the unregulated wildcat banks. The boom fueled by cheap land, high commodity prices, and easy credit suddenly burst in 1819; one trigger was a collapse in world commodity prices. Part of the problem was that the SECOND

BANK OF THE UNITED STATES, which had been chartered in 1816, called in specie from various state banks; those banks could not meet the demands, and thus hard currency dried up. In addition, in 1819, the U.S. Supreme Court, led by Chief Justice John Marshall, ruled that states could not tax the Bank of the United States, which was declared to be constitutional and of more immediate concern. This decision placed further strain on the financial health of the states. Some critics of the bank went so far as to accuse it of causing the panic of 1819, which is an exaggeration, although it did little to rein in irresponsible state and local banks that contributed to the panic by their liberal lending of paper money. The bank at this point concerned itself primarily with its own financial well-being and was more interested in making profits for its stockholders than it was in regulating the dangerous practices of reckless banks.

As the crisis deepened, much overseas trade and economic growth at home came to a halt. The collapse of wheat prices hurt farmers everywhere. Wheat had sold in some regions for \$2.41 a bushel in 1817; four years later, it was getting only 88 cents on the open market. The downturn in prices often made it impossible for indebted farmers to pay off their obligations, and many of them lost their land to the banks. Much economic suffering was also felt in urban areas. Philadelphia, the nation’s second largest city, had 75 percent of its people out of work, according to one estimate; nearly 2,000 of its citizens were put in jail for debt. Some cities and towns across the country actually lost population, as people returned to their relatives’ homes in the countryside. New England was less affected by the crisis than were other regions, having not experienced so much of a banking-and credit-fueled boom. The West, however, was severely distressed, and several states passed laws suspending debt collection until conditions improved—among them Indiana, Illinois, Tennessee, Kentucky, and Missouri.

In response to the crisis, President JAMES MONROE and the federal government did very little. One measure

Congress did take was to pass a law, which Monroe signed in 1820, lowering the price of public lands. Unlike several of the above-mentioned states, the federal government maintained a strict policy of not interfering in economic matters it thought beyond its constitutional powers. Although their traditional rival, the Federalists, were in disarray and on the verge of formal extinction, Republicans, and especially their supporters in the South, still feared any expansion of the powers of a national government, which might someday threaten slavery.

The economic effects of the panic were felt until at least 1824, with a general prosperity not returning until almost 1830. The political and psychological impact was as important as the economic consequences, however. Much of the optimism that swept the nation following the BATTLE OF NEW ORLEANS and the end of the War of 1812 ended with the panic. This doubt over whether an economy increasingly based on market values was in the nation's best interest coincided with the congressional dispute between North and South in 1819–21. In that controversy, the debate was whether Missouri should be admitted to the Union as a free or slave state. It combined with the anxieties that came with the panic to produce some genuine concern over the future of the republic. There were proposals for keeping the country largely agricultural, while others continued to point the finger of blame at the Bank of the United States and called for a government vigorous enough to contest its powers. The economic distress sparked a renewed interest in politics, as farmers, merchants, workers, and others began to think of what type of government might be needed to avoid a repeat of the hard times that erupted in 1819. One possible remedy was higher tariffs that would protect infant American industries from overseas competition; a major step in that direction was taken with the Tariff of 1824, which raised duties considerably on imports. In the 1820s and beyond, voters would begin to demand more of their elected officials as the American economy become more complex and diversified and the threats of panics remained.

### **panic of 1837**

The panic of 1837 brought to an end an extended economic boom, one of the most productive in the history of the United States. It began in the 1820s, when British investors poured large amounts of capital into American canals in the North, as well as into Southern cotton, and

basic commodities tripled in price. The nation's economy was undergoing a transformation that had accelerated in the decades since the WAR OF 1812, one marked by the development of an interconnected market and a workforce characterized more and more by wage labor. During the boom, there was a rage for speculation and credit, and it began to spin out of control.

One effort by the federal government to discourage speculation, which was blamed by some for rising inflation, was to issue the so-called Specie Circular in 1836. Drawn up by Senator THOMAS HART BENTON of Missouri and issued as an executive order by President ANDREW JACKSON over the objections of the WHIG PARTY, the Specie Circular mandated that only specie—i.e., gold and silver—would be acceptable payment for public lands. This was essentially an effort to end speculation with banknotes and allow ordinary people a better chance to buy land. The result, however, was that specie became harder to come by, especially in the Northeast, and it went west to pay for lands.

Another potential economic problem was rooted in the Bank War of 1832, which had resulted in the expiration of the charter of the SECOND BANK OF THE UNITED STATES in 1836. This took away a major force against runaway credit, and therefore inflation had increased because state and local banks were issuing too many notes.

The boom reached its peak between 1834–37, but some saw danger in all of the speculation and easy credit. One skeptic famously asked “When Will the Bubble Burst?” One of the first signs of trouble on the economic horizon was a series of crop failures in the United States, beginning in 1835; as a result, farmers could not repay their bank loans. As agriculture began to decline, the international balance of trade began to work against the United States. In the South, cotton firms began to fail and agricultural production in general slipped. Overexpansion had led to great amounts of debt and bad currency. Overtrading on Wall Street had led to a real-estate boom that also began to bust.

Although these domestic factors all played a role in the onset of the panic, it appears that its most important causes originated overseas. There came to be concern in London over the increased export of specie, especially gold, from their vaults to the United States. The Bank of England therefore decided to restrict the outflow of specie to the United States and demand the payment of specie that was owed to them. It also rather suddenly ceased granting credit to English firms doing business with their American counterparts. At the same time, a poor harvest in England caused a dip in the demand for American cotton, probably the most important commodity in the United States. These developments in England, which was the center of the Western world's financial system, contributed

to a collapse of world prices that affected many sectors of the U.S. ECONOMY. Banks began to suspend specie payments in spring 1837, meaning they would not redeem any paper notes for gold or silver. This helped to create a panic, as investors were fearful of losing their savings and rushed to withdraw them from the banks. As paper money became devalued, the notes in which workers were paid lost much of their purchasing power.

By early 1837, business failures had begun to mount. The distress was especially devastating in northern cities. Commerce and transportation declined; most construction, an important source of jobs, ceased; and goods went unsold. Wage-dependent workers in the new economy were especially vulnerable. Some of them were thrown out of their homes when they could not pay rent, and moved into cellars and basements. There were food riots that were reminiscent of colonial times. As the number of unemployed and food prices both soared, there was looting of bakeries and shops. In the South, cotton plantations were sold on the market for only 10 percent of their original price. To make matters even worse, hopes for economic recovery and a relatively brief panic were dashed in 1839, as another wave of business failures, unemployment, and general economic suffering hit the nation.

In response to the crisis, radical antibank Democrats, known as the Locofocos, began to call for hard currency so that workers and farmers could pay their debts, while Whigs and conservative Democrats called for paper money to ease the panic. There were many accusations in Washington over who was responsible for the panic. Whigs cried "Locofocoism" and blamed Democrats and their economic policies during the Jackson presidency; the Democrats pointed the finger at the now-defunct Bank of the United States. The initial response of President MARTIN VAN BUREN, who had taken office in 1837 just as the crisis was deepening, was that the panic was a healthy corrective to an overheated economy. He steadfastly refused to provide federal funds to relieve the distress caused by panic. Van Buren did eventually propose a policy known as the independent treasuries, or subtreasury. It called for the federal government to take its funds out of the banking system altogether and place them in government vaults. The idea behind this policy was that it would keep the federal government out of reach of economic elites and eliminate government-backed speculation in public lands. There was much opposition to this plan, both among the Whigs and the more business-minded Democrats, but Congress eventually passed it in 1840.

The impact of the panics of the late 1830s was such that general economic prosperity did not return until about 1844. Among the long-range consequences of the economic crisis was that labor organizations, which had begun to form in the late 1820s and early 1830s, essen-

tially collapsed in the face of a massive loss of bargaining power and would not return in force until after the Civil War. The DEMOCRATIC PARTY, which lost the White House in 1840 because the Whigs were able to blame them for the nation's economic troubles, in the future would be reluctant to pursue antibank and anticredit policies which, rightly or wrongly, had cost them so much politically. Debates over these issues would also soon be supplanted by the growing controversy brought by expansion, as the United States once and for all confronted the question of SLAVERY.

**panic of 1857** See VOLUME V.

**Paul, Nathaniel** (ca. 1793–1839) *abolitionist, minister* Nathaniel Paul, an African-American abolitionist minister, was a pioneering voice for the black community. Paul was born in Exeter, New Hampshire, around 1793, the son of a Revolutionary War veteran. He attended a school run by the Free Baptist Church. In 1820 he founded the Albany African Church Association in Albany, New York. Paul was a charismatic speaker who attracted large audiences, and he used the pulpit to advocate education and self-improvement as a means out of poverty and discrimination. To this end he served as founder and president of the Union Society of Albany for the Improvement of the Colored People in Morals, Education, and the Mechanical Arts.

Paul was also active in publishing and contributed regularly to newspapers such as *Freedom's Journal* and *The Rights of All*. In his writings he attacked both slavery and the efforts of the AMERICAN COLONIZATION SOCIETY. Nonetheless, in 1830 Paul himself migrated to a free black community in Canada at Wilberforce, Ontario, where he served as pastor. In 1831 he visited England to raise money for a manual training college in Wilberforce, and he spent the next five years lecturing and preaching in concert with British and Irish abolitionist figures, as well as William Lloyd Garrison. Paul remained in England six years and raised \$8,000, but because the expenses he incurred ran upward of \$7,000, he refused to hand over the money to the Wilberforce community. He was then driven from the community, which failed soon after, and he renewed his

residency in Albany as pastor of the Hamilton Street Baptist Church. Paul died there on July 17, 1839.

## penitentiary movement

Historians have argued about the origins of the penitential reform movement. Enlightenment thought, urbanization, the Industrial Revolution, and bourgeois fear of social disorder have all been suggested as causes of this historical development. Historians can all agree that in the late 18th and early 19th centuries, liberal republics shifted their major form of state punishment from public displays such as whippings to the incarceration of criminals in institutions.

The social movement to end public displays as the state's primary form of punishment may have originated in 18th-century philosophical thought. Age of Enlightenment penal theorists influenced reformers and state officials in late 18th-century America. Cesare Beccaria, who wrote *An Essay on Crimes and Punishments* (1764), advocated the consistency of punishment through a standard criminal code and the eradication of arbitrary punishment. Whipping, stocks, and other public humiliations had been effective methods in small, close-knit communities, but in rapidly growing urban areas with rising crime rates, developing a uniform punishment system was more efficient and manageable.

These new theories and the increasing level of disorder in urban centers influenced city officials to eradicate public punishments and build a new kind of system for dealing with crime. Philadelphia, for example, ceased public whipping for punishments in 1786 and instituted penal labor as the primary punishment for crime. When Philadelphia officials decided that chain-gang labor on public works did not properly reform the criminals to lead virtuous lives as good citizens, the idea of placing criminals in institutions began to gain support. The noted physician Benjamin Rush, for example, advocated the cessation of all public punishment, believing that this interaction with the citizenry would contaminate the public morals. In 1787, he published a pamphlet, *An Enquiring into the Effects of Public Punishments upon Criminals and upon Society*, which criticized current state punishments. He believed that public executions and punishments degraded both the criminal and the spectators. Social reformers like Rush supported the institutionalization of criminals, believing that a highly

structured program of organized activity could encourage repentance and develop the virtue needed for citizens in the new republic.

Prison reformers adopted the practice of social isolation as a technique for the moral rehabilitation of inmates. Early jails tended to be lightly monitored, with the prisoners largely governing themselves; they could often mingle freely, and their families could visit them regularly. Because the penitential reformers viewed the origins of criminal behavior as arising from corrupting social influences, the movement's proponents insisted on separating criminals from society and isolating them from their families and friends. For reformers who believed that virtue was rooted in individual responsibility and religious devotion, the goals of the penitential movement were ideologically appealing. Americans involved in this movement included such well-known reformers as DOROTHEA DIX and Louis Dwight.

As states with growing cities and populations, New York and Pennsylvania would lead the nation in developing new ways to punish criminals. The prison reforms adopted by these two states were later embraced by other states with some modifications. The Jacksonian era introduced the construction of large penitentiaries. In 1829, Pennsylvania opened the Eastern State Penitentiary, the first large institution designed by supporters of penitential reformers. This institution aimed to inculcate virtue through isolation, silence, and religious instruction. The architects who designed Eastern State carefully arranged the structure to facilitate this separation of prisoners, even during exercise and eating periods.

A debate emerged between social reformers who advocated the Pennsylvania system of incarceration and those who supported the treatment of prisoners in New York institutions. This debate centered around the degree of solitude institutions should require of prisoners. The New York system allowed prisoners to labor outside of their cells in workshops with other inmates, although prison regulations still required silence. The Pennsylvania system, in contrast, advocated as much separation as possible, including solitary confinement. Both systems embodied the belief that prisoner isolation would lead criminals to atone for their past vices and absorb a new sense of morality. Letters from family and friends were carefully censored, and the prisoners were only allowed reading material that could be depended upon to teach them moral behavior. This carefully controlled environment and lack of communication with the outside world was supposed to both produce repentance and teach the inmate the steady work habits necessary to a successful American citizen.

The expense of separating prisoners and keeping the institutions carefully regulated was often difficult for other states to reproduce; most adopted only some aspects of the New York or Pennsylvania system. But the general model

This detail rendering of an iron gag is an attack on the cruelty in Pennsylvania's Eastern Penitentiary, a prison notorious for its abuses and atrocities against prisoners, 1835. (Library of Congress)

of incarceration and separation was implemented throughout the country and remains a basic characteristic of the American criminal justice system to this day. The penitentiary reformers' disciplinary strategies spurred the building of all sorts of other institutions, including asylums for the poor and the insane. The construction of these new kinds of institutions signified an expansion of the state's power to control social behavior and punish those who deviated from established norms.

### Permanent Indian Frontier (1840)

A policy for permanently separating NATIVE AMERICANS from white settlers, the Permanent Indian Frontier had its roots in earlier plans suggested by presidents Thomas Jefferson and JAMES MONROE for dealing with conflicts between Indians and whites. Jefferson had proposed in 1803 that these conflicts could be solved by persuading nations to trade their lands east of the Mississippi for lands west of the river. Clearly dividing Indian and white lands would, he hoped, eliminate the violent confrontations on the frontier that were making western expansion difficult. He assumed that the amount of land east of the Mississippi would satisfy white demand for many generations. In 1825, Monroe officially proposed the concept of a permanent dividing line west of Missouri. He asserted that this policy would protect the Indians, who could form and administer their own separate government.

President ANDREW JACKSON supported removal to the West but opposed treating Native Americans as an independent nation. His concept of permanent relocation was passed in the INDIAN REMOVAL ACT (1830). After this policy was initiated in the 1830s, almost all eastern Native Americans were forced to move west of the Mississippi River. However, violent conflict between Indians and whites persisted, as American settlers continued to encroach on Indian lands. The U.S. government began looking for a way to defuse the conflict between Indians and white settlers for good. In an effort to establish the boundaries of settlement, the government proposed the creation of a “permanent Indian frontier” at about the 95th meridian (near the present-day western boundaries of Arkansas, Missouri, and Iowa). Officials hoped that by setting aside this large area for Native Americans, further conflicts with white settlers could be avoided. This frontier would, in essence, be a single large reservation for Indians.

But before this new policy had been implemented, white emigrants were already crossing the line on overland trails to CALIFORNIA and trespassing onto the Indian territory itself in an attempt to settle there. The Permanent Indian Frontier was difficult to enforce, and within 10 years the federal government had caved in to pressure from white settlers, abandoning the idea of one large Indian reservation. After the 1850s, government policy was to relocate Indian nations to many smaller, isolated reservations. Indian leaders were forced by economic necessity and intimidation into signing land cession treaties. They accepted goods, annuities, and small reservations in exchange for the large tracts needed to quench the white thirst for new lands. The new small-reservation plan was the latest in a string of policies that rendered Native Americans increasingly dependent on white traders and government officials in order to survive. The annuity money did not go far and was often not even paid, and soon Indians

in the West were suffering from disease, malnutrition, and alcoholism.

Trapped on reservations, Indian nations were less and less able to support themselves through their traditional means of hunting and agriculture. On small reservations, they were supposed to learn Euro-American farming practices and live like whites. Most continued to resist this pressure to adopt white ways, and open conflict between the United States and Native Americans continued in scattered pockets until the 1890s. The fate of the Permanent Indian Frontier embodies the general trend of U.S. Indian policy throughout the 19th century: Indian rights to land were consistently discarded because white Americans would not accept limits on their own settlement rights.

**Perry, Matthew Calbraith** (1794–1858) *naval officer who opened Japan to U.S. trade*

Commander of the naval expedition that established U.S. relations with Japan, Matthew Calbraith Perry was born on April 10, 1794, in South Kingstown, Rhode Island, the brother of Oliver Hazard Perry. He began his naval career as midshipman at the age of 15, advancing to lieutenant in 1813 and to commander in 1826. Perry supervised the construction of the first naval steamship, the *Fulton*, and upon its completion in 1837, he took command with the rank of captain. He was promoted to commodore in 1842. In 1846–47, he commanded the Gulf squadron during the MEXICAN-AMERICAN WAR.

As commander of U.S. naval forces in the China seas, Perry was a staunch expansionist. In 1852, he warned President MILLARD FILLMORE that the British, who had already taken control of Hong Kong and Singapore, would soon control all trade in the area. Perry recommended that the United States take “active measures to secure a number of ports of refuge” in Japan. Fillmore agreed with Perry, and in 1853 he ordered the commodore to open negotiations with the emperor of Japan.

American ships had long been active in the Pacific, as New England whaling fleets scoured the ocean in search of their prey. The China trade had been enriching Yankee merchants since 1784. Japan, however, had effectively closed its doors to outsiders, and it restricted foreign ships to a small port of Nagasaki. For more than 200 years, a

strict feudal system operated, and no foreigner was allowed to enter Japan at all. Even shipwrecked sailors were forced to remain so that no information about the country could leak out. The Dutch had established trading relations with the Japanese in the early 1600s, but were then forced, in 1641, to remove themselves and all future trading via an artificial island called Decima.

On July 8, 1853, Perry led a squadron of four ships into Tokyo Bay and presented representatives of the emperor with the text of a proposed treaty for commerce and friendship. To give the reluctant Japanese time to consider the offer, he then sailed for China. With an even more powerful fleet, he returned to Tokyo in February 1854 and came ashore to meet with representatives of the ruling shogun. He was accompanied by 600 men and a naval band. The Japanese signed the Treaty of Kanagawa on March 31, 1854, providing that humane treatment be extended to sailors shipwrecked in Japanese territory, that U.S. ships be permitted to buy coal in Japan, and that the ports of Shimoda and Hakodate be opened to U.S. commerce. Perry’s mission ended Japan’s isolation, a prerequisite for its subsequent development into a modern nation. Matthew Calbraith Perry died in New York City on March 4, 1858.

### personal liberty laws

Personal liberty laws were statutes passed by northern U.S. states to counter the FUGITIVE SLAVE LAWS. Article IV, Section 2 of the Constitution called for states to surrender escaped slaves to their owners, but as the ABOLITION MOVEMENT had grown, northern states not only refused to extradite runaway slaves but protected them from their owners and from hired slave catchers. Several northern states responded by passing so-called “personal liberty” laws aimed at thwarting the federal requirements. Among other things, these laws guaranteed the writ of habeas corpus, the right to a jury trial, and other procedural devices that protected the runaways, made it difficult for slave owners to prove their case in court, and made it costly for them to do so. Indiana and Connecticut, for example, passed liberty laws that assured fugitives the right to a jury trial and provided them with attorneys. In 1842, the U.S. Supreme Court, in *Prigg v. Pennsylvania*, ruled that obstructing the rights of slave owners to reclaim their slaves was unconstitutional. This ruling crippled the liberty laws that were currently in effect.

Several states responded by taking new approaches. Massachusetts passed a new liberty law in 1843 that prohibited the use of state resources to catch fugitive slaves. This required slave owners to rely on federal officials, who were in short supply, or hire their own slave catchers. As part of the COMPROMISE OF 1850 designed to reduce tensions between North and South, Congress passed a new and tougher fugitive slave law that so one-sidedly favored slave owners that it became a major propaganda weapon for the abolitionists. The Fugitive Slave Act called for all citizens to help apprehend fugitives, or face stiff penalties. However, the North continued to pass laws intended to help fugitive slaves, while the South cited these laws as an assault on states' rights and a justification for secession.

### **Phillips, Wendell** (1811–1884) *abolitionist orator*

As an abolitionist, Wendell Phillips was considered one of the great orators of the antislavery movement. He was born in Boston, Massachusetts, on November 29, 1811, into one of the state's oldest and most distinguished families. He was educated at the Boston Latin School, where he already displayed unusual ability as an orator, and subsequently studied at Harvard under the noted jurist Joseph Story. Phillips received his law degree in 1833 and set up a successful practice in Boston. By dint of his patrician lineage and background, he was expected to enjoy an accomplished career in law and a pursuit of public office. However, his life reached an important crossroads in 1835 when he witnessed a mob accost William Lloyd Garrison, the outspoken Massachusetts abolitionist, and drag him through the streets by a rope. Phillips was so outraged by the event that he adopted the protection of civil liberties as a personal cause.

Two years later, in 1837, the death of abolitionist editor Elijah Lovejoy in Illinois prompted Phillips to issue the first of his celebrated public ripostes that praised Lovejoy as a martyr to the cause of liberty. Hereafter, he became a vocal proponent of free speech for abolitionists, whose movement he had yet to embrace. Another turning point in Phillips's life occurred in 1837 when he met and fell in love with Ann Terry Greene, the wealthy daughter of a prominent merchant and an active member of the Boston Female Anti-Slavery Society. They married in December 1837. Through her influence, he formally abandoned his legal practice altogether to become active in the ABOLITION MOVEMENT. Within a few years, he gained national

renown as one of abolition's most eloquent and outspoken proponents after Garrison. He also began to champion the rights of Irish Catholics, whom he viewed as another exploited class.

Being in great demand, Phillips toured the country widely as a speaker, earning considerable fees for his lectures. He also spoke on a number of nonpolitical issues; one speech, "The Lost Arts," was rendered more than 2,000 times. A dynamic, vigorous orator, Phillips captivated and entertained his audiences through clever use of invective, which simultaneously demonized and insulted the opposition. Throughout his career, he also relied heavily on his wife Ann's advice, and he freely admitted that she was usually ahead of him with respect to social issues. By deft use of his acerbic wit and thunderous delivery, Phillips found his niche as the nation's most sought-after political agitator.

The onset of the Civil War in 1861 further enhanced Phillips' image as a social and political radical. He forcefully advocated having the Union be dissolved rather than compromise its moral integrity by remaining associated with the slave-owning South. He also attacked the Constitution for becoming the legal basis for SLAVERY. Phillips refused to support Abraham Lincoln during the war years, regarding the president as essentially accommodating toward the "peculiar institution."

After 1865, Phillips ended his long association with Garrison, who withdrew from politics, and succeeded him as head of the AMERICAN ANTI-SLAVERY SOCIETY. Using this organization as a pulpit, he agitated for the civil rights of African Americans and for WOMEN'S STATUS AND RIGHTS. Toward the end of his long career, Phillips also espoused labor rights, including an eight-hour workday. He died in Boston on February 2, 1884, one of the most memorable orators of American history and a strident advocate for change.

### **Pike, Zebulon Montgomery** (1779–1813) *explorer, army officer*

Army officer and explorer, Zebulon Pike led expeditions through lands acquired in the Louisiana Purchase. Born in Trenton, New Jersey, in 1779, Pike enlisted in the army

in 1794 at the age of 15 and participated in the campaigns in the Old Northwest under General Anthony Wayne. In 1799, at 20, he was commissioned a lieutenant and went on to serve in various forts on the trans-Appalachian frontier, including Fort Washington and Fort Knox. His formal education was limited, and Pike determined to make the most of his career opportunities in the army by a vigorous program of self-study. He read widely on military tactics, mathematics, and science, and he also studied the French and Spanish languages. Brave and a natural leader, Pike was ideally suited to serve on the frontier of the late 18th and early 19th centuries.

In 1805 General James Wilkinson ordered Pike to make a reconnaissance of the upper Mississippi River. Thomas Jefferson's recent purchase of the Louisiana Territory had turned the attention of the nation to its western possessions. With 20 soldiers, Pike left St. Louis in August 1805 in a 70-foot keelboat. Wilkinson had directed him to explore to the headwaters of the Mississippi and to do so before the onset of winter. Pike was given a list of items to observe: furs and minerals, the Indian peoples of the territory, and the population (Indian and European), among other things. He was also given authority to purchase sites for future military posts and to invite important Indian leaders to St. Louis to meet Wilkinson personally. Pike eventually left the keelboat at Prairie du Chien (then part of Michigan Territory and later Wisconsin), and he proceeded with his command upriver in small boats. With the onset of winter, he determined that his work was not yet finished and so decided to make a winter camp with his men at the present site of Little Falls, Minnesota. From this spot, he moved by sled up the Mississippi to what he thought was the river's source. In fact he had failed to find the real source, which lies in Lake Itasca.

Pike returned to St. Louis in late April 1806. Throughout the course of the expedition, he had displayed the highest qualities of leadership through a difficult winter in one of the most remote regions of the nation. The more practical aspects of the trip were less successful. Few Indian leaders accepted his invitation to visit St. Louis, and the U.S. Senate declined to ratify the treaty he had negotiated with the Sioux. His map and journal were of lasting importance, however, as they provided the first picture of the upper Mississippi Country.

Within three months, by July 15, 1806, Pike had received further orders from Wilkinson. This time he accompanied 50 Osage Indian captives to their homes in western Missouri; then he swung north to the Pawnee villages in Nebraska, where he presided over a treaty of peace among the nations of the region. From here, he headed west, eventually exploring the headwaters of the Arkansas River in present-day Colorado. While on this leg of his trip, he and his men tried without success to climb the peak

that would bear his name. Pike then moved south across the Sangre de Cristo range and eventually reached the Rio Grande. Although the boundary line of the recent Louisiana Purchase was not yet mapped, Pike had clearly passed into Spanish territory. In February 1807, a Spanish patrol captured him at a stockade they had constructed on the Rio Grande. Pike and his men were first taken to Santa Fe, then to Chihuahua, and finally released near Natchitoches, Louisiana. They returned to American territory on June 30, 1807.

In subsequent debate about the expedition, there was a consensus that Pike had been lost. At the same time, his journey had been a voyage of exploration. What was important was that he saw new places and could report on them. In this part of his mission, he was eminently successful. Furthermore, his capture and incarceration by the Spanish allowed him to see many Spanish towns and fortifications that would otherwise have been closed to him as an officer representing the U.S. Army. In 1810, Pike published his travel narrative, which later appeared in British, German, French, and Dutch editions. Pike had established something of an international reputation as an explorer, but this fame had little effect on his military career.

The expedition to the West enhanced Pike's reputation as an excellent officer. At the outbreak of the WAR OF 1812, he was promoted to the rank of brigadier general. In April 1813, he was killed while leading an attack on Toronto. A brave officer and effective troop leader, Pike is remembered now for his expeditions to the West and for the peak in the Rocky Mountains that bears his name.

### "Pike's Peak or Bust"

In 1858, the discovery of gold in Cherry Creek, Colorado, near the site of present-day Denver, triggered a large overland migration known as the COLORADO GOLD RUSH. The CALIFORNIA GOLD RUSH had provided the original model for a mass migration across the continent. The discoveries in Colorado a decade later produced many of the same outbursts of enthusiasm.

The first parties to go west headed for Pike's Peak, under the mistaken impression that this was the site of the strikes. The immigration to Colorado of as many as 100,000 miners in the summer of 1859 was based on better information, and most of these overlanders headed to Cherry Creek. Nevertheless, Pike's Peak retained a prominent place in the gold rush as the site, however erroneously

identified, of the original strikes. In addition, the peak itself was, from a distance, the most prominent and visible sign of the Rocky Mountains. That it could be seen some 40 miles distant on a clear day gave the eager argonauts of '59 their first glimpse of what they hoped would be the New El Dorado, the new CALIFORNIA. Consequently, many of the prospective miners who headed west in the summer of 1859 painted "Pike's Peak or Bust" on the sides of their wagons. After the original enthusiasm had spent itself in disappointment, Pike's Peak had another life as a familiar landmark for the flood of gold seekers moving through the area to the Continental Divide.

**Polk, James K.** (1795–1849) *11th U.S. president*

The 11th president of the United States, James Knox Polk served only one term in office but is generally credited with accomplishing all of his major goals. Born in Mecklenburg County, North Carolina, into a Presbyterian family of Scottish ancestry, Polk later attended school in Tennessee. He returned to North Carolina to attend the state university at Chapel Hill, graduating from there in 1818 with a reputation for hard work and achievement. After moving back to Tennessee to study law, he was admitted to the bar in 1820 and went on to practice law for three years.

In 1823, Polk was elected to the Tennessee legislature, serving for two years and establishing a friendship with ANDREW JACKSON, the state's most prominent political figure. During that time, he married Sarah Childress. In 1825, he was elected to the U.S. Congress, where he opposed the policies of President JOHN QUINCY ADAMS and was a strong Jackson supporter, a political alliance that continued after Jackson was elected president in 1828. From his position as chairman of the influential Ways and Means Committee, Polk pursued the Jacksonian line of opposition to the SECOND BANK OF THE UNITED STATES. He also supported the president when he issued his controversial veto of the Maysville Road Bill. Polk served a total of 14 years in Congress, rising to become speaker of the House in 1835, a position he held for four years. While in Congress, Polk became a target of criticism from the new WHIG PARTY, which alleged he was nothing more than Jackson's errand boy.

Although a powerful member of Congress, Polk was drafted by his party to run for governor in Tennessee after the Whigs had captured the state's highest office. He was elected governor in 1839, serving ably during his two-year term. He was subsequently defeated for reelection in 1841, however, and lost again two years later when he tried to

regain the governorship. The second defeat seemed to end any serious political future for him, but Polk stubbornly continued to remain active, both in Tennessee and nationally.

The DEMOCRATIC PARTY was determined to regain the White House, and most assumed they would nominate former president MARTIN VAN BUREN in 1844. Polk's name was circulated early on as a possible candidate for vice president. The main issue of that year's campaign was the annexation of the Republic of Texas, where SLAVERY was legal, to the United States. Van Buren hurt his hopes for nomination by coming out in opposition to annexation, which he did to head off protests from northern Democrats opposed to the influence of slaveholders within the party. With that stroke, Van Buren opened up the door for another candidate, especially one agreeable to the South. Former president Andrew Jackson was upset with Van Buren's stance on TEXAS, and he began to search for another candidate, eventually throwing his support behind his old protégé, James Knox Polk. The party as a whole

President James K. Polk (Library of Congress)

remained divided, with Van Buren retaining significant support as the Democratic convention opened in Baltimore in May of 1844. After deadlocking between Van Buren and LEWIS CASS of Michigan, the convention finally turned to Polk, who did support annexation, as a compromise “dark horse” candidate. In accepting the nomination, Polk pledged himself to a single term as president, in an effort to heal the divisions within the party. Polk and running mate George M. Dallas of Pennsylvania, running on an expansionist platform that called for American sovereignty over Texas and the disputed Oregon territory, then defeated Whig stalwart HENRY CLAY of Kentucky in a close election. Polk had been a consistent critic over the years of Clay’s AMERICAN SYSTEM. The LIBERTY PARTY candidate, James Birney, had drawn antislavery votes away from Clay that were crucial in a few states, including the key one of New York.

The 49-year-old Polk took office in 1845 as the youngest man to that point to serve as president. Although hampered somewhat by his one-term pledge, he proved to be an extraordinarily hard-working, focused, and in many ways successful president in terms of carrying out his program. He saw his four major goals in office as reducing the tariff; supporting an independent treasury, an institution by which the government kept its deposits separate from private banking interests; settling the Oregon boundary dispute with Britain; and acquiring the huge territory of California from Mexico. Thus, foreign affairs occupied much of his time, to a greater extent than it had most of his predecessors.

Although the United States and Britain had been negotiating over the Oregon territory and what should be the boundary between the United States and Canada, Polk forced the issue to a conclusion. He did so despite some disagreement within his own party on the issue, with Democrats from the Old Northwest favoring expansion and southern Democrats wary of war with Britain and skeptical of adding what was certain to be non-slave territory to the Union. The prospect of armed conflict with Britain ended when the two nations signed the OREGON TREATY OF 1846, with the United States gaining most of the territory in question and Britain retaining Vancouver Island.

Relations with Mexico, however, continued to be strained and had been made worse when the United States annexed Texas shortly before Polk took office. Polk pursued the acquisition of CALIFORNIA by offering to buy it from Mexico, which also owed the United States unpaid debts. When Mexico refused to repay its debts by selling California, Polk planned to ask Congress to declare war on that basis. In the meantime, however, American troops in a disputed area were fired on and killed by the Mexican army. Polk claimed that Mexican forces had actually invaded the United States and attacked its soldiers, which was arguable.

In any event, Congress declared war on Mexico, and the United States successfully prosecuted the war, conquering the enemy in a series of spectacular victories and capturing much territory in doing so. The MEXICAN-AMERICAN WAR was not without its critics, with some decrying it as “Mr. Polk’s War” and condemning it as a conflict of aggression and expansionism. Polk proved to be a capable wartime leader, as the partisan Democrat was able to work with Whig generals such as WINFIELD SCOTT. Determined to both win the peace and secure California, the Polk administration negotiated with Mexico from a position of strength. Under the TREATY OF GUADALUPE HIDALGO, which formally ended the war, the United States gained title to the huge territory of California and New Mexico. However, the victory contained within it the seeds of civil war, as North and South clashed sharply in the aftermath of the conflict about whether slavery should be allowed in the new territory.

Polk also succeeded politically on the domestic front. At his urging, Congress lowered the tariff, with the new rates remaining in effect for 11 years. As a consistently antibank Democrat, Polk threw his support behind the idea of an independent treasury as well. Overshadowed by the tariff question and the war with Mexico, the independent treasury did not generate the controversy or interest it had in the late 1830s; Polk himself paid minimal attention to it. Nonetheless, the measure became law.

Another important domestic issue which Polk tackled as president was that of INTERNAL IMPROVEMENTS. As befitting a staunch Jacksonian Democrat, he had consistently opposed efforts to use federal funds to build transportation networks, finding such plans to be beyond the constitutional boundaries of the federal government. In vetoing a bill that called for improvements in several western rivers and harbors, Polk said that federal funds for local projects would “produce a disreputable scramble for the public money.” Congress failed to override this particular veto, and when Polk later vetoed a similar piece of legislation, he again placed himself firmly in the Jacksonian tradition as he cited Jackson’s Maysville Road veto in his own message to Congress. Not only was the Constitution at stake, but the treasury and financial stability of the nation itself would be threatened by federal expenditures for so many projects, he warned.

Having kept his pledge to not run for reelection, Polk left office at the end of his term in 1849. He lived only a few months more, having exhausted himself through his hard work as president. One of the leading examples of a Jacksonian Democrat, Polk has generally received high marks from historians for having set out a specific set of goals as president and then proceeding to achieve them. While not quite as charismatic as his mentor, Polk, who was sometimes called “Little Hickory,” is generally consid-

ered to have been the most able president between Jackson and Lincoln. He died on June 15, 1849, and was buried in Nashville.

### polygamy

In 19th-century America, jurisdiction for the regulation of marriage was a state concern. This resulted in variations in marital law, particularly with regard to the age at which single individuals could marry and which races could marry one another. Under Euro-American law, however, marriage was, universally, a contract entered into by a single man and single woman. Upon marriage, women surrendered most of their legal rights and capabilities to their husbands. Husbands controlled their wives' property, any income they earned, their ability to sue, their ability to contract, and sexual access to their bodies. Wives who committed a crime, signed premarital agreements, had trusts created in their name, or appealed to a court with equity jurisdiction could find exceptions to this general rule. In the words of English jurist Sir William Blackstone, however, a wife was ideally considered to be under the legal "wing, protection, and cover" of her husband during marriage. Since women could not vote or be elected to public office, their husbands became their civic representatives. Marriage was the cornerstone of orderly government, prescribing ideal roles for men and women in civil society.

Polygamy, the practice of one man having several wives, was therefore the antithesis of orderly government. From the revolutionary period on, polygamy had been linked with the worst abuses of imperial rule. A husband who took several wives, argued theorists, was akin to a political despot whose power was predicated on the negation of other people's liberty. Bigamy and polygamy were abuses of the roles and responsibilities inherent within the marriage contract—the equal exchange of obligation and privilege between one man and one woman.

Polygamy was a moral and political issue to 19th-century Americans, who looked upon its practice in certain Native American communities as a sign of the latter's uncivilized state of being. Transforming Indian marital practices to mirror those of Euro-Americans was a central priority of the government and of missionary organizations

throughout the 19th century. By transforming MARRIAGE AND FAMILY LIFE, they hoped to transform tribal culture. Since Euro-American marriage was weighted with civic meaning, replacing polygamy with monogamy was a stepping-stone to replacing tribal government with a democratic civil order.

It was the practice of polygamy in Utah's Mormon communities, however, that gave many Americans their greatest concern. While settled in Illinois in 1843, JOSEPH SMITH, JR., the leader of the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS, received a vision in which Mormons were instructed to practice polygamy. It was nine more years before the revelation was widely known, by which time the Saints had migrated to Utah and Smith had died. While only the wealthiest Mormon men could afford to have several wives, the fact remained that polygamy was being practiced in a U.S. territory. Many Americans were outraged.

For the Mormons, the issue was one of states' rights. The regulation of marriage was of state concern, and the territorial government of Utah resisted attempts to force it to outlaw the practice. As a states' rights issue, the Mormons theoretically should have enjoyed southern support, as the right of a state to regulate domestic law was central to the South's defense of SLAVERY. Southern members of Congress, however, rejected such comparisons, preferring to paint polygamy as northern liberalism run amok. They were aided in this decision by northern arguments that compared slavery and polygamy. Slaveholders were, argued many northern politicians, no better than polygamous husbands themselves, since their female slaves were under their sexual control as much as their wives. To northerners, slavery and polygamy were both breakdowns of democratic social order. Despite the public outcry and moral outrage on all sides, however, Congress did not outlaw the practice of polygamy until well after the Civil War (1861–65).

**Further reading:** Nancy F. Cott, *Public Vows: A History of Marriage and the Nation* (Cambridge, Mass.: Harvard University Press, 2000); Michael Grossberg, *Governing the Hearth: Law and the Family in Nineteenth Century America* (Chapel Hill: University of North Carolina Press, 1985).

### popular sovereignty

Popular sovereignty was put forth in the late 1840s as the moderate answer to the question of whether or not SLAVERY should be extended into the territories. It offered a deceptively simple solution: let the settlers of a territory decide for themselves if they wished to enter the Union as a slave or a free state, without the interference, for or against, of the federal government.

Significantly, northern Democrats first developed the concept as an alternative to the Wilmot Proviso (1846), which would have unilaterally banned slavery from the territories acquired in the MEXICAN-AMERICAN WAR. The proviso was alarmingly popular in the North among both Democrats and Whigs, but deeply repugnant to the southern wing of the DEMOCRATIC PARTY. Popular sovereignty seemed to offer a middle way between the extremes of the proslavery advocates and free-labor positions that were threatening the harmony of the Union. It would also preserve the strength of the national Democratic Party.

First introduced in Congress by New York's Democratic senator Daniel S. Dickinson, popular sovereignty received its most important early support in 1847 from LEWIS CASS, a Democratic senator from Michigan and presidential hopeful. Cass declared that the doctrine should become a policy of the Democratic Party. He denied that Congress had the constitutional right to exclude slavery from the territories, and emphasized the pleasing but ambiguous notion that such decisions were best left to the people themselves. Voters of both sections could support the doctrine, but among other flaws, popular sovereignty left wide open the question of when settlers should make this decision.

Northerners wanted territorial legislatures to make the decision before applying for statehood. They worried that by the time a territory became a state, it would be too late to vote slavery out. This was because the legal structure supporting slavery would already exist and would in turn promote the continued settlement of slaveholders. Southerners assumed the exact opposite and were adamant that neither Congress nor territorial governments had the right to exclude slavery from a territory. To the contrary, they believed that slavery could not be voted in or out until after the territory drafted its constitution in the process of applying for statehood.

Popular sovereignty was included in the COMPROMISE OF 1850, which allowed territorial legislatures in New Mexico and Utah to pass slave codes before filing their state constitutions. The key test of the doctrine of popular sovereignty, however, came in its application to the organization and settlement of land that was not acquired from the Mexican-American War, but rather the last parcel of unorganized land from an earlier land purchase.

In order to get the Kansas-Nebraska Act of 1854 passed with southern support, Senator Stephen A. Douglas of Illinois agreed to abolish the 1820 MISSOURI COMPROMISE line that divided free and slave states in the Louisiana Territories. This act set off a firestorm of protest in the North that led to the "little civil war" in the Kansas territory. It was the beginning of the end for popular sovereignty, which was now in danger of being rejected by both northerners and southerners. As the Kansas fiasco unfolded, the

newly elected president James Buchanan hoped that the Supreme Court would decide once and for all the question of slavery in the territories.

In December 1857, the Court's verdict against Dred Scott dealt popular sovereignty and the Missouri Compromise the final blow. The decision in *Dred Scott v. Sandford* asserted that Congress had no power to exclude slavery from the territories, which alarmed many northerners. The decision went further to state that no one, not even the territorial legislatures, could properly exclude slave property from the territories, popular will or not. This part of the opinion was problematical for Democrats. Ever the optimist, Stephen A. Douglas asserted that while *Dred Scott* guaranteed the slaveholder's constitutional rights, slavery could not exist without protective laws voted on by a majority of settlers, whom he assumed would be antislavery. Douglas failed to revive the doctrine in any meaningful fashion, and popular sovereignty faded from the political arena as a viable compromise position to deciding the fate of slavery in the territories.

### public land policy

In 1800, as the new American nation began two generations of the greatest expansion in its history, the guidelines for public land policy reflected the Ordinance of 1785. The Land Ordinance (as it was known) embodied certain lasting principles that would continue to guide the evolution of land policy throughout the new century. These fixed principles included: (1) The federal government would acquire title to Indian lands through honorable negotiations; (2) the government would then survey the land before sale based on rectangular divisions of land into townships of six miles square, with the townships divided into 36 sections, or one mile square; (3) section 16 would be set aside to maintain public schools; (4) the government would sell the surveyed lands in minimum lots of 640 acres at the price of \$1 per acre; (5) the title would pass in fee simple, that is to say, absolutely, without other annual dues.

Under the Land Act of 1796, the Congress of the new national government under the Constitution of 1789 confirmed the rectangular survey system. The new law raised the minimum price of public land from \$1 to \$2 an acre with credit of one year. Alternate tiers of townships would be sold in quarter-township lots (5,760 acres) at the national capital, and the other townships would be sold in

sections of 640 acres at the newly established land offices at Cincinnati and Pittsburgh. Sales under the new law were few because of the high price, the short period of credit, and the large minimum size of salable tracts. Furthermore, the designated land offices were great distances from settler families. But Congress had begun its first adjustment of terms and the size of tracts; there would be many others. Between 1800 and 1860, Congress would enact more than 3,000 laws dealing with the public domain, but the basic principles of rectangular survey before sale, public auction, and title in fee simple issued by the federal government would remain constant.

The first major change in the land system was the Land Law of 1800 (sometimes known as the Harrison Law for its sponsor, WILLIAM HENRY HARRISON, territorial delegate from the Northwest Territory). Within the broad guidelines of the Land Ordinance, the Land Law of 1800 offered several important modifications to the advantage of individual settler families. It retained the price of \$2 an acre but offered four years of credit; the minimum size of a tract to be purchased was reduced from 640 to 320 acres; and it provided for establishing four district land offices in the Northwest Territory, making it more convenient for settler families to transact their land business. Tracts of land would first be sold at public auction held at the district land offices; after the individual tracts had been offered for sale, these lands would be open for private entry at the minimum price. The easier terms and more convenient access encouraged sales, and settlers and speculators alike responded. The credit provisions, however, produced a continuing administrative nightmare of payment calculations. In 1804, Congress further reduced the minimum tract that might be purchased to 160 acres. The sales of the public domain immediately increased.

With the close of the WAR OF 1812, a great surge of immigration to the West began. Settler families moved down the Ohio River and up tributaries into the Old Northwest, across the mountains and into the new southwest of Alabama and Mississippi Territories. Land sales surged; competitive bidding, especially on cotton lands in the South, rose to unheard-of levels of \$40 an acre and, in a few cases, to \$70 an acre. The credit system encouraged cultivators and speculators to bid and to acquire beyond their means. With the collapse of the ECONOMY in the PANIC OF 1819, a reckoning was at hand. That year, the secretary of the Treasury, William H. Crawford, reported that since 1789, the government had sold lands for \$44 million, but only half that sum had been paid, while the other half was still owed. Congress eventually passed 12 relief acts to retire these debts incurred in optimistic times. For the future, and to ensure that the system would never again produce a large land debt owed by the nation's citizens, Congress enacted the Land Law of 1820. This new law abolished the

credit system, requiring that all land be paid for in cash (hereafter known as "land office money"). The price was reduced to \$1.25 an acre, and the minimum tract was fixed at 80 acres. A family could now buy a farm for \$100. Unfortunately for the government, the process of public land sales was completely disrupted by the panic of 1819. The ensuing depression made it virtually impossible for most prospective pioneers to come up with the requisite \$100. The government compounded the problem by ending all land sales on credit and demanding cash. The result was a surge of illegal squatters who settled and cultivated unsurveyed land in the hopes of eventually raising the money to purchase a title. The practice became so widespread that Congress was forced to enact new policies the following decade to accommodate them.

Land legislation over the next generation reflected several threads of settlement patterns and sectional politics. Congress had to pass numerous laws to deal with land claims dating from French and Spanish grants, attempting to meld the two legal and land traditions. The purchase of Louisiana in 1803 and the subsequent organization of the Territory of Orleans (later the state of Louisiana) and the Territory of Louisiana (later the state of Missouri) came to involve the large-scale examination of earlier land grants in these territories west of the Mississippi River. The acquisition of FLORIDA in 1819 would raise the same issues in this new territory. Congress also made numerous gifts of land to individuals and special interests, ranging from veterans of the War of 1812 to educational institutions to cultivators of the vine and the olive. The rising sectional issues reflected the emergence of the West as a distinctive section with its representatives and senators in the Congress and its own special interests. Among these interests was the liberalization of land laws. Whatever the differences that emerged between the Northwest and the Southwest over the issue of SLAVERY, they would agree that liberal access to land would serve the interests of the nation's frontier peoples.

The first major issue was preemption. The principle of preemption affirmed that settlers who made improvements as evidence of their serious intention to occupy and cultivate the land should be entitled to purchase their tracts, up to 160 acres, for the minimum price without competitive bidding. Eastern representatives in Congress argued that preemption rewarded trespassing and illegal settlement, and they were right. But whatever their feelings, it was not possible for the federal government to evict illegal settlers, for no elected official who had hope for a future in politics would use force to eject settler families from the public domain.

While the Congress in Washington debated the merits of preemption, settlers on the frontier fashioned their own remedy. The CLAIM CLUBS brought together settlers in a land district to protect their holdings against bidding by

speculators at public auctions. Settlers thus agreed to bid only the minimum, and they physically threatened competitors who might bid against them. Although an extralegal institution, most state, territorial, and local governments accepted claim clubs.

In 1830, the West mustered sufficient support to enact a temporary preemption act. It provided that settlers who had cultivated land on the public domain might purchase their improvements and as many as 160 acres at the minimum price of \$1.25 an acre. The act was approved for a year, and Congress renewed the law annually until a permanent preemption law was enacted on 1841. The Preemption Act of 1841 reflected a shift in principle that dated back to the Ordinance of 1785 by making settlement by individuals and families a priority over revenue. Henceforth, the land laws of the nation would reflect an increasing liberalization and an acknowledgement that the public domain was to be distributed as widely and generously as possible to actual settler families. Legislation would reflect both the liberalization of terms and attempts to benefit individuals and families as opposed to large-scale speculators. The new policy also received a unique political twist when opposition Whigs, determined to return some of the land-generated revenue back to the seaboard states, managed to pass the Distribution Act of 1841 (repealed 1842).

The question of land and how to best dispense it also gave rise to a unique third party movement. In the late 1830s, several politicians including HENRY CLAY sought to keep the price of land artificially inflated in order to gener-

ate monetary surpluses subject to distribution among established states. Others with a more altruistic bent argued that land prices west of the Mississippi should be kept high to discourage western settlement and keep NATIVE AMERICANS living there free from additional depredations. But in eastern circles, labor leader George Henry Evans and *New York Tribune* editor Horace Greeley championed the notion of free land in the West to draw off surplus workers from eastern cities, thereby improving labor's bargaining power throughout the East. This free-soil movement was strongly resisted by slave-owning southerners, who feared the addition of new free states, but in 1848 it resulted in creation of the FREE-SOIL PARTY to formalize its advocacy. One of the largest third parties to arise in the 19th century, it was partly responsible for passage of the Homestead Act of 1862, one of the most significant land distribution schemes in American history. The Free-Soil philosophy also marked a complete shift in attitude toward land from a source of revenue to one of guaranteeing ownership and the creation of small farms to ensure the nation's republican heritage.

Despite this general tendency toward liberalism and leniency, the admission of CALIFORNIA to the Union in 1850 turned the process against Californio (Mexican) residents living throughout that region when the new Land Law of 1851 required all non-American inhabitants of California to produce valid titles to be approved in U.S. courts. Most landowners consequently spent several years in litigation to prove their ownership. The courts eventually approved 14 million acres as legal, while the remaining 700,000 were declared null and void. Meanwhile, many Californios were forced to sell off portions of their holdings to finance legal expenses. Others fell heavily in debt to lenders, bankers, and tax collectors and likewise lost additional acreage to cover their obligations. In turn, the existing rancho system of landownership gradually vanished as Spanish-speaking rancheros, vaqueros, sheepherders, and other laborers relocated to the new urban barrios of Los Angeles and other cities to find work. As a new minority subject to intense discrimination, they never recovered their former social or economic significance.

In 1854, in the next landmark law, Congress enacted the principle of graduation. It was introduced largely at the behest of Missouri's influential senator THOMAS HART BENTON, whose state had the largest supply of unsold public land. This act provided that lands unsold on the market for long periods would be offered at graduated prices. Lands available on the market for more than 10 years would be sold at \$1 an acre; more than 15 years, 75 cents an acre; more than twenty years, 25 cents an acre; more than 30 years, 12½ cents an acre. The law represented a political alliance between East and West (with the South opposed), coming as it did in the midst of a decade characterized by

growing sectional feeling. Millions of acres were sold as a result of this liberal law, which was repealed in 1862.

This same East-West alliance worked to enact a Homestead Law that would give free homesteads of 160 acres to settler families. In 1860, President James Buchanan vetoed a homestead law passed by both houses of Congress. In response, the REPUBLICAN PARTY inserted a strong homestead plank in its platform for the presidential election of 1860. It was a promise that spoke in the strongest terms to western voters.

After Abraham Lincoln's victory in November 1860, the South seceded from the Union, and the Civil War began. Amidst the chaos and confusion of a nation at war, the Republican Congress passed a Homestead Act in 1862, fulfilling an important election promise. The law offered any citizen of the republic—or any immigrant who intended to become a citizen, was head of a family, and was over 21 year of age—a tract of 160 acres in the public domain after five years of residence. The entrant had to pay registration fees and administrative costs, but the idea of “free land” to settlers was as much a reality as Congress and the president could make it. As an added benefit, the homestead was exempt from attachment for debt.

With the passage of the Homestead Law, an era in the history of the public domain had ended. This 60-year period was characterized by adherence to the basic principles of the Ordinance of 1785; by the continuous liberalizing of terms under which the public domain might be acquired; and by the gradual acceptance of the principle that the public domain was not a source of revenue but, instead, a resource to be distributed to the citizens of the republic on the most liberal terms possible. The public land system had provided guidelines for the greatest physical expansion in the nation's history, and it had offered to the citizens of the republic generally fertile and well-watered lands. If it was true that some had benefited more than others in the sense of acquiring larger tracts, it was also true that almost everyone who had sought lands had acquired something. The opportunities for landownership under this system were unique in the history of the world.

In the next generation, from the close of the Civil War to the end of the century, the nation would continue its expansion at an unparalleled pace into the distant lands of the trans-Mississippi West and then to the shores of the Pacific. In so doing, settlers and speculators would find new landscape and new climates that would dramatically transform the ways that Americans thought about the public domain. It would gradually dawn on citizens, pioneer families, and officials alike that the old land laws were inapplicable to the challenges of the new, distant West.

Rohrbough, *The Land Office Business* (New York: Oxford University Press, 1968).

**Pushmataha** (ca. 1764–1824) *ally of Americans in the Creek War, orator, negotiator*

Pushmataha was a CHOCTAW chief who sided with the United States in the Creek War (1813–14). He was born into the Choctaw Nation near the future site of Macon, Mississippi, around 1764. Orphaned at an early age, he displayed unusual prowess as a warrior, rose steadily through tribal ranks, and around 1805 became a war chief and leader of the Six Towns District. That same year he first entered into treaty negotiations with the United States and concluded the Treaty of Mount Dexter, whereby he sold Choctaw land in return for a \$500 gift and an annuity of \$150 a year for as long as he remained chief.

Through this process Pushmataha met and befriended trader John Pitchlynn and became amicably disposed toward the Americans. Ample proof of this was afforded in 1811, when the Shawnee leader Tecumseh visited the southern Indians and beseeched them to join his antiwhite confederacy. Pushmataha, who was in attendance, then rose and delivered a forceful speech of his own, effectively persuading many of his tribesmen and neighbors not to forsake the friendship of the United States for the sake of a stranger. In August 1813 the Upper CREEK Indians attacked American settlements. Pushmataha readily joined the ranks of General ANDREW JACKSON with 500 Choctaw warriors. These he personally commanded in several stiff engagements with the Creek, gaining Jackson's respect as an effective leader. In recognition of his conduct Pushmataha was made a brigadier general in the U.S. Army. In 1818–19 his Choctaw warriors performed similar work against the Seminole of Florida, and he became widely hailed as “the Indian general.”

The postwar period proved difficult for the Choctaw, who came under increasing pressure from the United States to sell their lands in Mississippi and migrate across the Mississippi River. Pushmataha was present at several treaty signings in 1816 and 1824, where he proved himself adept as a negotiator in talks with General Jackson. In 1824 Pushmataha visited Washington, D.C., with a tribal delegation to discuss forthcoming land cessions, and he was

cordially introduced to President JAMES MONROE and the marquis de Lafayette. However, the aged chief fell ill during the proceedings and died there on December 24, 1824. His final request to his hosts was to “fire the big guns over me,” and he received a formal military funeral replete with a cannon salute. Pushmataha is one of few NATIVE AMERICANS interred in the Congressional Cemetery. His passing created a void in Choctaw leadership that was never filled, and within a decade the tribe was relocated across the Mississippi.

## race and race relations

The notion of race is ancient, dating back at least to Classical antiquity. Ancient Greek thinkers held that discernible physical and cultural differences between various peoples could be ascribed more to environmental conditions than to any inherited quality, and later theorists expanded on this idea. The 17th-century English philosopher John Locke postulated that the human mind was the equivalent of a blank slate at birth and, as such, was malleable as long as environmental surroundings helped shape its attendant character, personality, and intellectual traits. The 18th-century French philosopher Voltaire maintained that Western Europeans had achieved their presumed superior level of civilization, compared with the people of other regions, owing to favorable environmental conditions. Despite ingrained notions of superiority, virtually all Enlightenment figures held that humanity, regardless of race, was capable of improvement and, hence, that all could theoretically rise to the same level of advanced civilization.

Though the racist concept of biological determinism had not yet been formulated in the early 19th century, conditions in the United States, characterized by SLAVERY and expansionism, led to the widespread acceptance of this pseudoscientific outlook. The idea grew slowly and was not universally embraced. It was prevalent enough, however, to inform U.S. policies that directly and adversely affected nonwhite peoples. Many politicians who enacted these racist policies, like many Americans in general, believed that nonwhites were intellectually inferior to whites and condemned to either subservience or extinction; they regarded racial minorities as incapable of rising to the level of “Anglo-Saxon” Americans, regardless of their education or acculturation. Americans with this outlook viewed “non-white” races—blacks and Indians initially, followed by Irish and Chinese immigrants later in the century—as essentially doomed on account of inherited racial weaknesses.

The United States in the 19th century was a nation composed of a rapidly growing and racially diverse pop-

ulation. It was also a nation in which social, economic, and political power and legal status were determined by race. Despite the 1776 pronouncement in the Declaration of Independence that the fledgling nation was to be one founded on the principle that “all men are created equal,” race, racism, and racial inequality would, by 1865, be deeply woven into the U.S. legal, societal, and cultural fabric. Throughout the century, members of the so-called white race (also referred to commonly as the Anglo-Saxon or European race) dominated over those deemed members of different, and allegedly inferior, racial groups. Prior to the Civil War (1861–65), three processes—slavery, expansion, and IMMIGRATION—that were fundamental to the development of the nation also fostered and structured its system of race relations. The precedents these processes set for racial interaction during the first half of the 19th century would persist well into the 20th century.

Americans did not invent “race” and “racism,” but these concepts determined life in the 19th-century United States as a nation of political power and privilege for white males. After the U.S. Constitution was ratified in 1788, the nascent federal government passed the Naturalization Act in 1790. According to this act, only “free white persons” were entitled to become U.S. citizens. Even more significant than the laws governing who could become citizens were the laws that defined which citizens could vote. Initially, these were only white, male property owners and taxpayers. This initial restriction on democratic participation was directed not only toward nonwhite and female populations but toward landless and poor white males. However, by the 1850s, most states lifted economic requirements, and suffrage became universal—but only for white men. Although the laws for citizenship and voting were modified several times prior to the Civil War, it was not until after the passage of the Fourteenth Amendment in 1868 and the Fifteenth Amendment in 1870 that voting and citizenship were extended to freed slaves and people of African descent. It would be several more decades before other

non-whites, and women generally, were granted eligibility to citizenship and enfranchisement.

Nothing shaped racial thinking and race relations more than the institution of slavery. By the middle of the 19th century, to be a slave meant to be black, to be of African heritage, and to be burdened with the weight of dehumanizing negative racial stereotyping. Almost from the beginning of British and European settlement, various colonies, particularly those with slave-labor economies, established laws demarcating lines between slave and the white populations. The colony of Virginia, for example, passed laws in the 1670s prohibiting free blacks from owning white servants or striking or physically harming white persons. Laws were promulgated in various colonies that denied slaves the right to vote, prohibited their testimony in court, and prevented them from holding any public office.

Yet the laws that were designed to separate the races were those that prohibited miscegenation, or interracial relationships. Whites were greatly troubled by such relationships for numerous reasons, including the general fear of interracial sexual unions, the blurring of a child's status as a slave or free person, and a child's inheritance rights. Miscegenation made clear the malleability of racial classification. In 1691, Virginia passed the first antimiscegenation law "for the prevention of that abominable mixture and spurious issue." Other colonies followed suit. Most of these laws targeted "Negroes" and "mulattoes" (mixed-race people), but Native Americans were usually included in the list of those prohibited from romantic or sexual relations with whites. These laws also uniformly barred such relations only with regard to white women. White men were not legally prevented from entering into relationships with slave women or other nonwhite women. However, their children, should paternity be proved, would be considered slaves and nonwhite. Because determining a person's racial lineage was so difficult and the anxieties about racial separation so great, many laws were later adopted stating that even "one drop" of nonwhite blood meant a person was nonwhite.

Laws that limited the political activity of slaves and prevented interracial marriage were designed, in part, to reinforce racial attitudes and the notion that blacks were less than human and, as slaves, were to be considered property. The U.S. Constitution did not recognize a slave as a whole person but only as three-fifths of a person. In 1850, the federal government passed the Fugitive Slave Law, which empowered slaveholders to retrieve their slaves, as private property, in free states and territories. The notion that slaves were merely chattel was reinforced by the U.S. Supreme Court in *Dred Scott v. Sandford* (1857). The Court ruled that black people, slave or free, were not U.S. citizens and therefore could not sue in federal courts and that U.S. government could not interfere with a slave owner's right to his property.

What made the Supreme Court's ruling in the *Dred Scott* case unsurprising was a U.S. culture greatly influenced by theories about race and racial difference. In order to defend slavery, an institution that denied slaves their freedom and humanity, southern slave owners and proslavery advocates from the 17th century onward propounded theories based on racial difference that set slaves apart from free people. These racial theories defined people of African descent as suitable only for slavery and servitude. Although proslavery thinking differed and at times conflicted, it always relied on an assumption of racial distinction between "black" slaves and "white" free people. Slavery was defended on biblical grounds as well as on outward physical difference. Some proslavery advocates believed in monogenesis, having one origin, and argued that differing environmental conditions promoted racial variation. A superior environment enabled white people to emerge as a superior race. Other proslavery Christians maintained that black people were the children of Ham, the disgraced son of Noah, and therefore condemned to a life of servitude. Those who believed in polygenesis, or having many sources, defended slavery and maintained that black people were a completely separate species and therefore excluded from the rules governing white humanity. Proslavery advocates explained that slavery was a positive good either because it regulated slaves, who were subhuman and dangerous, or paternalistically cared for slaves, who were childlike and helpless. Even enlightened thinkers such as Thomas Jefferson posited that blacks were intrinsically inferior to whites and therefore could never be successfully assimilated into the greater American society. He succinctly outlined this belief as early as 1785 in his eminent publication *Notes on the State of Virginia*. Jefferson carried his prejudice a step further by suggesting that Americans of African descent were, in effect, a distinct genus or species and separate from whites, an attitude anticipating later racial theories.

In the 1820s, "scientific" studies of race first appeared in numbers. These studies and their authors were to have a growing influence on how Americans saw race and racial groups. The following half-century was a period of growing study of science and the impact of science on American life. Among the most important figures were Louis Agassiz (1807–73) and Arnold Henry Guyot (1807–84), who represented the gradual separation of science from theology, and the efforts on the part of men like Guyot to reconcile the growing scientific discoveries of the 19th century with the Bible. Agassiz, a respected Swiss biologist and Harvard professor, argued for the separate creation of races, or polygenesis. He asserted that the differences in physical anatomy between Asians, Native Americans, Europeans, and Africans could only be attributed to different origins and evolution. This approach dovetailed with the prevailing scriptural view that the black races were descended from

Ham, the disgraced son of Noah, and were therefore destined for servitude.

Issues of race and the racial dimension of scientific theories had its first important scientific spokesman in Samuel George Morton (1799–1851). Like other scientific figures of the period, Morton trained as a doctor and began his professional career practicing medicine. While Morton's career as a doctor developed gradually over time, he used his spare time to pursue scientific interests. Among his early pursuits were a study in paleontology that analyzed the fossils collected by MERIWETHER LEWIS and WILLIAM CLARK on their celebrated expedition to the West. But Morton's most important study, begun in 1830, focused on the study of human skulls, or craniology. His work eventually encompassed the scientific measurement of more than 1,000 skulls. Through a wide correspondence network that stretched around the world, Morton had access to specimens from all over the globe, from which he deduced capacity of the skulls' interior. In 1839 he published *Crania Americana* (1839), a study that confirmed the division of humankind into five races: American, Caucasian, Ethiopian, Malay, and Mongolian. In this study, Morton argued that the American race was one species that included groups from South America to the Canadian border, and that the physical characteristics of different races were independent of external causes. But most tellingly, he concluded that the average skull size of whites generally accommodated a larger brain mass than those of Africans or Native Americans and, by default, whites were more intelligent and more capable of higher civilization. Many scientists praised Morton's theories, including Agassiz, but they were particularly popular among southern supporters of slavery, who energetically proposed and defended the theory that human races had different origins and did not belong to the same family. Morton's work was so important that scientists at the time referred to an "American school" of physical anthropology.

The most important racial theorist of the first half of the 19th century was Josiah Clark Nott (1804–73). Also trained as a medical doctor, Nott was first associated with the growing independence of scientific research from theologians and religion. In 1843, he published an article on mulattoes that began his work on race, which would lead to an international reputation. He became a leader in the American School of Ethnology, a group that included Samuel George Morton. Nott came to be regarded as a friend and respected scientist by many northern men of science, including Louis Agassiz. Nott believed that wide differences in innate capacity marked the different races; these differences were especially marked between blacks and whites. Like others, Nott argued that blacks and whites belonged to separate species without a common origin. Because of these innate differences, blacks were suitable to slavery because their

limited capacity prevented them from competing against superior races. In the long run, American Indians and the colored races were doomed to extinction unless they had a protected role in slavery. An important corollary of these theories was the central role of the superior races in human progress over the centuries, and to continue this progress, the superior races should be kept pure, hence the fear of racial amalgamation. Nott brought these theories together in his *Types of Mankind* (jointly written with George R. Gidden). Published in 1854, this work was regarded as the accepted account of racial origins in the 1850s, and it was republished in several editions over the next 20 years.

Even opponents of slavery, primarily northern abolitionists who argued for the abolishment of the institution on biblical grounds and believed in the slaves' basic humanity, viewed African Americans as racially different and inferior. Most abolitionists were neither egalitarians nor integrationists. They shared the same attitudes as proslavery paternalists. In fact, during the first half of the 19th century, many abolitionists and moderate critics of slavery, including Harriet Beecher Stowe and Abraham Lincoln, supported recolonization of slaves and free blacks to Africa. Such a plan was actively pursued by the AMERICAN COLONIZATION SOCIETY. Only William Lloyd Garrison and fellow radicals argued in favor of racial equality and integration, but they were on the distant fringe of the ABOLITION MOVEMENT.

Racial animus was directed not just at black slaves but at free blacks as well. Even in liberal northern states, such as Massachusetts, free blacks suffered from racial discrimination in the larger society and culture, particularly among the growing white working-class population, who saw free blacks as a challenge to their employment. Despite the prominent role free black Americans like Frederick Douglass and Sojourner Truth played in the abolition movement, the majority of white Americans viewed slaves and free blacks as being a distinct and lesser race.

By the outbreak of the Civil War in 1861, the debates over slavery and theories of race were largely inseparable. Slavery proponents and critics not only marshaled existing race ideologies for their causes, they also refined and altered such ideologies to fit their needs. Even those who condemned slavery and demanded immediate emancipation considered blacks to be a separate race, and, consequently, saw themselves as the superior race because of their white skins. In 1859, British scientist Charles Darwin published *Origin of Species*. Although Darwin's theories of evolution and natural selection were popularized too late to help the cause of slavery on the eve of the Civil War, these theories would add scientific legitimacy to racial thinking and racism during the second half of the 19th century.

Race thinking and racism were as integral to U.S. expansionism in the 19th century as they were to slavery.

Proexpansionist Americans used racial difference, primarily that between American Indian peoples and white settlers, to justify their quest for territory. From the beginning of European colonization of North America, whites encountered indigenous people. Most white settlers viewed the Native American population as a dangerous obstacle occupying valuable territory. They constructed their struggles with indigenous people in racial terms. Whites cast Native Americans as “uncivilized” and “savages” in order to validate the breaking of treaties and the use of violence to seize land. More charitable white Americans did not see Native Americans as inherently “savage.” In fact, in a racial hierarchy that was developing over the course of the 19th century, Native Americans were placed above slaves. However, they were still considered by most whites as racially subordinate. Thomas Jefferson, for example, held such views, and as president offered Native American people incorporation into U.S. society and good treatment if they agreed to surrender their lands and assimilate white behaviors. For those who refused this option, Jefferson offered them lands west of the Mississippi.

Jefferson’s views, however, were not predominant in the United States. President ANDREW JACKSON, a Tennessee slave owner, who gained his reputation as a violent “Indian Fighter” against the Creek and Seminole peoples during the War of 1812, rejected the notion that Indians were assimilable. As president, he won the passage of the INDIAN REMOVAL ACT in 1830, which forcibly pushed all Indian peoples west. Native Americans were thus presented with the miserable choices of evacuation, assimilation, or extinction. By the 1850s, federal policy ensured the racial separation of Native Americans by consigning them to reservations. White Americans justified this harsh treatment with race ideologies.

Over the course of the 19th century, race thinking and racism would continue to bolster white Americans’ expansionism. The notion of MANIFEST DESTINY characterized the U.S. domestic, expansionist policy. According to Manifest Destiny, white Americans, specifically Anglo-Saxons, were preordained to expand across the North American continent. Anglo-Saxons were to rule over, “Christianize” and “civilize” nonwhites, including black slaves, the Indian peoples, and Mexicans, who were incorporated into the United States after the MEXICAN-AMERICAN WAR (1846–48). This racially charged expansionism would lead to more violent clashes with Native Americans and other nonwhite peoples following the Civil War. It would also be used as a rationale for overseas expansion at the century’s conclusion.

Ironically, President Jackson’s term in office was also called the period of “Jacksonian Democracy” and the celebration of equality among Americans. However, this democracy was open only to white American men. It stressed the

unity of white people at a time when even “whiteness” was not necessarily racially uniform. From the 1830s through the Civil War period, the United States witnessed a dramatic increase in immigration from famine-stricken Ireland and politically turbulent Germany. In 1854, the number of immigrants entering the country was nearly 500,000. For the majority population of Protestant Americans, this influx of new immigrants, who were primarily poor, uneducated, and Catholic, was threatening. Irish immigrants in particular drew the ire of Anglo-Saxon Americans, who initially characterized them as a substandard race. Such anti-immigrant sentiment spawned pride in Anglo-Saxonism and the formation of short-lived, but dramatic nativist politics at mid-century.

Although white Protestant Americans were concerned about the increasing immigration of non-Protestant Europeans, the influx of Chinese immigrants created even greater anxiety. The Chinese came to the United States during the CALIFORNIA GOLD RUSH of 1849. Full-blown anti-Asian racism would not develop until the late 19th century, but white Americans, especially those on the West Coast, began establishing early barricades against Chinese immigration and integration into U.S. society. In the 1850s, white state legislatures passed laws that taxed only Chinese miners. Naturalization laws prevented Chinese immigrants, defined as nonwhite, from becoming citizens. Even the U.S. Supreme Court denied Chinese the right to testify in court in the *People v. Hall* decision (1854). As with slavery and expansionism, race and racial difference justified the white American response to and regulation of immigration.

By the time the Civil War concluded in 1865, race thinking and racism were well-entrenched in U.S. culture, society, and law. Although the post-Civil War amendments to the Constitution ended slavery, gave free slaves citizenship, and enfranchised black men, this did not usher in an alteration in race relations. In fact, race became a more significant factor in U.S. life and politics as white Americans confronted a newly freed black population, a more intransigent Native American population, and an ever-increasing non-Protestant, nonwhite immigrant population. In their struggle to maintain supremacy, white Americans would rely on race and race theories, especially scientific theory, to legitimize the use of violence and terror, segregation, race-based immigrant exclusion, and war to maintain their hold on power. It would not be until World War II that the United States would see a gradual liberalization in racial thinking, a rollback of racist policies, and the recognition of nonwhite peoples’ civil rights.

## railroads

By 1815 there were few nations in the world with a greater need for an effective transportation system than the United States. With the uncertainties of national survival overcome, Americans were beginning to move west over the Allegheny Mountains. Although most of the nation's population lived near the seaboard, and the rivers draining into the ocean provided adequate local transportation, the need to travel inland was increasing, and the lack of transportation across the mountains was a major hindrance.

The first idea of a railroad in the United States had been advanced before the Revolutionary War when the great American inventor Oliver Evans suggested the construction of a steam-powered railroad between Philadelphia and New York. Evans, who was not adequately appreciated by his contemporaries, had been experimenting with steam engines to power millstones. By 1801, he had constructed an amphibious steam carriage that chugged around Philadelphia, convincing people that Evans was deranged. Unfortunately, his inventions were ahead of their time, and he was unable to secure funds to perfect them. He died in 1819, convinced that future steam locomotives would pull passenger trains up to 300 miles per day. Most of his contemporaries continued to derive great mirth from Evan's predictions, but many of them lived to see him vindicated.

Probably the first known transportation system to actually use rails in the United States was constructed in 1795 to transport rock and cement in the Boston area. In 1807,

another railway was constructed in Boston by Silas Whitney. Two years later, Thomas Leiper built a railroad to a stone quarry near Philadelphia, and in May 1827 a nine-mile line was constructed to a coal mine in Pennsylvania. The longest early railroad was the Delaware & Hudson (D&H) Canal Company's 29-mile gravity railroad from its Honesdale, Pennsylvania, coal mines to the D&H canal at Rondout, New York. All of these railroads, however, used wooden rails and horse or mule power. Most of the lines were gravity lines, where cars coasted downgrade with loads and were drawn back up to the mine or oven by animal power. With the exception of the D&H line, they were also quite short. These lines were designed to haul a single cargo to the point where it was to be used or to haul it to a better-developed and more efficient source of water transportation.

The first incorporated railroad in the United States was the Granite Railway Company of Massachusetts, which was chartered by the state on March 4, 1826. Its purpose, hauling blocks of granite for the construction of the Bunker Hill Monument, was similar to that of the earliest railroads. The Granite Railway was only three miles long and was powered by horses. It was also the first railroad to utilize wooden rails overlaid with iron. The line eventually became part of the New York, New Haven & Hartford Railroad.

The first known charter for an intercity railroad in the United States was granted to New Jersey in 1815 to Colonel John Stevens. Stevens had been attempting to secure this charter since 1811, and in 1812 he petitioned Congress to support a national railroad. Since Colonel Stevens was not as eccentric as Evans, he was regarded more seriously. In 1825, he operated one of the first live-steam model railroads—a locomotive that ran around a loop of track on his lawn.

One of the major reasons people were unwilling to back Stevens was that most Americans believed an effective transportation system had already been developed. The same year Stevens first operated his live-steam model, the great engineering marvel of the new nation, the ERIE CANAL, had been opened. The canal opened the west to New York City and, furthermore, provided a laboratory for the training of many American civil and mechanical engineers, such as John Jervis. Until the 1840s, canals remained competitive with railroads in the question over which could provide better transportation. Eventually, the high initial cost of canals, the fact that they froze over in the winter in many parts of the country, and the slow speed of the boats allowed the railroad to win out. Canals continued, however, to transport bulk commodities, such as coal, that did not require speedy or timely delivery. Canals never were able to overcome their problem dealing with mountainous terrain. Railroads proved to be more adaptable to the severe grades faced by projects moving to the West.

This engraving depicts a race between Peter Cooper's locomotive Tom Thumb and a railcar pulled by a horse. (Hulton/Archive)

Thus, by the late 1820s, railroads clearly promised to be one facet of a transportation system that the new nation could utilize to, in the words of JOHN C. CALHOUN, “bind the Republic together with a perfect system of roads and canals.” Although railroads were in their infancy when Calhoun made his statement in 1817, by 1830 they were already looming as a major factor in interstate transportation. Two major factors combined in the 1820s to increase the need for all forms of transportation. One was the tremendous population growth of the states west of the original 13 states (Kentucky, Tennessee, Ohio, Louisiana, Indiana, Mississippi, Illinois, Alabama, and Missouri). In 1810, these states or territories contained 15 percent of the total U.S. population, but by 1830 this figure had grown to 28 percent. Trade with this increasingly populous region was extremely important for the East. The topography of the Midwest provided adequate river transportation down the Ohio and Mississippi Rivers to New Orleans. Early efforts were made to improve transportation by connecting the Great Lakes and the Ohio River by canal. If the East did not develop an effective transportation link with these western states, those in the West would be forced to trade primarily with New Orleans. By 1825, a significant number of steamboats were already competing to make the best time to and from New Orleans.

The second major factor was the rivalry that developed between the major eastern cities for dominance in the western trade. There were five major American coastal cities in the early 19th century: Boston, New York, Philadelphia, Baltimore, and Charleston. New York and Philadelphia had the initial edge for the western trade because of their size and huge financial resources. Baltimore's convenient and strategically placed harbor allowed it to join the “big two.” Both Boston and Charleston gradually fell behind in the battle for the western trade, Boston because it was located farther from the western states than the other cities, and Charleston because it did not have the capital base of the merchant-oriented northern cities. Boston, in particular,

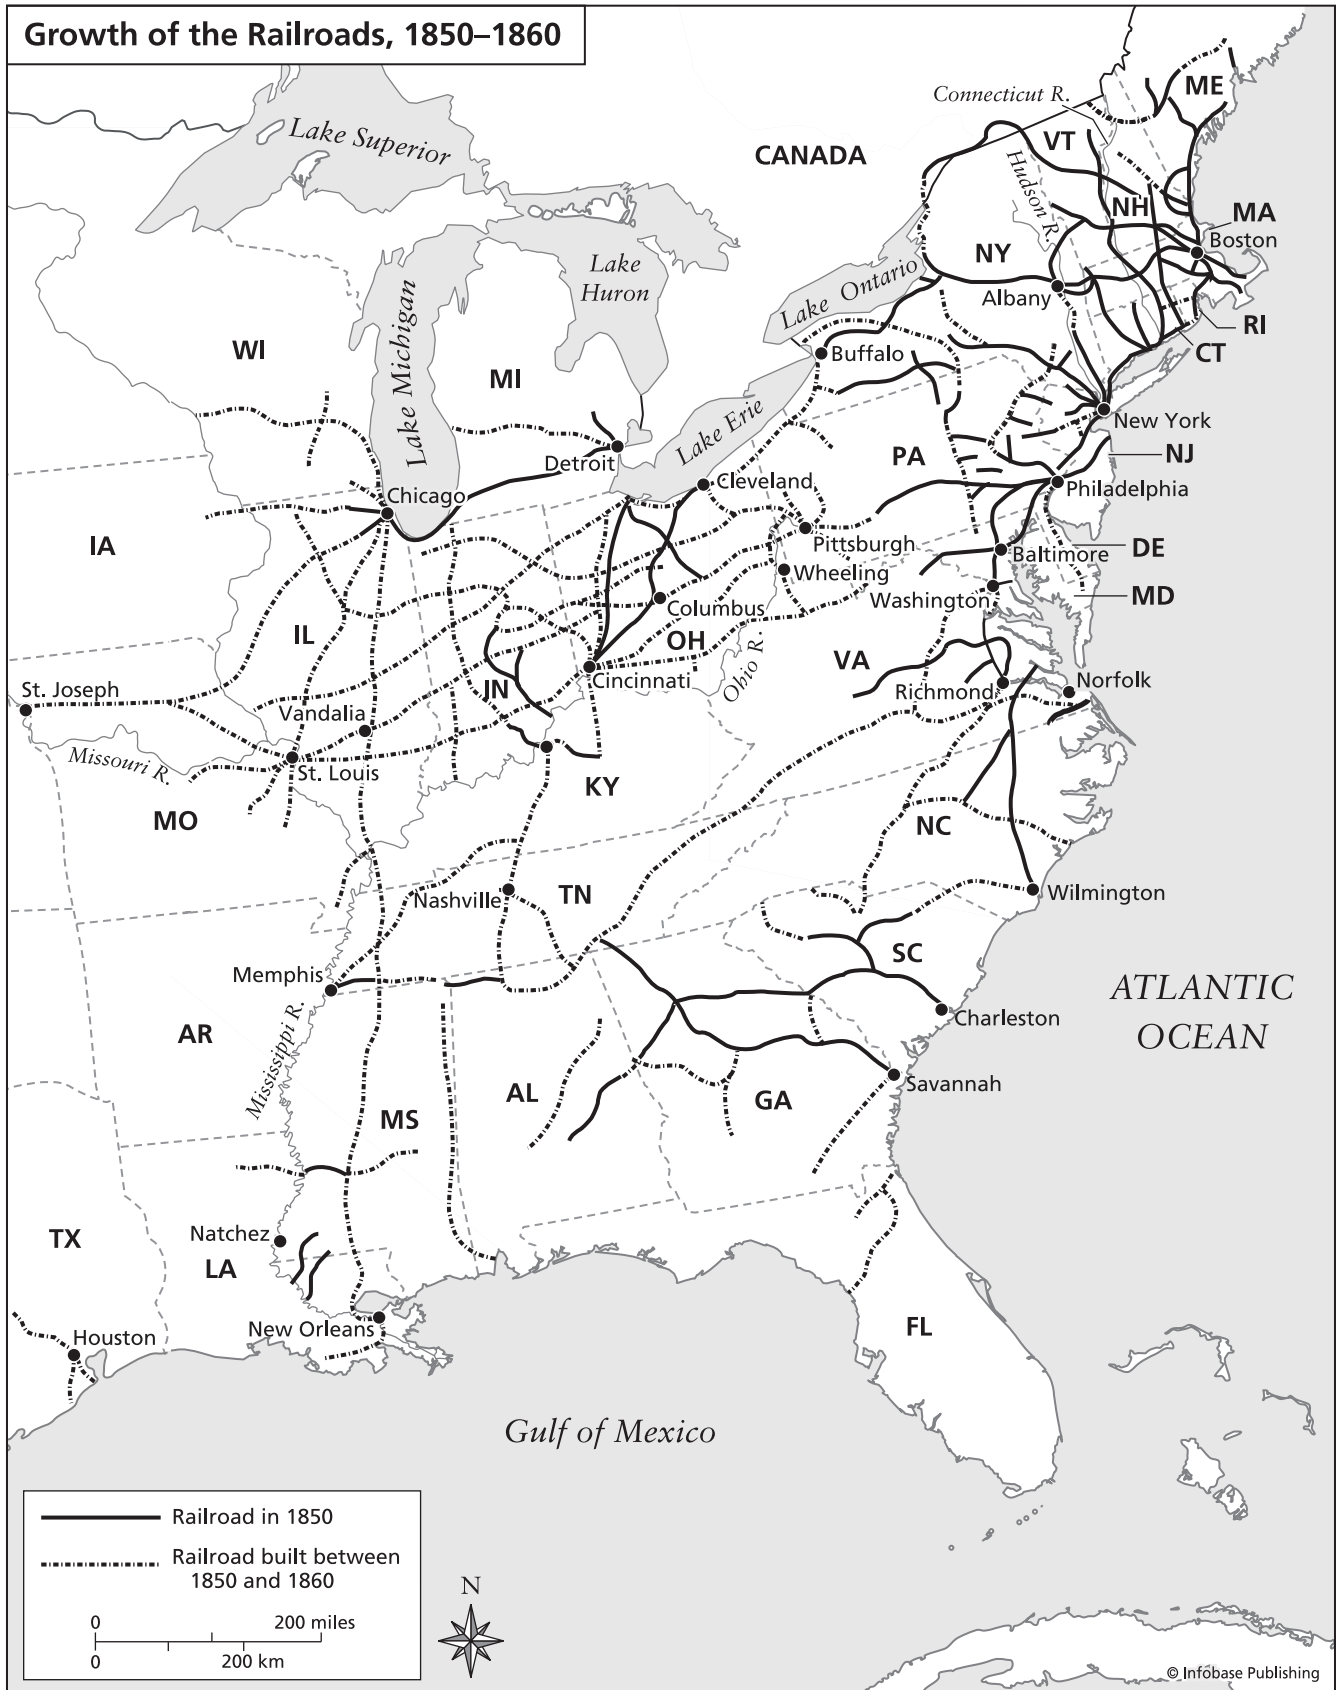

still attempted to gain its share of the western trade indirectly by trading with New Orleans, but the city was less and less successful as the century progressed.

Early railroads had one of three purposes. First, there were the short lines, like the Granite Railway of Massachusetts, whose major purpose was to carry a single product a short distance. Second, there were the intercity railroads or western lines that attempted to link up cities or markets in a linear fashion, the BALTIMORE & OHIO RAILROAD being a primary example. Finally, there were railroads designed to provide transportation to local markets in a major city. Such cities usually had lines radiating out from them like the spokes on a wheel. Boston was the leading example of this type of railroad system, with lines running to Lowell, Fitchburg, and Worcester, Massachusetts; Norwich, Connecticut; and Providence, Rhode Island.

With the success of such railroads as the Baltimore & Ohio, the South Carolina, and the Mohawk & Hudson, a type of “railroad fever” swept many parts of the nation. Opposition to the railroads came from people who stood to lose business and money because of their introduction. Sometimes railroad workers were shot at and beaten up, sections of railroad were torn up, and locomotives and rolling stock were damaged. But such opposition did not last long. Railroads were infinitely superior to canals and turnpikes, and the feared displacement of workers did not occur.

The Baltimore & Ohio was not the first railroad to reach the western waters from one of three competing eastern cities; rail service between the Hudson River and the Great Lakes had been available since the 1840s. About 10 short connecting railroads, including the Mohawk & Hudson, constituted an unincorporated “Central Line,” but the trip from New York to Albany had to be made by riverboat until 1852, when it was possible to travel from New York to Lake Erie by rail. Philadelphia businessmen began a western railroad late compared to Baltimore, but, once started, they pushed its construction across Pennsylvania

# Growth of the Railroads, 1850–1860

with vigor. The Pennsylvania Railroad was incorporated in 1846, and by 1852, also a little ahead of the B&O, the line was completed to Pittsburgh. Until 1854, this line had to use inclined planes to reach over the Allegheny Mountains. Thus, rail lines from all three cities reached western waters at Buffalo, Pittsburgh, and Wheeling at about the same time.

Another early railroad associated with Philadelphia and New York was the Camden & Amboy (C&A), built by Robert L. and Edwin A. Stevens, the sons of Colonel John Stevens. After acquiring a charter in 1830, the C&A was constructed from Camden, New Jersey, across the river from Philadelphia, to South Amboy, New Jersey, on the ocean 30 miles south of New York City. Final connections to both cities involved ferry boats. Direct connections on rails leased or owned by the Pennsylvania Railroad from west of Philadelphia to New York were not obtained until after the Civil War. From the 1850s to 1863, New York-bound traffic from Pennsylvania had to be turned over to Philadelphia & Reading at Harrisburg. The C&A dominated transportation between Philadelphia and New York for over 30 years.

Railroad construction in New England did not lag behind that in the Middle Atlantic states merely because Boston appeared to be out of the race for western trade. Eventually the railroads radiating out of Boston made efforts to connect with key markets in three specific directions. First, a series of lines, including the Fitchburg and the Vermont Central, attempted to link Boston with eastern Canada, thus directing Canadian trade to and from Boston. Second, attempts were made, primarily through the Western Railroad of Massachusetts, to link Boston with Albany and the "Central Line" to Buffalo and the western trade. Third, via predecessors of the Boston & Maine and the New York, New Haven & Hartford, efforts were made to link Boston with New York. All of these efforts succeeded to some degree, but they were unable to restore Boston to the economic preeminence it enjoyed in the 18th century.

Until the 1850s, the financing of railroads involved a combination of private and public capital. The coal-mine lines were low-cost affairs financed by the owners of the mines and quarries themselves. The Baltimore & Ohio and the South Carolina Railroad were essentially city projects, and most of the money came in the form of municipal bonds or other forms of public support. Exceptions such as the Camden & Amboy were financed primarily by individual investors, who also played a minor early role in the B&O and the South Carolina Railroad. The Pennsylvania Railroad, during the late 1840s and early 1850s, was heavily financed by state and local commitments; in 1857, however, an amendment to the Pennsylvania state constitution made it illegal for counties, municipalities, or townships to invest public funds in railway construction. Thereafter, the

issuance of stocks and bonds formed the basis for financing Pennsylvania's railroads. Several other states developed similar prohibitions on using public money to support what were frequently dubious railroad construction projects. Prior to the Civil War, little capital to support railroad construction came from outside the United States.

In 1830, 23 miles of railroad were in operation. This figure grew to 2,818 miles in 1840 and to 9,021 miles in 1850. The year in which the greatest mileage was put into service was 1850, with 1,261 miles added. By 1860, 30,626 miles of railroad were in operation. Part of the reason for the success of railroads was the speed and relatively low cost of the transportation. In 1853, the cost of moving a ton of freight one mile by turnpike was approximately \$15, while the rate on most railroads ranged between \$1 and \$2. River transportation, costing about 37 cents, was the least expensive, but rivers did not always flow where the freight had to go.

By the time of the Civil War, an extensive network of railroads covered New England, the Middle Atlantic states, Ohio, Indiana, Illinois, and the southern Michigan and Wisconsin. Lines in the South were less numerous, but all states had at least one rail line. In states like Texas, Florida, Louisiana, and Alabama, many of the lines were isolated with no outside connections, which was seldom the case in the North. The South had little of what could be termed a railroad system, but the North had already progressed a long way toward developing such a system.

## religion

The early 19th century was a time of great religious ferment in the United States. Most Americans were Christians, but the unity of this background disguised great variety. New forms of Christianity, such as Mormonism, were being born; old denominations were undergoing revival, change, conflict, and fragmentation. IMMIGRATION was changing religious demographics, as Roman Catholics arrived in large numbers. The fact that churches in America had been officially disestablished by the adoption of the Constitution in 1789 meant that they were responsible for their own funding, yet it also left them free to experiment with new doctrines, concepts, and appeals to attract as wide a following as possible. Religious ideas inspired social reform, utopian experiments, and movements as varied as transcendentalism and spiritual communication with the dead.

Religious revivals swept the nation from the 1790s to the 1830s in a movement called the SECOND GREAT

AWAKENING; this commemorated the Great Awakening in the thirteen colonies in the 1730s and 1740s. The Second Great Awakening was marked by Evangelicalism, an enthusiastic way of spreading the Gospel that deemphasized reason and learning in favor of emotional, personal acceptance of God's offer of grace. Coming into being at the end of the 18th century, the movement sprang forward from two areas. In Kentucky, Presbyterian pastor James McGready started the tradition of outdoor revivals called camp meetings. In Connecticut, Congregationalist Timothy Dwight, president of Yale College from 1795 to 1817, sought to correct the irreligion of Yale students by heartfelt preaching and common-sense application of religious truths to life.

One of Dwight's students, Presbyterian Lyman Beecher, furthered the Second Great Awakening with revival services in Boston beginning in 1826. CHARLES GRANDISON FINNEY left his law practice in 1821 to make upstate New York a hotbed of revivalism. Methodist bishop Francis Asbury used revivalistic preaching to spread Methodism in western frontier areas and in settled regions of the East. Tirelessly crisscrossing the country on horseback, Asbury set an example for other circuit riders, Methodist preachers who covered a large territory through regular travel. The countryside was not the sole focus of the spreading fervor: Throughout this period evangelical preachers like Finney worked the crowds of New York and Boston and found willing and enthusiastic audiences. Perhaps ironically, INDUSTRIALIZATION contributed to religious revivalism. Its uprooting effect upon heretofore agrarian populations, male and female alike, and the drudgery of factory and mill work left many young, single people isolated and hoping for a better future. The Protestant revival answered many of the spiritual, moral, and social needs of laborers in major metropolitan centers, and thus brought many thousands of converts into the religious mainstream.

Women found opportunities to testify and preach at revival meetings, though usually without being ordained as clergy. A prominent woman preacher was Phoebe Palmer, who in the 1830s began to preach a message of holiness later promoted through her periodical *Guide to Holiness* (1864–74).

The printing of Bibles and a growing interest in religious education were indicators of the spiritual fervor of the times. In 1816, the American Bible Society was founded to distribute English-language Bibles to Americans; it was soon publishing 300,000 copies a year. This zealotry also led to the founding of new groups like the American Tract Society and the American Temperance Society, whose purpose was to spread the Gospel while also imparting positive social change. In 1824, the American Sunday School Union was formed to provide general and religious instruction. The spread of missions and the formation of missionary societies were other signs of widespread zeal.

Congregationalist missionaries brought the Gospel to the Sandwich Islands, now Hawaii, in 1819. Other American missionaries were venturing as far as Burma and Africa by the 1820s. Closer to home, missionaries, with federal government aid, proselytized and educated Native Americans, particularly the Five Civilized Tribes (CHEROKEE, CHOC-TAW, CREEK, CHICKASAW, and SEMINOLE). This mission effort was severely disrupted by the forced removal of Native Americans from the Southeast in the 1830s.

Evangelical Christianity was linked to reform movements such as temperance, the movement against alcohol consumption; and abolitionism, the movement to end SLAVERY. Christians were involved in founding the Society for the Promotion of Temperance in 1826 and the American Temperance Union in 1836. Christian teaching about human equality before God was an important spur to the antislavery activists who founded the AMERICAN COLONIZATION SOCIETY (1819), which was aimed at resettling freed slaves in Africa; and the AMERICAN ANTI-SLAVERY SOCIETY (1833). Harriet Beecher Stowe, author of the antislavery novel *Uncle Tom's Cabin* (1852), was a daughter of the revivalist preacher Lyman Beecher. Some Christians, particularly Quakers, took grave risks to participate in the Underground Railroad, a clandestine network that transported fugitive southern slaves to free regions in the northern United States and Canada.

Although Christians in the North were increasingly likely to oppose slavery, those in the South, where slavery was concentrated, were increasingly likely to justify it, often on Biblical grounds. From the 1760s to about the 1820s, southern Methodists and Baptists had opposed slavery, but by the 1830s they had largely joined the South's defense of its "peculiar institution." Differences about slavery led to schisms in many denominations, including Presbyterians, Methodists, and Baptists. The Southern Baptist Convention, which would become the largest body of Baptists, formed in 1845 to distinguish itself from northern Baptists who forbade missionaries to own slaves.

African Americans, whether slave or free, sometimes worshiped with whites during this period (usually in separate sections) and sometimes formed churches of their own. Baptist and Methodist preachers in the early 19th century converted a growing number of southern slaves to evangelical Christian worship. Black Christians formed their own meeting houses and developed distinctive spirituals, folk hymns indebted both to African tradition and to the white spirituals sung at revivalist camp meetings. Some blacks kept alive the religious traditions of West Africa, often mingled with Christianity. Voodoo or vodun, practiced in Louisiana, was a blend of Roman Catholicism and West African religion.

African-American preaching often contained references to Moses and Exodus, drawing an analogy between

Engraving showing a preacher and his audience on a southern plantation (Billy Graham Center Museum)

black slaves and the Hebrew slaves whom God had freed from bondage in Egypt. Sometimes the radical implications of this imagery went beyond preaching. In the South, Christian teaching, with its message of equality before God, was sometimes used to justify slave rebellions, such as Denmark Vesey's in Charleston, South Carolina, in 1822; and Nat Turner's in Southampton County, Virginia, in 1831.

Black churches took shape in the North as well as the South. The African Methodist Episcopal (AME) Church, an independent Methodist denomination, was founded in Philadelphia in 1816 by former slave Richard Allen, who became its first bishop. Allen started the church after being outraged by enforcement of segregation rules in a white-controlled Methodist church. The African Methodist Episcopal Zion (AMEZ) Church, another black Methodist denomination, was established as a national body in 1821.

With all the changes underway, it was no wonder that religious demographics shifted. In 1800, the Congregationalists were the nation's largest denomination, followed in order by Presbyterians, Baptists, Episcopalians, Methodists, and Roman Catholics. But by 1850, Roman Catholics and Methodists were vying for first place, followed by Baptists, Presbyterians, and Congregationalists. Episcopalians were no longer in the top five, and the wholly new Disciples of Christ were in sixth place.

Congregationalism, a denomination descended from New England's Puritans, was split by the secession of Unitarianism. Rejecting the Trinity and preaching human

perfectibility and universal salvation, Unitarians had been active in the United States since the late 18th century, drawing on roots that dated to the 16th century in Switzerland and Poland. Many Congregationalists, particularly the intellectual and social elite, quietly embraced Unitarian belief, but the sect did not fully come into its own until after William Ellery Channing's influential sermon "Unitarian Christianity," delivered in Baltimore in 1819. In the 1820s, the American Unitarian Association formed, with Channing as its first president, attracting many Congregational churches.

Unitarians shifted in the early 19th century from emphasizing scripture to stressing reason and service to humankind. This shift gathered force in New England in the 1830s and 1840s under the influence of Unitarian minister Theodore Parker and essayist RALPH WALDO EMERSON. Universalism, a denomination with tenets similar to Unitarianism, spread about this time in rural and small-town areas of the Midwest, particularly Ohio, Indiana, and Illinois.

Those churches that remained Congregationalist retained the Calvinist orthodoxy inherited from 16th-century Protestant theologian John Calvin, but exhibited tensions between liberals and conservatives. Nathaniel W. Taylor, first professor of theology at Yale Divinity School, created a schism when he questioned the doctrine of election and other Calvinist tenets. "Taylorism," as it was known, was so detested by conservatives as to prompt the

formation of a pastoral Union for the suppression of heresy (1833). Horace Bushnell, Congregational minister, author of *Christian Nurture* (1847) and *God in Christ* (1849), stressed the presence of divinity in nature and humanity and spoke against the traditional severity of Calvinism.

Among Protestant denominations, Methodists and Baptists made the greatest gains in antebellum America; by the 1850s, about 70 percent of all Protestants were Methodists and Baptists. Methodism spread thanks to the efforts of the circuit riders. Baptists, who advocated baptism of believers by total immersion, spread their emotionally charged faith throughout frontier areas by entrusting the Gospel to individual farmers who became licensed preachers in their local congregations.

After a period as a small minority, Roman Catholicism was on its way to becoming the country's single largest denomination, as it is to this day. The great increase in Catholic numbers before the Civil War was due largely to Irish immigrants. Driven from Ireland by poverty and oppression, these devoted Catholics began migrating to America in large numbers in the 1820s. Immigration rose to a new height in the 1840s, when the Irish potato famine of 1845–46 forced many to either leave home or starve. Between 1845 and 1854 alone, about 1.3 million Irish emigrated to America. Catholic immigrants from Germany, another major source of immigration during this period, also swelled the numbers of Catholics in America. The U.S. acquisition of CALIFORNIA and major parts of the Southwest from Mexico in the 1840s brought in still more Catholics, as the Mexican population in that region was absorbed into the U.S. citizenry. Moreover, the Catholic church was the only major Christian group of this period not rent by competing doctrines. As the oldest and most highly organized branch of Christianity, it was authoritarian in tone and intolerant of criticism, requiring the laity to show unquestioned obedience to the pope in Rome. It usually won and retained the spiritual loyalty of millions of immigrants and was in many respects a counterweight to the overwhelming Protestant religious culture of America.

With the growing numbers of Catholics came a growing anti-Catholic movement among Protestants who saw the new immigrants as a threat. Tracts denouncing Catholicism proliferated, and in the 1854 local and state elections, the anti-Catholic KNOW-NOTHING PARTY scored numerous victories. This nativist impulse was stridently anti-Catholic in tenor and agitated against what it saw as a discernible tendency toward papist authoritarianism. The war of words escalated in 1864, when Pope Pius IX promulgated his *Syllabus of Errors* to denounce the trends of modernity, republicanism, and other tenets of "heresy" then prevalent in Protestant America.

To a much smaller degree, immigration during this period also increased the numbers of Jews in America.

They came mainly from Germany, beginning in the 1820s. In the 1850s, Cincinnati rabbi Isaac Mayer Wise spearheaded the development of Reform Judaism, a liberal form of the faith that incorporated Enlightenment ideals. These Jews conducted their services in both English and German and allowed men and women to be seated together. However, the firmly established Sephardic and newly arrived German communities tended to be mutually exclusive, and they lived their lives and their religion apart from each other. The CALIFORNIA GOLD RUSH, which began in 1849, brought still other groups of believers, this time from China. The Chinese imported to America Buddhism, Taoism, Confucianism, and various traditional beliefs.

Some wholly new forms of belief sprouted in the United States during this period. One of the most successful was Mormonism, or the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS. This religion was established in 1830 in Fayette, New York, by JOSEPH SMITH, JR. That year, Smith published the Book of Mormon, which he said he had translated from gold plates given to him by an angel. Smith regarded his faith as a restored version of Christianity, but it was different enough in its teachings to be regarded by outsiders as a new religion. Mormonism taught that Jesus Christ had visited the New World to preach to ancient peoples of Hebrew descent; claimed that the Second Coming would take place in America; advocated POLYGAMY; and established a centralized church structure with a strong emphasis on communal activity. The Mormon church grew rapidly but was persecuted for its beliefs, with Smith murdered in 1844. Seeking refuge, the Mormons under BRIGHAM YOUNG began migrating to Utah in 1847, where they established a distinctive community they called the STATE OF DESERET.

Another new denomination in this period was the Disciples of Christ, or Christian Churches. This group grew out of what was called the Restoration Movement, which sought to unite all Christian churches by restoring what it viewed as the simple Christianity of the New Testament. In Kentucky in 1803, Presbyterian minister Barton Warren Stone and like-minded colleagues founded a group who called themselves "Christians." In Pennsylvania in 1809, Presbyterian minister THOMAS CAMPBELL and his son Alexander formed the Christian Association of Washington, Pennsylvania, which temporarily joined forces with the Baptists. The Stoneites and the Campbellites (as they were sometimes called) merged in 1832, united around such principles as the autonomy of congregations and the importance of individual interpretation of scripture.

Around the same time, another new Christian movement, Adventism, was making its mark. In 1831, New York farmer William Miller began preaching his interpretation of scripture, according to which Christ's second coming would occur on March 21, 1843. Through periodicals,

tracts, camp meetings, and lectures, Miller developed a large following of tens of thousands of Millerites or Adventists (from Latin *advent*, coming). When the second coming did not take place in 1843, the date was shifted to 1844, but again Christ failed to appear as scheduled. Miller and other true believers remained convinced that Christ would come soon, and they formed several Adventist churches to prepare. The largest of these, the Seventh-Day Adventists, adopted Saturday, not Sunday, as the Sabbath in 1844.

Still another new denomination was the Christadelphians (Greek, “Brothers of Christ”), founded by John Thomas in 1848. It also emphasized belief in Christ’s Second Coming, but it had distinctive touches, including pacifism, nonparticipation in government, and rejection of the doctrines of the Trinity and hell.

Some spiritual movements of the time were not so much sects or denominations as intellectual currents. Most prominent among these was transcendentalism, a philosophical and literary movement that called for the individual to encounter God directly. Influenced by German Romanticism, the TRANSCENDENTAL MOVEMENT celebrated the presence of divinity in nature, encouraged self-reliance, and belittled organized religion. Its greatest spokesperson was Ralph Waldo Emerson, who had been trained as a Unitarian minister. In 1838, at Harvard Divinity School, Emerson delivered his “Divinity School Address” marking the beginning of transcendentalism and drawing controversy for his criticism of traditional Christianity. HENRY DAVID THOREAU’s *Walden* (1854), based on his experiment in living simply and “deliberately” at Walden Pond near Concord, Massachusetts, further developed transcendentalist ideas.

SPIRITUALISM, a religious movement focused on contact with the spirits of the dead, emerged in the 1840s. In 1848, Margaret, Leah, and Catherine Fox of New York claimed to hear rappings that were messages from spirits. Paying audiences flocked to theaters to see the Fox sisters communicate with the dead. Spiritualism drew much skepticism but also many followers, including newspaper editor Horace Greeley. A leading spiritualist was Andrew Jackson Davis, clairvoyant and author of *Nature’s Divine Revelations* (1847).

Utopian experiments attempting to reestablish society on a sounder basis were characteristic of this period of spiritual fervor. New Harmony, Indiana, was founded in 1814 by the Harmony Society, a German Separatist group espousing communal ownership and celibacy. (They were also known as Harmonists or Rappites, for their leader George Rapp.) New Harmony was sold in 1825 to British socialist reformer ROBERT OWEN, who turned it into a communistic colony that quickly broke up due to internal dissension. The Shakers, or the United Society of Believers in Christ’s Second Appearing, also espoused commu-

nal ownership and celibacy. Founded in the 18th century, the movement established 18 Shaker communities in eight states by 1826. In decline after 1860, the Shakers left a legacy of fine furniture and handcrafts.

At Putney, Vermont, in 1839, John Humphrey Noyes founded a society that sought to carry out his perfectionist teachings of Biblical communism. Forced to flee when neighbors became outraged at the colony’s polygamy, Noyes moved to Oneida, New York, in 1848, where his experiments in communal living continued until the 1870s. At BROOK FARM near Boston, several transcendentalists tried an experiment in communal living (1841–47). And in Iowa, the Amana Church Society, a group of seven colonies, was founded by a German Pietist group called the Ebenezer Society in 1855. Known for their fine woollens and expert farming, the cooperative villages would survive into the 20th century.

As previously mentioned, the Bible was central to the proselytizing that accompanied the Second Great Awakening. The first organization to actively distribute this seminal text was the Philadelphia Bible Society, which first arose in 1808 and locally distributed several hundred bibles every year. The scope of spreading religious texts reached national proportions in 1816 with the founding of the American Bible Society (ABS) under ELIAS BOUDINOT, formerly the first head of the United States Congress. Its self-proclaimed goal was to place a copy of the King James Bible in every household in the nation, and within two years it had enlisted the active support of 41 like-minded societies. The ABS found Americans to be receptive to their goal, and within four years it had distributed 100,000 Bibles across the nation. Between 1829 and 1831 it subsequently published 1 million copies of the Scriptures at a time when the country’s population hovered around 13 million.

However, in 1835 the ABS experienced a major schism when its Baptist auxiliaries protested the translation of the Greek word for “baptize” and sought to substitute “immerse,” a word more consistent with their own doctrine. Neither side yielded in this semantical dispute, so in 1836 the Baptists withdrew from the ABS to found their own American and Foreign Bible Society. Further squabbling among Baptists led to another dispute and creation of the new American Bible Union in 1850 under the aegis of philanthropist William Colgate. Trouble also arose with the influx of Catholic immigrants, mostly Irish, in the 1840s and 1850s. When their children were required to read the King James Bible in public schools, Catholic parents sometimes resisted, and in 1844 a violent riot in Philadelphia over precisely which Bible to use at school left 13 people dead and scores of houses in ruins. Despite this sometimes rocky reception, the Bible and Bible societies were a permanent fixture of 19th-century America and a vital conduit for disseminating Christian scripture to the citizenry.

Another significant development in this period was the rise of the Sunday school movement, whereby reading and writing was taught using the Bible as the central text. This movement was largely the outgrowth of British efforts in the 1780s to provide rudimentary education and moral training to urban youth, as well as to restrain them from impious behavior on the Sabbath. The first American “Sunday schools” arose around 1790, and the movement persisted until the 1830s. In this context, education came first and religious indoctrination was a secondary concern. However, with the coming of the Second Great Awakening at the beginning of the 19th century, the Sunday school movement acquired an evangelical bent it previously lacked.

The American Sunday School Union (ASSU) was founded in Philadelphia in 1817, entirely committed to providing, for both children and adults, religious instruction consistent with the norms of evangelical Protestantism. ASSU even published its own *Sunday School Magazine* to help propagate its mission and message nationwide. Sunday schools flourished in America’s urban settings and subsequently branched out to the frontier, where schools and churches were few and far between. Other branches arose for the specific purpose of training and educating African Americans, free and slave alike. These institutions constituted part of a much larger reform movement in American life, which also included the rise of hospitals, prisons, asylums, orphanages, and free public schools.

The first national convention of Sunday school workers was held in New York in 1832, and by the opening of the Civil War in 1861 Sunday schools were located in virtually every major city and many rural districts. Sunday schools earned their success largely by trying to be more than simply institutions for the poor, and proponents deliberately sought patrons among the middle and upper classes. Many different Protestant sects were involved with the movement, and despite doctrinal differences, all were concerned with evangelizing their youthful charges for active participation in church life. They also strove to impart such socially useful principles as cleanliness, neatness, punctuality, honesty, and hard work. Overall, the Sunday school movement in America was a useful institutional adjunct to Protestant religious instruction, and it continues to play an important role in that process in present times.

## rendezvous

The rendezvous, an annual gathering of independent fur traders at a prearranged site in the Rocky Mountains, was held for the first time in 1825 and for the last time in 1840. From the beginnings of the fur trade, traders often worked in groups for ease of operation in handling tasks requiring more than a single individual and, increasingly, for mutual protection. The system of contracted allegiance to a large-scale employer became more common over time as the trade increasingly became controlled by a few large companies. The most influential of these—the Hudson’s Bay Company, the AMERICAN FUR COMPANY, and the North West Company—signed on large numbers of trappers and other fur-trade personnel. At the same time that these large companies provided credit and protection, they also paid minimal prices for furs and contracted with trappers who could sell only to them. As the fur trade became more competitive in the early 19th century, the great companies tried to hire trappers away from competitors.

Amidst this consolidation of fur-trading companies came the reemergence of the individual fur trader. The person most responsible for this change was WILLIAM HENRY ASHLEY, a trader from St. Louis. The difficulty for Ashley and others was purchasing furs from the trappers in the field and resupplying them on a regular basis. Ashley proposed to do both by freighting supplies to a designated point in the Rocky Mountains on an annual basis. (One of the unusual features of Ashley’s plan was that he freighted the supplies overland rather than up the Missouri River). Trappers would then bring their winter harvest of furs to this site, where Ashley would purchase the furs and sell them supplies for the coming year.

This annual gathering came to be called the “rendezvous.” It was a week of commercial transactions, but it also served as a social occasion. The trappers ate, drank, gambled, sometimes fought, and engaged in contests of skill. The first rendezvous was held at Henry’s Fort on the Green River in spring 1825. Although Ashley sold out his interests and left the fur trade for land speculation and politics after the second rendezvous in 1826, it continued annually until

1840. The rendezvous provided an occasion for bringing together some of the most famous MOUNTAIN MEN associated with the frontier of the West. Its passing marked the decline of the fur trade.

## Republican Party

The modern Republican Party has its roots in a northern, antislavery party of the 1850s. The Republicans emerged rather suddenly and came to play a major role in events preceding the Civil War. Most historians agree that the party's origins stem from northern outrage over Congress's passage of the Kansas-Nebraska Act, which Democratic President Franklin Pierce signed into law in 1854. That act, whose most prominent champion was Senator Stephen Douglas of Illinois, essentially overturned the MISSOURI COMPROMISE of 1820 and permitted SLAVERY in the Nebraska Territory north of the line that the compromise had set as its limit. Under the Kansas-Nebraska Act, POPULAR SOVEREIGNTY, i.e., the desires of the people who settled a territory, would now determine whether or not it would enter the Union as a slave or free state. Northerners believed that the Kansas Territory, which was carved out from the Nebraska Territory under the act's provisions, was being targeted by southerners who wanted to bring their slaves there.

Even before Congress passed the controversial bill, the beginnings of what was to become the Republican Party were apparent when a group of Whigs, Democrats, and Free-Soilers opposed to the Nebraska bill met in Ripon, Wisconsin in 1854. Other anti-Nebraska gatherings were held in Illinois and in Jackson, Michigan. American politics was in a period of great change in 1854 and 1855. The WHIG PARTY had tried to keep its members at arm's length from the ABOLITION MOVEMENT, but the storm of protest that was forming as the "anti-Nebraska" movement made this task much more difficult. The American Party, more commonly referred to as the KNOW-NOTHING PARTY, included a diverse number of Nativists united by their fear and mistrust of immigrants, especially Catholics, who had entered the United States in recent years. The Know-Nothings showed great strength in elections in 1854 in states such as Massachusetts. That party, however, was in danger of splitting because of differing views on slavery.

Across the North, the anti-Nebraska movement quickly became a political force. Its adherents at first called themselves anti-Nebraska Whigs or anti-Nebraska Democrats. In the 1854 election, the DEMOCRATIC PARTY, which voters identified with the Kansas-Nebraska Act, lost badly in

northern states. Some Whigs were not yet ready to give up on their party, and its supporters ran candidates under the old name in New York as well as other states. The existence of the Whig Party was threatened by a deep and growing split over the slavery issue, and it finally collapsed altogether.

Abolitionists sensed that they had a significant opportunity to organize a new antislavery party that might attract former Whigs, Know-Nothings, and disaffected northern Democrats. The new movement first met to organize itself on a national basis in Pittsburgh in early 1856. Proposed names for the fledgling party included the People's and Union Party, but no formal name was adopted at that time. Later that year, however, the movement began to call itself the Republican Party, after Thomas Jefferson's party of the same name at the turn of the 19th century. In summer 1856, the Republicans had their inaugural convention, nominating JOHN C. FRÉMONT, a former Democrat from California, for president. Frémont had some Catholic roots; his father had been a Catholic, and the candidate himself had been married by a Catholic priest. This bothered some of the nativists and Know-Nothings in the emerging Republican coalition.

Slavery was now becoming the defining issue in American politics, and the Republicans were poised to take advantage of this shift in focus away from other issues. The new party was building a coalition that included those who had supported the antislavery LIBERTY PARTY and FREE-SOIL PARTY of the 1840s; former nativists and Know-Nothings; and former Whigs of New England origin, many of whom now lived in the states of the Ohio and Mississippi River valleys and others who had been active in the various reform movements that arose during the SECOND GREAT AWAKENING. From the beginning, Republicans also attracted the votes of Protestant immigrants from Britain and Scandinavia, although Catholics remained for the most part loyal to the Democratic Party. In addition, the Republican ranks included those who were committed to free-market economics and capitalist development. At its birth, then, the Republican Party was very much a sectional party. Its 1856 convention had been attended by a few delegates from Upper South slave states, but it had no hope of winning any southern states. Its platform called for a Kansas free of slavery and opposed Democratic plans of annexing CUBA as a slave territory. Its first slogan in 1856 stated clearly what the party stood for, and who it hoped to represent: "Free Soil, Free Labor, Free Men and Frémont."

In the election, the new Republican Party did very well across the North, winning 45 percent of the popular vote there (former president MILLARD FILLMORE was running as the American Party nominee) and capturing 11 of the 16 free states. Democrat James Buchanan, largely on

the strength of the solid South, was elected president, but the Republican Party had shown impressive strength in its first national election. One danger sign for the party and the future of the union was that their ticket appeared on the ballot in only four slave states, all in the Upper South, and the party did not approach even 1 percent of the vote in any of them. Democrats would charge over the course of the next four years that a national victory by the “Black Republicans” (so called for their antislavery views) would mean the dissolution of the union.

In 1857 the case of *Dred Scott v. Sandford* galvanized much of the North around Republican antislavery principles. The U.S. Supreme Court, in a decision written by Jacksonian Democrat Roger Taney, declared that Dred Scott, a slave attempting to claim his freedom based on his residence in the North, had “no rights which the white man was bound to respect,” due to Scott’s race. The Scott decision essentially overruled the Missouri Compromise and appeared to make the expansion of slavery easier by insisting that African Americans could not be citizens of the United States. While the decision was met with enthusiastic approval in the slave states, and with cheers from some northern Democrats as well, Republicans denounced it in the most bitter terms. They were most outraged by the Taney Court’s contention that Congress had no authority to exclude slavery from the territories, as it had done in the Missouri Compromise. Republicans now attracted to their party former Democrats and others who began to see, for the first time in some cases, a conspiracy by the slavery supporters to extend their “peculiar institution” across the country. Abraham Lincoln of Illinois said that the next step could well be a decision by the Supreme Court “declaring that the Constitution of the United States does not permit a state to exclude slavery from its limits.”

In the late 1850s, the Republicans continued to show impressive strength across the North. Political blame for the PANIC OF 1857 was placed on the floundering Buchanan administration. There were still many Democrats in the North, however, who remained wary of the Republicans on a range of issues, including slavery. Then the Kansas question boiled again, as President Buchanan put his support behind a contested state constitution written by proslavery advocates. He went so far as to declare that Kansas was “as much a slave state as Georgia or South Carolina.” Although the Senate approved a bill granting Kansas entrance into the Union as a slave state, the House rejected the measure. Leading Senate Democrat Stephen A. Douglas of Illinois broke with his party on this crucial issue, earning him the enmity of southern Democrats and presaging the splitting of the country along sectional lines.

The question of slavery continued to roil the nation as abolitionist John Brown led a band of his followers on a raid

on the federal arsenal at Harpers Ferry, Virginia. Although the attempt failed badly and Brown was captured, tried, and executed, many in the North, especially those who were already in or moving toward the Republican Party, looked on him as a hero and martyr.

In its second attempt to win the presidency, the Republicans in 1860 turned to Abraham Lincoln, who had lost a Senate seat to Douglas in Illinois just two years earlier. Although not an outright abolitionist by any means, Lincoln was firmly opposed to the further expansion of slavery. He was a relative newcomer on the national political scene, and Republicans were determined to win the crucial state of Illinois, which they had lost in 1856. A former Whig who was acceptable to all wings of the new party, Lincoln and his running mate Hannibal Hamlin of Maine, a former Democrat, faced the same difficulty as did Frémont: Their party’s political support remained entirely in the North. The difference in 1860 was that the Democrats had fractured into northern and southern wings, with Stephen Douglas as the regular nominee and John Breckinridge as the southern Democrat. There was a fourth candidate, John Bell of Tennessee, who was nominated by the Constitutional Union Party, which drew its support in the Upper South from former Whigs. Lincoln campaigned on a platform of Free Soil, which would stop slavery’s expansion, but he and the Republicans were careful to distance themselves from abolitionists, especially the radical wing as personified by John Brown.

Although there was increasing talk of secession by the South if Lincoln won, the Republican nominee was elected the 16th president on the strength of his showing in the North, as he won the electoral votes in every free state except for New Jersey, where he split them with Douglas. As Lincoln prepared to assume office, South Carolina and several other slave states seceded from the Union as a direct result of the Republican triumph, and North and South lurched toward a civil war.

**Ridge, John** (1803–1839) *planter, Cherokee leader, and signer of the Treaty of New Echota*

John Ridge was born in Oothcaloga (Calhoun), Georgia, in 1803. A member of the CHEROKEE Nation, he was the son of Major Ridge and grandson to a Scottish trader. When Ridge was a youth, his parents sent him to a boarding school in Cornwall, Connecticut, with his cousin ELIAS BOUDINOT. There he learned English, converted to

John Ridge (Library of Congress)

Christianity, and fell in love with a white girl named Sarah Bird Northrup. In 1824 they were married over community objections, and Ridge and his young bride were soon forced to depart, moving to his homeland.

In Georgia, Ridge established himself as a wealthy planter who owned 24 slaves. Politically, while he favored acculturation of the Cherokee, he strongly opposed selling land and forced relocation. He was also active in tribal affairs, helping to found the Moral and Literary Society of the Cherokee Nation (1824) becoming clerk of the Cherokee National Council in 1829, and serving as president of the National Committee in 1830. It fell upon Ridge, in this last capacity, to play out the singular tragedy of his people. In the wake of the Cherokee Removal Act of 1830, Ridge and several other tribal authorities visited Washington, D.C., to plead for reconsideration. None was forthcoming. When the federal government under President ANDREW JACKSON refused to rein in avaricious Georgia authorities in 1832, Ridge concluded that his people had no choice but to leave Georgia. This stance placed him squarely at odds with Chief JOHN ROSS, the head of the Cherokee Nation, and deep factions arose over the issue of forced relocation. Ridge believed that a war with the United States would prove disastrous to the tribe, so he argued that it was better to sell their land for cash than have it forcibly taken. On December 29, 1835, Ridge and his followers signed the Treaty of New Echota, which was ratified in the U.S. Congress by the margin of a single vote. Cherokee in the opposing faction accused Ridge and his followers of treason, and most refused to leave Georgia.

In fall 1837 the Ridges and their followers constituted the first wave of Cherokee to migrate to new lands in the Indian Territory (Oklahoma). Ridge himself settled in the vicinity of Honey Springs and founded a prosperous plantation, all the while insisting that relocation was the only realistic solution to the Cherokee Nation's dilemma. Meanwhile, the vast majority of his tribesmen remained in Georgia until they were physically removed by U.S. troops and forced to travel the infamous TRAIL OF TEARS. Many of the half-starved survivors resented the wealth that Ridge had accumulated for himself. On June 22, 1839, tribal assassins killed Ridge, his father, and Elias Boudinot over what many Cherokee considered a betrayal of their people.

### Rocky Mountain Fur Company

A latecomer to the North American fur-trading business, the Rocky Mountain Fur Company was the fourth such business to operate within the Pacific Northwest. It was organized in St. Louis in 1823 by Andrew Henry and WILLIAM HENRY ASHLEY. Henry had already gained fame for having built Fort Henry in what is now southern Idaho. Ashley was described as a “little man who always had a stomach ache,” but this did not prevent him from earning \$50,000–\$60,000 a year during the first four years of the company's life.

In 1826, JEDEDIAH STRONG SMITH, Milton and WILLIAM SUBLETTE, and David Jackson bought the Rocky Mountain Fur Company, and for the next seven years it continued to prosper. Unlike its competitors (such as the AMERICAN FUR COMPANY), the company did not build forts or trading houses. This meant that trappers had no home base but lived independently, fending for themselves. They caught their own food, found their own shelter, and fought off wild animals and hostile Indians. These independent trappers, who were known as MOUNTAIN MEN, led exciting but lonely lives and in time became the subject of many a dime novel. In addition to Smith and the Sublettes, some of these men included JAMES BRIDGER, JIM BECKWORTH, Joe Meek, Robert Newell, and KIT CARSON. Every summer the mountain men and traders for the Rocky Mountain Fur Company would gather at a RENDEZVOUS to trade pelts and purchase supplies. It was a chance to relax and enjoy themselves after a long season in the mountains, so there was much drinking, gambling, and dancing.

The Rocky Mountain Fur Company was constantly challenging the domain of the Hudson's Bay Company. Their rendezvous were consistently located near a Hudson's Bay Company post in an attempt to draw off some of the Indian trade. A number of the mountain men went into the Snake River region of Oregon, where they competed with the Hudson's Bay's Snake River brigade for trade with the Indians. They also penetrated the Umpqua and Rogue River Valley, which was considered the domain of the Hudson's Bay Company.

In 1826, Jedediah Smith pioneered a trail from the Bear Lake rendezvous to a Spanish mission in southern California. After a trapping expedition into northern California, he made his way back to Bear Lake. In 1827, he led a party of 20 men over the northern California mountains into Oregon country. This expedition proved to be a disaster. Not only did they suffer terrible hardship in crossing the mountains, they were attacked by Indians in the Umpqua River region and all but three of the party were massacred. Smith was out scouting at the time of the attack and survived.

After the attack, Smith traveled north to the COLUMBIA RIVER and FORT VANCOUVER, which was under the control of the Hudson's Bay Company. While there, he was able to obtain firsthand knowledge about the fort. He reported in letters to the East that the fort looked like a permanent establishment, with its many inhabitants, its gardens, livestock, and shops. He complained to the American government that the British were trying to keep Americans out of the Oregon Territory. Smith subsequently realized that the future of the fur trade lay in the Southwest region, and he organized an expedition in late May 1831. While on that expedition, he was killed by some Comanche Indians near the Cimarron River in present-day southwestern Kansas.

One of the biggest factors in the demise of the Rocky Mountain Fur Company was the campaign of opposition that the AMERICAN FUR COMPANY mounted after 1830. The expansion of the American Fur Company from the upper Missouri into the Rocky Mountains was part of JOHN JACOB ASTOR's ambition to monopolize the U.S. fur trade. This competition produced a temporary inflation, forcing the fur traders to bear the brunt of the increase. The American Fur Company could bear the short-term losses. The Rocky Mountain Fur Company, on the other hand, simply did not have the financial resources to compete, and in 1833 it was bought out by Astor.

**Further reading:** Hiram Martin Chittenden, *The American Fur Trade of the Far West: A History of the Pioneer Trading Posts and Early Fur Companies of the Missouri Valley and Rocky Mountains, and of the Overland Commerce with Santa Fe* (Stanford, Calif.: Academic Reprints, 1954).

**Ross, John** (1790–1866) *principal chief and spokesperson of the Cherokee*

John Ross was a CHEROKEE chief who was compelled to lead the Cherokee on the TRAIL OF TEARS. Ross was born on October 3, 1790, in Turkey Town (Center), Alabama, and educated at a white school in Tennessee. The son of a Scottish trader, he was only one-eighth Cherokee, a fact that may have helped him assimilate into the white business world as a merchant. In 1813 he married a nearly full-blood Cherokee named Quatie (Elizabeth Brown Henley). He fought as a U.S. ally in the Creek War (1813–14).

After the war Ross began operating a ferry and warehouse at Ross's Landing (Chattanooga), Tennessee. Later he relocated to Head of Coosa (Rome), Georgia, where he lived as an affluent planter. By the 1820s Ross was possibly the wealthiest man in the Cherokee Nation, and he turned his attention to tribal politics. He was instrumental in writing the Cherokee Constitution of 1827, the first such document ever adopted by NATIVE AMERICANS. He was elected head chief of the nation in 1828, a position he held for nearly four decades. In this capacity Ross confronted the most agonizing period of Cherokee history.

In 1828–31 Georgia officials maneuvered to seize Cherokee lands and drive the Cherokee west beyond the Mississippi River. Ross adamantly opposed forced relocation, and he turned to the U.S. Supreme Court to stop the state government. When this failed, he appealed to President ANDREW JACKSON for federal help against Georgia, but he found an unsympathetic audience. In 1835 JOHN RIDGE and several other mixed-blood Cherokee signed the Treaty of New Echota, which effectively cleared the way for removal. Ross condemned their action and refused to leave his land. In 1838, however, the U.S. military finally evicted the Cherokee remaining in Georgia. Ross and his people were forced to embark on the infamous Trail of Tears over the winter of 1838–39, in which a quarter of the migrants died before they could set up new homes in the Indian Territory (Oklahoma). Among the dead was Ross's wife.

Once established in Oklahoma, Ross was confronted by lingering resentments against those who signed the treaty, and a civil war broke out. Cherokee vigilantes murdered Ridge and several of his followers, and it was not until 1846 that peace and tribal unity were finally restored. In 1861 Ross faced an even larger military threat when the Civil War erupted and Confederate agents demanded that the Cherokee fight on their behalf. Ross, though a slave owner, was firmly in the Union camp, but he felt it imperative to forestall a southern invasion and consented to an alliance. He then fled the territory in 1862, all the while assuring the federal government of his loyalty. He finally returned home in 1865. By then in poor health, he spent his final months working to heal the recent divisions and promote unity.

Ross died on August 1, 1866, shortly after learning that the new Treaty of 1866 with the U.S. government would not divide his nation. For his unceasing efforts to improve the lot of his people, Ross is regarded as the greatest leader of the Cherokee.

### Sac and Fox Nation

This combined tribe waged the last armed resistance to white migration in the Old Northwest in 1832. The Sac (Sauk) and Fox (Mesquaki) are an amalgamation of two Algonquian-speaking tribes closely related in tongue and culture to the Kickapoo. They originally inhabited the region near the Saginaw River of Michigan before being driven westward into Green Bay, Wisconsin, by the Iroquois. The Fox were one of few Algonquian-speaking tribes to side against France in the 1730s, and they were decimated in a series of wars. Thereafter, the Fox sought shelter within or near their Sauk allies and the two more or less functioned as one group. In the 1790s they joined the nativist, anti-American alliance of Miami chief Little Turtle, yet in 1804 a small group of tribal elders signed a treaty which ceded most of their land in Michigan and Illinois. White rapaciousness led to the rise of Indian nativism under the Shawnee leader Tecumseh, and the Sac and many Fox Indians fought against the United States in the WAR OF 1812. The most notable figure in this regard was the Sac war chief Black Hawk, leader of the pro-British band.

After 1818, with the establishment of the state of Illinois, whites began settling in the Old Northwest in alarming numbers, and the American government began pressuring the Sac and Fox, among others, to sell their lands and relocate across the Mississippi River. Many Indians complied and moved to Iowa, but Black Hawk's band defiantly refused to abandon their traditional hunting grounds. Tensions flared in 1829 when whites moved in and occupied Indian huts, left vacant for the winter, but Black Hawk returned the following spring and built new lodgings. In 1830 the Indians again returned to reclaim their grounds, at which point the white authorities warned them to keep out.

The breaking point occurred in May 1832, when Black Hawk determined to relocate his band east of the Mississippi to Saukenuk (Rock Island), Illinois. This time federal

and Illinois officials gathered troops to stop the Indians and fired upon them even when Black Hawk hoisted a white flag in surrender. The Indians defeated the local militia in a few engagements until the arrival of U.S. Army troops under General HENRY ATKINSON. This unit crushed Black Hawk's band at the Battle of Bad Axe River, in which 300 Indians were slain. The surviving Sac and Fox were then set upon by marauding bands of Sioux, their traditional enemy, and Black Hawk was arrested and released into the custody of KEOKUK, a pro-American chief. The defeat of the Sac and Fox in 1832 removed the final Native American obstacle to western migration in the Old Northwest and marked the beginning of U.S. tensions with the prairie tribes of Minnesota and Wisconsin.

In 1842 Keokuk agreed to sell his lands in Iowa to the United States, and in 1845 he moved his people to new homes in Kansas. By the 1850s the arrival of more whites in the area brought pressure on the federal government to further relocate part of the tribe into Oklahoma. Meanwhile, a smaller, prosperous segment returned to Iowa and bought back part of their previous land.

### St. Vrain, Cérán (Cérán de St. Vrain) (1802–1870)

*American fur trader, businessman*

Cérán de Hault de Lassus St. Vrain was a merchant who was a significant figure in the early Santa Fe trade. St. Vrain was born near St. Louis, Missouri, on May 5, 1802, the son of a former French naval officer. By 1824 he had entered the fur trade, working for François Guerin. He made a number of trips to the Mexican trading center of Taos, New Mexico, where he also clerked for several

other companies. To facilitate his business arrangements in Mexico, he became a Mexican citizen and also married a Mexican woman.

In 1832, after several months of trapping for himself, St. Vrain joined a partnership with CHARLES BENT. Two years later they constructed the famous BENT'S FORT on the bank of the Arkansas River. This locale quickly became one of the major trading centers of the entire region, surpassed in volume only by the AMERICAN FUR COMPANY. St. Vrain himself proved a commanding and popular figure on both sides of the border by virtue of his physical size, genteel bearing, and honesty in business relations. He acquired several large tracts of land thanks to the liberal policies of New Mexico Governor MANUEL ARMIJO. Following the assassination of Charles Bent in Taos in 1847, St. Vrain formed a new partnership with Bent's brother William.

After the war with Mexico ended in 1848, St. Vrain became active in local politics and also agitated for Congress to grant New Mexico territorial status. He was recognized as a leading citizen of the region, well respected by contemporaries for many years. In 1854–55 he served as a colonel of volunteers to help repel Apache raiders. After the Civil War broke out in April 1861, St. Vrain accepted an appointment as colonel of the 1st New Mexico Volunteers. He resigned the following October for health reasons and was replaced by noted scout KIT CARSON. St. Vrain died in Mora, New Mexico, on October 28, 1870. His funeral was attended by the officers of nearby Fort Union and 2,000 of his neighbors.

### **San Jacinto, Battle of** (April 21, 1836)

The Battle of San Jacinto was the conflict that established the independence of the Republic of TEXAS. In the wake of the Mexican victory at THE ALAMO on March 6, 1835, General SAM HOUSTON commanded fewer than 400 recruits in his Texas army, all wretchedly trained, poorly equipped, and no match for the professional forces of General ANTONIO LOPEZ DE SANTA ANNA. He therefore, over the protests of his men, commenced a strategic withdrawal to buy time to train his force and add additional volunteers before risking a confrontation.

Having encamped on the banks of Groce's Ferry for 12 days, the Americans were strengthened by the welcome addition of the "Two Sisters," a pair of 6-pounder cannons, on April 11, 1836. Houston kept a close watch on Mexican movements through an active and intelligent scouting ser-

vice. He then learned that Santa Anna had split up his army into small detachments and fanned out across the countryside to intimidate the civilian population. Thousands of American settlers fled before them in what became known as the "Runaway Scrape." When Houston learned that Santa Anna himself was leading a small detachment on the banks of the nearby San Jacinto River, he immediately decided to engage him. The choice was well received by the Americans, who were clearly spoiling for a fight and whose numbers had since swelled to 900. On April 20 Houston marched to the confluence of Buffalo Bayou and the San Jacinto River, where the Mexicans were encamped, and the two forces briefly exchanged fire. That night Santa Anna was reinforced by the arrival of General Perfecto de Cos, which brought his numbers up to 1,400 men and dissuaded him from taking any security precautions against surprise.

On the afternoon of April 21, 1836, Houston led his ragged band in two columns across the river, infantry on the left and cavalry on the right, and plunged into the Mexican camp nearly undetected. Their advance was screened by a high river bank that had been left unguarded, and they took the defenders completely by surprise. The ensuing battle was more of a massacre, as the vengeful Texans swept all before them, killing 630 Mexicans and taking 730 captive at a cost of two killed and 30 wounded. Houston himself was wounded in the foot. On the following day a patrol captured Santa Anna himself, disguised as a common soldier, and he was forced to sign an order for all Mexican forces to withdraw south of the Rio Grande. The Republic of Texas was thus preserved in a single blow, although Mexico did not relinquish its claim on the area until the TREATY OF GUADALUPE HIDALGO in 1848.

### **Santa Anna, Antonio López de** (1794–1876) *soldier*

A leading military and political figure in the history of Mexico for more than half a century, Antonio López de Santa Anna was born in Veracruz. In 1810, at the age of 16, he joined a Veracruz regiment of the Royal Spanish Infantry, where he initially fought against the Mexican independence movements. As the rebels became stronger and Spanish resistance in Mexico and elsewhere in the New World declined, Santa Anna moved to the side of the rebels, fighting in the final struggles to establish an independent Republic of Mexico. In 1821, he allied him-

self with Agustín de Iturbide, a self-appointed leader of the revolution, who soon crowned himself Emperor Agustín I of Mexico. Augustín's reign was characterized by growing discontent over his excesses, as a result of which Santa Anna turned against the emperor and joined with others to overthrow him.

Mexico became a republic and drafted a constitution in 1824. Santa Anna retired from public life, living as a country squire while remaining in touch with his military friends. In 1829, King Ferdinand of Spain mounted a military expedition to regain control of his former colony. Santa Anna returned to lead the Mexican army in resisting the invasion. The Spanish military force attempted a landing at Tampico that was plagued by poor organization and bad luck. The Mexican army's victory was overwhelming, and Santa Anna was proclaimed the "hero of Tampico." Now tremendously popular, he went to Mexico City, deposed the president, and installed his friend, Anastasio Bustamante, as president.

After Bustamante had governed for three years, Santa Anna overthrew him in 1832 and chose Valentín Gómez Farías as the new president before again retiring to his estate. Gómez Farías was a reformer whose policies alienated the Catholic Church, the large landholders, and the military. Once more, Santa Anna stepped in to remove the president, but this time he assumed the office himself. In 1833 he was elected president in a popular election, and he began to consolidate his power in a series of campaigns to destroy his opposition. He extended his presidential term to eight years and abolished the constitution of 1824. His authority was now absolute, but there was much opposition to him in liberal circles in Mexico.

In 1835 Santa Anna turned his army toward TEXAS, which he found in a state of rebellion. Since the late 1820s, factions in Texas had long talked of secession and independence from Mexico, followed by union with the United States. STEPHEN F. AUSTIN, the voice of moderate loyalty to Mexico, opposed this policy. Santa Anna's abolition of

Drawing showing Texan leader and soldier Sam Houston accepting the surrender of General Santa Anna and Perfecto de Cos after the Battle of San Jacinto during the Texan War of Independence (Hulton/Archive)

the constitution and his invasion of Texas in 1835 strengthened the hand of the rebels. That same year, under the leadership of SAM HOUSTON, Texans called a convention that issued a declaration of independence. Angered by this expression of disloyalty, Santa Anna intended to crush the revolution and force Texans to accept their former status within the nation of Mexico.

The advance guard of Santa Anna's army crossed the frontier into Texas on October 2, 1835. The first serious objective was the old Spanish mission at THE ALAMO in San Antonio. Rebellious Texans had seized the mission, and in spite of orders to evacuate, they fortified the place, convinced that they could defeat a force several times larger than their own. Santa Anna would give them the opportunity. After a prolonged artillery bombardment, he ordered a frontal assault, which overwhelmed the Alamo's defenders. Santa Anna ordered that no survivors should be taken alive. None were, and the handful of prisoners was immediately executed. Next, he ordered the execution of prisoners recently taken at Goliad. These brutal tactics confirmed him in his belief that the TEXAS REVOLUTION could be put down by ruthless force.

For Texans, Santa Anna's actions offered conclusive proof that they must come together, appoint a commander, train an army, and defeat him in the field. The commander was Sam Houston, and he quickly assembled and trained a small force of some 800 men. Houston retreated up the coast, and Santa Anna followed with an army three times the size. On April 21, Santa Anna confronted Houston at the San Jacinto River, and in a brief and savage battle, the Texans routed his Mexican army. Although disguised, Santa Anna was recognized and taken prisoner. After he had signed the Treaty of Velasco that recognized Texas independence, and against the advice of many who wished to execute Santa Anna for his treatment of prisoners, Houston permitted him to leave for Veracruz. In Mexico, Santa Anna immediately repudiated the treaty of Texas independence, and the two sides faced one another for nine years in an uneasy truce across the Rio Grande.

With the outbreak of the MEXICAN-AMERICAN WAR in 1846, Santa Anna offered his service to his nation once again. With an army of some 20,000, he attacked General ZACHARY TAYLOR at Buena Vista. In one of the bloodiest engagements of the war, Taylor defeated Santa Anna after two days of hard fighting. He then engaged the American army under General WINFIELD SCOTT at the Battle of Cerro Gordo, where he was defeated. The TREATY OF GUADALUPE HIDALGO, signed in February 1848, set the boundaries of the State of Texas and added the northern third of Mexico to the expanding American continental empire. Santa Anna's long campaign to preserve Mexico's North had failed.

With the close of the war, Santa Anna went into self-imposed exile. The Conservative Party recalled him in

1853, and he was once again appointed president. To support his empty treasury, he sold 45,000 acres (the GADSDEN PURCHASE) to the United States for \$10 million. Two years later, the Liberal Party overthrew his government, and Santa Anna was forced into exile. Forbidden to return to Mexico, he traveled, including one trip to the United States. He continually petitioned the government to return to his native land, and his request was granted in 1874. Santa Anna died at the age of 82.

### Santa Fe Trail

The Santa Fe Trail was an overland commercial route between Independence, Missouri, and Santa Fe, New Mexico. It was used from the establishment of the Republic of Mexico in 1821 until railroads put it out of business in the years following the Civil War.

For 300 years, Spain had protected her empire in the Americas by forbidding the visits or residence of foreigners. After the United States achieved independence from Great Britain in 1783, American traders or explorers who ventured into Spanish territory in the Southwest were routinely arrested and confined. However, after gaining independence from Spain in 1821, the new republic of Mexico pursued a policy of trade and open access. One dimension of this new direction was the law that STEPHEN F. AUSTIN used to colonize TEXAS. Another was the opening of the southwest of New Mexico to trade. When WILLIAM BECKNELL, the first Missouri trader to visit under the new policy, returned to Missouri in 1822 with bags of Spanish silver, others were anxious to follow his example. In summer that year, Becknell returned to Santa Fe with a wagon train of goods, pioneering a route across the Cimarron desert that avoided the hazardous Raton Pass across the Raton Mountains linking southeast Colorado and northern New Mexico. As subsequent trading expeditions began using this route, Becknell became known as the "Father of the Santa Fe Trade."

By 1824 Becknell and other merchants had established a regular trade with Santa Fe, with gross returns that year on the order of \$200,000. With the appearance of regular caravans on the trail, the Indian peoples adjacent to the passage—mostly Kiowa and Comanche—began regular raids on the wagon trains. The combination of profits for Missouri traders and Indian raiders brought the trail and its trade to the attention of the U.S. government. Senator THOMAS HART BENTON of Missouri introduced legislation to mark the trail and protect the traders. In 1825 one law provided for an official survey of the Santa Fe Trail and a second appropriated \$20,000 to negotiate with

the Indians for a right of way. Beginning in 1828, military escorts accompanied the wagons, but this protection ended after two years; thereafter, the traders had to defend themselves.

As William Becknell was from Franklin, Missouri, for the first few years, this town marked the beginning of

the trail. By 1830, though, the starting point had become Independence, a town at the bend of the Missouri River that had become the staging place for overland travel to the West. From Independence, the trail ran south and west to Council Grove, across the Arkansas and Canadian Rivers to San Miguel on the Pecos. From this point, the

wagons moved directly to Santa Fe over Glorietta Pass. An alternate route from the Arkansas River ran west to BENT'S FORT and thence south over Raton Pass to Santa Fe. The second trail was longer and steeper, but it avoided most of the Indian dangers and the 60-mile Cimarron desert. Many chose the alternate trail because of Bent's Fort (completed in 1832), the most permanent and secure outpost on the southern plains. Whatever the southern route of the trail, the end of the 800-mile journey was Santa Fe. With a full load of wagons, the trip from Missouri to Santa Fe took three months. The return trip with empty wagons took perhaps half that time.

Arriving at Santa Fe with the trail and its dangers behind them, the American traders now had to deal with customs duties and the officials who collected them. The entrance into the town could be a frustrating and sometimes expensive exercise. Taxes levied on the Santa Fe trade were arbitrary and inconsistent. Mexican officials charged with enforcing the customs laws were virtually independent of oversight and far removed from Mexico City. Little of what was actually collected found its way into the national treasury. Sometimes powerful individuals levied their own duties. For some time, Governor Manuel Armijo levied his personal tax of \$500 on each wagon. Faced with such an array of officials and charges, the American traders evaded them at every turn. Sometimes they used little-known trails. They also tried to sneak into town in the middle of the night, a difficult feat in view of the warm welcome accorded them by the Mexican population.

The arrival of a wagon train in Santa Fe was a moment of universal enthusiasm. The Mexican peoples lined the street to celebrate. The business of the day transacted, the drives and the local population met at a fandango, a raucous public dance that provided a suitable end to the privations of three months on the trail and often ended in personal confrontations of various kinds. Whatever the social occasions, the business of the trail and its trade was good for Santa Fe. Leading town merchants had stores on the square, and the Mexican merchants sometimes traveled to Independence to choose their goods. Even with the vagaries of customs duties and officials, the 1830s was a time of mutual accommodation and prosperity for the Santa Fe Trail and for its twin terminals of Independence and Santa Fe.

Beginning about 1840, the Mexican government became less welcoming. The TEXAS REVOLUTION had showed the dangers of American immigration and commercial connections. The independent Republic of Texas claimed boundary lines to include the upper Arkansas River, placing Santa Fe within its territory. Although Texas was never able to extend its authority over Santa Fe, its presence and expansionist policies disturbed Mexican officials. In 1841 the Republic of Texas mounted an invasion

of New Mexico. Although the enterprise failed, it added to the uneasiness that seemed to surround the regular arrival of caravans of trade goods and traders from Missouri.

In 1846 the outbreak of the MEXICAN-AMERICAN WAR confirmed the Mexican view of American designs on Mexican territory in the Southwest. In the summer of that year, General STEPHEN WATTS KEARNY occupied Santa Fe and claimed New Mexico as part of the United States. In 1848 the TREATY OF GUADALUPE HIDALGO confirmed the cession of New Mexico to the continental American empire.

The Santa Fe Trail now assumed a new and expanded form. Mexican officials and customs duties disappeared with American sovereignty. The U.S. Army constructed a series of forts along the trail to protect wagon trains, and traffic expanded to include mail and stagecoach service. The discovery of gold in California in 1848 and the subsequent CALIFORNIA GOLD RUSH further enlarged the business of the Santa Fe Trail. By 1855 the volume of trade reached \$5 million annually.

Trade along the Santa Fe Trail continued during the Civil War (1816–65), enlarged by supplies sent to Union military forces assembled to meet a perceived Confederate threat in the West. With the arrival of the Southern Pacific Railroad in Santa Fe, the trail vanished as a trade route. Having served the Republic of Mexico and the United States for a half-century it was a symbol of the significance of trade in the opening of the Southwest.

### science and technology

In the period of 1813–55, the United States was not known for achievements in pure science. Most of the major advances in physics, chemistry, biology, and other sciences had been taking place in Europe. In Britain, Michael Faraday researched electromagnetism and Charles Darwin began to develop his theory of evolution; in Germany, Friedrich Wöhler made the first synthetic organic compound; in France, Jean-Bernard-Léon Foucault constructed a pendulum that demonstrated the rotation of the Earth. Americans of this period showed an interest in such investigations, but, as pragmatic citizens of a young and growing nation, they were more prone to distinguish themselves as inventors and adapters of practical technology. American innovations of the period included the telegraph, the mechanical reaper, the six-shooter, and ether anesthesia. In the meantime, through the foundation of professional societies and journals, the nation took steps

toward establishing itself as the scientific power it would become in the 20th century.

An important example of American ingenuity was the electromagnetic telegraph, patented by SAMUEL F. B. MORSE in 1837. This device for transmitting messages via wire greatly increased humanity's capacity to communicate swiftly over long distances. Morse and his assistant Alfred Vail also developed Morse code, a system for encoding messages to be telegraphed. In 1844, Morse demonstrated the practicality of his invention by sending the telegraph message "What hath God wrought!" from Washington, D.C., to Baltimore, Maryland. Morse was indebted to earlier scientists and rivaled by contemporaries, notably Charles Wheatstone and W. F. Cooke in England. But his business sense and his system's practical advantages soon made it the world's standard.

In 1831 CYRUS HALL MCCORMICK invented a mechanical, horse-drawn reaper that greatly improved the efficiency of harvesting. For McCormick, as it had been for Morse, business acumen was key to supplanting rivals and making his machine the leader in its market. In 1835–36, another skillful entrepreneur, SAMUEL COLT, patented his six-shooter, a pistol with six revolving chambers. The Colt revolver would become popular worldwide and became identified in folklore with the nation's "Wild West."

Some inventors were better at inventing than at profiting from their technology. In 1839, Charles Goodyear discovered a process for vulcanizing rubber, through which it kept its elasticity in all weather. Previously, rubber had tended to become sticky in warm weather and brittle in cold. Goodyear's process made rubber a much more practical material for industrial and consumer uses, but it did not make him rich. What with debts and failure to keep control of his patents, he died in poverty.

In 1852, Elisha Graves Otis patented an automatic safety device to prevent an elevator from falling. His safety elevator would become vital to the spread of multistory buildings, but not until after his death in 1861.

A technology with more immediate uses was anesthesia. Previously, surgery and dental work had been accompanied by unavoidable pain. In 1846, dentist William Thomas Morton publicly demonstrated the effectiveness of ether as an anesthetic, or pain-deadening agent, in tooth extraction. That same year, collaborating with surgeon John Warren, Morton also used ether for the first time in surgery, during an operation to remove a neck tumor.

Americans were resourceful adapters of existing technology. The steam engine had been invented in Britain in 1769, but it was American engineer Robert Fulton who, in 1807, used it to launch the first commercially viable steamboat, the *Clermont*. Throughout the years 1813–55, the steamboat was improved and adapted for many purposes,

including war: Fulton introduced the first steam warship in 1814–15. In 1819, the USS *Savannah*, traveling from Georgia to Liverpool, England, completed the first transatlantic trip powered by a combination of sail and steam. With the steamboat's spread, canals became increasingly important. In 1819, Rome and Utica, New York, were joined in the opening of the first part of the ERIE CANAL. In 1825, the full length of the canal, spanning over 300 miles, opened for business, linking the Hudson River to the Great Lakes and inspiring other canal projects.

Steam locomotives had been operating on RAILROADS in Britain since 1804, but American engineers added refinements. In 1830, Robert Livingston Stevens invented the T-rail, which would become standard equipment on rail lines. That same year, the first U.S.-built locomotive, the Tom Thumb, was introduced, and the BALTIMORE & OHIO RAILROAD (B&O) began using steam locomotives for rail service. Based in Baltimore, the B&O steadily extended its reach, to St. Louis, Missouri, by 1857.

During the early years of American railroads, locomotives were imported from England, but these imported engines proved poorly adapted to the uneven rails, sharp curves, and heavy grades of the early American railroads. American locomotive designs and manufacture soon developed engines to meet the American needs, with headlights, cowcatchers, and the Baldwin "flexible beam" truck to hold locomotives and cars on the track in sharp curves. The American locomotive builders Matthias Baldwin and William Norris of Philadelphia began as jewelers and then shifted to machine shops. The Baldwin Locomotive Works, first in Philadelphia and then in Eddystone, Pennsylvania, became the largest builder in the nation and Norris's railroad engines were exported around the world. The two companies produced a sizable portion of all the locomotives that carried freight and passengers in South America, Australia, Russia, Africa, and the Middle East.

Another important step in transportation technology was the wire-cable suspension bridge, which German-American engineer John Augustus Roebling pioneered in the 1840s in Pittsburgh, Pennsylvania, and Wheeling, Virginia (later West Virginia).

American innovations of the period were as varied as Americans themselves. Dentist Anthony Plantson introduced the dental plate in 1817–18. A few years later, in 1824, Shakers in Hancock, New York, built the first round barn, a design that became popular with dairy farmers. Other inventions included the platform scale or Fairbanks scale, produced by Thaddeus Fairbanks, 1830; a compression machine for cooling water, a precursor of modern refrigerators, Jacob Perkins, 1834; a corn harvester, Henry Blair (the first African American to receive a patent, 1836); a steam-powered thresher, John and Hiram Pitts, 1837; a safety pin, Walter Hunt, 1849; prefabricated homes, James

The Delaware Aqueduct, one of several suspension bridges designed by John A. Roebling, was built and operational by 1848. It is still in service more than 150 years later as a vehicular bridge. (*Library of Congress*)

Bogardus, 1849; and a process for condensing milk, Gail Borden, 1855.

Despite the emphasis on technology, the young United States did produce some advances in pure science. In 1831, American physicist Joseph Henry and British physicist Michael Faraday independently discovered the principle of electromagnetic induction. In the course of doing so, they invented the dynamo, or electric generator, which would make possible the widespread use of electric power from the late 19th century onward. Henry also improved the electromagnet, built one of the first electric motors, and was important in institutionalizing and stimulating scientific research in America. He was a professor at Princeton (1832–46), the first secretary and director of the Smithsonian Institution (1846–78), and a founder of the American Association for the Advancement of Science (AAAS) in 1847. At the Smithsonian, he set up a weather-reporting system that led to the creation of the U.S. Weather Bureau.

Medical science was advanced by physician Oliver Wendell Holmes, father of the Supreme Court justice of the same name. In 1843, the elder Holmes demon-

strated, based on many case studies, that puerperal fever, or childbed fever, was contagious, a finding supported four years later by the studies of Hungarian physician Ignaz P. Semmelweis.

More generally during this period, science was being transformed from the hobby of amateurs, known as natural philosophers, to the profession of specialized scholars called scientists (a word coined at this time by British philosopher William Whewell). The founding of the AAAS was a key step in that direction, as was the founding of other scientific and professional societies, including the American Medical Association, established in 1847; and the American Psychiatric Association, started in 1844. Earlier, in 1818, chemist Benjamin Silliman had founded the *American Journal of Science and Arts*, which prided itself on publishing serious scientific research, even when too arcane for the general public. Silliman also became important in the 1850s for his distillation of crude oil and his report of the many uses to which it could be put—a prescient view, given that the invention of the petroleum-driven internal combustion engine was still years away.

Despite the growing shift toward professional science, there was still ample scope for the dedicated amateur in early 19th-century America, particularly when it came to natural observation and collection rather than theory and experiment. Astronomy, paleontology, geology, botany, and zoology were all areas in which gentlemen could dabble, whether they were clergymen, lawyers, doctors, merchants, or planters. Sometimes the results were astonishing. From 1827 to 1838, one-time storekeeper JOHN JAMES AUDUBON published his landmark, multivolume collection of ornithological drawings, *Birds of America*. In the Connecticut Valley in 1818, Solomon Ellsworth, Jr., and Nathan Smith discovered fossil bones of the dinosaur *Anchisaurus* without understanding the significance of their find. From 1818 to 1858, no fewer than 13 academies of science were founded in the Middle West alone, from Ohio to Wisconsin. Most of their members were amateur natural scientists.

Despite their more restricted opportunities, women too could achieve impressive results. Maria Mitchell, librarian and amateur astronomer, established the orbit of a newly discovered comet in 1847. For this feat, she became the first woman admitted to the American Academy of Arts and Sciences.

Archaeology and oceanography were fields of growing interest. Ephraim George Squier and Edwin H. Davis made the first major exploration of the earthworks of the Native American Mound Builders in Ohio in 1845–47. In 1854, naval officer Matthew Fontaine Maury discovered Telegraph Plateau, a shallow section of the Atlantic Ocean, while searching for an undersea route for the transatlantic cable. Maury charted the Gulf Stream and wrote *Physical Geography of the Sea* (1855), the first textbook of modern oceanography.

In *Democracy in America* (1835), French visitor Alexis de Tocqueville devoted a chapter to the subject “Why Americans Prefer the Practice Rather Than the Theory of Science.” Tocqueville was probably right that Americans were more interested in practical inventions than in theoretical findings, yet there was popular interest in loftier matters. Through newspapers, books, and popular lectures (often in a local lyceum), Americans learned about findings in astronomy, botany, chemistry, physics, and other areas. The passage of the Great Comet of 1843 was eagerly followed. Much of this popular science was confined to “curiosities” and “wonders” rather than deep inquiry into the causes of phenomena. But it showed that Americans at this time were not averse to scientific learning. In fact, many viewed it as morally uplifting. Naturalist Increase A. Lapham, lecturing in Milwaukee in 1840, said: “Teach young persons to relish the pure and simple beauties of nature—excite in their bosoms an ardent and enthusiastic love of the wonderful works of the Great Creator and you have one of the surest safeguards against immorality and vice.”

**Scott, Winfield** (1786–1866) *Mexican-American war hero, politician*

U.S. Army general and Whig politician, Winfield Scott's victories during the MEXICAN-AMERICAN WAR made him a national hero. Scott was born in Petersburg, Virginia, on June 13, 1786, the son of a Revolutionary War veteran. He attended William and Mary College briefly in 1806, but dropped out the following year to study law. Scott joined the U.S. Army as a captain in 1808. He proved himself a studious and capable individual, but extremely sensitive about matters concerning personal honor. In 1810, for publicly denouncing his superior, General James Wilkinson,

Winfield Scott (National Archives)

Scott was court-martialed and suspended for a year. More determined than ever to be a good officer, he spent that interval reading and mastering several European manuals on the art of war. He reemerged as one of the most promising young officers in the American army.

When the WAR OF 1812 commenced in June 1812, Scott was a lieutenant colonel of the Second U.S. Artillery. In October that year, he fought with great bravery at the debacle at Queenston Heights on the Niagara frontier and was captured. Exchanged the following year, and promoted to full colonel, he accompanied General Henry Dearborn's amphibious expedition against Fort George in May 1813 and was conspicuous in its capture. Scott pursued the defeated enemy vigorously and would have taken them prisoner but for Dearborn's premature order to withdraw. He spent the balance of the year along the Niagara Frontier before joining General Wilkinson's ill-fated St. Lawrence expedition that fall.

As one of several junior officers to acquire distinction in service, in March 1814 Scott became the youngest brigadier general in the army. He was then assigned to the Left Division under General Jacob Brown at Buffalo, New York, where he instituted the first systematized training regimen for American troops. On July 5, 1814, his intense drilling paid dividends when his brigade won an overwhelming victory over a larger British force at Chippawa Creek, Canada. This was the first time in the War of 1812 that American troops had defeated their professional adversaries in an open field and proof of their growing professionalism. Three weeks later, Scott commanded the American front line at the Battle of Lundy's Lane. The battle was a draw, and Scott was seriously wounded. Sent to Baltimore to convalesce, he saw no further fighting, but he had acquired a military reputation second only to ANDREW JACKSON.

After the war, Scott convinced the War Department to send him to Europe to study military institutions there. Thus began a 50-year quest for promoting and sustaining military professionalism in the U.S. Army. In this capacity, Scott authored several widely read drill manuals and regulations, some of which remained in use until 1861. However, he remained stubbornly opinionated about personal affairs and publicly quarreled with General Edmund P. Gaines over seniority. This row resulted in the selection of Alexander Macomb as commanding general of the army in 1828. Such was Scott's insistence on military protocol that he was widely derided as "Old Fuss and Feathers."

Scott continued to function effectively as a soldier, and he was actively involved in the Second Seminole War, the Cherokee removal, and border disputes with Canada. He became the army's senior military leader in 1841, and six years later he led the decisive campaign of the Mexi-

can-American War. Landing at Veracruz, he bested a series of larger Mexican armies in a brilliant campaign of maneuvers that included cutting off his own lines of communication. Mexico City was subsequently taken, and the government of General ANTONIO LÓPEZ DE SANTA ANNA sued for peace.

As a national hero, Scott tried to secure the WHIG PARTY's nomination for president in 1848, but lost to ZACHARY TAYLOR. He achieved his quest in 1852, but badly lost the election that year to Franklin Pierce. He was nonetheless honored the following year by being elevated to lieutenant general, the first officer to hold such a distinction since George Washington.

Scott remained the nation's senior military figure until the outbreak of the Civil War in April 1861, when he was succeeded by General George McClellan. Before retiring, he promulgated the so-called Anaconda Plan for defeating the Confederacy. This entailed establishment of a naval blockade coupled with a series of western advances down the Mississippi River that carved up enemy territory methodically and slowly strangled the South. The strategy brought him into direct conflict with younger officers like McClellan, who sought to attack immediately before the army was properly trained. Much lampooned at first, Scott's strategy eventually triumphed. The old soldier died at West Point on 29 May 1866, having bequeathed to the U.S. Army traditions of professionalism and victory that it heretofore had not possessed.

## Second Great Awakening

Beginning in the 1790s, a wave of revivalism swept across the United States that ultimately transformed the religious and social landscape. The revival reflected tremendous faith in the ability of an individual to affect his own salvation. In an age when the clarion of equality was gaining in tempo, suddenly every man was equal before God. All a person had to do, so many revivalists declared, was open his or her heart up to Jesus, and the individual

Camp meetings, such as the one shown here, helped to spread Protestantism to the scattered frontier population. (Library of Congress)

would be saved. Harsh Calvinism was shunted aside, and the learned minister was no longer needed to guide the layman. Evangelicals did not write formal and reasoned sermons. Instead, they preached as the Lord moved them, threatening sinners with fire and brimstone and speaking in an impassioned voice.

While regular church services might be a part of the revival, the camp meeting became its special tool. In rural areas where population was dispersed, the camp meeting provided a reason for hundreds, sometimes thousands, to assemble together in both a social and religious setting. In summer 1801, over 12,000 people attended the Cane Ridge camp meeting in Kentucky. Similar gatherings occurred throughout the early 19th century. The behavior of the participants at such camp meetings could border on

the bizarre, with some individuals barking like dogs, others shouting and screaming for the glory of God, and still others sobbing in the recognition of their own sin.

The enthusiastic RELIGION associated with this revival had its greatest impact on the frontier both in the North and the South. Kentucky and Tennessee were particularly responsive to the revival. Western upstate New York, recently occupied by European Americans, experienced so many revivals that it was known as the “burned over district,” because the fires of religion had repeatedly burned over the area. Charismatic and imposing preachers such as CHARLES GRANDISON FINNEY would draw large crowds. In newly settled regions, Americans were looking for some order in an unstructured social environment. The Awakening, even with some of its extravagant behavior, provided individuals with reassurance that they were guaranteed salvation and had a special relationship with God. Many evangelical denominations also emphasized the need for personal discipline and attacked drinking, gambling, and other forms of misbehavior.

The implications of the revival on society were profound. The Awakening brought an ever-increasing number of Americans into church attendance. It was also at this time that many African-American slaves became Christians, responding to the evangelical currents swirling about them. Denominations like the Methodists and Baptists swelled in numbers, quickly becoming the predominant religious groups in many sections of the nation. Eventually, after 1820, new denominations like the Mormons and the Church of Christ appeared. The call for self-discipline also helped to spawn a host of reform

### The Second Great Awakening

movements in the United States. With the emphasis on an individual's personal relationship with God, the need to spread the gospel led to Bible and Sunday school societies. In turn, other groups emerged to help the poor and disadvantaged and to reform society. While these reform movements gained their fullest expression in the 1830s and 1840s, it is in the opening decades of the 19th century that they began. Ultimately, however, the greatest impact of the revival was the further impetus it gave to the developing central creed of the American nation. In the face of this massive religious upheaval, it became increasingly difficult to sustain social distinctions and oppose the rise of equality.

Hatch, *The Democratization of American Christianity* (New Haven, Conn.: Yale University Press, 1989); Christine Leigh Heyrman, *Southern Cross: The Beginnings of the Bible Belt* (New York: Alfred A. Knopf, 1997).

## Seminole

A southern Native American tribe, the Seminole were the target of the longest and most costly Indian war in U.S. history. The Seminole are a Muskogean-speaking offshoot of the Lower CREEK tribes of Georgia and Alabama that first appeared during the early 18th century. Like their forebears, they were an agrarian, hunting culture centered upon various "towns." These were headed by senior chiefs and gathered into larger confederacies under paramount chiefs. By the end of the century the Seminole had struck up cordial relations with Spain and Great Britain and viewed the newly independent United States with ambivalence.

Despite their Creek roots, the Seminole were neutral during the Creek War of 1813–14, in which the Americans under General ANDREW JACKSON decimated the Upper Creek of northern Alabama. But they openly welcomed Upper Creek refugees into their ranks as they had welcomed escaped African-American slaves, who had also intermingled with the tribe. After the WAR OF 1812 these two elements formed war bands that raided American settlements along the Georgia frontier, which Spanish authorities proved helpless to prevent. This lax security resulted in the FIRST SEMINOLE WAR (1817–18). In 1816 General Edmund P. Gaines of the United States invaded Florida and destroyed a large fort occupied by escaped slaves. Angry Seminole then ambushed a convoy of American troops on the Apalachicola River on November 30, 1817. This act drew a sharp response by General Jackson. Without wait-

ing for governmental permission, Jackson took 4,000 men to raid Indian towns, burning several and effectively extinguishing Spanish rule in the region. In 1819 Spain signed the ADAMS-ONÍS TREATY, which ceded Florida to the United States and placed the nation on a collision course with the Seminole people.

In 1823 the Seminole signed the Treaty of Moultrie Creek, whereby they agreed to be placed on a reservation in central Florida. The treaty also led to their first unified government to replace the rule of town chiefs. White settlers coveted Indian land, however, and the U.S. government began pressuring the Seminole to migrate to new land west of the Mississippi River. In the Treaty of Payne's Landing of 1832, the bulk of Seminole chiefs yielded to this pressure and agreed to move. However, rebel factions under chiefs like OSCEOLA refused. On December 28, 1835, these dissidents ambushed and massacred a column of troops under Major Francis L. Dade, precipitating the SECOND SEMINOLE WAR (1835–42). This proved to be the most protracted and costly Indian conflict in U.S. history. The Seminole waged a relentless guerrilla campaign against the invaders. U.S. troops did manage to deport roughly 3,000 Seminole by force, but at a cost of \$20 million and 1,500 lives—roughly two Indians deported for every white life lost. A body of 300 Seminole managed to remain in the south of Florida, oblivious to any treaties.

By 1855 renewed white encroachment was answered by Seminole reprisals led by Billy Bowlegs in the Third Seminole War (1855–58), which resulted in another handful of deportations before hostilities ceased in March 1858. However, a body of 150 Seminole under Sam Jones remained sequestered in the Everglades and did not move. The bulk of the Seminole Nation now lived in the Indian Territory (Oklahoma), where they reestablished their communities and government. They also clashed with neighboring Creeks who had arrived earlier, and in 1849 a large party of Seminole under Chief Wildcat emigrated to northern Mexico. Those who remained eventually adopted agriculture and ranching with some success. This relative prosperity faltered with the outbreak of the American Civil War, in which the Indian Territory sided with the Confederacy.

### **Seminole War, First and Second** (1817–1818), (1835–1842)

The history of the Seminole Indians begins with the early 18th-century conflicts between English and Spanish interests in what is now northern Florida. After Creek and English incursions destroyed the Spanish mission system and the Indians associated with it, the Spanish wanted protection from their enemies in order to rebuild their strength. They invited groups of Lower Creek Indians to move into northern Florida, hoping their presence would act as a shield against the English settlements to the north. By the mid-18th century, these Lower Creek had developed a distinct society and were known as the Seminole, a corruption of the Spanish word “cimarron,” or “runaway.” The Seminole fought on the Loyalist side in the Revolutionary War, and when Spain resumed control of the Floridas from Great Britain in 1783, they continued to act as important strategic partners.

Over time the Seminole became what is known as a “triracial isolate” because they welcomed runaway slaves and others escaping from established colonial society. Their willingness to welcome escaped slaves would prove pivotal in the First Seminole War. American slaveholders resented the presence of havens for runaway slaves in Florida and pushed the government to roust out fugitives. Seminole were known to be hostile to the Americans, a position that led to violence in 1817. The previous year, the United States had built Fort Scott on the border between Florida and Georgia in Spanish territory, near the Seminole village of Fowlstown. This village was a hotbed of anti-American sentiment, and its chief, Neamathla, used the area to stage raids on Georgia. Runaway slaves were also known to congregate in Fowlstown. By 1817, the Seminole’s hostility in Fowlstown induced General Edmund P. Gaines, commander of Fort Scott, to attack the Indian settlement. The Seminole were forced to retreat and join forces with another band further south.

In 1818, General ANDREW JACKSON invaded West Florida, partly to assert U.S. jurisdiction over the territory, partly to capture escaping Red Stick Creek and partly to recover fugitive slaves. Jackson and his troops pushed the Seminole eastward, destroying their villages along the way. This aggressive American behavior induced the Spanish to cede EAST AND WEST FLORIDA to the United States, which they did through the ADAMS-ONÍS TREATY of 1819. All of Florida, including Seminole lands, now officially belonged to the United States.

In 1830 Congress passed the INDIAN REMOVAL ACT, which required Indians east of the Mississippi River to be removed from their lands and relocated to the West. Seminole resistance to Indian removal led to the Second Seminole War. In 1835, their leader Osceola ordered the killing of an Indian agent and two companies under Major

Francis L. Dade. Indian forces achieved major victories in attacks on northeastern Florida. Joining the Seminole in battle were escaped slaves who had become part of the nation. The presence of these former slaves among the Indians angered American southerners, who continued to pressure the federal government to stamp out the rebellions.

Following Osceola’s victories, President Andrew Jackson sent military hero General WINFIELD SCOTT to lead the fight against the Seminole. Scott’s troops were stymied by the Indians’ guerrilla tactics, and his campaign failed. Jackson replaced Scott with General Thomas S. Jesup, who used a more ruthless approach for battling the Seminole, violating the rules of war and using torture and execution. In 1837, Jesup captured Osceola, even though a truce was supposedly in effect; the Seminole leader died in captivity a few months later. That same year, a major battle was fought at Lake Okeechobee, with American troops commanded by General ZACHARY TAYLOR. By 1838, 100 Indians had been killed and over 2,500 captured and transported to Oklahoma. Among those transported were former slaves who had fought for their freedom alongside the Indians.

The fighting continued, the combatants locked in a stalemate. Jesup lost his command, and the cast of American generals would continue to change over the next four years. The Seminole also fought under the leadership of various men after Osceola’s death, but no single leader emerged. As the war advanced, both sides used Indian fighting tactics—the only viable method for fighting in the subtropical environment.

By 1842 only about 300 Seminole remained in Florida. The last American commander, General William J. Worth, proposed that the United States cease fighting in Florida and strike an agreement with the Seminole holdouts. In August, the Seminole agreed with Worth to stay in the region south of Pease Creek and west of Lake Okeechobee. This agreement was not an official treaty, but it did end seven years of fighting, the longest and most expensive war ever fought by Indians against the United States.

Florida Territory petitioned for statehood in 1845 and was admitted as a slave state. Soon state officials were demanding the removal of the remaining Seminole in order to make white settlement safe. Military forces provoked a confrontation by destroying the property of Seminole leader Billy Bowlegs. The Indians retaliated in 1855, starting a smaller conflict that became known as the Third Seminole War (1855–58). By 1858, Billy Bowlegs and 165 others had agreed to go to Oklahoma; he later convinced another 75 to join the migration. After all the bloodshed, 125 Seminole resisters remained in the remote swampland of Florida. They were never removed. The Seminole who moved to Oklahoma lived on the Creek reservation until 1856, when they were given their own

reservation. The nation's alliances were divided during the Civil War, and those in Indian Territory continued to be isolated from the remaining Florida Seminole. The nation strove to regain a unified identity after the war. Like other Native Americans in the last half of the 19th century, the Seminole were plagued by poverty, disease, and the indifference of the U.S. government. By the beginning of the 20th century, the nation had traded its reserved land for allotments, and their tribal government provided less and less protection for the most resistant eastern nation.

### Seneca Falls convention

On July 19 and 20, 1848, nearly 300 men and women gathered at the Wesleyan Chapel in Seneca Falls to attend a women's rights convention. Considered by many historians to mark the beginning of an organized movement for WOMEN'S STATUS AND RIGHTS in the United States, the convention built on decades of political activism by women devoted to the causes of abolitionism, temperance, and religious reform. The convention broadened and sometimes redirected women's political action. It used familiar language to articulate new political goals. Most of all, however, it gave notice that the legal and cultural identity of women in America could not and would not remain the same.

While the American Revolution severed the former colonies' ties to Great Britain, it did little to alter the balance of power between women and men. Denied equal access to education, prohibited from joining professions, and without the benefit of apprenticeships in profitable trades, most women of the new republic were forced into economic dependency on men. Young women were taught the business of home management and child care, skills with their own economic worth that were nevertheless rarely sufficient to provide a woman with financial independence. Marriage was therefore a largely economic transaction, in which women and men exchanged their financial skills in order to form a household. Marriage also wrought another transformation on women. Upon marriage, women became "civilly dead"—that is, their legal identities were largely suspended in those of their husbands, who controlled their

property, earnings, ability to contract and sue, sexual access to their bodies, and custody of their children. In general, only men were allowed to vote, serve on juries, enter the legal profession, or become elected officials. Women relied on men to act on their behalf in each of these arenas.

This left women on the civic fringes of the new republic forged during the Revolutionary War. What would their stake be in the perpetuation of the state? What role should the women who had upheld economic sanctions, worked on battlelines, and run households in the absence of their husbands be expected to shoulder now that the war was done?

The answer was a political identity rooted in motherhood. For the republic to flourish, it was necessary that the sons and daughters of the revolutionary generation understand the civic identity they had inherited. Who better to instill this in the youngest generation of Americans than their mothers? Seized upon by women as well as men as a means to channel their political expression, "Republican Motherhood" became the very definition of a woman's political role.

It was as mothers (and for young women, mothers-to-be) that women made the majority of their political claims in the early 19th century. Early temperance activists used the rhetoric of motherhood to urge politicians to protect women against drunken husbands, financial ruin, and physical violence. Many women who lobbied state legislatures for the better protection of married women's property rights did so with the argument that mothers and children needed protection from the wasteful financial habits of neglectful men. Rarely did anyone argue that women deserved equal legal rights with men out of basic justice. Those who did ran the risk of alienating the politicians they hoped to sway, opening themselves to ridicule or scaring their constituents with the possibility of a radically changed social order.

Yet the women at Seneca Falls did not make their claims to political activism on the basis of motherhood. The lasting impact of the convention was their plainspoken demand to be considered the equals of men and to be understood as citizens in their own right. The resolutions of the convention did not suggest that women deserved rights because they deserved protection from a harsh and violently male world. Instead, the organizers and attendees argued that the business begun by the American Revolution was not finished and could not be until the laws of the land recognized that "all men and women were created equal."

The evolution of this particular brand of women's activism owed much to the influence of Quakerism in the United States. More egalitarian than many religious groups, the Quakers encouraged women to speak at religious meetings and allowed them to become ministers. Members often considered social activism indistinguish-

able from spiritual responsibility. As a group, Quakers were fiercely opposed to SLAVERY, and many of the most prominent women's rights activists of the 19th century learned their organizing and public speaking skills as Quaker advocates of abolitionism. ANGELINA AND SARAH GRIMKÉ, for example, became Quakers after moving to Philadelphia in the 1820s and were outspoken abolitionists throughout the 1830s. The public condemnation of their lectures to mixed-sex crowds propelled them to defend a woman's right to political action.

LUCRETIA MOTT was another Quaker abolitionist who became an advocate for women's rights. In her youth, she had worked as a teacher and was paid only half the salary of her male colleagues. As an adult, she had hoped to join William Lloyd Garrison's AMERICAN ANTI-SLAVERY SOCIETY but was denied membership because of her sex. In response, she formed the Female Anti-Slavery Society of Philadelphia and organized a series of conventions for women abolitionists. In 1839, after fierce debate, the American Anti-Slavery Society admitted women to its ranks, causing many who opposed this development to break with the organization and form their own society. Mott joined Garrison's organization and was elected as a delegate to the 1840 World Anti-Slavery Convention in London.

Mott, along with five other women delegates, was refused entrance to the convention because of her sex. The occurrence compounded her earlier experiences with prejudice and persuaded her that a movement to advance women's rights was as necessary as the ABOLITION MOVEMENT. Many of her ideas were honed in conversation with Elizabeth Cady Stanton, the young wife of another American delegate to the convention, who was staying at the same boardinghouse as Mott. Stanton possessed only a fraction of Mott's experience with reform movements, but she was nevertheless appalled by the treatment of the women delegates to the convention. The two agreed that a women's rights convention should be organized in the United States as soon as possible.

It was eight more years before the convention would take place. Mott returned to Philadelphia, where she remained active in abolitionist circles and continued to preach as a Quaker minister. Stanton was absorbed by the birth and care of her children—three before 1847—and the management of her homes, first in New York, then in Boston. Everywhere reformists continued to press for changes in American society. Persistent lobbying eventually secured the passage of a married women's property act in New York in April 1848. Antislavery petitions continued to pour into Congress, and the TRANSCENDENTAL MOVEMENT was flourishing in the Northeast. Within the ranks of Hicksite Quakerism, the pressure brought to bear by many liberals who wanted greater equality for women and

a deeper commitment to secular activism resulted in a split in the movement. It was a time replete with the possibility of change.

In 1847 Stanton moved with her husband and children to Seneca Falls, New York. Close to the Quaker community in Waterloo and populated by many abolitionists, Henry Stanton hoped the town would offer him the opportunity to launch a political career. Elizabeth Cady Stanton, however, disliked her new home. She felt cut off from the intellectual circles of Boston and New York, could find no hired help, and found her children hard to control and frequently sick. As her husband began to travel, Stanton felt increasingly isolated. The home that had once been her solace began to feel like her jail.

In July 1848 Lucretia Mott traveled to Seneca Falls to visit her sister, Martha Wright. On July 13, Wright invited Stanton to join the sisters in a visit to their friends Mary Ann McClintock and Jane Hunt. The five women conversed, and in the course of the day, Stanton confessed her discontent with her life at home. The women sympathized and began to talk of the connections between domestic unhappiness and political dependency. By the end of the day, the five had resolved to call the convention that Mott and Stanton had proposed eight years before. The five sent announcements to local newspapers for a convention to be held in six days, on July 19.

It was harvest season around Seneca Falls, and the organizers expected only a few people to attend. Confounding their expectations, some 300 people flocked to the Wesleyan Chapel for the two-day conference, most from the local area, some from great distances, all from upstate New York. Almost everyone in attendance had experience in reform work, whether as Quakers, abolitionists, temperance workers, lawyers, writers, or newspaper editors. Some, such as Mott and Frederick Douglass, were already well known. Others, such as Stanton and AMELIA BLOOMER, would gain their greatest notoriety after the event. Unprepared for such a turnout, the organizers asked James Mott, Lucretia's husband, to chair the event. (Within two weeks, another women's rights convention was held in Rochester, New York; it was chaired by a woman.)

The centerpiece of the Seneca Falls convention was the "Declaration of Sentiments," a list of political grievances generated by the five organizers and written by Stanton. Using the Declaration of Independence as a model, Stanton claimed that "[t]he history of mankind is a history of repeated injuries and usurpations on the part of man toward woman, having in direct object the establishment of an absolute tyranny over her." The document then listed the grievances the women felt most keenly. Women were, they argued, prohibited from voting, from making laws, from securing elected office, from entering profitable employment, from gaining a useful education,

and from gaining positions of authority in church. Women had no legal claim to their property, their earnings, or their children, were forced into unnatural obedience to their husbands before the law, were oppressed by divorce laws that favored men, forced to pay taxes without gaining representation, and subject to a moral double standard. In short, charged the women, man had “usurped the prerogative of Jehovah himself, claiming it as his right to assign for [woman] . . . a sphere of action, when that belongs to her conscience and to God.” Worthy women, they argued, lacked the rights that men, regardless of character, enjoyed.

The Declaration of Sentiments was both shrewd and revolutionary. It was shrewd because it used the language on which the republic was formed to demonstrate the failings of government toward half of those it governed. It was revolutionary because it removed husbands, fathers, brothers, and children from a woman’s claim to citizenship. Women did not ask for the opportunity to serve others more faithfully. Instead, they demanded the right to serve themselves.

For two days, the men and women in attendance at the convention debated the declaration. Thirteen resolutions were offered and passed, 12 of them unanimously. One passed by majority vote—a resolution offered on the second day by Elizabeth Cady Stanton in which she called for a campaign for woman’s suffrage. It was a controversial resolution, not because the idea was new but because many activists feared that the idea would garner so much negative attention that it would make their other goals impossible to achieve. There were also Quaker women in attendance who did not want the vote, as it would make them party to a political system that approved of war.

At the end of the second day, 68 women and 32 men signed the Declaration of Sentiments. They ranged in age from 14 to 68 and came from a variety of backgrounds. Under immense pressure from their families and friends, many—including Elizabeth Cady Stanton’s sister Harriet—would later recant their support for the declaration. The principles and ideas it contain continued to spread, however, communicated through family and reform networks across the country. Women’s rights conventions were held in numerous states for years to come. The political and social demands of women became impossible to ignore.

### **Sequoyah** (ca. 1770–1843) *inventor of the Cherokee syllabary*

The Cherokee linguist Sequoyah (“Sparrow”) was the inventor of the Cherokee alphabet and written language. Sequoyah was born in the Cherokee village Taskigi (Fort Loudoun), Tennessee, around 1770, a member of the Paint Clan. His mother, Wurttee, was related to several important chiefs. It is believed that his father was the American soldier and trader Nathaniel Gist. The two apparently never married, and she relocated with part of her tribe to present-day Willstown, Alabama, where Sequoyah learned to tend cattle and hunt. During one hunting foray, however, he sustained a leg injury that left him permanently lame. Excluded from the usual tribal activities because of his injury, he took to drink and nearly died before embarking on a life of abstinence.

Sequoyah then began a career as a silversmith, gaining renown in this profession. As he actively traded with white settlers and traders in the region, he developed a fascination with their “talking leaves,” or books. Being intellectually inclined, he envisioned the advantages Cherokee could enjoy if they had their own alphabet and could transmit and preserve important information on paper. Around 1809 Sequoyah began experimenting with an Indian syllabary using pictorial symbols, but he abandoned this

Sequoyah, Cherokee linguist (Library of Congress)

approach when the sheer number of symbols required became untenable. The Creek War of 1813–14 interrupted his studies, and he joined a noted Cherokee battalion that served under General ANDREW JACKSON.

In 1818 Sequoyah departed Alabama with his family and settled down in present-day Pope County, Arkansas, part of an early wave of Cherokee to move westward. Around this time he resumed his work creating a Cherokee alphabet. Fellow tribesmen taunted him and accused him of engaging in witchcraft, and on one occasion his home was burned down. But he persevered. By 1821 Sequoyah finally perfected his system, which utilized 87 characters to represent all the sounds of the Cherokee language. He had arrived at this solution by closely studying English, Greek, and Hebrew characters depicted in mission schoolbooks. That year he faced a gathering of elders in the tribal assembly and tested his system with his six-year-old daughter. When, to their amazement, she answered all written questions perfectly, the Tribal Council authorized adoption of Sequoyah's syllabary. Formal instruction began, and within a few months large numbers of Cherokee could communicate over vast distances by the written word. Tribal literacy was firmly established in 1828 with the founding of the *Cherokee Phoenix and Indian Advocate*, the first Native American newspaper, which was written partly in English and partly in Cherokee. White missionaries also availed themselves of Sequoyah's system by translating parts of the Bible into Cherokee.

In 1829 Sequoyah moved farther west to Indian Territory (Oklahoma), where many other Cherokee were compelled to settle. He was among the Cherokee leaders who prepared a revised constitution for their reconstructed nation in 1839. For his role as the only person to ever single-handedly invent a viable alphabet, Sequoyah was awarded a silver medal by his tribe and was also the first Native American awarded a pension. In 1843 he departed his new home in Oklahoma to search for a missing band of Cherokee purportedly farther west. While on this journey, Sequoyah died of dysentery in Tamaulipas, Mexico.

**Seton, Elizabeth Ann** (1774–1821) *educator, religious leader*

The first American-born Roman Catholic saint, Elizabeth Ann Seton founded the Catholic order known as the Sisters of Charity, the first American-based community of Roman

Elizabeth Ann Seton (Library of Congress)

Catholic women. She is also regarded as the mother of the parochial school system in the United States.

Seton was born into the prominent Bayley family of New York City. Her father, physician Richard Bayley, was an educator and a public servant who served as Columbia University's first professor of anatomy and New York City's first public-health officer. Her mother, the daughter of an Episcopalian minister, saw that their children were reared in the Protestant faith. Elizabeth would often accompany her father as he cared for the desperately sick Irish immigrants in the city's quarantine on Staten Island. She was struck by both their poverty and their strong, sustaining Catholic faith.

In 1794 Elizabeth Bayley married William Magee Seton, a prosperous financier. They had five children, but as she raised her young family, she found herself drawn toward religious contemplation and charity. Early each morning, she left her fashionable house on the Bowery with a basket filled with medicines and food for the poor. Though pregnant, she ministered to the quarantined immigrants by her father's side and nursed him through the course of the yellow fever he contracted from his patients. He died of the illness in 1801.

At the same time, her own family's financial and physical health declined. William Seton had inherited his father's troubled banking and shipping businesses, and they continued to founder. Meanwhile, a lingering tubercular condition left him a near-invalid. By 1803, William was convinced that only a sojourn in Italy, where he had lived for a time as a young man, would cure him. The couple set off with their eldest child, but to no avail; William died in Italy.

Elizabeth Seton found herself in a strange country, widowed, separated from her children, and without funds, but she was unbowed by all this hardship. Instead, she made many friends, all of whom were Roman Catholics. Again, she was fascinated by their faith. She began to study Catholicism in earnest, returned to New York in 1804, and there was confirmed a Catholic in 1805.

Her new faith made her very nearly an outcast in the New York of the day. Catholics were a distinct minority, made up largely of working-class immigrants. Seton found work as a teacher, but her notoriety and several incidents of anti-Catholic violence soon made life in New York impossible.

In 1808, the Archdiocese of Baltimore came to the rescue. Seton was invited to come, children and all, and open the first Catholic elementary school in America. Her school for girls was an immediate success—Catholics were a majority in Maryland, not the oddity they were in New York—and “Mother Seton,” as she soon became known, attracted four postulants, or nuns-in-training, within a year of her arrival. The women took vows, chose a habit, and lived, studied, taught, and worshipped together. The first American religious order had been born.

When a tract of land in Emmitsburg, Maryland, was donated to Mother Seton in 1809, she established the Sisters of Charity's motherhouse there. During the next several decades, the sisters opened schools and hospitals in cities throughout the Northeast and as far west as Cincinnati. The order's rule was influenced by St. Vincent de Paul and was organized along the lines of his Daughters of Charity in France. More than 150 of the sisters would serve as nurses in the Civil War.

Mother Seton was the order's superior until her death in 1821. In 1975, she was canonized as a saint of the Catholic Church.

## slavery

An economic, political, and cultural institution lasting for more than two centuries, slavery affected every man,

woman, and child in the 19th century United States. In broad terms, American slavery could be considered a labor system in which enslaved men and women, overwhelmingly of African descent, were owned by free men and women, overwhelmingly white. Yet such a definition obscures the complexity of the system and the ways in which it was shaped by those who participated in it, whether by coercion or by choice. Slavery varied by industry, by region, through personal relationships, and by the actions of owners and enslaved men and women themselves. Often defined in total opposition to liberty, slavery was in fact a complicated cultural system in which enslaved men and women actively negotiated and fought for multiple freedoms on the road to their emancipation. While the institution of slavery ended with the Civil War and Reconstruction, this fight for freedom continued well into the 20th century.

Politically, slavery was a contentious issue with the power to divide the United States. All of the original 13 colonies had permitted slavery before the Revolutionary War, although the highest concentration of enslaved people was in the South. Less dependent on slave labor to support its more diversified economy, the North was able to move cautiously toward abolition after the war. Historians have debated the reasons for this shift. Some contend that the rhetoric of the American Revolution, with its emphasis on personal liberty and the natural rights of man, convinced individuals that it was hypocritical to own slaves. Others contend that the shift was motivated purely by economics or religious conviction. Whatever combination of motivations spurred northern states toward abolition, slavery came to a slow end in the late 18th and early 19th centuries.

Northern abolition was neither uniform nor immediate. Many states chose to free enslaved men and women once they reached adulthood or if they accepted Christianity. Others legislated that existing slaves would live in bondage, but their children would be born free. This gradual emancipation meant that a significant number of slaves existed in the North well into the 19th century, although their numbers dropped steadily with time. Congress had endeavored to make new northern territories free as early as 1787. The Northwest Ordinance, passed in that year to govern the expansion, settlement, and government of the Ohio region and beyond, prohibited “involuntary servitude” in the territory. Slaves accompanying their owners on travel or to military service in the northern territories remained enslaved despite these legislative developments.

In the South, slavery was so firmly entrenched in the region's culture and so central to its economic health that abolition was widely opposed. There had been efforts during the revolutionary period to relax the grounds on which owners might manumit their slaves, but these were not widespread. They were further scaled back after events like the aborted Prosser Slave Rebellion in 1800 outside Rich-

mond, Virginia, convinced many southerners that their lives were at risk. Unlike most slave regimes in South America, the slave population of the American South grew through natural reproduction, sometimes through consensual sex, sometimes through abuse and rape, often at the hands of slave owners. This natural increase in the slave population made slavery especially profitable for whites. After a one-time investment in slaves, slaveholders expected them to increase in number and value with only a moderate additional investment of food and shelter. Since slaves were considered property that could be willed and inherited, many individuals became slave owners without buying a slave themselves. The entire economic structure of slaveholding was based on the idea of free labor. Paying slaves a wage, argued the slaveholders, would completely undermine the region's economy.

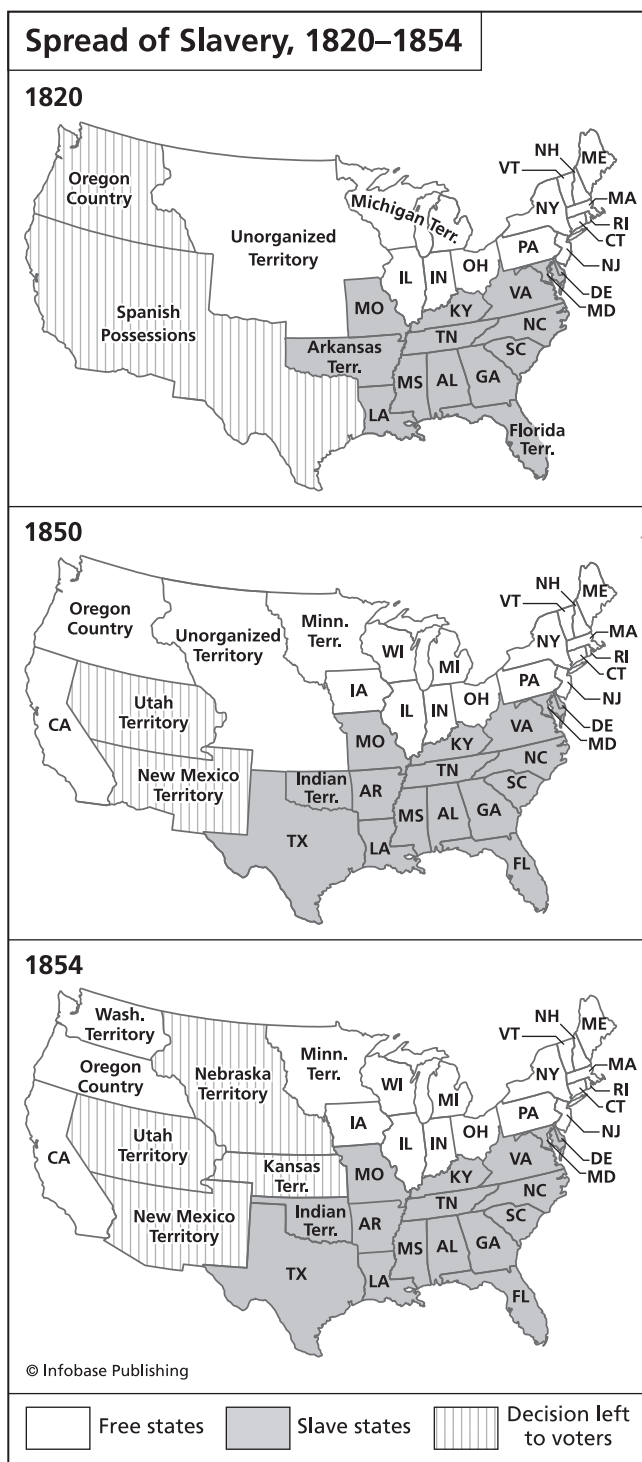

Southerners did not argue that slavery was a purely economic necessity. Many argued that it was a moral blessing. Proponents of slavery contended that conditions in the factories of the North were far worse than those in the slave

communities of the South. They suggested that northerners should turn their reformist zeal toward their own poor rather than demanding an end to slavery, an institution which they argued provided food, clothing, and shelter to those within its bounds. Conditioned by racial prejudice, proponents of slavery often argued that AFRICAN AMERICANS lacked intelligence, common sense, and a work ethic, making them incapable of supporting themselves outside the confines of the institution. Southerners also defended the long workdays imposed on slaves as well as the prohibition of education and noninstitutional religious meetings. Too much education, too little work, and the unsupervised practice of religion, they argued, would make slaves a danger to white citizens across the South.

Slavery was also bound up with the issue of states' rights. From its inception, the republic had struggled with the issue of slavery and the right of the federal government to govern its existence. Article One of the Constitution, which decreed that slaves would be counted as three-fifths of a person for the purpose of census counts (thus allowing

This illustration idealizes slavery; the reality was that picking cotton for long hours, six days a week, was grueling work. (*Library of Congress*)

southern states to gain a greater number of Congressional representatives than if free-born men had been counted alone) recorded such struggle and compromise. By 1819, as Missouri and Maine both applied to become states in the Union, the struggle had become particularly severe.

Eleven free states and 11 slave states existed in the Union, with the free states supporting 105 delegates to the House of Representatives, as opposed to the South's 81. Several antislavery delegates offered amendments to the legislation making Missouri a state, demanding that the slavery be prohibited within the region. A bitter debate ensued in which the arguments for and against slavery—political, economic, and cultural—were all aired. At the crux of the matter lay the Constitution. Antislavery delegates insisted that Congress's power to set the terms by which new states entered the Union gave the federal government the power to prohibit slavery. Proponents of slavery argued that the government possessed no such power, and that the Constitution protected state and personal liberties. A compromise was eventually forged in which Maine entered the Union as a free state, Missouri as a slave state, and slavery was prohibited in all remaining territories of the Louisiana Purchase, north of 30°36'.

This was not the end of sectional difficulties, however, nor a permanent answer to the question of which rights legitimately belonged to the states. The issue was revisited with the Kansas-Nebraska Act of 1854 and the decision in *Dred Scott v. Sandford* (1857), both of which undermined the federal government's ability to regulate slavery in the states. In December 1860, South Carolina seceded from the Union, believing that the election of Abraham Lincoln to the presidency would result in a concerted attempt to limit states' rights. Ten other southern states followed suit, and within the year a civil war had begun.

Yet slavery was much more than a political question. For millions of Americans, it was a way of life. At the outbreak of the Civil War, an estimated 4 million African Americans were held as slaves in the southern and western territories of the United States. Despite sharing a common legal identity, their experiences differed widely depending on the type of labor they were expected to perform.

The practice of slavery also crossed various ethnic and racial lines. A small number of French-speaking free blacks in Louisiana owned plantations and held slaves throughout this period, and slavery was also adopted by a number of Native American tribes in the South. In the first third of the 19th century, members of the so-called Five Civilized Tribes (Choctaw, Chickasaw, Seminole, Creek, and Cherokee) deliberately assimilated to the outward norms of white civilization in an attempt to forestall their removal to the far West. To this end they adopted the same racial hierarchy as whites and obtained several thousand African-American slaves to work their farms and plantations. Many Indians, principally mixed-blood chiefs among the Cherokee, acquired considerable wealth in this manner. Those members of the Five Civilized Tribes transplanted to the new Indian Territory (Oklahoma) took their slaves in

tow. Again, the Indians adroitly managed their plantations and acquired considerable wealth. The success of the slave economy on Indian land prompted the tribes to support the Confederacy in 1861, but four years later, following the Union victory, they were forced to manumit their slaves.

The vast majority of slaves lived in rural areas. Contrary to popular imagination, few lived on sprawling plantations but instead lived and worked on small farms. The most popular crops grown by slave labor were cotton, rice, sugar, and tobacco, with smaller investments in corn and indigo. Field labor was notoriously harsh no matter what was grown, but each crop demanded a specific cycle of cultivation and harvest. While tobacco required constant attention, it facilitated a steady pace of work and was relatively safe to grow, harvest, and process. Rice, on the other hand, grew in water, and slaves were easy prey for waterborne diseases. Rice cultivation required relentless labor, and while workdays might be short, they were exhausting. In order to turn rice into a viable product for market, it had to be watered, harvested, dried, buried, stacked, threshed, winnowed, and pounded by hand. Accidents were common from the complexity of the work and the fatigue that accompanied production. Cotton cultivation required physical strength and endurance since workdays were always long, especially in picking season. An average enslaved man or woman was expected to pick between 150 and 200 pounds of cotton a day. All slaves had a supervisor, whether their owner, an overseer, or the head of their field gang. The level of supervision varied, from task systems where enslaved men or women were allowed a degree of control over how long it took to complete a job to oppressive regimes where the work pace was enforced by whippings or beatings.

Even in rural areas, not all enslaved men and women worked in the fields. Many slave owners used slave labor in their homes where women worked as housekeepers, cooks, nursery maids, and laundresses; and men were employed as blacksmiths, wheelwrights, valets, and stable hands. These positions often offered physically comfortable working conditions when compared to field labor, but they required slaves to work under the direct supervision of their owners. The result was too often the physical and sexual abuse of slaves by slaveholders and their families.

A sizeable number of slaves worked in urban communities during the antebellum period. Urban slavery generally offered enslaved men and women greater freedom of movement, the chance to earn money from their labor, and the opportunity to acquire and perfect a marketable skill. As well as employing slaves in their homes, many urban slave owners allowed enslaved men and women to hire themselves out for wages in return for paying a fee every week. Such opportunities were more plentiful for men than for women. Men could work in construction, in

skilled trades such as carpentry, at railroad terminals, and on docks. Women were more limited in their options; the most skilled profession open to them was midwifery, and their more usual choices included dressmaking, laundry, and market work. This inequality of opportunity also existed in rural slave communities, where skilled positions were most likely given to men. Inequalities spilled over into the home lives of slaves, where the burdens of housekeeping, laundry, cooking, and child care fell heavily on the shoulders of women.

Overall, the living standard of typical southern slaves gradually deteriorated as the 19th century progressed. Many states had already adopted legislation making it nearly impossible for owners to manumit slaves, and after 1830 laws were enacted forbidding them from learning how to read or write. Hard workloads and declining nutrition for pregnant slaves also incurred low birth weights and high infant mortality rates. The rise of sugar plantations in the Deep South, notably Louisiana, increased the number of adult slaves worked to death while growing this demanding crop. Planters, however, were usually sustained by the high prices sugar fetched on the open market, coupled with a thriving internal SLAVE TRADE that assured them a steady stream of replacements. Internal slave trading served to destroy nuclear families in the African-American community as family members, usually young males and females, were ripped from their parents and transported to a life of hard labor in the Old South. By 1860 the number of individuals transferred in this way totaled nearly 1 million, making the internal slave trade one of the largest forced migrations in American history.

In all aspects of their lives, slaves fought to maintain and protect their own traditions and communities, even in the face of opposition from white society. At work, slaves engaged in slowdowns and sabotage to regulate the pace of work imposed on them by overseers and owners. Some slaves offered physical resistance to their ill-treatment, and many ran away in the hopes of reuniting with loved ones or escaping the harsh conditions under which they worked. Slaves sometimes resorted to conspiracy and violence to improve their plight. Slave rebellions had occurred previously on a small scale, but in the 19th century two episodes stood out. The first involved the former slave DENMARK VESEY, who worked as a carpenter in Charleston, South Carolina. Vesey had won a lottery and purchased his freedom in 1799. Deeply religious, he helped found a branch of the African Methodist Episcopal Church. Vesey was inspired by the successful 1791 revolt of black Haitians against their French masters on Santo Domingo. After his church was closed by white authorities, he began fomenting a black uprising in Charleston that would have entailed thousands of slaves and a mass exodus to Haiti. The revolt was set to unfold on July 14, 1822—Bastille Day—but white

authorities were informed of the plot and the conspirators were arrested. Vesey and 35 coconspirators were then publicly executed. Afterward city officials installed a 150-man garrison at an arsenal named the Citadel (at the site of the present-day South Carolina Military Academy).

A much more serious affair was the violent revolt led by Virginia slave NAT TURNER in Southampton County, Virginia. Like Vesey, Turner was highly intelligent and very religious, so much so that he regularly received what he deemed visions from God, and his fellow slaves consequently nicknamed him “The Prophet.” On August 22, 1831, he led a rebellion against local slave masters, killing 57 white men, women, and children. The alarmed countryside quickly raised a large militia force that hunted down the rebels and killed upwards of 100 blacks, guilty and innocent alike. Turner managed to elude capture until October 30, 1831, when he was seized in a swamp. He stood trial and went to the gallows quietly on November 5, 1831. The Virginia legislature then passed new laws forbidding the teaching of literacy to slaves, a trend that was subsequently copied throughout the South.

On a day-to-day level, enslaved men and women worked hard to create a meaningful life away from work. Men and women entered into marriage, solemnizing their relationships through customs such as “jumping the broom” even as Anglo law denied the legality of such ceremonies. Blending African tradition, neighborly obligation, and friendship, enslaved men and women observed extended kinship networks that stretched beyond individual farms to surrounding counties, even as slave owners wielded the power to divide families and sell individuals far from home. Despite frequent bans on unorganized religious activity, slaves interpreted the Bible for themselves, practiced multiple African religions, and often blended these to create wholly new expressions of spirituality. Despite the widespread prohibition of slave education, literate slaves and sympathetic free whites and blacks did teach others to read and write. Often barely sustained by rations of food and clothing from their owners, enslaved men and women supplemented their lot by hunting and raising gardens where possible. For many slaves, these activities represented a measure of freedom, hard won amid an oppressive system of exploitation.

## slave trade, internal

Although increasingly confined to the South, American SLAVERY underwent massive expansion in the antebellum period. From some 700,000 in 1790, the number of slaves had more than quintupled to almost 4 million in 1860. The African slave trade was stopped in 1808, only to be supplanted by an equally horrific domestic slave trade. Hundreds of thousands of black Americans were taken west in irons to sustain the growth of a vast southern empire based on slave labor.

The Louisiana Purchase of 1803, coupled with the mass deportation of NATIVE AMERICANS, opened to settlement a vast wilderness tract known as the Old Southwest. Over the following decades millions of white settlers moved into what eventually became the states of Mississippi, Alabama, Louisiana, and Arkansas. The newly settled region was economically skewed toward the production of cotton, spurring demand for cheap labor. Meanwhile, the Chesapeake region had declining agricultural output and a surplus chattel population. These circumstances stimulated an elaborate system of domestic slave trade through which, between about 1815 and 1855, an estimated 1 million slaves were forcibly relocated to work the region known as the Cotton Belt. By 1860, slavery had spread to nine new states and extended more than halfway across the continent into Texas.

In the half-century after the legal termination of the African slave trade, the slave population of the United States first surpassed that of any other country in the New World and then went on to exceed that of all the other American countries combined. This growth was due almost entirely to natural increase, as the number of slaves smuggled into the United States roughly equaled the number gaining freedom through manumission or escape.

There are several reasons for the much higher growth rate in the United States. The generally healthy and mild climate of the South kept slaves from succumbing to the kinds of diseases more prevalent in the tropics. Work as a field hand was an unrelenting ordeal, but the cultivation of cotton and tobacco was less physically demanding than that of sugar or coffee. Most important, though, was that slaves themselves became the crop.

Cotton cultivation, which required a minimum growing season of 200 frostless days, was confined to the Lower South. The rapid expansion of cotton plantations across the Deep South created an intense demand for slave labor. Slave owners in the Upper South quickly realized that their "surplus" slaves were a valuable commodity. With the decline in tobacco production, it was a commodity the Chesapeake states, particularly Virginia, had in abundance. By 1800 a domestic slave trade had developed, with slave traders purchasing excess slaves in non-cotton-producing states and then moving them to cotton-producing areas for sale. This domestic commerce had already reached the point in 1808 where it could readily replace the newly closed African slave trade as the regular source of slaves.

The Deep South's cotton boom, combined with the ban on slave importations, kept the domestic slave trade a lucrative business throughout the antebellum period. The price of a field hand eventually rose from about \$300 in 1795 to between \$1,200 and \$1,800 in 1860. It was not unusual for the average trader's annual rate of return to reach 30 percent. Such profits bound the South together in a slave economy.

As the COTTON CULTURE moved westward into Alabama, Mississippi, Louisiana, and Texas, so did the domestic slave trade. It is estimated about 1 million slaves were taken west between 1790 and 1860. Many accompanied masters who left home in search of new opportunities. This was the case with the majority of the early black migrants into Kentucky and Tennessee, as many of the states' first settlers were slave owners from Virginia and North Carolina. Later in the Deep South, entire plantation staffs would be moved westward by slave-owning families relocating or expanding their holdings.

After 1815, the domestic slave trade predominated in the forced internal migration of slaves. Eventually, the commerce accounted for as much as 70 percent of the

massive transfer of slaves westward. In doing so it replicated many of the horrors of the African slave trade; it also created new ones. One of these was the virtual breeding of slaves. Almost all the blacks relocated by the domestic slave trade came from the more northern slave states and almost all went to the cotton-producing tier of states along the Gulf of Mexico. Maryland, North Carolina, and Kentucky all had active slave markets, but Virginia was by far the biggest provider, sending roughly 300,000 slaves to the Gulf states between 1830 and 1860. Both Baltimore, Maryland, and Alexandria, Virginia, functioned as major receiving centers for these chattels, who were then loaded up on vessels bound for New Orleans.

To ensure a steady supply of slaves, slave owners in the Upper South took to guaranteeing the constant replenishment of their slave populations through the most basic means of human reproduction. Some chose mates for young slaves and forced them to live together. More often, owners would encourage slaves to marry, and thus to procreate, at an early age.

When it came time to sell, however, there was little or no respect for slave marriages, much less the slave families. In many cases, slaves were sold and moved without regard for family ties. In the Upper South, about one in three marriages was broken by the slave trade, and close to half of all children were sold away from at least one parent. Most sellers kept children with their mothers until about age 13, at which point they were deemed capable of work and thus ready for market. Understandably, the fear of being shipped south generated considerable fear in slave families throughout the Upper South, and it was probably a frequent motivation for attempts to escape to the North. Owners did not hesitate to use the threat of sale as a way of enforcing discipline among those selected to remain behind.

Slaves were normally bought and sold at auction like cattle. Most in demand, not surprisingly, were prime field hands, ranging in age from 15 to 30. Next in order of value were slaves capable of household and industrial tasks. A disproportionate share of the slaves sent west were young adults between the ages of 15 and 25. Both men and women toiled as field hands. Except to Louisiana, where the premium was on young men for the backbreaking work in the sugar fields, slave merchants shipped roughly equal numbers of males and females.

It was not uncommon for a young female slave in Virginia to find herself suddenly torn from her family and transported hundreds of miles to a strange new plantation in Mississippi. Separation from relatives and friends was probably the most devastating experience endured by slaves. The physical ordeal of the journey west was made even worse by the psychological cruelty involved in the permanent forced parting from loved ones.

Most of the domestic slave trade moved overland, and the logistics involved were invariably complicated, expensive, and cruel. As well as being housed and fed en route to their destination, most slaves had to be insured against loss by death or escape. Next came local transportation charges, overhead costs such as advertising and legal fees, sales commissions to local agents, and other business expenses. At regular intervals throughout the trip, slaves were confined in either jails or specially designed pens until they could be safely transported by boat, train, or on foot, like any common commodity. Slaves were formed into coffles, or chain gangs, and marched under guard into boats that plied the coastal waters from Virginia to Texas. Major marketing and distribution points included Richmond, Norfolk, and Louisville in the slave-sending Upper South and Charleston, Mobile, and New Orleans in the slave-receiving Lower South. The trade was relentless, with at least 100,000 slaves taken west every decade between 1810 and 1860. The internal slave trade conferred economic benefits to those who sold or used slaves in the antebellum period. But its macabre practices—breaking up family units, binding human beings in manacles, transporting them far from home, and compelling them to endure a life of forced labor once there—marks the internal slave trade as one of the most dehumanizing facets of the “peculiar institution.”

**Smith, Jedediah Strong** (1799–1831) *explorer, trader, trapper*

Fur trader and explorer who opened up trails and territory that were followed by settlers of the West, Jedediah Strong Smith was born in Bainbridge, New York, in 1799. As a young man, he had a good basic education by the standards of the day. At 13, he found a job as a clerk on a Lake Erie commercial vessel and gained experience in business transactions. He may also have met fur trappers and traders from the Great Lakes and southern Canada. He left the Lake Erie trade for St. Louis, perhaps as early as 1816 but certainly by the end of the decade. There he saw WILLIAM HENRY ASHLEY's notice in the *St. Louis Gazette*, with a call to “Enterprising Young Men . . . to ascend the Missouri to its source, there to be employed for one, two, or three

years.” Smith responded to the appeal and discovered the opportunities associated with the FUR TRADE.

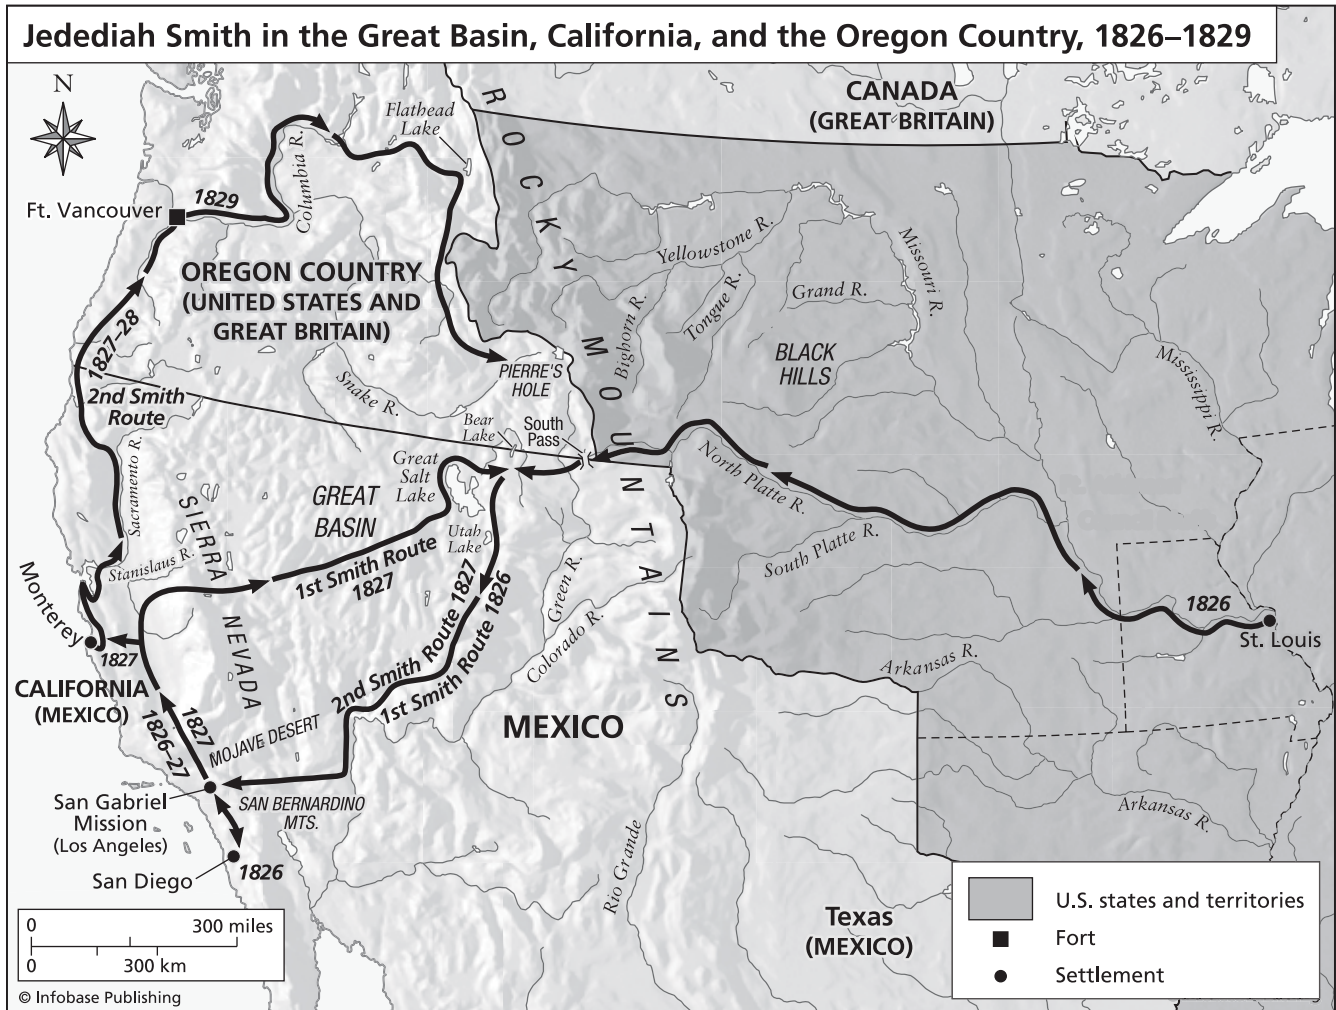

In 1822, Smith joined Ashley's first expedition up the Missouri River. The following year, he was once again on the upper Missouri when his party was attacked by the Arikara and suffered several casualties. He next led an overland party to the Black Hills, where he was badly injured in an encounter with a grizzly bear. From this point, Smith and his group went west, wintering in Wyoming. From encounters with Native Americans, he learned of an easy gateway through the Rocky Mountains. Expeditions from Fort ASTORIA had used SOUTH PASS as a gateway to the West in 1811, but Smith's rediscovery of it in 1824 made it a vital part of transcontinental travel. Over the next generation, South Pass would become the access route by way of the Platte and Sweetwater Rivers through the mountains used by overlanders on both the CALIFORNIA TRAIL and the OREGON TRAIL. Not only was South Pass a gentle slope, it was also wide enough to allow the use of wagons.

In 1824, still in Ashley's employ, Smith met the Hudson's Bay Company expedition to the Snake River Country, and he visited the HBC post at Flathead Lake. Based on his observations, he wrote a report for Ashley on the outfitting and trading policies of their chief rival. The following year, Ashley made Smith a full partner and placed him in charge of field operations. At the second great RENDEZVOUS in 1826, Smith (with David Jackson and WILLIAM SUBLETTE) bought out Ashley, who retired to St. Louis and politics.

As a managing partner in his own company, Smith and a few chosen companions now set out to explore the West in search of new fur-trapping and trading opportunities. They went from the rendezvous to the south, past the Great Salt Lake, along the Colorado River, and through the Mohave Desert, crossing into California and coming to the San Gabriel Mission in late November 1826. The Americans' presence aroused the suspicion of the Mexican governor of California, and Smith soon departed north through the San Joaquin Valley. In spite of repeated attempts in the face of difficult conditions, Smith failed to find a passage through the Sierra Nevada, and he and his company had to winter in the valley. The following spring, they crossed the mountains and made their way back to the Rockies by way of the Great Salt Lake to the annual rendezvous, arriving in July 1827. In making this journey, Smith and his companions were the first Americans to cross the Sierra Nevada from west to east.

In late summer 1827, Smith set out to retrace his earlier year's route, but this time he and his party were attacked by the Mohave Indians. Ten members of the party were killed, and Smith led the eight survivors across the mountains into California and the mission at San Gabriel. Although he

had only just survived the Indian assault, Smith's second appearance in California intensified the suspicion of Mexican officials. Eventually permitted to leave, he made his way by San Francisco and the San Joaquin Valley north to Oregon. In July 1828, Indians attacked Smith and his party on the Umpqua River. Of 18 men in the party, only Smith and three others escaped to find refuge at FORT VANCOUVER. There, JOHN MCLOUGHLIN gave Smith assistance, including the recovery of some of his furs seized at the Umpqua River. The meeting of Smith and McLoughlin at Fort Vancouver brought together two of the most important figures in the fur trade, and each represented the separate lines associated with the enterprise: McLoughlin the savvy administrator for the Hudson's Bay Company, who ran his empire from a fort; Smith, the explorer constantly on the move, who represented the independent trader.

Based on his stay at Fort Vancouver, Smith wrote a report for the secretary of war assessing the British presence in the Oregon Country. In 1828, he once again attended

the annual rendezvous, when he decided to retire from the fur-trading business. In 1830, however, he was persuaded to enter the Santa Fe trade. Like CHARLES BENT and WILLIAM BENT, Smith recognized that the future of the trade lay in the Southwest. He organized and captained a caravan of goods headed for the New Mexican capital of Santa Fe. As he scouted ahead to find a water hole, he was attacked and killed by Comanche Indians on the Cimarron River.

When Smith died in 1831 at the age of 32, he was one of the nation's most accomplished fur traders and explorers. Modern scholars have acknowledged his many accomplishments; transcontinental travelers were indebted to him for identifying South Pass as the universal route to the west; and his fellow trappers and traders widely admired him for his modesty, faithfulness, and kindness.

**Smith, Joseph, Jr.** (1805–1844) *founder of the Church of Jesus Christ of Latter-day Saints*

Founder, prophet, and first president of the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS, Joseph Smith, Jr., was born in Sharon, Vermont. He was the fourth of nine children in a family with marginal economic prospects, and his father failed at a variety of enterprises, most of them associated with farming and storekeeping. The young Smith moved with his family several times across northern New England and finally in 1816 to Palmyra, New York. Like other children in similar circumstances, Joseph had little formal schooling, and from an early age, he sought employment to assist the family's marginal circumstances. In this capacity, he worked as a hired laborer on neighboring farms. As others in that time sometimes did, he looked for buried treasure, and he claimed to have special powers to find hidden riches.

Joseph Smith, Jr. (Library of Congress)

Smith's family bequeathed him a heritage of intense religious introspection. His mother joined the Presbyterian Church, but his father remained outside any religious denomination and maintained a belief in dreams and revelations. The surrounding countryside and indeed the whole of upstate New York was caught up in religious feelings and disputations that gave it the name "burned-over district." It was in this context that Smith claimed to be visited by God and Jesus Christ in the spring of 1820. On this occasion, according to Smith, these divine personages indicated to him that he had been chosen for a special task that would be revealed subsequently. Three years later, according to Smith, he was visited by the Angel Moroni and informed that he had been chosen to translate a text from golden plates. The text was the history of pre-Columbian inhabitants of the Western Hemisphere. According to Smith's account, between 1823 and 1827 he made periodic visits to the site of the hidden plates, and he received instructions that would make him the modern prophet of a new religion. Completed in 1830, the publication of the *Book of Mormon* provided the text for the new religion, and Joseph Smith, Jr., was its prophet. On April 6, 1830, Smith incorporated the new church under New York law and revealed a revelation that designated him "a seer, a translator, a prophet, and apostle of Jesus Christ."

Smith's first converts were members of his own family, but he soon recruited others, including Heber C. Kimball and BRIGHAM YOUNG. Smith's continuing revelations—on subjects ranging from heaven and hell to the economy and banking—kept the church in turmoil. But whatever the day-to-day confusion, the church grew, from perhaps 300 at the close of 1830 to 700 at the close of 1831. With the conversion of Sidney Rigdon and his congregation of the Christian Church (Disciples of Christ), Smith moved the church to Kirtland, Ohio. At the same time, he established a strong missionary presence in western Missouri, near the frontier town of Independence. The church grew and prospered in Kirtland, and by 1835 its numbers exceeded 8,500, although exact numbers are unknown. In Kirtland, Smith directed the construction of a temple, the first of what would become several Mormon temples. Just as the Mormon community in Kirtland prospered in the boom times of the early 1830s, so it suffered with the onset of the PANIC OF 1837 and the subsequent depression. The situation was especially serious because the church had become involved in the banking business, and when the bank failed, the church was confronted by furious non-Mormon creditors.

Smith and his church fled Kirtland for the Mormon settlements in western Missouri, although apostasy thinned the ranks of the faithful. In Missouri, the church soon found itself in escalating conflict with its surrounding neighbors. As the membership continued to expand, so

did the church's need for land, and aggressive, expansionist Mormons made neighbors uneasy. Furthermore, the Mormons were a closed and self-righteous group, openly proclaiming their virtues as a "chosen people" and denouncing the sins of the rest of the world. They were eastern in their cultural characteristics, alien to the frontier environment of western Missouri, and sympathetic to the plight of slaves and Indians alike. These views made their presence unwelcome to other settlements in western Missouri. Conflicts escalated in the late 1830s, especially after the arrival of the church members from Kirtland. Missourians raided Mormon settlements, and Smith, tired of turning the other cheek, organized a quasi-military body known as "the Danites" to protect the church and its leadership. The church and Joseph Smith now became an issue in state politics. Missouri governor Lilburn Boggs apparently saw the Mormons and their prophet as a useful political target, and, speaking of them as threats to domestic order, he issued what became known as an "order of extermination," ordering Mormons to leave the state or face expulsion.

What became known as the Mormon War of 1838–39 cost Smith and his church severe losses. Men and women were killed, property destroyed, and when Boggs called up the state militia to enter the war, Smith's position was hopeless. He agreed to surrender, and he and other Mormon leaders were jailed for five months without formal charges. While they were incarcerated, Brigham Young took command and organized the emigration of the Mormon community from Missouri to Illinois, where, they took over a small village, Commerce, on the upper Missouri River. Smith, released from a Missouri jail in April 1839 and once more leader of the church, renamed the town NAUVOO. Here, beginning in 1839, the church and its leader began another cycle of prosperity and growth. Bolstered by numbers of converts from aggressive missionary activities and natural increase, the population of Nauvoo grew steadily, and by 1845 Mormons claimed 12,000 people in the city, numbers that rivaled Chicago as the most rapidly growing and progressive in the state.

Smith's plans for Nauvoo were three-dimensional. To begin with, alarmed by the Missouri experience and its threat to the Mormon community, he sought political and military power. He found political influence by bargaining with the state's Whig and Democratic parties, almost equally balanced in numbers. Using his leverage to deliver a bloc of votes, Smith received the concessions of independence and security that he sought. The state legislature passed, and the governor signed, the so-called "Nauvoo Charter," which gave specific rights to the Mormon community. These included the authority to establish a university (founded but never organized) and its own court system. Smith was elected mayor of Nauvoo under the charter in 1842, and at the same time, the governor made

him a major general in the Illinois state militia. Smith organized the Nauvoo Legion, a training body of men armed with guns from the state arsenals who were the answer to his search for military security.

In spring 1844, Smith announced himself a candidate for president of the United States, confirming Mormon views of his destiny to lead the nation and non-Mormon views that he was a danger to the nation. He also embarked on religious growth that paralleled the secular prosperity of Nauvoo. He ordered the construction of a large temple, which would become the center of church life and rituals, and experienced a series of religious revelations that laid the basis for the church's future. Included among these were the ordinance sealing husbands and wives for eternity and his declaration that men could become godlike. But the most important of these revelations for the immediate future of the church was the one sanctioning POLYGAMY, under which a chosen church leader would have more than one wife. Smith may have taken his first plural wife as early as 1841, but the revelation on polygamy is dated 1843, and within a year, other prominent church leaders had secretly married plural wives. When the practice became known, deep divisions within the church developed over it. Smith at first publicly disavowed the practice of polygamy. Some of those who left the church (or were expelled) wrote vivid accounts, quite horrifying to a 19th-century Protestant America that saw marriage based on monogamy.

In the face of this controversy, various church leaders remained loyal to the church itself but agitated for the removal of Smith as president. Consequently, Smith surrounded himself with a personal bodyguard to insure his office. In spring 1844, a group of dissident church leaders published a newspaper, the *Nauvoo Expositor*, which exposed the doctrine of polygamy and called Smith "a fallen prophet." He now used his authority to condemn the press as a danger to the public and ordered the destruction of the press. The dissidents fled Nauvoo in fear of their lives, and they swore out a warrant for Smith's arrest, charging him with disorderly conduct. Assured by the governor of his personal safety, Smith surrendered and was lodged in the Carthage jail. On June 27, 1844, a mob broke into the jail and assassinated Joseph Smith and his brother Hyrum. The Mormon prophet was 38 years old.

In his short life, Joseph Smith became one of the most charismatic American religious leaders of the 19th century. Indeed, in terms of the lasting influence of his church, no other religious leader compares to his presence over almost two centuries. Smith established a church with great appeal to Americans in his time, one that spoke to men and women of small means (like the family from which he came), that condemned the rich and powerful, and that praised success in economic ventures. Furthermore, if the church was male-dominated through the priesthood, so was every

other church at the time, and Smith made the perfection of the church and the godlike stature of its members available to all men, women, and children. By opening salvation to families through conversion, ancestors could gain this exalted status. With continuing prophecies, Smith could meet the changing conditions faced by the church, and he did so. Tall, distinguished, commanding, and articulate, he seemed to embody physically the prophets that he spoke of, wrote about, and represented.

### South Pass

South Pass is a route across the Continental Divide, between the northern and southern Rocky Mountains. Part of the OREGON TRAIL, CALIFORNIA TRAIL, and MORMON TRAIL, it was used by overland immigrants from the 1830s to the late 1860s.

Although Native Americans had known of South Pass for centuries, the first Euro-American to use it was Robert Stuart and a group of Astorians, who were returning eastward from ASTORIA on the Oregon Coast in 1812. Stuart's discovery was ignored, since trading companies at that time viewed transcontinental travel as more difficult than travel by sea. In opening up the trade of the Pacific Coast, JOHN JACOB ASTOR primarily used sea vessels. With the close of the WAR OF 1812, fur traders and explorers resumed overland travel. In spring 1824, JEDEDIAH STRONG SMITH and a party of trappers used the pass, apparently after being informed by a Crow Indian of the easy route across the Continental Divide. Smith recognized the significance of the pass for the FUR TRADE: Furs and supplies could be moved this way across the Rocky Mountains and in so doing avoid the dangerous route via the upper Missouri River. WILLIAM HENRY ASHLEY subsequently used South Pass to bring supplies to the RENDEZVOUS in 1825.

South Pass, as used by the fur traders and later overland travelers, was a gentle slope at the southern end of the Wind River Mountains. A broad, high plain, some 20 miles wide, it in no way resembled the image of a jagged gap in a mountain range. Travelers followed the Sweetwater River to its source and then continued up the gradual rise, to a height of 7,550 feet; a few miles later, the waters flowed west. Overland travelers confided in their journals

that they found the "pass" something of a disappointment, although they came to appreciate its easy access across a formidable mountain barrier.

In 1830, Jedediah Smith and his trading partners informed the secretary of war that South Pass offered easy access to the Oregon Country. At a time when the issue of Oregon was still a contentious one (later settled by the OREGON TREATY OF 1846), South Pass provided an important means to move settlers and supplies into this contested region. In 1832, Captain Benjamin Bonneville brought wagons through the pass, thus demonstrating the trail's usefulness for settler families traveling to Oregon and CALIFORNIA. Four years later, Narcissa Whitman and Eliza Spaulding, going west as the wives of missionaries, were the first white women to cross South Pass.

By the late 1830s and early 1840s, annual wagon trains of several hundred settler families went overland to Oregon by way of South Pass. In 1843, the federal government dispatched JOHN C. FRÉMONT to explore routes to the West, but Frémont's well-publicized expedition added nothing to the accepted consensus that South Pass was the best route to Oregon and the Pacific Northwest. It soon also became the standard route to California.

With the discovery of gold in 1848, California became a national obsession, and the numbers on the overland trail grew in like proportion. In 1849, some 75,000 FORTY-NINERS crossed the pass in a single season, and annual numbers thereafter remained high. The large number of diaries and travel accounts of the gold-seekers and the numbers of published accounts established South Pass—along with FORT LARAMIE, Independence Rock, the Humboldt River, and Sutter's Fort—as a landmark in the great overland pioneering experience. Mormons, who also used the trail to the Utah settlement of the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS, joined the argonauts on the way west. Although the Mormons continued to use the overland trail, with its variations to Salt Lake City, until the completion of the transcontinental railroad in 1869, by the middle of 1850s, many California-bound migrants had shifted to the sea route. Between 1836 and 1853, some 160,000 overland migrants used South Pass.

### spiritualism

The central tenet of spiritualism, a 19th-century American religious movement, is that spirits of the dead can communicate with the living through mediums. The spiritualist movement began in 1845 when two sisters, Kate and Margaret Fox, heard knocks on walls and tables in their upstate New York home. Amy and Isaac Post, well-known Quaker

activists in Rochester, New York, publicized the Fox sisters' experiences and invited many progressive friends to view the young girls' preternatural abilities. The sisters toured the United States in the 1850s, spreading the spiritualist ideology to such far-reaching sites as Philadelphia, Ohio, New York City, and Washington, D.C. This tour helped spread spiritualism in the Midwest and along the eastern seaboard.

Spiritualists believed that humans could communicate with the souls of the dead. Séances and the use of ouija boards (known as planchettes) aided them in their quest to speak to their dead loved ones. The desire to contact the dead reflected the anxieties of a rising middle class, for whom family life centered on sentimental affection rather than economic survival. Thus, spiritualists were drawn to the idea that they could stay connected to the loved ones they had relied upon for emotional comfort. Spiritualists strove to be effective mediums, possessing the powerful sensory and spiritual abilities necessary to reach the deceased. Famous spiritualist converts included many individuals from radical and socially active families. William Lloyd Garrison, ANGELINA AND SARAH GRIMKÉ, and Isabella Beecher Hooker were all attracted to the spiritualist faith.

The so-called burned-over district (see RELIGION) of upstate New York had been the center of several popular religious movements. Quakerism, which had supported the antislavery activity organized in western New York, merged with the new spiritualism movement. The spiritualist concept of individuals having direct connections to the beyond echoed the Quaker doctrine of the inner light, which declared that every individual held the divinity of God within themselves and formal authority should not outweigh this divine source of inspiration and thought. Quaker meetings allowed those moved by the divine light to stand and testify to the congregation. Likewise, in spiritualist circles, ordinary people were encouraged to speak out in public about their communications with the dead.

The belief that all individuals possessed the divine spirit granted authority to women and provided them with opportunities to speak at religious gatherings. Like the Fox sisters, mediums were often young women, supposedly innocent and pure and thus the ideal vessels for transmitting messages from beyond. Those who were identified as spiritualists often belonged to religious denominations with liberal dogmas, such as the Quakers, Unitarians, and Universalists. Spiritualists rejected the orthodoxy of Calvinism and conservative evangelical doctrines. Those who were identified as spiritualists often doubted the divinity of Jesus and were skeptical of the Bible as a literal translation of God's will. The Universalist church drew the most interest in spiritualism from its members, since the Universalist faith declared that all souls would be saved, and their rejection

of Hell and damnation fed into the spiritualist rejection of Protestant orthodoxy. Politically and socially, spiritualists tended to support a variety of both progressive and radical causes, such as marriage reform, the ABOLITION MOVEMENT, religious freedom, WOMEN'S STATUS AND RIGHTS, and the TEMPERANCE MOVEMENT. The social and theological ideologies followed by spiritualists supported their individualistic and heterodox belief systems.

Spiritualists viewed the family and the home as the true center of religious life. They subscribed to no official doctrines and were not organized nationally. Because there was no official affiliation required to be a spiritualist and no group theological consensus, the spiritualists' main sources of linkage were conferences and the dissemination of journals, newspapers, and books. A well-known spiritualist newspaper was the *Banner of Light*, published in Boston. The popularity of the movement can be seen in the many books and pamphlets sold in the second half of the 19th century. Spiritualist bookstores appeared throughout the United States, and more than 50,000 books on spiritualism were sold in 1871.

Spiritualists strongly supported the 19th-century women's rights movement. Radical, "ultraist" women's rights supporters were often attracted to the spiritualist faith. They promoted women's self-ownership of both body and soul and believed that orthodox religions oppressed women as a group. In an era when women were not supposed to speak in public gatherings, spiritualist gatherings allowed them to assert a powerful public presence, even if they were technically only supposed to be mediums for the dead. Thus, spiritualist meetings helped remove the stigma from women in the public sphere, making women's rights activities gradually more acceptable. These activists also criticized the legal and social restrictions that marriage placed on women. Their criticism included calling attention to the potential for sexual coercion in marriage, and they accepted divorce as a reasonable solution for unhappy marriages. Spiritualist beliefs promoted spiritual attraction as a necessary basis for a loving relationship. Spiritualists believed this affinity of souls would then produce a "true" marriage of body, mind, and spirit. Their beliefs about marriage resulted in critics labeling spiritualists as promiscuous and supporters of "free love." Victoria Woodhull, a supporter of woman's suffrage and a practicing spiritualist, popularized the criticisms of free love as a result of sensational newspaper reports about her. Spiritualists often had to fight their stereotype as promiscuous sex radicals in the popular mind due to their promotion of "true marriages."

By the 1890s, the spiritualist movement was in decline in terms of membership and popularity. But during the height of its influence, spiritualism provided a forum wherein many reform-minded people gathered and formulated radical new ideas about the capacities of the living and the dead.

**Stearns, Abel** (1798–1871) *businessman*

Abel Stearns was a pioneer merchant in CALIFORNIA. Born in Lunenburg, Massachusetts, on February 9, 1798, Stearns went to sea at an early age. He acquired his own ship by 1822, and for many years he plied the trade routes to China, the West Indies, and South America. Four years later, he relocated to Mexico City and became a naturalized citizen.

In 1828, Stearns migrated to Monterey, California, where he spent two years trying to obtain a land grant. He subsequently enjoyed better luck in Los Angeles, where he was operating a mercantile house by 1831. Stearns quickly acquired great wealth as part of the local hide and tallow trade then prevalent in Mexican California. He also cemented many friendships among the ruling elite, gained election to the Los Angeles *ayuntamiento* (town council), and later functioned as its *sindico procurador* (treasurer/tax collector). In 1835, he experienced an unfortunate brawl with a Kentucky mountain man that left him disfigured facially and suffering from a permanent speech impairment. Nonetheless, Stearns's popularity remained undiminished, and in 1836 and 1844 he wielded sufficient influence to assist two uprisings against unpopular Mexican governors who were then replaced by native Californians more sympathetic to the popular will.

Stearns proved himself a successful businessman, but his physical demeanor was so grotesque that he acquired the sobriquet of *Cara de Caballo* (horse face). Looks notwithstanding, he married into the local nobility, which also boosted his reputation and popularity among neighboring *rancheros*. He also built an impressive home, El Palacio, which served as a social center to facilitate his many transactions.

When the MEXICAN-AMERICAN WAR broke out in 1846, California was invaded by American forces. Stearns, as a Mexican national, maintained a studious neutrality. Afterwards, he retained all his property under the new regime, and in 1849 he participated in the state constitutional convention at Monterey. The following year, Stearns gained election to the new state assembly first as a WHIG PARTY candidate and, after 1860, as a member of the REPUBLICAN PARTY. He also amassed a considerable fortune by buying up the property of dispossessed *rancheros*; by 1858, he owned an estimated 450,000 acres. However, between

1856 and 1865, declining cattle prices, coupled with flood and droughts, severely impacted his holdings, and Stearns liquidated most of his assets to pay off his debts. He subsequently reentered the real-estate market, then enjoying a postwar boom, and regained most of his wealth. By the time Stearns died in San Francisco on August 23, 1871, he ranked as one of the richest individuals in that state. His life personified the first generation of Anglo settlers to California who prospered under Mexican rule and then assisted its transition to self-government.

**Stewart, Maria** (1803–1879) *activist*

Maria Stewart was one of the first African-American female abolitionists and feminists. She was born Maria Miller in Hartford, Connecticut, in 1803. Orphaned at an early age, she matured in the home of an African-American clergyman and subsequently worked as an indentured servant. She had previously attended Sabbath school, showing an aptitude for literacy and theology. In 1826, she married James W. Stewart, a black merchant and WAR OF 1812 veteran from Boston, and adopted his middle initial and family name. She resided in Boston in relative comfort until 1829, when her husband died and she was cheated from her inheritance by dishonest executors. In despair, she experienced a religious conversion in 1830 and thereafter dedicated her life to proselytizing religion and civil rights.

Over the next few years, Stewart gained notoriety as the first African American to lecture publicly on national issues. Drawing on her religious background, she heartily condemned SLAVERY in biblical terms, but white northern communities were also castigated for their systematic discrimination against people of color. She therefore exhorted the free African-American community to band together, educate themselves, and demand their civil rights. She also distinguished herself by calling out for women's rights with concomitant larger roles in civic and political affairs. Stewart's stridency brought her to the attention of abolitionist William Lloyd Garrison, and the two struck up a fruitful association. In January 1832, when he printed several of Stewart's remarks in his newspaper, *The Liberator*, she became one of the first African-American woman to be published. This was followed up by several radically tinged

pamphlets containing harsh language and open criticism of men, the first from a woman of any race, which brought her acrimony and resistance from her own community. At length, Stewart decided she accomplished little by remaining in Boston, so she resettled in New York City in 1833. Intent on becoming a teacher, she sought further enlightenment by joining the Female Literary Society there.

Stewart successively taught in New York, Baltimore, and Washington, D.C., until the advent of the Civil War in 1861. She then organized a school for poor black students and also gained appointment as matron of the Freedman's Hospital. Ever conscious of the need for educating children, in 1871 she opened another school near the newly founded Howard University and called on the faculty there to assist her. In March 1879, Stewart received a government pension based on her late husband's military service, and with the proceeds she published a second edition of her *Meditations from the Pen of Mrs. Maria W. Stewart* (1879), now featuring supporting letters from Garrison and other leading abolitionists. Stewart died in Washington on December 17, 1879, generally regarded as the first African-American feminist.

—John C. Fredriksen

**Still, William** (1821–1902) *abolitionist, civil rights, Underground Railroad Conductor*

An abolitionist and businessman, William Still personally sheltered most of the slave fugitives who made it as far as Philadelphia. He was born in Medford, New Jersey, on October 7, 1821, the youngest of 18 children. His parents were both former slaves who either purchased their freedom or escaped. Barely educated and largely self-taught, Still worked on his father's farm until the age of 20, then left home to work as a laborer. In 1844, he arrived in Philadelphia, site of the largest community of free African Americans in the country. He worked at numerous odd jobs until 1847, when he joined the Anti-Slavery Society office. This was a front organization of the famous "underground railroad," which smuggled slaves to northern cities and Canada. Still performed well, and in 1852 he gained appointment as secretary and chairman of the society's General Vigilance Committee. He was then tasked with raising money for the effort and keeping accurate records.

At this time, the Fugitive Slave Law of 1850 made it a federal offense not to aid in the recovery of escaped slaves, but Philadelphia nonetheless thrived as an important station in the underground railroad. Still became directly responsible for assigning shelter to fugitives, feeding them, and sending them north to Canada. He also carefully interviewed each escaped slave to record their individual experiences. In this manner, Still inadvertently encountered his long-lost brother, who had been abandoned by his mother 40 years earlier. In 1855 Still also ventured to Canada to report favorably on the progress of fugitive slaves settling there.

When the Civil War erupted in 1861, Still left the ABOLITION MOVEMENT to concentrate on business matters. After opening a lucrative coal yard, he was called on to service Camp William Penn outside the city, where African-American soldiers were stationed. Postwar emancipation further intensified Still's social activism. He subsequently initiated a drive to fight the prohibition against African Americans' using the city's streetcars, and in 1867 the state legislature complied, forbidding such discrimination. He also gained a measure of national attention through publication of his eloquent book *The Underground Railroad* (1872), which related the experience through the eyes of the fugitives. This landmark publication went through three editions, with several thousand copies sold.

Still further enhanced his reputation for philanthropy by providing material assistance to the African-American community of Philadelphia. He remained a longtime member of the Freedmen's Aid Commission as well as a number of charitable and welfare agencies. Despite his advanced years, Still was active in founding a YMCA for black youth and the Home for Aged and Infirm Colored Persons. Still died in Philadelphia on July 14, 1902, a leading African-American reformer and civil rights champion of the 19th century.

**Stockton, Robert Field** (1795–1966) *naval officer*  
Commodore Robert Field Stockton was an American naval officer who commanded the Pacific squadron during the MEXICAN-AMERICAN WAR (1846–48). With a small naval force, he occupied southern CALIFORNIA,

fought two battles, and broke Mexican resistance by early 1847.

Stockton was born in Princeton, New Jersey, on August 20, 1795, the grandson of Richard Stockton, one of the signers of the Declaration of Independence. He left the College of New Jersey (now Princeton) to enter the U.S. Navy at the age of 16. Commissioned a midshipman on September 5, 1811 he served under Commodore John Rodgers aboard the USS *President* during the WAR OF 1812. Promoted to lieutenant, Stockton sailed to the Mediterranean aboard the USS *Guerrière* and took part in the campaign against the Barbary pirates.

Stockton was selected by President JOHN TYLER to bring a proposal for annexation to TEXAS in 1845. Following the outbreak of the Mexican-American War, in July 1846, he sailed around Cape Horn to take command of the Pacific squadron, arriving in Monterey to relieve Commodore John Sloat as commander. Stockton proceeded to occupy the ports of Southern California, capturing Santa Barbara on August 4, 1846 and Los Angeles several weeks later with the aid of Colonel JOHN C. FRÉMONT's California Battalion. He declared California a territory of the United States and named himself the governor of the new civil and military government.

While Stockton was in the north, Mexican loyalists recaptured most of the southern California towns. In January 1847, he joined forces with Brigadier General STEPHEN WATTS KEARNY in recapturing Los Angeles and ending Mexican resistance in California. Stockton and Kearny feuded over who had U.S. governmental authority in California. Kearny's position was upheld, and Stockton returned to the East Coast. He retired from the navy in May 1850 and became a U.S. senator from New Jersey for a brief time (1851–53). While in the Senate, he urged the abolition of flogging as punishment in the U.S. Navy. Stockton retired to Princeton, New Jersey, where he died on October 7, 1866.

**Stowe, Harriet Beecher** See VOLUME V.

**Strang, James Jesse** (1813–1856) *religious leader*

James Jesse Strang was the founder and self-proclaimed king of a religious colony in Michigan. Born in Scipio, New York, in 1836, he married and became postmaster and editor of the *Randolph Herald* in western New York. In 1843,

he moved to Wisconsin, where he became interested in Mormonism, converting in 1844. The following year, after the murder of JOSEPH SMITH, JR., Strang announced that he was the new prophet. He was cast out of the Mormon church and subsequently established a colony in Wisconsin called Voree, which attracted Mormons disaffected by BRIGHAM YOUNG's rule.

The community lasted until 1847, when Strang decided to move his followers to Beaver Island in Lake Michigan. Although he sought to establish a benevolent theocracy, in reality he ruled as a harsh despot, which caused friction between the native inhabitants and the "Strangites," as they were called. The public outcry eventually became so great that the federal government brought charges against Strang, but he successfully defended himself. His influence grew, and in 1850 he crowned himself "king" of the island. He was later elected to the Michigan House of Representatives. The conflict between the colony and the surrounding population increased, finally resulting in a raid on the island in July 1853, which the Strangites repelled. However, Strang's autocratic rule made him enemies, and he was assassinated in 1856 by some of his own followers. The colony disbanded soon after, and the land was reclaimed by its original inhabitants.

**Further reading:** Roger Van Noord, *Assassination of the Michigan King: The Life of James Jesse Strang* (Ann Arbor: University of Michigan Press, 1997).

**Strauss, Levi** (1829–1902) *work pants designer and entrepreneur*

Clothier to the American West and later to the nation, Levi Strauss made his fortune selling dry goods to the gold-rush miners who flooded into CALIFORNIA after 1848. Born Loeb Strauss in Buttenheim, Bavaria, Strauss immigrated to the United States with his family in 1847. Two of his older brothers were already in the dry-goods business in New York City, and Levi Strauss (as he would be called) joined them. In 1850, he established Levi Strauss and Company, and three years later, he moved to San Francisco to join his brother-in-law, David Stern, in a business there. The CALIFORNIA GOLD RUSH was underway, and tens of thousands of new miners arrived annually. Every miner needed tools, food, and clothing. Stores in San Francisco and smaller emporia in the towns and mining camps did a booming business. Strauss and Company supplied miners with a strong canvas and denim pants that were ideal for work in the streams of the sierra. The Strauss brothers in New York manufactured the pants and shipped them to California, where Levi Strauss and David Stern sold pants as rapidly as they could be unpacked and shelved. Mining ran in seasonal cycles,

but whatever their luck on the streams, miners had to have good clothing. The Levi Strauss and Company pants quickly established a reputation for protection and durability.

In 1872, Jacob Davis, a tailor in Nevada and sometime customer of Strauss, made an important advance in work clothing. He perfected a way to reinforce the pocket seams and long seams of work trousers with copper rivets. This reinforcement made the durable pants even more durable. In May 1873, Strauss and Davis became partners in patenting the new clothing idea. Strauss immediately established a factory on Fremont Street, San Francisco, to manufacture the new pants. He later carried the new reinforcing technique over to work shirts, hunting coats, and other outdoor wear. In all these enterprises, the company continued to prosper.

As the century ended, Strauss gradually left the business in the hands of his four nephews. He was a bachelor, and David Stern had died in 1874. Strauss had a remarkable reputation for fairness to customers and employees alike. He served on the board of directors of many of San Francisco's most important companies. He was also known for his philanthropy. The University of California at Berkeley was one of the greatest beneficiaries of his financial support. Strauss died in San Francisco in 1902. He left an estate of more than \$6 million, with beneficiaries ranging from the university to orphans. His nephews continued to operate the company on his principles, rebuilding the factory and the business after the devastating earthquake that leveled San Francisco in 1906. An entrepreneur who formed a bridge from the California gold rush to the modern city, Levi Strauss produced a quality product for sale at a reasonable price, and the public responded with its continuing patronage.

**Further reading:** Ed Cray, *Levi's* (Boston: Houghton Mifflin, 1978).

### **Sublette, William** (1799–1845) *fur trader, merchant*

Fur trader and mountain man, William Sublette was one of the major figures of the American FUR TRADE. Born in Kentucky in 1799, Sublette was the eldest of five brothers, all associated with the fur trade; the others were Milton, Andrew, Pinckney, and Solomon. In 1816–17, the entire Sublette family moved to Missouri Territory. In 1823, William Sublette joined the second expedition of WILLIAM HENRY ASHLEY to the upper Missouri River, where they were attacked by the Arikara. Sublette, JEDEDIAH STRONG SMITH, and Ashley were among the few that escaped. Sublette joined Colonel Henry Leavenworth's force in the hunt for the Indians involved, but they were not successful. Still, the presence of the troops, whatever their numbers,

did bring a degree of calm to the vast region of the upper Missouri.

As Ashley and other traders resumed trading operations, Sublette joined Smith's overland trek in search of new routes of communication and new sites for trapping. It was this party that reopened SOUTH PASS as a route of access across the Rocky Mountains. For the next 15 years, overland caravans would use the South Pass route, which became part of the CALIFORNIA TRAIL and the OREGON TRAIL. For Sublette and his fellow trappers, South Pass opened up access to the rich fur-trapping region of the Green River.

In 1826 Sublette joined Smith and David Jackson in purchasing Ashley's fur company. Four years later, he sold his interest in the ROCKY MOUNTAIN FUR COMPANY, whose other partners now included JAMES BRIDGER, Thomas Fitzpatrick, and Milton Sublette, one of William's younger brothers. Sublette himself continued to play a strong role in the fur business, building FORT LARAMIE in eastern Wyoming (which he later lost to the AMERICAN FUR COMPANY). Throughout these years, from 1830 to 1836, he continued to attend the annual RENDEZVOUS, where he was a major supplier and trader.

In 1836 Sublette retired from the fur trade, one of the most revered of the original MOUNTAIN MEN, and went into the mercantile business in St. Louis. He bought a country estate near Sulphur Springs, complete with racetrack and hotel, and stayed in close touch with his younger brothers, who were still active in the fur trade. A vigorous supporter of Senator THOMAS HART BENTON and the Missouri Democratic Party, his main interest in retirement was politics. In 1844, he married Frances Hereford. The last years of his life were a continuing struggle against tuberculosis. He died at a hotel in Pittsburgh while on his way east to convalesce on the New Jersey shore.

**Further reading:** John E. Sunder, *Bill Sublette: Mountain Man* (Norman: University of Oklahoma Press, 1959).

### **suffrage**

Voting rights in the United States expanded greatly in the period 1813–55, especially as related to white males, who proved the greatest beneficiaries. It is estimated that by the WAR OF 1812, suffrage extended to around 50 percent of all white households, or freeholders—namely, families who owned property. The next decade witnessed a drive to expand voting rights for white males. In 1824 JOHN QUINCY ADAMS became the first president elected by this enlarged franchise. But it fell upon his successor, ANDREW JACKSON, to usher in what became known as the “Age of the Common Man.”

As a frontier lawyer, land speculator, and army general, Jackson had rubbed shoulders with all manner of

trappers, traders, Indian fighters, and frontiersmen, and he clearly identified with them far more than with the landed elites of the East Coast. After his inauguration in 1829, Jackson acted upon the precept that voting rights should be extended beyond landowners to all white male adult citizens. Greater power for the common man came at the expense of moneyed institutions such as the National Bank. Jackson also introduced the practice of patronage, or appointing political friends to high political office, because he firmly believed that it reduced the power of social elites and forestalled the creation of an aristocracy.

Despite its apparent egalitarianism, the ideology of “Jacksonian democracy” was wedded to the notion of racial supremacy. It promoted the continuation of SLAVERY and the removal of NATIVE AMERICANS to western lands across the Mississippi River. Nor were voting benefits extended to free African-American males throughout the country, although those living in Virginia, North Carolina, and South Carolina (among other states) had legally cast ballots since the 1790s. In this era states gradually repealed property qualifications, poll taxes, and religious requirements. But they remained free to legislate racial restrictions on the right to vote. Under the Constitution, state legislatures could disenfranchise black males, and up through 1860 only a third of all states permitted free minorities to vote. For white males, however, Jackson was the apotheosis of popular democracy, and the changes he wrought ushered out the old republican elitism of the previous Jeffersonian period.

The antebellum period also witnessed the first stirrings of the women’s movement and, with it, the drive for suffrage. New Jersey was the first state to grant women the right to vote in 1776, although it was repealed in 1807. Thereafter, females officially languished as second-class citizens without the franchise and, in many instances, without the right to own property, conduct business, or even keep the wages they earned, which automatically belonged to their husbands. These gross inequities found their undoing in the rise of social reform movements, such as temperance and abolitionism, in which women actively participated: As women campaigned for reform, they began equating their own plight with that of slaves. But as female delegates in these reform movements increasingly demanded gender equality, others in the movements resisted. The result was continuous strife, which actually split the AMERICAN ANTI-SLAVERY SOCIETY in 1840.

The drive for female emancipation crystallized in 1848, when New York activists Elizabeth Cady Stanton and LUCRETIA MOTT advertised a convention in SENECA FALLS to discuss the “social, civil, and religious rights of women.” Convened on July 14, 1848, this conference was widely attended by delegates of both genders. Stanton and Mott couched their “Declaration of Sentiments” in

principles drawn from the Declaration of Independence, informed by abolitionism and the ideals of Quakerism, a sect that gave women relative equality. The proceedings provoked an uproar in the press, inducing many of the 100 or so signatories to have their names struck from the document. Nonetheless, the American women’s movement had been born, and in the following month an even larger convention gathered in Rochester, New York. Progress proved painfully slow, retarded by the deep-rooted cultural ambivalence from a male-dominated political establishment. It was not until Reconstruction, when slavery had been legally abolished, that the movement for female suffrage gathered impetus.

Prospects were even more dismal for African-American females. The suffrage movement consisted mostly of middle-class women, who were fully cognizant that the presence of minorities at their conventions might hinder recruiting efforts. Thus black women were either discouraged from attending or forbidden outright. In 1851, when the black abolitionist Sojourner Truth appeared at a women’s rights convention in Akron, Ohio, she was booed by many whites in the audience. Her “Ain’t I a Woman” speech may have rocked the halls, but it failed to gather many converts. As a rule women’s rights organizations throughout the antebellum period were largely all-white affairs and deliberately kept that way. The determination to keep abolitionism distinct from the women’s rights movement led to the creation of black women’s advocacy groups. One such was the American Moral Reform Society, which allowed African-American women a public, albeit limited, speaking platform in 1839. Some 80 years later, in 1920, the 19th Amendment finally granted the franchise to white women. But it was not until the passage of the Civil Rights Act of 1964 that African Americans of either gender could freely exercise the same suffrage rights.

### Supreme Court decisions

The United States Supreme Court was created by the Judiciary Act of 1789, in conformity with Article III of the Constitution. As the highest tribunal in the nation, the Court’s decisions on various issues of law have shaped American

life and concepts of justice throughout the history of the United States. During its first 70 years, the Supreme Court ruled on dozens of landmark cases with far-reaching consequences for American society. The driving force behind what became known as “judicial nationalism” was none other than Chief Justice John Marshall. Marshall used his Federalist political leanings and penetrating jurisprudence to elevate his court to first among equals with respect to other branches of government, and he used the Court effectively to scale back state influence in matters of national importance. In his 34-year tenure as the head of the highest court in the land, Marshall oversaw several landmark decisions. These indelibly altered the judicial and political landscape of the nation, setting the conditions for robust economic growth and increased centralized authority.

During its first years, the Court considered several cases in which it clarified the constitutional roles of the states, the federal government, and the three branches of government. In *Chisholm v. Georgia* (1793) the Court ruled that federal judicial power could, among other things, extend to controversies between two or more states. This decision was later overturned by the passage of the Eleventh Amendment (1798), which declared that the judicial power of the United States would not extend to cases in which a person in one state files a suit in equity law against another state. *Marbury v. Madison* (1803) concerned the validity of a judicial appointment. In this case, Chief Justice John Marshall first introduced the concept of “judicial review,” or the power of the Supreme Court to determine the constitutionality of a law or statute passed by Congress. Although judicial review was not mentioned in Article III of the Constitution as a power of the Supreme Court, Marshall and his associate justices ruled that the Court did possess this power. This seminal decision instituted a powerful and specific role for the judiciary branch, and Americans ever since have assumed the principles in the case: that in a conflict between the Constitution and a federal or state law, the Constitution is paramount, and that it is the Supreme Court’s ultimate responsibility to interpret American laws. In Marshall’s hands, the select application of judicial authority reaffirmed the superiority of the federal government and its prerogatives over the states, granting it a degree of centrality that would have been otherwise unthinkable in the hands of the Jeffersonian Republicans. It can be argued that Marshall achieved judicially what Alexander Hamilton had failed to accomplish through political ends in the 1790s.

In *Fletcher v. Peck* (1810) the Court ruled that a contract in which Indian lands were sold to Georgia speculators was valid, even though the land sale was later revoked by the Georgia legislature because of fraud and bribery in the original transaction. This decision invalidated the state law, upholding a contract despite the shady circum-

stances of the agreement. In other words, the Court held that the Constitution does not permit state legislatures to pass laws voiding contracts made by previous legislatures. After *Fletcher*, there were many other key cases decided on issues of contract and land titles. This was a primary concern in the early republic, because contracts concerning property affected the ability of Americans to purchase frontier lands. In *Martin v. Hunter’s Lessee* (1816), another case concerning land title, the Court ruled that state courts must obey the Constitution, reaffirming the supremacy of the Supreme Court and the uniformity of federal law from state to state. In *Dartmouth College v. Woodward* (1819), the Court ruled that Dartmouth’s private corporate charter was protected from any state law that aimed to change the nature and purpose of the original contract. Here again, the Court sided with the individual right to contract over the state’s legislative power. The same year, in *MCCULLOCH V. MARYLAND*, the Court decided that the Bank of the United States was not subject to state taxation, and that a bank legitimately established by Congress should be regulated and taxed by Congress. Again, the Court addressed the relationship between the rights of states, individuals, and the federal government. Marshall, in this instance, grafted the concept of implied powers to constitutional law, ruling that whenever federal and state powers were at cross-purposes, federal power invariably exercised ultimate authority. *McCulloch v. Maryland* thus constitutes the latest and possibly best example of the chief justice’s nationalist stance to addressing issues that pertained to federalism.

The Court also decided several commerce cases in this period. In *Cohens v. Virginia* (1821), a case concerning the sale of lottery tickets in a state where lotteries were illegal, the justices reaffirmed the judicial supremacy of the Supreme Court over state laws. In *Gibbons v. Ogden* (1824), the Court ruled that a New York law prohibiting vessels licensed by the U.S. from navigating in state waters was unconstitutional. These vessels were commercial and conducted trade with vessels from other states; therefore the New York law was void. This decision reaffirmed that Congress alone had the power to regulate all aspects of interstate commerce, and states only had the power to regulate commerce that was entirely internal. These two cases exemplify Marshall’s judicial nationalism regarding the institution of a common market throughout the United States. His strident defense of contractual property rights established the Supreme Court as an invaluable ally for both corporate enterprise and capitalist development at the national level.

In the *Charles River Bridge* case (1837) the Court reconsidered the purposes of contract. Marshall’s recently appointed successor as chief justice, Roger B. Taney, ruled that the Constitution was primarily responsible for fostering “the happiness and prosperity of the community,” not

simply protecting the right to property. The proprietors of the Charles River Bridge sought to enjoin the Warren Bridge Company from constructing a bridge that would compete with their own. The Charles River Bridge proprietors argued that their exclusive contract for bridge transport prevented Warren from erecting a competing bridge. Taney ruled in favor of Warren, arguing that in a prosperous young nation, exclusive contracts dampened competition and slowed down the economic expansion of the nation. This decision implied that the interests of developers building new roads and other improvements would take precedence over established companies with exclusive contracts. The case had far-reaching consequences, since it connected “happiness and prosperity” with the right of capitalists to develop new structures and industries. While friendly toward capitalism overall, the Taney Court backed off somewhat from its predecessor’s nationalist tenor and granted states, through the doctrine of concurrent powers, the ability to regulate economic matters where federal legislation was clearly lacking.

Several significant cases throughout this period also bore a strong racial component and were indicative of mounting sectional strife. With the passage of the INDIAN REMOVAL ACT of 1830 and the increasing conflict over Indian lands came cases concerning the sovereignty of Indian nations and the powers of states to pass laws affecting those nations. In *Cherokee Nation v. Georgia* (1831), the Court decided that it did not have jurisdiction to rule on a case where a state enforced its laws upon the Cherokee. This decision seemed to contradict the previous efforts of the Court to assert its supremacy. In *Worcester v. Georgia* (1832), another Cherokee case concerning state powers and tribal sovereignty, the Court ruled that Indian tribes were “dependent domestic nations.” As such, they retained rights to any lands they had not voluntarily ceded to the United States. Marshall’s ruling in this case did not prevent the administration of President ANDREW JACKSON from forcing eastern nations to isolated reservations in the West. “Marshall has made his decision,” Jackson declared; “now let him enforce it!” Clearly, the Court’s authority would be sacrificed to popular opinion in the case of Native American removal.

The relationship between nonwhite peoples and American law would arise again with the AMISTAD INCIDENT (1841) and the first Supreme Court case that dealt with the issue of slavery. Ostensibly an issue of international law, the fate of the Africans who mutinied on the *Amistad* became a high-profile public referendum on SLAVERY. Justice Joseph Story in his majority opinion upheld a lower-court ruling that the Africans had been kidnapped and thus were not the legitimate property of the Spanish traders who had captured them. The Court ordered the Africans returned to their own land. Notably, the justification for this rul-

ing was not that slavery was unlawful but that the *Amistad* Africans were not lawfully slaves. The Taney Court also demonstrated a proslavery slant through its ruling in *Prigg v. Pennsylvania* (1842), which struck down a state law enacted to prevent the kidnapping or re-enslavement of escaped slaves. The Court insisted that any state legislation interfering with the return of fugitive slaves was null and void, even if invoked for the protection of free blacks. The Court reaffirmed its proslavery leanings in *Jones v. Van Zandt* (1847), whereby it sustained the Federal Fugitive Slave Law, defended the right of property in man, and characterized slavery as a “sacred component” upon which the Constitution and the Union arose.

The Taney Court’s position on the legality of slavery became clearer in *Dred Scott v. Sandford* (1857). Scott, a slave, was transported to northern (free) territory by his owner, John Sandford. Scott believed that by entering free territory, he had been freed. When he and Sandford returned to St. Louis, he sued for his freedom. At issue in the case was whether slaves were citizens of the United States with the right to sue in court. In this case, the Court emphasized the rights of the owner, Sandford, over the rights of his black slave. Slaves were property, not citizens, and thus could not use the courts for redress. As Taney famously remarked in his opinion, black people had no rights that white people were bound to respect. Freeing Scott would violate Sandford’s Fifth Amendment right to due process. In this case, unlike *Charles River Bridge*, Taney upheld the rights to property. Taney added that Congress had no power to prohibit slavery in the territories, which rendered the MISSOURI COMPROMISE unconstitutional. This controversial decision infuriated abolitionists and was one of the main factors contributing to the outbreak of the Civil War four years later.

Throughout the history of the United States, the Supreme Court has been a visible and powerful mediator between the federal and state governments and between the three branches of the federal government. Like any other institution, the Court has reflected the priorities and anxieties of the nation. During the first half of the 19th century, the Court often took a conservative position on matters of individual liberties while adopting a more liberal stance on economic matters like contracts and property rights. As the *Dred Scott* case shows, Supreme Court decisions often reflected the self-interest of the judges in establishing the supremacy of the Court. Many of the cases described also demonstrate the Court’s unwillingness to apply judicial powers to what they saw as legislative responsibilities.

The Supreme Court made indelible contributions to national growth in the antebellum period by asserting its own constitutional authority, expanding central authority overall, and clearly defining the heretofore muddled relationship between state and federal authority.

**Sutter, John** (1803–1880) *landowner in the California gold rush*

Intimately associated with the discovery of gold in CALIFORNIA in 1848 and the European colonization of the Sacramento River Valley, John Sutter was also a victim of the CALIFORNIA GOLD RUSH. He was born Johann Augustus Sutter near Basel, Switzerland (the German-speaking part of trilingual nation), in 1803. After elementary schooling, he married and became a dry-goods merchant, but both ventures failed. To escape the prospect of debtor's prison, Sutter abandoned his wife and traveled to America. On the frontier of settlement in Missouri, he gave himself the military title of captain and engaged in trade over the SANTA FE TRAIL. His ventures failed here as well, and he traveled overland to Oregon and then to Hawaii before arriving in California in 1839.

That year Sutter petitioned the Mexican governor, Juan Bautista Alvarado, for a grant of land. Alvarado gave him 11 square leagues (nearly 50,000 acres) in the Sacramento River Valley and also authorized him to serve as a local justice and law officer. With his large landholdings and official status, Sutter was soon the most important Euro-American in central California. As the command post of his new empire, which he named New Helvetia, Sutter built a fort on the site of the present city of Sacramento. He soon made his fort the center of a series of economic enterprises that included AGRICULTURE, grazing, trapping, and the FUR TRADE. He traded extensively and supplied the trappers who had visited the region for a decade before his arrival. This expansive enterprise was created in substantial part through the use of Indian labor. Native Americans worked his fields under conditions that varied from debt peonage to slavery. He also recruited an Indian army,

John Sutter (Library of Congress)

which he armed and used to enforce order and his own style of justice in the interior of California.

Sutter also befriended arriving American immigrants, and his warm welcome at Fort Sutter symbolized the end of the CALIFORNIA TRAIL. Some of the immigrant families settled on his lands; others were employed in his various economic enterprises. As the largest economic force in central California, he assisted the immigrants while enriching himself at the same time. Sutter held a commission and lands from the republic of Mexico, but he distrusted Mexicans and favored the Americans. With the outbreak of the MEXICAN-AMERICAN WAR in 1846, he openly sided with the Americans, and he was enthusiastic about the prospect of an American victory and California's annexation to the United States.

As part of the expansion of his many enterprises, Sutter employed a carpenter, James W. Marshall, to build a sawmill on the American River. It was in the race of the mill that Marshall discovered gold on January 24, 1848. Marshall shared his news with his employer, but Sutter (like so many others) did not sense the immense implications of the discovery, and he asked Marshall to keep the news quiet so that the mill could be completed. However, the news began to circulate through the interior valleys and then to San Francisco, and soon the California gold rush was under way. From within California, from Monterey and San Francisco, from Oregon and the HAWAIIAN ISLANDS,

from the East Coast, from Chile and Peru, and eventually from all over the world, men and women by the tens and eventually hundreds of thousands swarmed over the watercourses of central California. By far the largest numbers were the Americans from the East Coast. Several thousand came by sea in the late 1848 and the first half of 1849, but they began flooding into California in the summer of 1849. Sutter's New Helvetia was at the center of this uncontrollable rush. His workers, including the Indians, deserted him for the gold that seemed to lie everywhere. Prospective miners invaded his property, destroyed his crops, stole his livestock, and took the gold from his lands as their own. Sutter could not stop them; no individual could, and eventually the federal government simply threw up its hands and let the gold rush proceed.

The California gold rush ruined Sutter. Although by proximity he was the individual best placed to profit from it, his vantage point was too close. When he tried

to hold on to part of his claim, he found himself without the abundance of paper records that the American land commissioners demanded. By 1852, the great empire of New Helvetia was in ruins. In 1865, Sutter abandoned any attempt to claim part of his grant, and he moved to Pennsylvania, bankrupt. For the rest of his life, he petitioned the federal government on an annual basis for compensation. He asked for damages for the losses he suffered during the Mexican-American War and for the losses that he sustained during the gold rush. He was never successful. In a final blow to his prospects, the Supreme Court denied his land claims in the Sacramento River Valley.

### Tallmadge Amendment (1819)

Missouri's application for statehood in 1818 caused little concern in Congress, and Speaker HENRY CLAY presented it to that body on December 18, 1818, with little fanfare. However, on February 13, 1819, Representative James Tallmadge of New York, a Jeffersonian Republican, completely upset the routine proceedings by introducing an amendment laced with sectional ramifications. This document, the so-called Tallmadge Amendment, called for a ban on the importation of new slaves to Missouri and stipulated that all slave children born after the state was admitted were to be manumitted at the age of 25. Slaves already in that territory would remain unaffected, but the process of gradual emancipation would eventually eliminate SLAVERY within two generations.

The Tallmadge Amendment was the first piece of legislation to directly address the "peculiar institution" since the debates of the late 1780s; these had resulted in adoption of the Northwest Ordinance (1787), which banned slavery in the Northwest Territory. Not surprisingly, the Tallmadge Amendment unleashed a firestorm of criticism from southern politicians, who passionately defended the institution of slavery and claimed that Congress possessed no Constitutional authority to restrict it. Moreover, they held that Missouri's gradual transformation into a free state would upset the delicate political balance of power between North and South. Northerners, meanwhile, rallied to the proposal's defense. They claimed that the Northwest Ordinance had set the requisite legal precedent to legitimize the Tallmadge Amendment. Thoroughly roiled, Congress debated Tallmadge's proposal for an entire year. It was repeatedly passed in the House of Representatives, where northern delegates enjoyed a slight edge, then defeated in the Senate, where slave and free states were balanced. Meanwhile, the admission of Missouri into the Union was postponed.

The impasse was finally broken in February 1820, when Illinois Senator Jesse B. Thomas offered an amendment to the proceedings that would allow Maine, which

had recently voted to separate itself from Massachusetts, to gain entrance as a free state, while Missouri became a slave state. Thomas's compromise proposal would thereby preserve the existing balance of power. Moreover, slavery would be banned from all land acquired from the Louisiana Purchase above 36 degrees 30 minutes north latitude. Congress adopted this legislation, better known as the MISSOURI COMPROMISE, later that year. While it resolved Missouri's long-pending request for statehood, it only postponed sectional tensions first underscored by the Tallmadge Amendment. These were ultimately resolved by the Civil War (1861–65), which finally exorcized slavery from the American polity.

### Taney, Roger B. (1777–1864) *chief justice of the United States*

Roger Brooke Taney was the fifth chief justice of the U.S. Supreme Court. Taney was born in Calvert County, Maryland, on March 17, 1777, into a slave-owning family associated with the minor gentry. Tutored at home, he entered Dickinson College at the age of 15 and graduated with honors in 1795. He then pursued law, gaining admission to the Maryland state bar in 1799. Politically, Taney began as a Federalist, but he broke with his party over the WAR OF 1812 and subsequently aligned himself with the Democratic-Republicans. In 1816 he was elected to the state senate, where he served five years, and in 1827 he accepted the position as state attorney general.

Taney was widely regarded as an outstanding lawyer and legal scholar and was known for his outspoken support of the DEMOCRATIC PARTY under ANDREW JACKSON. As such, he came to President Jackson's attention through party officials,

and in 1831 Taney joined Jackson's cabinet as U.S. attorney general. A strict loyalist, he always upheld the president's political agenda in this capacity. In 1832 Taney authored the legal reasoning behind the president's veto against extending the charter of the SECOND BANK OF THE UNITED STATES. The following year he supported the constitutionality of Jackson's decision to withdraw federal money from the Second Bank of the United States, and he was ultimately appointed Secretary of the Treasury when no other individual was willing to perform the task. A southerner, Taney upheld the institution of SLAVERY, supporting South Carolina's legislation to forbid free blacks from entering that state. Despite his opinions about AFRICAN AMERICANS, Taney enjoyed a reputation as one of the country's best legal minds.

The biggest turn in Taney's career happened on December 28, 1835, when President Jackson nominated him chief justice of the U.S. Supreme Court, to succeed the late John Marshall. His succession changed the overall tenor of the Court from Marshall's consistent pro-government outlook to one more favorably disposed toward states' rights. Proof of this manifested in the landmark case *Charles River Bridge v. Warren Bridge*, in which Taney decided in favor of the state of Massachusetts over a company with monopoly rights. His refusal to recognize the doctrine of implied contract allowed states greater latitude in matters of public interest. Taney's most notorious decision, however, was in *Dred Scott v. Sanford* in 1857. The *Dred Scott* decision determined that slaves were property and could be moved across state lines with impunity. This ruling not only negated the MISSOURI COMPROMISE, which restricted slavery from the northern area of the nation, but also called for increased enforcement of FUGITIVE SLAVE LAW. The negative reaction to Taney's reasoning soured public opinion of him, and during the Civil War he functioned far less effectively. He died in Washington, D.C., on October 12, 1864. Reviled by abolitionist contemporaries as a proslavery judge, Taney has since come to be regarded as one of the most effective chief justices of American history.

Huebner, *The Taney Court: Justices, Rulings, and Legacy* (Santa Barbara, Calif.: ABC-CLIO, 2003); Earl M. Maltz, *Dred Scott and the Politics of Slavery* (Lawrence: University Press of Kansas, 2007).

—John C. Fredriksen

### **Tappan, Arthur** (1786–1865), and **Tappan, Lewis** (1788–1863) *abolitionists*

Two of the most influential abolitionists in the antebellum United States, Arthur and Lewis Tappan were born

in Northampton, Massachusetts. Growing up in a devoutly Calvinistic family, both were deeply influenced by their parents' evangelical beliefs. The PANIC OF 1837 caused the family's dry-goods business to fail, but the brothers quickly started another venture, founding America's first credit-rating service (later to be known as Dun & Bradstreet). The brothers accumulated enough wealth to found a newspaper, the *New York Journal of Commerce*, and to fund various humanitarian causes ranging from abolition to temperance.

The Tappans' concern for the abolition of SLAVERY dates from the early 1830s, a dangerous period for public expression of antislavery sentiment. At that time, the ABOLITION MOVEMENT had not made much progress because many businessmen saw it as a threat to law and order. This feeling repeatedly incited mob action against the abolitionists and free blacks in the Northeast and in the Midwest.

It took courage to speak out, but in 1833 Lewis and Arthur Tappan and Theodore Weld formed the AMERICAN ANTI-SLAVERY SOCIETY. That same year, the Tappan brothers founded Oberlin College, open to blacks and whites alike. Lewis Tappan financially backed the *Emancipator*, the most widely circulated antislavery journal. To his brother Benjamin, a U.S. senator from Ohio, Lewis wrote that slavery "was the worm at the tree of liberty. Unless killed, the tree will die."

The Tappans' public statements against slavery brought about public reaction on July 4, 1834, when a mob trashed Lewis's home and burned his furniture in the street. Tappan wrote to Weld that he wanted his house to remain "this summer as it is, a silent anti-slavery preacher to the crowds who will see it." The next year, a church built by the Tappans was set on fire when it was rumored that they intended to promote racial "amalgamation."

Undeterred, the Tappans continued their efforts to bring about a peaceful end to slavery. Like many abolitionists, they proposed reforming the system from within and worked tirelessly to win over churches and missionary societies to their views. Lewis was more fully committed than his brother Arthur, who stopped short of associating with blacks. Lewis tried to eliminate the "black pew" in New York churches and caused a furor in upstate New York when he and his family sat in the pews reserved for black communicants. On another occasion, members of the American Anti-Slavery Association blocked his proposal to invite a black minister to speak to the association.

In the AMISTAD incident, Lewis Tappan recognized the opportunity not only to help the captured Africans but also to dramatize the evils of the slave trade. He had been handed a "Providential occurrence," he admitted when the district court opened proceedings. Ultimately, he hoped to use the opportunity to strike at slavery itself, "the market that invites the supply," he concluded, in suitably business-like fashion.

He assumed major responsibility for mapping out the strategy for the court trials, raised money in “the voice of humanity and liberty,” visited the imprisoned Mendian captives, located Africans who could talk with them, and wrote letters to the *New York Journal of Commerce* presenting the Africans’ side of the mutiny. In company with Ellis Gray Loring, John Quincy Adams’s friend of many years, Tappan pleaded eloquently with Adams to join Roger Sherman Baldwin in arguing the case for the defense before the U.S. Supreme Court. Adams did so, and on hearing the Court’s decision, he wrote to Tappan, “The captives are free . . . ‘Not unto us, not unto us!’ but thanks, thanks, in the name of humanity and justice to you.”

In the year following the release of the Mendians, Lewis Tappan devoted his energy to arranging for their transportation home to Sierra Leone, and he very likely helped spirit away Antonio (the *Amistad*’s slave cabin boy) to freedom in Canada. Lewis Tappan’s participation in the *Amistad* case may be considered the high point of his career as an abolitionist. At Adams’s suggestion, he attended an antislavery convention in London in 1843, and in 1846 he was instrumental in merging the *Amistad* committee with other missionary groups to form the American Missionary Society (1846).

In the 1840s, the Tappan brothers split with abolitionist William Lloyd Garrison, who wanted to branch off into other kinds of reform, including WOMEN’S STATUS AND RIGHTS. Arthur Tappan continued to work for abolition, helping to found the American and Foreign Anti-Slavery Society (1840). With the passage of the Fugitive Slave Act of 1850, he declared himself now willing to disobey the law and actively supported the efforts of the underground railroad to help slaves escape to freedom. He lived long enough to witness the emancipation of slaves and died as the Civil War ended, in 1865. His brother Lewis had predeceased him by two years.

Friedman, *Gregarious Saints: Self and Community in American Abolitionism, 1830-1870* (New Rochelle, N.Y.: Cambridge University Press, 1982); Bertram Wyatt-Brown, *Lewis Tappan and the Evangelical War against Slavery* (Cleveland, Ohio: Press of Case Western Reserve University, 1966).

### **Taylor, Zachary** (1784–1850) *12th U.S. president*

Zachary Taylor, 12th president of the United States, was in office for little more than a year but proved to be influential at a pivotal moment in American history. In 1850 the crisis of the slavery issue was continuing to build. Taylor was a slaveholder but also a nationalist with western roots. With the possibility of civil war in the air, Taylor was determined to hold the Union together at all costs.

Zachary Taylor (Library of Congress)

Born in Virginia on November 24, 1784, Taylor was taken as an infant to Kentucky and raised on a plantation. By 1800, his family owned 10,000 acres in Kentucky and a number of slaves. In 1808, he received his first commission as an army officer, commanding the garrison at Fort Pickering, site of modern-day Memphis. Two years later, he married Margaret Mackall Smith of Calvert County, Maryland. As a captain in the WAR OF 1812, Taylor won distinction in September 1812 for his defense of Fort Harrison in Indiana Territory against an Indian attack. For this achievement, the young officer became the first brevet major in the U.S. Army. In 1814, Taylor led U.S. troops against British and Indians at Credit Island in Illinois Territory. Outnumbered three to one, he scored temporary successes before withdrawing. In 1815, he was promoted to the lineal grade of major.

After a year as a civilian, Taylor reentered the army in 1816. At various times, he served in the states or future states of Wisconsin, Minnesota, Missouri, Mississippi, Louisiana, Arkansas, and Oklahoma. Commissioned a colonel in 1832, he fought in the BLACK HAWK WAR that year, participating in the climactic Battle of Bad Axe River. Taylor acquired his nickname, “Old Rough and Ready,” while fighting the Seminole Indians in FLORIDA Territory from 1837 to 1840. His victory at the Battle of Okeechobee in 1837 was the single most successful U.S. effort of the

protracted SECOND SEMINOLE WAR. Brevetted a brigadier general in 1838, he commanded all U.S. troops in Florida. He emerged from the struggle with the reputation of a determined, resourceful leader.

From 1840 to 1845, Taylor remained in the army but also gave careful attention to his plantation in Mississippi. The annexation of TEXAS, however, enabled him to receive his most important military assignment. In August 1845 he was in command of a small army of regulars near the mouth of the Nueces River at Corpus Christi, Texas. Both the United States and Mexico claimed the region between this river and the Rio Grande, and because Mexican military activity was rumored, Taylor augmented his troops and awaited specific instructions before moving through the disputed region. President JAMES K. POLK ordered Taylor and his troops into the contested area. After winning two decisive encounters, Taylor triumphed against overwhelming odds in a battle with the Mexican general ANTONIO LÓPEZ DE SANTA ANNA at Buena Vista. When the smoke cleared, Taylor's army of 6,000 had defeated a Mexican force of 20,000, and Zachary Taylor, "Old Rough and Ready," was a national hero.

Taylor was reluctant to enter politics. Initially, he did not publicly commit himself to any political party, although, because he was a slaveholder, the South hoped he would promote the expansion of SLAVERY. Because of his military record, the North claimed him as a man of the Union. Taylor had problems with the two major political parties: He disagreed with the WHIG PARTY on the issue of strong protective tariffs, and he opposed the DEMOCRATIC PARTY plank of extending slavery in western territories and the concept of a strong national bank. He eventually joined the Whig Party. At the 1848 convention, the Whigs nominated Taylor to run against the Democratic Party candidate, LEWIS CASS, who favored POPULAR SOVEREIGNTY, allowing the residents of territories to decide for themselves whether they supported the extension of slavery. MILLARD FILLMORE, comptroller of New York, was chosen as his running mate.

Northerners who opposed the extension of slavery formed the FREE-SOIL PARTY and nominated MARTIN VAN BUREN. In a close election, the Free-Soilers pulled enough votes away from Cass to elect Taylor. Taylor won eight southern states and seven northern states, giving him 163 electoral votes to Cass's 127. Taylor did not win a majority of the popular votes. He had 1,360,099, compared to 1,220,544 for Cass and 291,263 for Van Buren. However, because Van Buren took Democratic votes away from Cass in New York, all of that state's 36 electoral votes went to Taylor, who thereby won the election.

As president, Zachary Taylor adopted the spoils system, awarding offices to party loyalists. As a result, much of his time and many of his problems concerned the

demands of unemployed Whig politicians. His administration was marked, however, by his personal honesty and courage, especially in the handling of the delicate question of slavery.

The expansion of slavery in the new territories gained in the Mexican War had been the major concern of Congress since the introduction in 1846 of the Wilmot Proviso, which would have banned slavery there. The demands of two such territories, CALIFORNIA and New Mexico, for statehood brought the issue to a head, because both territories wanted to be admitted to the federal Union as free states.

President Taylor's position on this issue surprised both his supporters and his opponents. He considered the solution simple. Because California wanted statehood, it should be granted promptly. The president also felt that if the people of California wanted to prohibit slavery, they and not Congress had the right to make that decision. Therefore, compromises and concessions were unnecessary. Taylor's stand drew the support of the Free-Soilers and the anti-slavery, or "conscience," Whigs, who were led by Senator William H. Seward of New York.

On the other extreme was a small but vocal faction of Southerners who would accept no changes to the arrangements of the MISSOURI COMPROMISE of 1820, in which Congress had drawn a line at 36°30' north latitude as the northern limit of slave territory. This line bisected California and would have put Los Angeles and San Diego in slave territory. These so-called diehards, led by Senator JOHN C. CALHOUN of South Carolina, talked of seceding from the Union if Taylor's plan was followed. Taylor responded with tough talk of his own. He personally pledged that he would lead an army against any state that attempted secession.

In the middle was a group of moderate Whigs and Democrats who were trying to find a compromise. Its leaders were Senator Stephen A. Douglas of Illinois and HENRY CLAY, who had brokered the Missouri Compromise 30 years earlier. As long as Taylor was in office, the moderates' cause was hopeless. However, when Vice President Fillmore succeeded to the presidency in 1850, the moderates got his support for compromise. On July 4, 1850, Taylor stood in the hot sun at the site of the Washington Monument in Washington, D.C., listening to patriotic speeches celebrating Independence Day. That night he had an attack of cholera morbus, or acute indigestion, and he died five days later. His last words were, "I regret nothing, but I am sorry to leave my friends."

### temperance movement

The temperance movement was a reaction to a national trend toward increased alcohol consumption at the beginning of the 19th century. Americans had been heavy drinkers since colonial times, but the opening of western lands such as Pennsylvania, Kentucky, and Tennessee led to the mass production of grains from which whiskey could be made. Whiskey was both cheaper and more potent than rum, the traditional standby, and it began flooding markets nationwide. By the 1830s each American of drinking age (15 and older) was imbibing an estimated 6.6 to 7.1 gallons of hard liquor every year—and suffering commensurate debilitating effects. These were particularly evident among the lower classes, who drank the most, but did not spare wealthier individuals with little resistance to alcohol.

Using tactics as varied as moral suasion, strict licensing, and outright prohibition, the temperance movement aimed to eradicate the use of alcoholic beverages throughout American society. While local groups had been advocating abstinence from alcohol since the turn of the 19th century, temperance societies with a broader reach began to emerge in 1813. That year, the Massachusetts Society for the Suppression of Intemperance (MSSI), was founded in Boston. An elitist group seeking to control the behavior of those lower in the social hierarchy, the MSSI focused its efforts on moderation rather than abstinence. But the drinking culture proved too powerful for a group with such limited appeal, and its efforts soon failed.

Boston would later give rise to the national organization responsible for temperance's widespread influence. It was there that, in 1826, the American Society for the Promotion of Temperance was born. This group later changed its name to the American Temperance Society (ATS). The ATS had a radically different approach from that of the MSSI, seeking mass appeal on a grassroots level. Founded by evangelical ministers who had emerged from a culture of religious revivalism, the ATS used the same tactics to spread the gospel of abstinence from distilled spirits. By distributing printed materials such as vivid tracts and weekly newspapers and sending itinerant organizers to far-flung communities, the ATS grew rapidly. By 1835, the society claimed over 1.5 million members in more than 8,000 auxiliaries, nearly 20 percent of the free adult population. Tactically, the group was committed to moderation of, not complete abstinence from, alcoholic consumption. To get its message across, ATS co-opted the tactic of moral suasion, usually used in concert with education and good example.

The success of the temperance movement was possibly due to the overall climate of progressive reform during this

period. Many historians have dubbed the years between 1830 and 1850 as an "age of reform." Religious revivalism, the ABOLITION MOVEMENT, pacifism, WOMEN'S STATUS AND RIGHTS, intentional communities, and universal EDUCATION were only a few of the causes embraced by segments of the American public. INDUSTRIALIZATION, westward expansion, and urbanization contributed to the notion of inevitable American progress. Within these contexts, religious and moral reform could be seen as intrinsic to the new nation's future.

Evangelical clergy, businessmen, and farmers were at the forefront of this economic and social change. Although they operated within divergent spheres, these men found common cause in seeking to improve society as a whole by urging their parishioners and employees to improve themselves.

Intellectual elites also took part in temperance reform. The movement spread rapidly on college campuses as administrators, faculty, and students sponsored revivals and built reform networks. Doctors soon followed suit, as the 19th-century drive to professionalize MEDICINE depended on distinguishing it from midwifery and other folk-healing practices. Adopting a view of alcohol as harmful helped solidify the role of physicians as experts in health-related matters.

In the 1840s temperance experienced a minor revival at the hands of activists called the Washingtonians, who, in contrast to traditional middle-class advocates, directed their appeal to the working and lower middle classes. Their efforts to redeem inebriates used the testimony of former drunkards in gatherings akin to revival meetings of the SECOND GREAT AWAKENING. Women were also invited to join Martha Washington societies to help husbands and sons abstain from alcohol. Indeed, their goal was no less than total abstinence. Washingtonians, however, still delivered their message through moral suasion, a tactic that mainstream temperance societies had long since abandoned. The movement also suffered from a lack of formal organization at the national level and a lack of farsighted leaders. Accordingly, after a few years of notoriety, the Washingtonian movement faded away and was replaced by a spate of fraternal organizations such as the Sons of Temperance. These introduced the temperance movement to secret handshakes, rituals, ceremonies, and other trappings of fraternal behavior. By 1850 the Sons of Temperance had chapters in every state and a membership estimated at over 238,000, but they enjoyed no greater success than their antecedents.

Temperance reform attracted women for a variety of reasons. The mid-19th century ideology casting men and women as belonging to separate spheres valued women as moral gatekeepers of the home in what historians describe as the "cult of true womanhood." The growing market

ECONOMY brought about an increase in female dependence on male wages earned outside the home. Excessive drunkenness among men could thus imperil women's financial stability.

Initially, the temperance movement was less grounded in political activism than in moral suasion; as such, women were encouraged to participate within a seemingly nonpolitical sphere of activity. However, that distinction would later break down as moral reform gave way to the drive for prohibition. By 1852, prominent female activists such as Elizabeth Cady Stanton, Susan B. Anthony, and AMELIA BLOOMER began to link the temperance crusade to broader campaigns for women's rights.

The first temperance pledges, which members would sign, vowed abstinence from distilled spirits but allowed for the continued consumption of fermented beverages such as beer, wine, and cider. These were considered to contain some elements of alcohol but not alcohol itself. A new pledge rose during the 1830s, known as the "long" and "teetotal" pledge, which included both distilled and fermented beverages. The teetotal movement came about from the earlier reform movement's success and sense of progress, as well as from changing scientific knowledge about the alcohol content of fermented beverages. The discovery by a chemist during the 1820s that alcohol was also present in wine, beer, and cider became widely publicized, changing the popular view of fermented beverages as essentially harmless.

Teetotalism marked a major shift in temperance activism, one that was not universally adopted by reformers. Some found it too radical, especially wealthy elites who were not eager to abandon wine. Wine also became a subject of controversy within organized religion due to the practice of distributing fermented wine for communion. Many mainstream clergy, who had been central to the temperance movement, withdrew their support.

During the 1830s, temperance advocates began to shift their efforts from moral suasion to more coercive methods, including legal reform. Foremost among them was the American Temperance Union (ATU), which had replaced the more accommodating American Temperance Society by 1836. Initial legal efforts by temperance activists were designed to be symbolic. Various states adopted no-license laws in order to send a moral message to their constituents that the sale of liquor was no longer a respectable profession; their intention was not to use the law to prevent people from drinking. Regardless of the law's intent, liquor became hard to come by in these areas. As a result, illegal sales proliferated much as they would under nationwide prohibition during the 1920s. Moreover, with its radicalized stance the new temperance movement began losing adherents nationally, first among wealthy supporters and then among southerners of all classes and backgrounds.

It remained relatively strong in terms of numbers only in New England and New York, whose polity was by then also hotly embroiled in other reform issues such as abolition. Prohibition activity continued throughout the 1840s, until the landmark passage of the Maine Law in 1851 banning the manufacture of liquor and restricting its sale to agents of the state for medicinal and industrial users.

The success of the Maine Law spurred other states to implement prohibition. Between 1851 and 1855, 13 states and territories passed legislation forbidding the manufacture and sale of alcohol. Other states passed narrower laws restricting sales to a specific amount or location. Such efforts met with strong opposition from liquor manufacturers, who formed liquor leagues to finance and organize repeal efforts. Some drinkers became vehemently opposed to prohibition as well, sparking violence in cities like Chicago and New York. Repeal efforts were successful in many states, to the dismay of temperance advocates.

This groundswell of public opposition, combined with growing sectional strife and the approaching Civil War, caused the temperance movement to founder. Its revival did not take place until the formation of the Women's Christian Temperance Union in the 1870s. The new temperance movement, unlike earlier male-driven ones, proved a formidable platform for a broader women's rights agenda.

## Texas

The largest of the continental U.S. states, Texas has a widely varied landscape and a long history of diverse human occupation. The geographic boundaries of Texas are defined by the Gulf of Mexico on the east, the Rio Grande to the south and west, the Sabine River to the east, and the Red River to the north. The geography extends from a part of the Gulf Coast plains associated with Louisiana and Arkansas in the East across the Great Plains to the arid peaks in the West. The coastal plain, first occupied by American settler families in the 1820s and 1830s, included grazing and the COTTON CULTURE (with slave labor) at that time. This area includes the present cities of Dallas/Fort Worth, San

Antonio, and Austin. To the west lies the southern extension of the Great Plains. Here, grazing was the basis of the ECONOMY of this vast landed area stretching north to the panhandle. The western part of Texas is the high plains, an extension of the southern Rockies, with a landscape reflecting a climate that is semiarid. The climate in Texas is as varied as its topography. While the east and areas along the gulf are wet and humid, the west and north are dry. Texas is home to dramatic storms, hurricanes from the Gulf Coast, and winter blizzards in the west and north.

The first Native American peoples probably appeared in what is now Texas some 15,000 years ago. The variations in these peoples reflected the size and varied landscape of the region. In the east were the Caddo, forest dwellers related to the Indian peoples of Louisiana. To the south were the Jumano, who pursued AGRICULTURE. The Apache, the essence of the mounted raiders associated with the Indians of the Great Plains, were in the west.

The Spanish were the first of the European explorers and colonizers to reach the area, having already conquered the region that is now Mexico. Spanish explorers had visited the mouth of the Rio Grande in 1520, and Álar Núñez Cabeza de Vaca and the survivors of Pánfilo de Narváez's expedition to Florida crossed Texas beginning in 1528. Of these, only Cabeza da Vaca and a black Moroccan slave named Esteban survived to reach Mexico. Their reports prompted others to set out in search of golden cities, most notably the expedition led by Francisco Vázquez de Coronado.

At the end of the 17th century, Spain established its first settlements at the sites of El Paso and Santa Fe (now New Mexico). Spanish officials occasionally dispatched small expeditions to Texas, but it lay at the far northern edge of an empire that was already in decline. Still, the Spanish took note of the ill-fated expedition of Sieur de la Salle, who sought the mouth of the Mississippi River and landed instead at Matagorda Bay. LaSalle and his men almost all perished, but his presence indicated an expanded French interest in the area. LaSalle's expedition and the founding of Mobile and New Orleans as the southern anchor of the French empire galvanized the Spanish into action, and they settled what is today eastern Texas by a series of missions that ran from Laredo on the Rio Grande to Nacogdoches on the Louisiana border. The most important center of Spanish influence was San Antonio, founded in 1718. Although the French were ineffectual in opposing Spanish expansion, the Indians were a continuing obstacle, especially the Apache and, in the 17th century, the Comanche, who expanded from the mountains out onto the plains. As Native Americans acquired horses, they became even more warlike and nomadic, forcing the Spanish to confine themselves to the missions and settlements in the eastern part of Texas.

Although opposed by the French, the Comanche, and the Apache, Spanish settlements and missions in east Texas grew throughout the first half of the 18th century. With the expulsion of the French under the Treaty of Paris in 1763, the Spanish position in Texas seemed secure, with the French gone and the victorious English far distant along the East Coast. This security was short-lived. With the success of the American Revolution and the recognition of American independence in another Treaty of Paris in 1783, the Spanish found a new, expansionist neighbor. Under the terms of the treaty, the American boundary on the west was the Mississippi River. The desire of Americans for Spanish possessions was first felt in Florida but soon moved closer to Texas. At the turn of the century, Spain retroceded Louisiana to the French as part of the endless imperial trading characteristic of Europe at the time. In 1803, in an astonishing act of national self-interest and intrigue, Napoleon Bonaparte sold Louisiana to the United States. Although the western boundary of the Louisiana Purchase was in dispute, the ADAMS-ONÍS TREATY of 1819, in which Spain ceded Florida to the United States, also established the Sabine River as the border. Texas was now on the edge of an expanding American nation looking to the west and the south.

Spain's empire in the Americas was already under assault from national independence movements. In Mexico, isolated revolutionary outbreaks began in 1811; Spain finally recognized Mexican independence in 1821. In a last desperate attempt to colonize American settlers in Texas, the Spanish government had experimented with a system of contracted immigration under the direction of an individual who would serve as an intermediary between the Spanish government and the new settlements. The original contact was with MOSES AUSTIN, a St. Louis entrepreneur who had failed in the PANIC OF 1819 and subsequent depression. Upon his death in 1821, Austin's project was taken over by his son, STEPHEN F. AUSTIN. The success of the Mexican Revolution intervened to delay the younger Austin's plans, but the new, independent government of the Republic of Mexico finally agreed to proceed with the policy of contracted immigration.

Between 1820 and 1830, Austin and other "empresarios" brought hundreds of American families into Texas. Austin's settlements, by far the largest, were in the Brazos and Colorado River valleys. Other immigrant groups settled along the coast. The very success of the republic of Mexico's contracted immigration policy soon created innumerable problems for Mexican officials in Texas and in Mexico City. By 1830, the American population of Texas was 20,000, all arrived within the last 10 years. Texan residents of Hispanic descent were approximately 4,000, the same as in 1820.

Austin was intensely loyal to the Republic of Mexico, but the settler families, in spite of the generous grants of

land given to them, remained American. They were impatient with the local state government of Coahuila-Texas and inclined to pursue the American frontier doctrine of taking collective action rather than calling on the government for assistance. To the American settlers in Texas, this was an appropriate solution to their complaints about local government, the court system, and protection against the Indians. To officials of the Republic of Mexico in Texas and in Mexico, such actions were tantamount to rebellion against constituted authority. That Americans in the age of MANIFEST DESTINY often looked on Mexicans as inferior and incompetent increased the tensions.

Austin counseled patience and forbearance, but his imprisonment in Mexico City for 18 months in 1834 and 1835 removed from Texas the most important voice of compromise. In autumn 1835, scattered armed clashes took place between Texans and Mexican authorities. The fact that numbers of armed Texans had gathered together in pursuit of political freedom only confirmed the view of Mexican officials that an armed rebellion was imminent. General ANTONIO LÓPEZ DE SANTA ANNA, to consolidate his authority and suppress a rebellion, led a large army into Texas in early 1836. The Texans suffered disastrous defeats at Goliad and at THE ALAMO, but SAM HOUSTON organized the scattered volunteers into something like an army and defeated Santa Anna at the Battle of San Jacinto. Santa Anna signed a treaty recognizing Texan independence, and the Republic of Texas was established.

The leaders of the new Republic of Texas had always assumed that they would seek annexation to the United States. With the republic established, however, several issues caused a distinctly cool response on the part of the government in Washington to the suggestion of annexation. Within the international community, the United States had been heavily criticized for what was perceived as its partisan attitude during the TEXAS REVOLUTION. That Americans individuals and collectively should support the Texas cause was understandable, but as a government, the United States was bound to pursue a policy of neutrality. Nevertheless, large quantities of men, arms, supplies, and financial support made their way from American soil to Texas—much of it through southern ports, especially New Orleans, with little or no attempt at interdiction on the part of Washington. In view of such lax enforcement of neutrality laws, it was awkward for the United States to hastily annex a state so recently a part of the Republic of Mexico.

Sam Houston, the victorious commander at San Jacinto, was elected president of the Republic of Texas. His successors were Mirabeau B. Lamar and Anson Jones. Although vigorously committed by public oratory to independence, the Republic of Texas had many problems to overcome. Among these were a continuing war with Mexico, an ongoing conflict with many Native Americans, and

uncertain financial policies. The prevailing philosophy of government was based on the policies of ANDREW JACKSON: minimal intrusion on the part of government into the lives of individual citizens. As a result, Texas had no taxes and minimal import duties. The free-trade posture delighted Great Britain and France but left the republic with an empty treasury. Indians on the Texas frontier fought the expansion of a growing population. That Texas grew from 40,000 in 1836 to 120,000 in 1846 meant continuing conflict with Native Americans. Elements of the Mexican army periodically sent expeditions into Texas, raising cries of alarm among the civil population and confusion among elements of the Texas militia. A Texan military expedition against Santa Fe, to confirm Texas's claim to the upper Rio Grande watershed, ended in disaster. As annexation to the United States became the focus of diplomatic efforts on both sides, the issue became embroiled in domestic American politics. SLAVERY was legal in Texas, and elements in Congress opposed to slavery and its expansion into the new territory organized to oppose Texas annexation. Finally, in 1845, Texas was brought into the Union by a resolution of annexation in both houses, a parliamentary maneuver that required only a simple majority rather than the two-thirds required by a treaty. Under terms of the annexation, Texas was admitted as a state and retained its public lands to retire its debt.

At almost the same time as annexation came the MEXICAN-AMERICAN WAR, which began in spring 1846. One of the causes was conflict over the boundary line between Mexico and Texas. Although Texas and its relations with Mexico—the republic of Mexico still regarded Texas as a state in rebellion—was important in the opening of the war, most of the military campaigns were to the south in Mexico or west in California. The close of the war, with the signing of the TREATY OF GUADALUPE HIDALGO in early 1848, confirmed Texas annexation to the United States and included the cession of California, New Mexico, and Arizona to the American nation. The resolution of the territories acquired during the war was the subject of an extended national debate, eventually resolved by the COMPROMISE OF 1850. Under the terms of the agreement, Texas gave up its claims to portions of Colorado and New Mexico and received \$10 million to settle the state's long-standing debt.

Texas resumed its rapid growth, from 300,000 in 1850 to 600,000 in 1860, with the densest population living along the Gulf Coast, where Texas had a cotton/slave economy like the Deep South. By 1860 the state had a large slave population, some 20 percent of its enumerated population. Cattle ranching was also important in the hill country and farther inland, where ranchers grazed large herds. The only substantial town was San Antonio, with 8,000 inhabitants. With the rise of sectional feeling in the 1850s, Texas was

in the proslavery camp. Although Sam Houston, who supported the Union, was elected governor in 1860, Texas nevertheless seceded from the Union in 1861. Houston, who would not take an oath to support the Confederacy, was forced to resign.

### Texas Revolution (1835–1836)

The Texas Revolution is the name given to the series of events that led to the independence of Texas from Mexico and the subsequent establishment of the Republic of Texas. Texas had long been the northern extension of the Spanish Empire in the Americas. Although sparsely settled from the opening of the 17th century, the region was an important outpost of Spanish imperial policy, at the same time forming a barrier against the French advance from Louisiana to the West and a line of defense against Indian raiders on the plains. As Spanish colonies turned toward independence at the close of the 18th century, Mexico joined those who sought independence. The success of the Mexican Revolution and the establishment of an independent republic of Mexico in 1821 began a new chapter in the history of Texas.

As part of a plan to settle its northern states, Mexico established a system of contracted immigration. MOSES AUSTIN had first proposed the scheme in 1820 to Spanish officials in Mexico City. Upon Austin's death the following year, his proposal was taken over by his son, STEPHEN F. AUSTIN. After the establishment of Mexican independence, the younger Austin spent a year in Mexico City, lobbying officials to accept his father's proposal. His persistence paid off when Mexico agreed to permit Austin to settle 300 families on a large tract of land in Texas. Austin eventually chose the Brazos and Colorado River valleys as the site of his settlement. Under the terms of the arrangement, Austin would receive a large land grant from Mexico, and he would choose the settler families to whom he would make substantial grants of land. He would have enormous authority not only in making land grants but also in maintaining order, establishing a court system, providing a defense against Indians, and deciding other issues that confronted every new settlement on the frontier. The Mexican government eventually passed a law embodying the outlines of Austin's scheme, which became a national policy. Hundreds of immigrant families from the United States—Austin eventually brought in some 700 families

under three contracts—settled in the Mexican state of Texas. This policy of supervised immigration appeared to be a great success. Enterprising pioneer families settled portions of coastal Texas and the river valleys under the leadership of designated “empresarios.”

But the success of the enterprise made for problems. By 1830, the American population of Texas—all arrived within the decade of the 1820s—had reached 20,000. Officials in Mexico City found themselves confronted with a numerous and increasingly unsettled population that was more American than Mexican. Under the terms of the contracted immigration, in exchange for generous land grants, Americans agreed to become citizens of the Republic of Mexico and to become Roman Catholics. That the predominantly Protestant settlers from the lower Mississippi Valley did neither was indicative of their attitudes toward their new nation. That Stephen F. Austin remained intensely loyal to the Republic of Mexico was a stabilizing influence, but the growing numbers of Americans invariably led to talk of separation from Mexico and occasional plots to foment an uprising against Mexican authority. The uneasiness of the Americans was increased by the attachment of Coahuila to Texas, creating a united state of Coahuila-Texas, which American Texans saw as a way of minimizing their political influence.

Mexican officials were aware of the difficulties posed by the preponderance of Americans in Texas, and in 1830 Mexico passed a law forbidding further immigration from the United States. For Austin, the new law threatened a successful system of contracted immigration, and it was, among other things, unenforceable. For the Americans in Texas, the 1830 law confirmed their views that Mexican officials intended to infringe on their liberties, including the right to immigrate. The Americans in Texas now organized to give voice to their grievances. They did so in a

The flag of the Republic of Texas, the “Lone Star” state  
(Library of Congress)

traditionally American way, by electing delegates to meet in a convention, drafting petitions to explain their views, and conveying these petitions to the proper authority. The most important Texan, Stephen F. Austin, took the petitions to Mexico City in 1833.

Changes in the political situation in Mexico City made Austin's mission more difficult. Mexico's political world had always been somewhat unstable, mitigated by the consistency of a federal bureaucracy. In 1832, General ANTONIO LÓPEZ DE SANTA ANNA overthrew the constitutional government in Mexico. The next year, after Santa Anna won a popular mandate, he embarked on a series of military campaigns to subdue rebellions in parts of the Republic of Mexico. Texans observed Santa Anna's campaigns throughout the southern portion of Mexico with growing uneasiness. As for Santa Anna, with the south pacified, he intended to turn his attention to Texas, long considered disloyal because of its increasingly dominant American population.

In this atmosphere of growing uneasiness on both sides, Austin appeared in Mexico City with his petitions. He found a generally cordial reception. The Santa Anna government agreed to his requests with one exception. The petition for separate statehood for Texas was denied, as Mexican authorities saw a separate state of Texas as a prelude to secession. As Austin was returning from what he regarded as a successful mission, he was arrested. Jailed in Mexico City for almost two years, his absence accelerated the increasingly radical stance of the new Texan leaders, of whom the most noteworthy newcomer was SAM HOUSTON, who had immigrated to Texas in 1832.

As Texans began to consider their relations with the Republic of Mexico, several common issues came into focus. One faction pointed to RELIGION and the requirements of marriage associated with the Roman Catholic Church, since only Catholics could inherit. As Anglo-Texans had more to inherit, the issue was more pressing. The question of local government and the court system was also an issue; hence the request to create a separate state of Texas that could more effectively meet the needs of the immigrants from the North. Throughout these debates, Texans clung to the traditional American frontier institution of a local armed militia for protection, especially against the Indians, and raised questions of public schools and language. In addition, they continued to insist on their rights as citizens under the constitution of 1824 at a time when it was increasingly irrelevant under the new presidency of Santa Anna.

Mexican officials were also uneasy about the situation in Texas. To begin with, they saw Texas as Mexican and the newly arrived settlers as ungrateful Norte Americanos. In exchange for generous land grants, the settlers had sworn allegiance to the Republic of Mexico, and it was to their new nation that they owed allegiance. As citizens of the

Republic of Mexico, they were bound to follow the laws of the republic, whether these laws suited them or not. If they objected to laws or officials, they should not convene conventions but instead initiate a correspondence through the hierarchy of officials, beginning with the state of Coahuila-Texas. The idea of Anglo-Texans forming an armed militia seemed little less than a prelude to armed rebellion. Loyal Texans should have recourse to the Mexican army. Above all, Texans must be taught to respect and obey Mexican laws. Mexican officials were, understandably, sensitive to what they regarded as ethnic slights and ethnic slurs. Relations between the two groups were further inflamed by two recent considerations: Santa Anna's campaigns to reduce opposition to his rule and the presence of Mexican troops in garrisons in Texas ports, which would invariably lead to confrontations between Mexican forces intent on upholding the honor of the republic of Mexico and Anglo-Texans who saw such garrisons as an alien occupying force.

In 1835, Austin returned after two years in prison to find Texas split into two factions. One favored peace overtures to the Republic of Mexico and a continuing search for an alliance with Santa Anna's liberal political opponents. The second supported a revolution in favor of independence. Austin soon allied himself with the first group; Houston headed the second. Military clashes between the two sides had begun to sharpen hostility between Mexicans and Anglo-Texans. When, in June 1835, some 30 Texans forced the garrison at Anahuac to surrender, many communities in Texas repudiated the action, but Mexican officials saw the confrontation as part of a Texas revolt. Although the Texan force surrendered its arms, local officials did not turn the 30 rebels over to Mexican officials to stand trial.

Santa Anna was now determined to pacify Texas by military force as he had other parts of the Republic of Mexico. In so doing, he disavowed any observance of the Constitution of 1824 so sacred to many Texans, and he also threatened to force observance of Mexico's ban on slavery. In late 1835, as Santa Anna dispatched an army to put down what he saw as a rebellion, even Austin realized that the time for mediation had passed. Instead, he urged Texans to resist the invasion and bring Texas finally into the United States. In his own words: "War is our only recourse. There is no other remedy." When Texas communities convened in November 1835 to consider the future, they strongly supported loyalty to Mexico under the Constitution of 1824. Deferring independence did win some Tejano support, but most Tejanos—Texans of Spanish and Mexican origin—were distant from the Anglo-Texans, whom they regarded as brash and aggressive.

Sam Houston led the movement to armed insurrection. At first, Texan attempts at military activity were uncoordi-

nated and reflected individual leaders. In December 1835, a contingent of Texans coordinated an attack in San Antonio that laid siege to the Mexican garrison in THE ALAMO and eventually forced its surrender. Houston counseled the evacuation of the Alamo; he favored a retreat toward the center of Anglo-Texas settlement with a continuing guerilla war. He therefore sent JIM BOWIE to San Antonio with orders to remove the Alamo's guns, blow up the old mission, and evacuate the Texan garrison. When Bowie arrived at the Alamo, however, he did not carry out his orders. Instead, he and others decided that the Alamo was a key position and must be defended. When Santa Anna reached San Antonio, he had some 2,000 troops ready for the field; Bowie and the garrison at the Alamo numbered 100, perhaps a quarter of them soldiers and the rest volunteers. Bowie's appeal for reinforcements, ignored by the provisional government of Texas, was answered by Colonel WILLIAM BARRET TRAVIS, a leader of the war party; and DAVY CROCKETT, a former congressman from Tennessee. They and their companions raised the defenders of the mission to perhaps 187.

On February 25, 1836, Santa Anna and his army arrived at San Antonio. Bowie offered to surrender on condition of safe conduct for combatants; Santa Anna demanded unconditional surrender. The siege began. After a long period of Mexican bombardment that was largely ineffective, Santa Anna launched a frontal assault by 1,800 soldiers on March 6, 1836. Sheer numbers carried the day. After 90 minutes of combat, some of it hand-to-hand, Santa Anna was in control of the old mission. He had lost 600 men; most of the Texan defenders were dead. Santa Anna executed the handful of prisoners, including Davy Crockett, as a warning to others who remained in revolt against the Mexican government. Although Santa Anna had won a military victory, he had given the Texans' cause a company of martyrs and a reason for a declaration of independence. Henceforth, the battle cry of the infant Republic of Texas would be: "Remember the Alamo!"

The disaster at the Alamo was followed by another military and human defeat. As the Texans retired north in the face of Santa Anna's advance, Colonel James Fannin delayed his withdrawal from Goliad's fort for so long that he and his force were captured by advance troops of the Mexican army. Santa Anna ordered the execution of the 300 prisoners. He was convinced that he had overwhelmed Texan resistance to his force, and the panicked retreat of thousands of refugees to the north, including the provisional government, seemed to confirm his view.

In the face of this hysteria mixed with a burning desire for revenge, Houston recruited and trained an army. It was not a large force, perhaps 800 men, but it had a degree of discipline and training that other Texas forces had lacked. Houston and his army met a Mexican army about twice as

large under Santa Anna on a plain west of the San Jacinto River (near Galveston Bay). On April 21, 1836 Houston ordered a frontal charge, and in 20 minutes, the Texans had won the field. The slaughter of the retreating Mexican army went on for several hours, at the end of which 630 Mexican soldiers were dead.

After the battle, Santa Anna was captured while trying to escape. Many favored his execution for his crimes against prisoners, but Houston forced him to sign a treaty recognizing Texas independence. Under the terms of the Treaty of Velasco, Santa Anna ordered all Mexican soldiers to evacuate Texas and recognized the independence of the former state. Although signed under duress and later repudiated by the government of Mexico, this treaty of independence was generally recognized abroad. The revolution was over; the Republic of Texas was established.

### Thames, Battle of the (October 5, 1813)

The overwhelming American victory at the Battle of the Thames broke the back of the last organized Native American resistance east of the Mississippi. The leader of the movement to unite the nations, Tecumseh, died in the encounter.

The Thames River flows through Canada near the U.S. border at Detroit, Michigan. During the WAR OF 1812 (1812–15), Great Britain feared the Americans would launch an invasion into the region around it to seize control of the Great Lakes and possibly annex the entire colony. Americans made several failed attempts to conquer the area in 1812 and 1813.

On September 27, 1813, WILLIAM HENRY HARRISON and 3,000 Americans crossed uncontested into Canada. Tecumseh and his warriors had fallen back into British territory in the hopes that they would defeat the Americans and reclaim their homes in the Michigan and Indiana territories. The British commander, Major General Henry Proctor, wanted to retreat to a more defensible spot further away from the border. Tecumseh convinced Proctor to face the enemy along a narrow stretch of road between the Thames River and a swampy thicket. However the 450 British troops ran from their positions at the road after a brief assault by the powerful American forces. Americans quickly crushed the remaining 800 Native American warriors who had stayed to cover the retreat. Tecumseh died in the fighting, and his body was never recovered.

After the battle, most of the Native Americans south of the Great Lakes accepted that the United States was too strong for them to stop. Within two decades, the government forced most of the remaining nations to move west of the Mississippi.

**Thoreau, Henry David** (1817–1862) *philosopher, poet*

Essayist, poet, naturalist, educator, and lecturer, Henry David Thoreau was born on July 12, 1817, in Concord, Massachusetts. His father, John Thoreau, was a pencil manufacturer. The young Thoreau attended Concord Academy and Harvard College, graduating in 1837. He then worked as a public-school teacher to supplement his family's income and pay for his college EDUCATION. Later, he opened a day and boarding school from the family home. Shortly after returning from Harvard to Concord, Thoreau met fellow intellectual RALPH WALDO EMERSON. They soon began a remarkable relationship based on their work in the important literary movement of transcendentalism.

The new TRANSCENDENTAL MOVEMENT was mainly comprised of young men and women from New England who rejected formal RELIGION for what they called "The Transcendental Law." This was the moral law through which man discovers for himself the nature of God. Transcendentalists like Thoreau believed that God was embodied in a spirit whose essence could never be defined or contained by tedious, learned texts or rules. Rather, transcendentalists advised looking to the fluid, energetic, and "transcendental" unity of life. They celebrated a somewhat vaguely defined, but nonetheless liberating, "truth" whose essence could only be discovered through the natural world. The simple life was celebrated, although few adherents to the movement took that as far as Thoreau.

Thoreau began publishing poetry and essays regularly in the transcendentalist magazine *The Dial*. From 1845 to 1847, he formed the basis for 18 more essays, collectively entitled *Walden; or Life in the Woods*, when he moved to a cabin on Emerson's property near Walden Pond in Concord in order to live as simply and as close to nature as possible. Midway through his stay there, Thoreau refused to pay the local poll tax because of his opposition toward a government that condoned SLAVERY and had launched what he considered an imperialist war against Mexico. Thoreau's one night in jail as well as his thoughts on the subject fueled the essay "Resistance to Civil Government," or "Civil Disobedience" (1849), in which he espoused the

Title page of *Walden*, by Henry David Thoreau (*Library of Congress*)

need to live up to higher ideals than those of civil society—even if this meant breaking laws in the process. "The law will never make men free," he declared, "it is men who have got to make the law free."

Thoreau continued his own private form of social activism after he moved out of the woods. He wrote essays and delivered lectures such as "Slavery in Massachusetts" (1854) in support of the ABOLITION MOVEMENT. He explained his ideas on the role of the state: "There will never be a really free and enlightened state until the state comes to recognize the individual as a higher and independent power . . . and treats him accordingly." Following John Brown's failure to incite a slave revolt with his raid on Harpers Ferry, Thoreau delivered "A Plea for Captain Brown" (1859) in order to exonerate Brown in the eyes of the law for living up to a higher ideal. Brown was hanged, however, and it is

believed that the incident shocked Thoreau so much as to hasten his own death.

After spending a few years beginning a study of the plight of NATIVE AMERICANS, Thoreau, who had suffered from tuberculosis for many years, finally died of its effects on May 6, 1862. His final works, *The Maine Woods* (1864) and *Cape Cod* (1865) were published posthumously.

## Trail of Tears

Between 1830 and 1839, the CHOCTAW, CHICKASAW, CREEK, CHEROKEE, and SEMINOLE nations—who collectively came to be known as the Five Civilized Tribes—were removed under varying degrees of coercion from their homes in the Southeast to new lands west of the Mississippi River. Their relocation was the culmination of a decades-old dispute between southeastern Indian nations and the white settlers who wanted their lands.

White Americans had long coveted the fertile soil of the Southeast and the lucrative possibility of expanding cotton production there. Many considered Native Americans to be undeserving stewards of such lands, falsely characterizing them as lazy and nomadic. These stereotypes were especially egregious when applied to the southeastern nations. By the 1820s, many of them had made a series of cultural adaptations that responded to the presence of so many whites in the region and the failure of military resistance early in the century to prevent the same. By 1828, the Cherokee nation boasted a bicameral legislature, a Cherokee alphabet, a bilingual newspaper, their own network of schools and churches, and the flourishing practice of cash-crop AGRICULTURE. Yet such adaptations only convinced whites that it was imperative to remove Native Americans from the Southeast. It was clear that the vast majority of American Indian people would not surrender their lands voluntarily, and the southern states rejected the idea that self-governing Indian nations could constitutionally exist within their borders. Amid a tangle of arguments about

state vs. federal rights, land hunger, and racial prejudice, overwhelming white pressure for the removal of Indian people from the East to the West was born. The long and painful process of Cherokee removal became known as the Trail of Tears.

On May 28, 1830, Congress passed the INDIAN REMOVAL ACT. Approved and signed by President ANDREW JACKSON the act authorized the exchange of Indian lands in the East for new territories west of the Mississippi. It promised that the new western lands offered to American Indian nations would remain theirs forever, and they would be protected against encroachment from other nations or settlers. Native Americans were to be compensated for any improvements they had made on their eastern lands, and the government was authorized to provide financial assistance with the process of removal. While the act was used to relocate American Indian communities across the United States, it was in the Southeast that it was used to its most devastating effect. As a result, the peoples of the Choctaw, Chickasaw, Creek, and Cherokee nations would suffer tremendous material and physical losses in the process of removal.

The Indian Removal Act stipulated that any east-west land exchange was to be voluntary, open to “such tribes or nations of Indians as may choose” to be part of the process. In reality, however, coercion was used at every turn to facilitate removal. Annuities owed to nations from past treaties were doled out to individuals instead of tribal leaders, undermining the ability of chiefs to maintain their leadership positions or to provide for the needs of their communities. States extended their laws over tribal lands, nullifying the legal and judicial systems of each nation, making Native Americans liable for taxes and withholding their right to vote or testify in court. States took no action to protect Indians from squatters encroaching on their lands, and the federal government likewise ignored the problem. Federal officials purposely negotiated removal treaties with the most disaffected members of nations, and often bribed Indian representatives into agreeing to sign.

The Choctaw were the first to be relocated under the provisions of the Indian Removal Act. The Treaty of Dancing Rabbit Creek was signed between a handful of Choctaw and the federal government in 1830, sealing the removal of the nation to lands in present-day Oklahoma. Their experience was miserable. Two thousand men, women, and children set out from Mississippi in autumn 1830. Only 400–500 reached their new homeland after battling extreme cold, starvation, and disease. More Choctaw emigrated over the next two years, their experience largely the same. Forced to cover enormous distances of the trek on foot, the Choctaw saw hundreds of their horses die, while they themselves battled cholera and malnutrition. It is estimated that approximately 9,000 Choctaw relocated to

Indian Territory, 7,000 stayed in Mississippi (often in hiding), and over 4,000 died during removal.

The removal of the Creek nation was equally cruel. In 1832, those Creek who had not already emigrated west signed a treaty with the United States that ostensibly left the option of removal up to each individual family. Creek lands in Alabama were to be divided into individual allotments and protected by the federal government from intrusion for up to five years. These lands could be sold and the family removed to Indian Territory, or they could wait and receive the deed to their land after a five-year period.

The plan fell apart almost immediately. Squatters encroached on Indian lands, often forcing families out of their homes. Land companies committed massive fraud, engaging individual Indians to pretend to be landowners, illegally selling the same plot of land to a multitude of bidders. Tension between squatters and the increasing number of dispossessed Creek built into outbreaks of violence, resulting in military intervention in the region in 1836. Over the next two years the Creek, whether “peaceful” or “hostile,” were removed to Indian Territory under deplorable conditions. Thousands died from starvation and exposure along the way.

For the Chickasaw, the experience of removal was less harsh, although just as fraught with difficulty. After signing a removal treaty in 1832, the Chickasaw were forced to wait five years for the federal government to resolve where in Indian Territory they might live. In those five years, Chickasaw lands were sold from under them and overrun with squatters. It was not until 1837 that the Choctaw agreed to cede part of their new land to the Chickasaw, who migrated with better supplies, protection, and transportation than either of their predecessors to Indian Territory.

The removal of the Cherokee was the last in the series because of the vigorous opposition of Indian peoples and a group of American reformers. When the state of Georgia extended its jurisdiction over Cherokee lands within the state in 1828, the Cherokee nation sued the state to void the state law. In 1831 the SUPREME COURT ruled in *Cherokee Nation v. State of Georgia* that the suit was null and void because Indian tribes could not sue. In a subsequent case brought in the name of Samuel Worcester, a Congregational missionary, the Court declared in 1832 that the Cherokee Nation was a separate and distinct community with its own territory within the state. President Andrew Jackson refused to enforce the decision.

The most important Cherokee chief, John Ross, refused to negotiate a treaty of cession. In 1835, after months of unsuccessful talks, the federal government ordered the entire nation to appear at the town of New Echota. Those Cherokee who refused to appear would be considered in support of any treaty negotiated at the meeting. The enormous pressure applied by the United States government

divided the Cherokee Nation. After weeks of threats and behind-the-scenes discussions, the Treaty of New Echota was signed between representatives of the federal government and John Ridge, who sought to save the tribe from threats of internal and external violence. Perhaps as few as 500 of the 17,000 Cherokee people favored the agreement.

While some groups emigrated almost immediately, the majority of the Cherokee nation stayed in Georgia. They refused to acknowledge the legality of the treaty or the May 23, 1838, deadline for voluntary removal. After the deadline had passed, however, the Cherokee were rounded up at bayonet point and held in temporary camps. They were not allowed to gather personal possessions or make preparations for the journey ahead of them. While around 5,000 Cherokee were immediately dispatched to Indian Territory, the rest were held in camps under military guard through the summer of 1838, suffering from disease and food shortages. Approximately 3,000 Cherokee died in the camps, and those who survived were forced to trek some 800 miles to their new lands west of the Mississippi. The march was carried out in two trips in 1838–39, and the journey killed another thousand people. Even once they had reached Oklahoma, disease and lack of food further reduced their population. Such were the devastating effects of the removal that the Cherokee called their route “Nunna daul Tsunyn” (“the Trail Where They Cried”). In time, the “Trail of Tears” came to apply to the combined experience of all Indian Nations removed from the Southeast.

### transcendental movement

American transcendentalism was a New England-based philosophical and literary movement that began with the 1836 founding of the Transcendental Club in Concord, Massachusetts. The movement's members included RALPH WALDO EMERSON (1803–82), HENRY DAVID THOREAU (1817–62), MARGARET FULLER (1810–50), Nathaniel Hawthorne (1804–64), and Bronson Alcott (1799–1888).

The transcendentalists believed in the inherent goodness of humanity and all of nature. They were strongly influenced by the German idealists, including Immanuel

Kant, and the romantic movement in England. Emerson was inspired to form the Transcendental Club on his return from a trip to Europe, where he met William Wordsworth, Samuel Taylor Coleridge, Thomas Carlyle, and other important romantic writers. The transcendentalists explicitly rejected rationalism and the Puritan attitudes they had inherited as New Englanders. Instead, they expressed near-religious fervor for nature, intuition, and the creative process. They believed that God (or, as they called it, the Over-Soul) permeated all of creation, living and nonliving things alike, and that an individual's highest potential could only be achieved through complete awareness of the truth and beauty of the natural world.

The Transcendental Club's magazine, *The Dial*, was published from 1840 to 1844 and was an influential literary journal of the day. Edited by Fuller in its first two years of publication, it introduced many of Emerson's best-known essays.

The transcendentalists were known for their experiments in alternative modes of living. Thoreau, most famously, lived alone and largely off the land for a time. His book about his solitary experience, *Walden, or Life in the Woods* (1854), remains one of the most widely read of the transcendentalists' works. The idea that intellectual work and physical labor must go hand in hand appealed to the transcendentalists, whose philosophy after all compelled them to seek a complete awareness of and union with nature. Communal living and cooperative farming were attempted at BROOK FARM in West Roxbury, Massachusetts, where a number of the transcendentalists, including Hawthorne, lived in a socialist society from 1841 to 1847. Alcott's cooperative vegetarian farm, Fruitlands, in Harvard, Massachusetts, endured for only a few months in 1843. Neither of the farms were financial successes, and in fact their members had to endure much monetary hardship. But these utopian communities did allow their residents to attempt to live in harmony with the land and in accordance with their transcendental ideals. They were also an important inspiration for the communes, organic farms, and cooperatives of later generations of idealists, especially in the 1960s.

It is for their writings that the transcendentalists are best remembered. Emerson's book *Nature* (1836) and his essay "Self-Reliance" (1841) both focus on important aspects of transcendentalist philosophy. Fuller's *Woman in the Nineteenth Century* (1845) is a major early feminist work that grew out of the women-only philosophy seminars she held in Boston between 1839 and 1844. Hawthorne's novels and short stories remain important; *The Blithedale Romance* (1852) was based on his experience as part of the Brook Farm community, and his masterworks *The Scarlet Letter* (1850) and *The House of the Seven Gables* (1851) criticize the values and legacy of Puritanism. Along with

*Walden*, Thoreau is best known for his essay "Civil Disobedience" (1849), which was a powerful influence on 20th-century thinkers and activists including Martin Luther King, Jr., and Mohandas K. Gandhi.

—Mary Kay Linge

**Travis, William Barret** (1809–1836) *lawyer, soldier*

A lawyer and Texas military leader, William Barret Travis was an ardent supporter of American expansion into Mexican territory. He was born in Edgefield, South Carolina, in 1809. In 1818, the Travis family joined the great migration to the opening of new lands in the South, moving to Conecuh County, Alabama. The young Travis received a fair education at the local school. Like other ambitious young men in this frontier environment, he decided to read law. He pursued his study in the office of Judge James Dellett in Claiborne, Alabama. In 1819, just before his 20th birthday, he was admitted to the bar. Travis set up a legal practice in a new state whose prospects were immediately blighted by the economic crisis of 1819. To supplement his income, he taught school. In 1828, he married Rosanna Cato, one of his students.

In 1831, Travis left his wife (they were divorced in 1835) and two children and moved to TEXAS, where he settled in Anahuac, on Galveston Bay. This was also the site of the Mexican military garrison, commanded by Colonel John Bradbury, a Kentucky native now in the service of Mexico. Bradbury was an arbitrary officer, and Travis quickly rose to the leadership of an American faction in opposition to Mexican authority. The newly arrived immigrants from the United States aggressively defended their rights in the Republic of Mexico, viewing their position from the perspective of a different frontier tradition and generally ignoring their responsibilities as recipients of Mexican land grants. On every issue, Travis took a radical position, asserting that settlers' rights must be upheld, if necessary, by force. Almost immediately on his arrival in Texas, he offended the authorities and was arrested. When an armed force gathered to demand his release, Mexican officials complied. The issue was settled peacefully, but hard feelings remained on each side. In October 1832, Travis moved to San Felipe, where he set up a thriving legal practice and soon became involved in local politics, once again as a vigorous defender of the rights of new settlers from the United States.

When General ANTONIO LÓPEZ DE SANTA ANNA ascended to power in Mexico City, alarm bells sounded for

Travis and other Texans. Heretofore, the issues of rights and obligations, while hotly debated, had been largely abstract matters of principle. With Santa Anna's decision to march north with his army and subdue dissident factions in Texas, these issues had become immediate. Travis was at the forefront of those determined to take vigorous action. In 1835, when Santa Anna sent soldiers to regarrison the fort at Anahuac, Travis raised a volunteer company, disarmed the Mexican soldiers, and seized the fort. The surrounding countryside was electrified by his actions. Many Texans repudiated his radical steps, but Travis and others pressed the issue of Texan rights and forced Santa Anna toward a campaign to subjugate the rebels. His aggressive actions at the head of an invading army validated Travis's position that Texans must take up arms in defense of their rights.

When a convention convened at San Felipe to prepare a defense, Travis was commissioned a lieutenant colonel in the cavalry. In autumn 1835, he participated actively in the siege of San Antonio. In December that year, he was appointed to command the artillery, and soon thereafter, he transferred to the cavalry, once again with the rank of lieutenant colonel. In early February 1836, with 25 men, he reinforced the small garrison at THE ALAMO. On February 13, he was appointed joint commander (with JAMES BOWIE) of the force, Travis to command the regulars and Bowie to lead the volunteers. Travis and Bowie disagreed on almost every aspect of the command, and they were still sorting out their views when Santa Anna's army arrived at the gates of the Alamo. Bowie was soon felled by typhoid fever, and Travis assumed overall command. When Santa Anna launched his frontal assault on March 6, Travis was killed along with the other defenders, including Bowie and DAVY CROCKETT. He was 26 years old. Officials and citizens alike remembered him as a staunch defender of principle and a Texas patriot.

**Turner, Nat** (1800–1831) *slave rebellion leader*

Born in Southampton County, Virginia, on October 2, 1800, Nat Turner became one of the most infamous enslaved men and insurrectionists of the 19th century. The child of African-born parents, Nat was owned first by Ben-

jamin Turner and then his son Samuel. Nat's father was a recurrent runaway who succeeded in escaping slavery and emigrating to LIBERIA. His mother Nancy was also a slave at the Turner plantation. Nat learned to read early in his childhood, and claimed that he did so through a natural and inexplicable gift rather than instruction. His intelligence was widely discussed within his community.

Turner grew up to become a fieldhand, entering adulthood just as the PANIC OF 1819 marked the beginning of a four-year depression in the United States. In an effort to maintain his plantation's profitability, Samuel Turner instructed his overseer to work his slaves particularly hard. After a whipping from the overseer during this period, Nat Turner ran away to the nearby Flat Swamps. He remained free for 30 days, before returning to the Turner plantation of his own free will, convinced by a series of religious visions that it was the right course of action. Few of his fellow slaves understood his choice.

Sometime within the next two years, Nat married Cherry, another slave on the Turner plantation. In 1823, Samuel Turner died, and the couple were sold to different planters—Nat to Thomas Moore and Cherry to Giles Reese. Although separated, the couple worked on neighboring plantations and were able to see each other from time to time. Together they had three children.

During the mid-1820s, Turner became increasingly convinced that his life had a special religious purpose. From his childhood, adults around him had suggested that he was meant for great things, and visions throughout his life had strengthened his own conviction of the same. In 1825, Turner began to preach, traveling to Cross Keys, Jerusalem, and Bethlehem Crossroads in Southampton County on different Sundays. Turner spoke to whites and blacks in his travels, and most famously baptized Etheldred T. Brantley, a white overseer in the county who had been shunned by his own church. The baptism came after Brantley had confessed unnamed sins to Turner and subsequently had been cured of an outbreak of bleeding boils through fasting and prayer.

It was a vision experienced on May 12, 1828, that would most significantly change Turner's life. Remembering the moment as he sat in jail in 1831, Turner recalled that "the Spirit instantly appeared to me and said the Serpent was loosened, and Christ had laid down the yoke he had borne for the sins of men, and that I should take it on and fight against the Serpent, for the time was fast approaching, when the first should be last and the last should be first." Turner took the vision to mean that at a given sign he should rise up against the institution of SLAVERY and kill those he considered his enemies "with their own weapons."

The sign did not come for another three years. In the interim, Thomas Moore died, and his slaves became the property of his widow. One year later, Moore's widow

Cartoon illustrating Nat Turner's uprising against southern whites (*Library of Congress*)

married Joseph Travis, a wheelwright in the county, who moved his business and his own slaves to the Moore plantation. The slave community at the plantation numbered 17 in February 1831, when Turner received the sign he'd been waiting for in the shape of a solar eclipse. Keeping the details of his plan to himself, Turner alerted his closest allies—Sam Francis, Henry Porter, Hark Travis, and Nelson Williams—that an important event would take place on July 4. When Turner fell ill, the plans were postponed, but on August 13 more solar disturbances convinced Turner that the time was again ripe for revolt.

On Sunday, August 21, Turner's four allies, plus Jack Reese and Will Francis, met at Cabin Pond to await instruction. While there, the men ate wild pig and drank brandy, joined eventually by Turner, who had been keeping religious solitude in preparation for the night ahead. At around 2 A.M. on the morning of August 22, the group broke into the Travis home and killed Joseph, his wife, and their children. The plan was to kill whites in the county

without reference to age or sex, thereby scaring other whites into submission. The ultimate goal of the rebels was to seize Jerusalem, the county seat, where there was an arsenal they hoped to use. Armed, and with their brutalities widely known, the group believed that it would be a mere matter of time before slavery would come to an end. Indiscriminate killing would be unnecessary beyond the early example they hoped to make in the homes of the planter families around them.

The men worked steadily through their corner of Southampton County, killing between 55 and 65 white men, women, and children as their numbers swelled. By the evening of August 22, Nat Turner's band had grown to between 60 and 70 slaves, armed with guns, swords, pikes and axes. Despite repelling the local militia once during the day, the band was attacked again at nightfall as they rested and regrouped at the Ridley plantation. Swelled with reinforcements the militia succeeded in ending the revolt, slaughtering many of the men involved and placing at least

a dozen severed heads on poles as an example to other slaves. Turner escaped into the swamps, but he was captured on October 30. Put on trial on November 5, Turner was found guilty of “making insurrection, and plotting to take away the lives of divers [sic] free white persons.” He was executed by hanging on November 11, 1831.

The ramifications of the rebellion were wide-ranging. To enslaved men and women, Turner was a hero. To whites, he was an example of what religion, education, and leniency from owners could create in the slave population, causing a crackdown on all three of the same. Badly scared by the incident, the Virginia state legislature briefly considered abolition, coupled with the deportation of all African Americans in the state. The measure died, and slavery was practiced in the state for more than 30 additional years.

### **Tyler, John** (1790–1862) 10th U.S. president

An antebellum president and Confederate congressman, John Tyler was born and raised in Charles City County, Virginia. At the age of 12, he entered William and Mary College, graduating five years later. In 1809 he was admitted to the bar, and two years after that he became involved in politics, serving terms in the Virginia legislature, the U.S. House of Representatives, and as Virginia’s governor. While serving in the House of Representatives (1816–21), Tyler voted against most nationalist legislation and opposed the MISSOURI COMPROMISE. His devotion to states’ rights ideology was slavish, and he stridently opposed federally funded internal improvements, a protectionist tariff for nascent industries, and a Third Bank of the United States.

In 1827 Tyler was elected to the U.S. Senate, where he became one of its leading figures. As a southern planter, Tyler opposed tariffs, a standing army, and extending the right to vote to men without property. He vehemently opposed President ANDREW JACKSON’s threat to use federal force against South Carolina when the state renounced federal tariffs, and he frequently condemned what he saw as Jackson’s abuse of executive power. In 1834 he censured the president’s removal of federal funds from the national bank. In February 1836 the Jacksonian-controlled Virginia

President John Tyler (Library of Congress)

legislature instructed Tyler to vote to expunge the Senate censure resolution against the president on this matter. He refused, resigned his seat, and severed his Democratic ties. Tyler’s disgust with Jackson drove him to join forces with HENRY CLAY and DANIEL WEBSTER to form the new WHIG PARTY.

In 1840 the Whigs nominated WILLIAM HENRY HARRISON for president and added Tyler to the ticket to balance it out. Though both men were Whigs, Harrison and Tyler had little in common politically. Running under the slogan “Tippecanoe and Tyler Too,” the Whig ticket easily captured the White House.

Senator Henry Clay was the real power behind the Whig Party, and he expected to be able to control President Harrison from behind the scenes. However, much to Clay’s dismay, the popular and genial Harrison contracted pneumonia and died one month after taking office. Tyler succeeded to the presidency, becoming the first vice president ever to do so. He spent his first few months in office establishing that he was legitimately the president and not just the “acting president.” Tyler also made clear that he would not be Clay’s puppet and, in so doing he effectively alienated the party that had elected him. Fearing that he

would alienate Harrison's supporters, Tyler decided to keep Harrison's entire cabinet, enough though some were openly hostile to him. Following his core belief in states' rights led Tyler to veto a bill for a federal Bank of the United States, a bill that the Whig majority in Congress favored. His entire cabinet resigned in protest, with the exception of Daniel Webster. Webster, for his part, functioned as secretary of state only long enough to conclude negotiations with Great Britain regarding the U.S.-Canadian border; his diplomacy resulted in the WEBSTER-ASHBURTON TREATY of 1842, which permanently settled the dispute. He then resigned and in due course was replaced by JOHN C. CALHOUN of South Carolina, whose ascent marked the beginning of a heated North-South divide between Whigs and Democrats. Tyler's subsequent cabinet appointees were all likewise from southern states, which did little to endear his administration to the Whigs.

Tyler further alienated the Whig members by vetoing the Tariff Bill, which he opposed on constitutional grounds. This so angered Congress that Representative JOHN QUINCY ADAMS of Massachusetts introduced an impeachment resolution for the president's alleged abuse of power, though the resolution failed to pass. The first such impeachment motion against a sitting chief executive in American history, it was indicative of Tyler's mounting unpopularity within the political establishment.

Tyler was able to score some FOREIGN POLICY successes, most notably the signing of a trade pact with China. His domestic agenda, however, ground to a halt over the issue of TEXAS's annexation. In 1842 South Carolina senator John C. Calhoun negotiated a treaty that allowed the Republic of Texas, then independent, to become the Union's 28th state. Many congressmen opposed the treaty because they did not want another slave state to be added to the Union, or because they did not wish to antagonize Mexico, from which Texas had won her independence six years earlier. Tyler tried repeatedly to force the treaty through Congress. Failing that, he resorted to a political expedient: couching annexation as a joint resolution, which requires only a simple majority in both houses of Congress to be adopted. The measure passed by a vote of 132–72 in the House and 27–25 in the Senate on Tyler's last day in office; actual annexation would be undertaken during his successor's administration.

A major domestic disturbance during Tyler's tenure in office was the so-called Dorr War in Rhode Island, when rebels under Thomas Dorr took to arms, demanding a new

state constitution with an expanded voting franchise. The governor and legislature appealed to the federal government for troops to help quell the disturbance. But Tyler, always reluctant to interfere with state affairs, simply urged calm and suggested that the state government allow more white landholders to vote. In any event, no federal troops were dispatched, and the rebels immediately dispersed when approached by local militia. Calm was restored after the franchise was enlarged. Tyler also sustained a brush with disaster on February 28, 1844, when a deck gun exploded on the steam sloop USS *Princeton*, killing Secretary of the Navy Thomas Gilmer and Secretary of State Abel P. Upshur.

The 1844 presidential election came down to a three-way race between Tyler, JAMES K. POLK, and Henry Clay. Fearing that he and Polk might split the vote, thereby handing the election to Clay, Tyler withdrew from the race, and Polk was elected. Tyler, nearly bankrupt, retired to his plantation. When Abraham Lincoln was elected president, Tyler tried to help broker a compromise between northern authorities and southern secessionists. After his proposals were rejected, in April 1861, Tyler went to Virginia's secession convention and voted in favor of the state's withdrawal from the Union. He was elected to the Confederate House of Representatives but died on January 18, 1862, in Richmond before he could take his seat. His death marked the only time that the United States completely ignored the death of a former president. The controversy surrounding Tyler's political legitimacy was not formally put to rest until 1967, when the Twenty-fifth Amendment to the U.S. Constitution finally clarified and codified vice presidential succession to the White House.

## **Van Buren, Martin** (1782–1862) *eighth U.S. president*

Martin Van Buren, eighth president of the United States, was born on December 5, 1782, in Kinderhook, New York. Because his father, a tavern keeper, was a staunch supporter of the Jeffersonian Party, which emphasized agrarianism, states' rights, and a limited national government, his son Martin absorbed these ideas. Many politicians frequented the elder Van Buren's tavern, thus at an early age Martin Van Buren learned a great deal about history, politics, and the means by which people attempt to influence one another to achieve their goals.

After educating himself in the law, he apprenticed to a lawyer and later opened his own practice. As a Democratic-Republican, Van Buren entered the state senate in 1816 but soon left this body to return to the legal profession, working in the New York attorney general's office. Later he was reelected to the state senate, but in 1821 he graduated to the U.S. Senate.

In 1824 Van Buren campaigned for Democratic-Republican Party nominee William H. Crawford's election to the presidency. JOHN QUINCY ADAMS prevailed in the election, and Van Buren began to support ANDREW JACKSON. For the duration of Adams's administration, Van Buren worked in and out of Congress to block executive action and win the presidency for Jackson in 1828. To achieve these ends, he united several Democratic-Republican factions in various states into a new political party that reasserted the principles of the third U.S. president, Thomas Jefferson.

This new political alliance, which would become the DEMOCRATIC PARTY, nominated Jackson for the presidency and JOHN C. CALHOUN of South Carolina for the vice presidency. After winning the election of 1828, Jackson promoted Van Buren to the position of secretary of state. Van Buren became vice president, serving President Jackson after he was elected to a second term, beginning in 1832. As vice president, Van Buren helped Jackson in his

“war” with the SECOND BANK OF THE UNITED STATES. Jackson removed government deposits from the bank and placed them in so-called pet, or state, banks. This action hastened the end of the Bank of the United States. Some members of the opposition party believed that the removal of the deposits was undertaken to benefit bankers friendly to the Democratic Party and that Van Buren had been the agent of these bankers. Although Van Buren supported the president in refusing the recharter of the bank, he had serious doubts about the wisdom of withdrawing the government's deposits from it.

In response to the “reign” of so-called King Andrew during the years 1828 to 1836, the new WHIG PARTY

President Martin Van Buren (*Library of Congress*)

succeeded the National Republicans, as an expression of its opposition to Jackson's use of strong presidential powers. In the election of 1836, the Whig Party nominated three candidates, each supported by a regional section of the United States. The Whigs hoped that this would prevent Van Buren from receiving the required majority of electoral votes, forcing the election to be determined by the House of Representatives, which was already angry at Jackson. The Whig candidates were DANIEL WEBSTER of Massachusetts, who ran in the New England states; Hugh Lawson White of Tennessee, who ran in the South and Southwest; and WILLIAM HENRY HARRISON of Ohio, who ran in the West. Van Buren, however, won handily with 170 electoral votes as opposed to 73 for Harrison, 26 for White, and 14 for Webster. In the popular vote, Van Buren received a total of 764,176 to Harrison's 550,816, White's 146,107, and Webster's 41,201.

In his inaugural address, Van Buren promised to continue the policies of Andrew Jackson. However, soon after his election, the country was hit hard with the PANIC OF 1837. The panic of 1837 was a worldwide depression, but it was particularly sharp in the United States because the nation had been involved in rapid economic expansion for the past several years. Production jolted to a halt; hundreds of companies went bankrupt; factories closed; and unemployment rose rapidly. To meet the distress, Van Buren, on May 15, 1837, called a special session of Congress to convene on September 4. At that time the central government was not expected to assist individual members of society; the best that Van Buren could offer in his message to the special session was a reform of fiscal problems facing the federal government.

Van Buren continued Jackson's policy with the NATIVE AMERICANS. He further ordered all Indians to move west of the Mississippi. The Seminole resisted the seizure of their lands and rallied behind their war leader, a young chief named Osceola. Eventually Osceola was seized under a flag of truce and imprisoned at Fort Moultrie, South Carolina, where he died not long afterward. It cost many millions of dollars to fight the Seminole, who were eventually subdued and, for the most part, driven westward.

The 1837 economic depression coupled with his aristocratic demeanor made Van Buren increasingly unpopular with the American people. Nevertheless, the Democratic Party unanimously renominated him for the presidency at its national convention in 1840. The Whig Party nominated General William Henry Harrison, who had made a remarkably good showing in the election of 1836. Harrison was known as "Tippecanoe," after his victory over the Shawnee nation at the Battle of Tippecanoe in 1811. In addition to Harrison, the Whigs nominated JOHN TYLER of Virginia.

Van Buren lost the election by an electoral count of 234 to 60. The popular vote gave him 1,128,854 to Harrison's

1,275,390. Economic woes and problems with Great Britain all hurt Van Buren, but perhaps the issue most responsible for his defeat was the fact that the Whigs convinced the American people that, unlike Harrison, Van Buren was not a "man of the people," but, rather, an aristocrat with extravagant tastes who lacked genuine sympathy for the problems of the ordinary citizen.

### **Vanderbilt, Cornelius** (1794–1877) *shipping and railroad entrepreneur*

Born on May 27, 1794, in Staten Island, New York, Cornelius Vanderbilt was one of nine children of Cornelius Vanderbilt, a farmer, and Phebe Hand Vanderbilt. He received almost no schooling and began working full-time with his father at the age of 11. Described as a rugged, headstrong, untamable, illiterate youth who at the age of 12 could scarcely write his own name, Vanderbilt showed an early instinct for making and manipulating money. At the age of 16, with \$100 borrowed from his mother, he bought a small sailing vessel and began ferrying passengers and farm produce across New York Bay to Manhattan. Diligent and efficient, he made the business pay, and the WAR OF 1812 brought him a government contract to supply the island forts. By then he owned three boats that operated as far south as the Carolinas. In 1813 he married Sophia Johnson, with whom he had 13 children, of whom 11 survived him.

Vanderbilt quickly recognized the advantage of steam over sail. In 1818 he sold his schooners and took a job as captain of a steamboat to familiarize himself with the craft. The vessel traveled between New York and New Brunswick, New Jersey, where he made his home and where his wife supplemented the family income by running a tavern. By 1829 the family had saved enough to permit him to leave his job and establish his own steamboat service on the Hudson River. His business strategy was characteristic of the ruthless methods of the time: He exacted maximum labor for minimum wages, bribed city officials to give him exclusive docking privileges, and reduced his fares and freight rates until he forced his competitors into bankruptcy and then raised his prices to exorbitant levels. Regarded as the prime buccaneer of the shipping world, by the middle 1830s Vanderbilt was the largest steamboat owner and builder in the country. His vessels, numbering

Cornelius Vanderbilt (Library of Congress)

more than 100, served many cities on the coast, and newspapers began referring to him as Commodore. In 1847, in response to the CALIFORNIA GOLD RUSH, he organized a steamship line to San Francisco across Nicaragua.

During the 1850s the Commodore recognized the limitations of maritime shipping and the dangers of privateers preying on mercantile vessels, and he turned his attentions to railroads. In 1855 his fortunes were estimated at \$1.5 million; within the next 10 years, his railroad interests multiplied that sum more than tenfold and made him, in Burton J. Hendrick's words, "the symbol that links the old industrial era with the new." He took control of the Harlem Railroad in 1857, the Hudson River Railroad in 1865, and the New York Central in 1867. By the time of his death 10 years later on January 2, 1877, his railroad empire covered 4,300 miles and extended to Chicago; and his estate amounted to more than \$104 million, the first of the colossal American fortunes that were destined to astound the world.

Unbending in business, Vanderbilt was known for his arrogance and truculence. When reminded that one of his transactions was contrary to law, he was reported as sneering, "What do I care about the law? Hain't I got the power?" Although he left \$1 million to found Central University of Nashville, Tennessee (later renamed Vanderbilt University), he left the bulk of his money to his son

William Henry, initiating America's first great dynasty of wealth and power.

**Vesey, Denmark** (ca. 1767–1822) *slave rebellion leader* Probably born on St. Thomas in the Virgin Islands, Denmark Vesey, the future advocate of slave rebellion, was purchased by Captain Joseph Vesey on his way from Charleston, South Carolina, to Cap-Français, Santo Domingo (later, Haiti) in 1781. Impressed by the 14-year-old slave's intelligence and ability, the captain made him the ship's mascot and nicknamed him Telemaque, for the Greek mythological hero Telemachus. He eventually became known as Denmark, a name possibly derived from Telemaque, or perhaps a reference to his origin in the Virgin Islands, then a colony of Denmark. The captain's mascot was sold along with the other slaves on board when the ship reached Cap-Français.

Returning to Cap-Français a year later, Captain Vesey was forced to buy back Denmark from his master, who claimed that the young man suffered from seizures which made him unfit to work. The captain kept him as his own slave. Because no mention is made of his seizures after leaving Santo Domingo, some have speculated that Denmark faked epileptic fits in order to escape the grinding labor that awaited him on the Caribbean sugar plantations. When Joseph Vesey settled in Charleston, Denmark Vesey (as he was now commonly known) learned carpentry and became one of the many highly skilled slaves whose labor was rented out by their masters in this urban seaport.

In 1799 Denmark Vesey won \$1,500 in the East Bay Street lottery and purchased his freedom from Joseph Vesey for \$600. He continued to work as a master carpenter in Charleston, establishing a good reputation and owning a respectable house on Bull Street. Unlike many ambitious free blacks in Charleston, he rejected the idea of acquiring slaves as a way to bolster his own social status. For the most part, he distrusted and avoided the free blacks (often light-skinned mulattos) who attempted to cultivate favor in white society by living like white slave owners. A charismatic leader who spoke several languages, Vesey became a powerful voice in the Charleston slave community. He married at least one slave woman, possibly several. He believed in the equality of blacks and whites, and, while free himself, resented that his children were still classified as slaves because their mothers were slaves.

Vesey used his economic power and relative mobility to organize within the community of slaves and free blacks. In

1817 he joined the Second Presbyterian Church and later joined the newly established African Methodist Church. His charisma and literacy made him a leader in the congregation, to which he argued that Scripture advocated the delivery of Africans from SLAVERY. Threatened by the autonomy of the African Methodist congregation, white Charlestonians attempted to stop their activities by having hundreds of congregants arrested for disorderly conduct and ordering that black churches could not educate slaves. This religious oppression, combined with the national controversy surrounding the MISSOURI COMPROMISE and the lingering example of the successful slave revolution in Haiti impelled Vesey to begin organizing for a slave revolt in Charleston.

After several years of heightening tensions, Vesey began planning action with the five men who would become his main partners in the insurrection: Peter Poyas, Ned Bennett, Rolla Bennett, Monday Gell, and Gullah Jack Pritchard. Like Vesey, his comrades were effective organizers because of their unusual mobility and their knowledge of different segments of the African community in Charleston and the surrounding countryside. Indeed, Vesey's rebellion strategy was the first North American insurrection to emphasize pan-Africanism: the unification of disparate African and African-American communities, free and slave, in order to challenge white racism and the oppression of black people. Vesey and his lieutenants appealed to skilled urban laborers, recently arrived slaves on the Gullah-speaking sea islands and slaves from the inland agricultural areas. As many as 9,000 slaves would be involved.

Vesey's plan called for attacking Charleston from six different areas. The organized companies would seize important government buildings such as the U.S. arsenal, the governor's mansion, and the city's guardhouse. The surprise attack was to take place at midnight on Sunday, July 14, 1822—a moonless night in the hot and sluggish middle of summer, while many white Charlestonians would be vacationing away from the city. Sunday was also the only day of the week when large numbers of rural slaves could enter the city without triggering suspicion.

In late May, however, word of the planned insurrection fell into the wrong hands when one of Vesey's supporters, William Paul, told mulatto slave Peter Prioleau Desverney about the plot. On the advice of a free mulatto slave owner, Desverney told his master, Colonel Prioleau. William Paul was arrested and interrogated, eventually giving police the names of other conspirators, but not Vesey. When brought in for questioning, the accused maintained their composure and denied the charges. Authorities were left with rumors but no real proof, and the anxiety level among whites began to rise. Vesey and the other undetected conspirators continued to plan for the attack, moving the date up to June 16.

Promising him his freedom, white authorities hired George Wilson to spy on potential conspirators and infil-

trate meetings in local churches. Wilson brought them solid proof of a continuing conspiracy, providing names, dates, and strategies. After learning of their betrayal, Vesey and his men sent word to the rural slave companies to postpone their march, but the word came too late. When Vesey's soldiers arrived on June 16, they found Charleston occupied by federal troops. Authorities convened a secret court to begin hearings, and the police began arresting the leaders. Vesey was arrested on June 20. By early July, all of the principal leaders were in custody at the Charleston Work House, the prison for slaves.

With the exception of Monday Gell, all of the conspirators maintained silence while incarcerated in an attempt to protect their followers. Vesey urged his lieutenants to "die in silence." The secret court found them guilty, and Vesey and his inner circle were executed on July 2, 1822, in a desolate part of Charleston known as Blake's Lands. By the end of July, 35 men had been executed. Twenty-two of them were publicly hanged on the main thoroughfare in Charleston, their bodies left hanging for three days as a grisly warning to would-be insurrectionists.

In the aftermath of the failed insurrection, white authorities tightened their grip on free and enslaved blacks in Charleston. Legislators passed laws restricting the movements of free blacks and their ability to organize gatherings. These new legal restrictions—especially the Negro Seaman's Act of 1823, which required the incarceration of free black sailors while their ships were in Charleston—helped trigger the constitutional battle between the federal government and South Carolina that resulted in the Ordinance of Nullification and, later, the Civil War (1861–65). Thus, Vesey's conspiracy and the violent response to it embodied the tensions that continued to intensify in the slave society of the South in the first half of the 19th century. While Vesey's revolutionary plan was unsuccessful, his efforts left a deep impression among both fearful whites and hopeful blacks, who remembered him as a heroic leader in the struggle against slavery. Recent scholarship has raised questions about the nature and extent of Vesey's conspiracy, but the vigorous reaction of the white population in Charleston confirms its powerful influence at the time.

## **Walker, David** (1785–1830) *antislavery pamphleteer*

The African-American abolitionist David Walker was born in 1785 in Wilmington, North Carolina, the son of a free black woman and a slave. He inherited his mother's status but was profoundly affected by the vast number of slaves working in the local economy. Walker identified not only with their plight, but also their skill and resourcefulness as human beings living under a terrible affliction. Around 1820 he moved to Charleston, South Carolina, which had a much higher percentage of free blacks. He soon joined the local African Methodist Episcopal (AME) Church, originally founded by Richard Allen in Philadelphia. The AME Church in Charleston was a hotbed of antislavery sentiment and the probable inspiration for DENMARK VESEY's abortive uprising there in June 1822. White authorities razed the church in consequence, but the episode seems to have impressed upon Walker the impact of religion combined with abolition and slave resistance.

By 1825 Walker had moved to Boston, Massachusetts, where he operated a used clothing store and married a local woman. He became a prominent member of the small but active black community by joining the Prince Hall Masonry at African Lodge No. 459, the first black Masonic lodge in America. In this capacity he championed *Freedom's Journal*, the nation's first black newspaper, in 1827. The following year he helped to found the Massachusetts General Colored Association, one of the early black activist organizations in America. But Walker remained deeply embittered over SLAVERY and felt compelled to write on behalf of its victims.

In 1829 Walker composed and published his *Appeal to the Colored Citizens of the World*, which gained instant notoriety for its strident and militant tenor. In contrast with other, comparatively mild antislavery publications, Walker's tract thunderously condemned slavery in biblical terms and called upon slaves to rise against their masters. It was subsequently mailed and distributed to blacks in slave states, where it genuinely terrified white communities. Walker's

*Appeal* was accordingly proscribed throughout the South and a bounty was placed on his head, dead or alive. Several states also banned literacy among slaves and forbade them from associating with free black sailors, who might have smuggled such incendiary materials. Walker died in Boston on August 6, 1830.

## **War Hawks**

In 1812, about 20 young Democratic-Republican members of Congress from western and southern states actively favored war with Britain, hoping to conquer Canada, end impressment, and guarantee free trade. The group was given its name, War Hawks, by John Randolph of Roanoke, Virginia. They included future cabinet members HENRY CLAY of Kentucky and JOHN C. CALHOUN of South Carolina and several less well known members of congress.

Examinations of congressional votes leading up to the WAR OF 1812 (1812–15) reveal what at first seems a puzzling pattern. British attacks had the greatest impact on New England, yet those states were largely against war. In contrast, the areas represented by the War Hawks, the farming regions of the West and South, were in favor of aggressively defending the national honor. The fact that New Englanders, in the time-honored manner, continued to make money despite the annoyance of British deprivations

may partially explain this. It was also true that the farming regions suffered when the price of goods increased due to British interference with trade. However, other concerns motivated the War Hawks and their constituents.

Conflict with Indian nations often disrupted life in the backcountry. Such conflict posed real dangers to settlers and interfered with the lucrative business of land speculation by limiting the amount of secure land available for sale. Westerners blamed the British for instigating Indian raids and supplying the Native Americans with weapons from their safe haven in Canada. Driving the British from Canada therefore promised to remove the threat to the frontier while opening large areas of Canadian land for speculation. The violation of neutral rights was indeed an important factor in the decision to go to war. However, for the War Hawks and their backcountry constituents, the desire for Canadian land appears to have been an equally powerful motivation. The prowar campaign of the War Hawks was successful in increasing war fever among the public and helped prepare popular support for the declaration of war.

### War of 1812 (1812–1815)

The War of 1812 marked the culmination of a bankrupt foreign policy and demonstrated both the weaknesses and the strengths of the American republic. When Great Britain and France went to war in 1793, the United States had a problem: how to remain neutral in a major European war while reaping the benefits of trade and commerce. Repeatedly the United States came to the brink of war, first with one power and then the other. At times, some politicians cried out for a declaration of war against both Great Britain and France. Such fanciful assertions reflected a degree of unreality that many Americans displayed in the area of FOREIGN POLICY. During the opening decade of the 19th century, with the ascendancy of Thomas Jefferson and the Democratic-Republican Party, foreign policy assumed an Anglophobe caste. While both France and Great Britain increased their efforts to influence American trade, the government generally looked on Britain as the villain. When Napoleon Bonaparte hinted that he would repeal his Berlin and Milan decrees putting restraints on neutral trade, James Madison's administration seized the opportunity to reinstate a trade ban with Great Britain, following Macon's Bill No. 2 (1810). This action created a new crisis with the British that ultimately led to Madison asking Congress for

a declaration of war on June 1, 1812. Madison signed a Declaration of War passed by Congress on June 18, 1812. Ironically, Great Britain had decided to end its blockade of Europe and ease its restrictions on the United States the day before. But since transatlantic communication took weeks and sometimes months, no one was aware of these concessions as the United States entered the war.

Many Federalists, especially in New England, objected to the war. These opponents wanted to maintain their commercial contacts with Great Britain and saw little reason for fighting. Many of them continued to trade illegally with Britain and even flirted with secession. The HARTFORD CONVENTION (1814) gave the greatest form and substance to the Federalist complaints just as the hostilities were ending.

If the Federalists were right and there was no immediate reason to fight the War of 1812, there were many long-term causes for the conflict. First, there was the issue of neutral rights that had plagued the United States since 1793. Americans insisted that neutral ships carried neutral goods and believed that the profits of the carrying trade should be theirs. Second, there was the question of impressment. For almost two decades, the British Navy had forced Americans to serve on its ships. This violation of the integrity of the United States was not only a diplomatic affront, it also affected the lives of thousands of American seamen who found themselves trapped—virtually enslaved—aboard British men of war for years and sometimes decades. Third, many Americans believed that British agents encouraged NATIVE AMERICANS to fight against the United States. Americans blamed British agitation for Tecumseh's pan-Indian movement that led to the Battle of Tippecanoe (November 7, 1811). Fourth, led by WAR HAWKS, expansionist fever swept many parts of the United States. War with Great Britain would allow Americans not only to fight Indians and gain control of more land, but potentially promised the addition of Canada and even FLORIDA (which was Spanish). Finally, many Americans believed that if a republic was ever to be taken seriously on the world stage, the United States had to defend its honor and demonstrate that it could successfully fight a war.

Success was elusive, and the national government was so ineffective, it almost proved its critics right. However, the same traits that made the country appear weak also saved the republic from complete disaster. Jefferson's policies had been dismantling the strong central government created by the Federalists. Instead of a capital that would be the new Rome, as the Federalists had hoped, Washington, D.C., became a mere shadow of a city. Its destruction might be humiliating, but it had little real impact on the ability to wage war. Allowing the First Bank of the United States to expire in 1811 removed an area of central finance,

but it encouraged banking to spread elsewhere. The army was not extensive, but thousands of men were in the militia and could be called upon in a time of invasion. Finally, the nation was spread out over millions of square miles. Such a territory might be hard to defend, but it was also almost impossible to conquer. These conditions made it difficult to win the war, but it was equally hard to lose it.

The war began badly on land. In 1812, there were three major campaigns along the Canadian border: the west, the Niagara River, and the Lake Champlain corridor. Each ended in failure. The biggest disaster occurred in the west. The British captured Fort Mackinac which guarded the straits between Lakes Huron, Michigan, and Superior by the end of July. The evacuation of Fort Dearborn (now Chicago) ended in an Indian massacre on August 15, and the inept general WILLIAM HULL surrendered Fort Detroit on August 16. The American effort on the Niagara Frontier was little better. An invasion across the Niagara River ended in a costly defeat at the Battle of Queenstown (October 11, 1812) when the militia refused to cross into Canada, arguing that they were a defensive force only. The thrust into Canada at Lake Champlain was only a mild setback. The American army got a late start, reached the border, and when the militia refused to enter Canada, the whole force simply retreated into winter quarters.

By comparison, the U.S. Navy began the war in a spectacular fashion, experiencing a series of single-ship victories that stunned the British. On August 19, 1812, the American super frigate USS *Constitution* pummeled the HMS *Guerrière* so heavily that the British ship had to be scuttled after it surrendered. On October 15, the USS *United States* handled the HMS *Macedonian* in a similar fashion, but managed to bring its prize to an American port. Then, on December 29, the *Constitution* sank the HMS *Java* off the coast of Brazil. Along with some smaller ship actions, these victories gave Americans something to boast about.

The war on land improved slightly for the Americans in 1813. There was a major turnaround in the situation in the west. Oliver Hazard Perry built a fleet of ships on Lake Erie, then defeated a British squadron in the BATTLE OF LAKE ERIE (September 10, 1813). This victory compelled the British to abandon Detroit. General WILLIAM HENRY HARRISON, the hero of Tippecanoe, pursued the British, defeating a combined Native American and British force at the BATTLE OF THE THAMES (October 5, 1813), thus ending the threat to the northwest during the war. Tecumseh was killed in this battle, eliminating that threat as well.

Further south, Andrew Jackson began his campaign against the Creek Indians with devastating effect. He and his army pursued the Creek with vigor, winning the BATTLE OF HORSESHOE BEND (March 27, 1814). The

This lithograph depicts the capture of the frigate *Java* by the American frigate *Constitution* during one of many naval battles in the War of 1812. (Library of Congress)

Niagara campaign began well, with an American victory at Fort George (May 24, 1813), where the Niagara meets Lake Ontario. The Americans did not immediately seize the initiative that this victory had opened. The result was that the British and Canadian forces were able to rally, and, under effective military leadership (something the Americans lacked), the British won a series of victories in the summer, fall, and winter. They not only recaptured Fort George but also took Fort Niagara (December 18, 1813) on the American side of the river. By the beginning of 1814, the situation along this front had deteriorated into almost a complete debacle. The war further north remained a stalemate. Two invasions, one from Lake Ontario, the other along Lake Champlain, ran into some minor resistance and were quickly abandoned.

If the United States was unable to generate much offensive firepower and seemed to be spinning its wheels, the British also were getting nowhere. Victories in the west in 1812 and on the Niagara in 1813 did little good. In both cases the occupation of forts barely dented the huge territorial expanse of the United States, and the British armies remained hundreds of miles from the American population centers. In 1813, the British finally won a single frigate action—the HMS *Shannon* captured the ill-fated USS *Chesapeake* (June 1, 1813)—and had effectively blockaded most of the American navy. But American privateers continued to wreak havoc on British shipping. Moreover, Native American power had been broken in both the North and the South.

In Europe, Napoleon's armies were in retreat and his defeat was almost certain. Despite war weariness (the war with France had been waged almost without interruption since 1793), Britain was able to turn greater attention to the United States in 1814. Although reinforcements brought British North American forces to approximately 40,000, the

war continued to be a stalemate in 1814. The Americans launched two initiatives that accomplished little, while the British seized the offensive in four areas that led to mixed results. Hoping to further stabilize the northwestern frontier, an American force was sent against the British-occupied Fort Mackinac. A combined British and Indian attack (August 4) surprised and defeated the advancing Americans. Having regained some strength on the Niagara River over the winter, American forces launched yet another invasion of Canada, winning the Battle of Chippewa (July 5), fighting the Battle of Lundy's Lane (July 25) to a draw, and successfully defending Fort Erie (August 15). The entire Niagara campaign saw little net change. The British planned a major invasion along Lake Champlain. With a vastly superior force, they advanced on Plattsburgh (New York). But when Lieutenant Thomas Macdonough defeated the British fleet in the Battle of Lake Champlain (September 11), the British army was compelled to retreat despite success on land in the Battle of Plattsburgh (September 11).

The British were able to occupy most of eastern Maine almost unopposed in the summer of 1814. They also launched a combined army and naval operation in the Chesapeake, winning the Battle of Bladensburg (August 24) and burning the American capital of Washington, D.C. However, when the British attempted to extend this success at the BATTLE OF BALTIMORE (September 12–14), they were repulsed and withdrew from the area. The final British campaign ended in disaster after the TREATY OF GHENT (1814). An experienced army under General Edward Pakenham fought General ANDREW JACKSON at the BATTLE OF NEW ORLEANS (January 8, 1815), with tremendous casualties for the British. Pakenham was killed and lost over 2,000 men.

The peace treaty that ended the war settled nothing. The outstanding issues of free trade, impressment and boundaries were left untouched. Yet with Napoleon defeated, impressment and free trade became moot, while the United States had other areas in which it could seek expansion. The war also marked an important watershed in American history. Native American power east of the Mississippi was nearly crushed. A new nationalism emerged from the war that would help propel the United States across a continent. And, although seriously challenged, the republic showed that it could viably defend itself.

### Warren, Josiah (1798–1874) *scholar*

Firmly rooted in the American experience was a long native tradition of hostility to the authority of the state. Strong elements of anarchism can be found in some early American religious sects, in such groups as the abolitionists, and in individuals like HENRY DAVID THOREAU. But the most systematic philosophy of native American anarchism originated with Josiah Warren.

Like most of the other adherents of this variety of anarchism, Warren came from an old New England family. He was a highly inventive and practical-minded individual who in the course of his life worked as a musician and orchestra leader, invented and manufactured a lard-burning lamp, contributed to the improvement of the printing press, and devised an original system of musical notation. In 1826, he moved to ROBERT OWEN's community at New Harmony, Indiana, where he lived for over a year. In what was perhaps the earliest anarchist critique of socialism, he attributed the failure of New Harmony to its communal property arrangements and system of authority. He concluded that the true principle of social organization lay in voluntary association, with each individual owning property equal to the value of his own labor.

Never content merely to propound a theory, Warren proceeded to test its validity in practice. His first experiment was the "time store." As described later by his son George:

The time store was started by my father for the purpose of illustrating the labor-for-labor system. The goods he bought principally of Evansville merchants. The customers would come in and ask for what was wanted. The time dial was set to correspond with the minute hand of the clock and when the customer was through with his purchase, the time required in waiting on him was figured up; this labor was paid by the customer in labor notes and the cost of the goods was paid in cash. There was no profit added to the first cost of the goods, except the amount expended in freight, bills, and other incidentals. The labor notes, of course, represented all classes—merchants, farmers, doctors, and every description of laborer, and the rates per hour were regulated by the cost to the person of having to spend the time in learning the business in which he was engaged.

Some years later, Warren opened another store utilizing a somewhat more refined system of labor notes (an idea originally conceived by Owen). In addition, he made several attempts to implement his theories on a larger scale by founding an anarchist colony. The first of these, the Village of Equity in Ohio, soon came to grief. The other two, Utopia, located not far from Cincinnati, and Modern Times, on Long Island, were more enduring and at least for

a time followed Warren's principles of social organization and used labor notes as a medium of exchange. Modern Times, the most ambitious of Warren's efforts, was founded in 1851, changing its name after a few years to Brentwood, which it remains today. Warren himself left the colony in 1863, and even within his lifetime it lost much of its unique character and began to settle into more conventional patterns. Nevertheless, Warren looked upon it as a success and as a vindication of his principles. He spent the last year of his life in Massachusetts, dying at Charlestown in 1874.

**Webster, Daniel** (1782–1852) *lawyer, politician, orator* Daniel Webster was born in 1782 in Salisbury, New Hampshire, the youngest son in a farm family of 10 children. After going to local schools, Webster attended Phillips Exeter Academy and then graduated from Dartmouth College in 1801, followed by a legal apprenticeship. In 1807, he opened a legal practice in Portsmouth, New Hampshire, and a year later married Grace Fletcher. He developed an early interest in politics and rose quickly as a lawyer and Federalist Party leader.

Elected to represent a New Hampshire district in the U.S. House of Representatives in 1812, Webster opposed the WAR OF 1812 and protective tariffs. After serving in the House four years, Webster left Congress in 1816 and moved to Boston to establish a new law practice. Webster would gain his renown as a lawyer by arguing such landmark cases as *Dartmouth College v. Woodward* (the DARTMOUTH COLLEGE CASE), 1819, *McCulloch v. Maryland*, 1819, and *Gibbons v. Ogden*, 1824, before the U.S. Supreme Court—and winning. In 1823 Webster was again in the House of Representatives, this time from Massachusetts. In 1827 the legislature of that state chose him to represent Massachusetts in the Senate.

Now representing an industrialized northern state, Webster abandoned his free-trade position and supported a tariff to protect U.S. manufacturers and expressed a hostility towards slavery. Advocating American nationalism, Webster decided to abandon the dying Federalist Party and instead became a member of the National Republican Party. He joined forces with HENRY CLAY to get government support for the construction of roadways in the West. These positions incurred the wrath of southern politicians, and South Carolina senator JOHN C. CALHOUN claimed that his state had the right to nullify the law. On January

26 and 27, 1830, the U.S. Senate heard one of the greatest speeches ever delivered before it, as Webster argued against Senator Robert Hayne of South Carolina on the issue of states' rights. Webster refuted Hayne's notion of "Liberty first and Union afterwards" with the memorable words, "Liberty and Union, now and forever, one and inseparable!"

This stance made Webster the darling of the newly formed WHIG PARTY. While Webster was on President ANDREW JACKSON's side in the nullification crisis, they found themselves at odds over other issues, such as the SECOND BANK OF THE UNITED STATES. Webster was put forward as a Whig candidate for president in 1836 but only received the electoral vote of Massachusetts. In 1841 he was appointed secretary of state by President WILLIAM HENRY HARRISON and after Harrison's death served under JOHN TYLER. All of the Whigs in Tyler's cabinet resigned in protest after Tyler vetoed the recharter of the Bank of the United States. Webster refused to join his fellow Whigs and stayed in office to successfully negotiate the WEBSTER-ASHBURTON TREATY with Great Britain in 1842. Pressure from the Whig Party finally convinced him to leave office in May 1843.

Daniel Webster (Library of Congress)

In 1845 Webster reentered the Senate and opposed the annexation of TEXAS and the MEXICAN-AMERICAN WAR (1846–48). After the war, however, he became involved in the sectional crisis concerning SLAVERY in the new territories gained from Mexico. He supported Henry Clay's COMPROMISE OF 1850 proposals, one of which would organize the territories with no prohibition of slavery, yet he argued that the West was unsuitable for plantation slavery. For his support of the compromise he was roundly condemned by antislavery factions. As secretary of state under President MILLARD FILLMORE from 1850 to 1852, Webster's enforcement of the FUGITIVE SLAVE LAW further enraged abolitionists. It was his espousal of nationalism and his willingness to compromise on slavery that cost him any chance for the presidency during the period after 1840. Webster remained as secretary of state until the condition of his health became so critical that he was forced to resign. He returned to his home in Marshfield, Massachusetts, where he died on October 24, 1852.

### Webster-Ashburton Treaty (1842)

The Webster-Ashburton Treaty, signed on August 9, 1842, resolved two boundary issues between the United States and the English in Canada left over from the Revolutionary War. The first was the boundary between the state of Maine and the Canadian provinces of New Brunswick and Quebec. The second was the boundary from Lake Superior to the Lake of the Woods in the old Northwest Territory. The treaty is significant both for eliminating potential trouble spots with the British and for paving the way for further expansion in Oregon and in the Southwest. When the United States turned to settling the disputed Oregon boundary and approached war with Mexico later in the 1840s, it did not have to deal simultaneously with problems in the old Northwest Territory and in the Northeast.

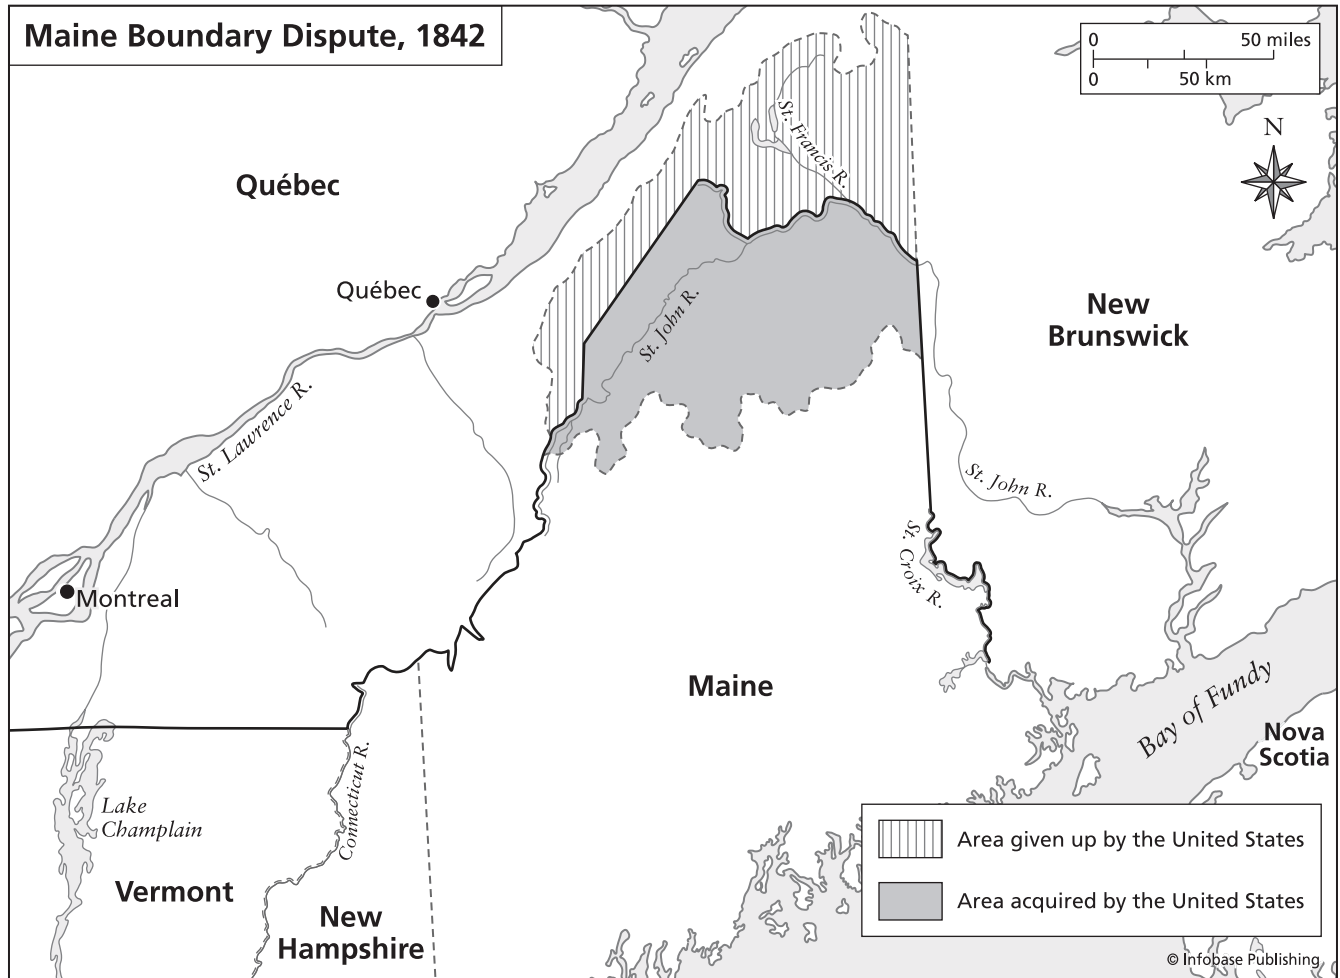

The Treaty of Paris in 1783 left unclear the intended boundaries in the Northwest and Northeast, since the two countries could not agree on the identity of rivers specified in the treaty. In its early years, the United States asserted a boundary in the Northeast that would carry American territory northward, close to the St. Lawrence River. This boundary would give the United States control of the headwaters of the St. John River while leaving the mouth of the

river in Canada. It would also cut across a planned military road between Quebec and New Brunswick, leaving the latter vulnerable to American expansionism. The British, on the other hand, asserted a boundary placing the entire St. John River, as well as the smaller Aroostook River, in Canada. In all, the disputed territory comprised a little more than 12,000 square miles, much of it covered in valuable timber resources.

In 1818, under terms established in the TREATY OF GHENT at the end of the WAR OF 1812, American representatives in England negotiated a treaty fixing the boundary between the United States and Canada at the 49th parallel from the Lake of the Woods to the Rocky Mountains. Attempts to resolve the northeastern boundary and the boundary from Lake Superior to the Lake of the Woods in the same treaty, however, failed. In 1836, the Senate rejected a compromise line for the northeastern boundary suggested by the king of the Netherlands, the key obstacle being the reluctance of the states of Maine and Massachusetts (which controlled Maine until 1820) to surrender the territory north of the St. John River. Two years later, lumberjacks from Maine occupied and began cutting timber in the disputed area, prompting a crisis. General WINFIELD SCOTT was sent to the area and settled what became known as the AROOSTOOK WAR (1838–39) by getting the citizens of Maine and New Brunswick to agree to stay in the areas they currently occupied, pending a final disposition of the disputed land.

In 1842 conditions were ripe for a settlement. A new Tory government in Great Britain appointed Lord Ashburton its representative in negotiations with the United States. Ashburton, who had an American wife, had spent much of his career seeking improved relations with the United States, and the British government gave him wide latitude for making concessions to settle the boundary dispute. The American secretary of state, DANIEL WEBSTER, was equally ready for a settlement. Webster wanted better relations with England, and for this reason he had remained in the cabinet after the death of President WILLIAM HENRY HARRISON in 1841; the rest of Harrison's cabinet had resigned rather than serve under his successor, JOHN TYLER. The states of Maine and Massachusetts dropped their objections to a settlement after being offered \$150,000 each by the federal government.

In his eagerness to deal, however, Webster received less territory in the Northeast than the United States would have received under the compromise proposed by the king of the Netherlands and, more important, less overall than Ashburton might have given. Webster might also have been able to get the British to pay the compensation made to Maine and Massachusetts. But if Webster lost territory in the Northeast, securing the entire Mesabi region in the Old Northwest meant the United States controlled its rich

iron ore deposits, of which Ashburton may have been only vaguely aware. The Mesabi iron deposits more than compensated the United States for the loss of timberland in the Northeast.

In the ratification process, both countries produced old maps that seemed to show the other country's full claim was the more just and hence the compromise represented a victory. Still, the Webster-Ashburton Treaty received unqualified acceptance in neither country. Although only nine senators voted against ratification in the U.S. Senate, the Webster-Ashburton treaty seemed to represent a retreat at a time when Americans were feeling particularly expansionist. Further, the treaty left the thorniest problem between the United States and Great Britain—Oregon—untouched.

**Weld, Theodore Dwight** (1803–1895) *abolitionist, orator*

A leading northern abolitionist and perhaps the most effective of all antislavery speakers, Theodore Dwight Weld was born in Connecticut and raised near Utica, New York. He studied at Hamilton College, where he met revivalist CHARLES GRANDISON FINNEY, whose financial support permitted Weld to enter Oneida Institute in 1827 to study for the ministry. While still at college, Weld was influenced by Charles Stuart, an early abolitionist organizer, to get involved in the antislavery cause.

When ARTHUR AND LEWIS TAPPAN of New York organized an antislavery society in 1831, Weld attended the early meetings. After several years of lecturing and leading revivals, he was commissioned by the Tappans to select a

theological seminary in the West for them to endow. Weld chose Lane Seminary at Cincinnati and persuaded many of students there to join the ABOLITION MOVEMENT. When the AMERICAN ANTI-SLAVERY SOCIETY was formed, it began a pamphlet campaign which met resistance in both North and South. Weld returned to Lane Seminary to study in 1833 and organized a debate on slavery that converted a large number of students to the abolitionist cause. Although the Lane Seminary trustees expelled Weld and his followers, they moved on to Oberlin College, where they were able to continue their work without interference. Many of Weld's followers were persuaded to become itinerant lecturers for emancipation. With Weld, they preached the sinfulness of slavery and dwelt on emancipation as a revival in benevolence. Their work firmly established the movement in Ohio, Michigan, Pennsylvania, New York, and western Massachusetts.

The success of Weld's agents caused the American Anti-Slavery Society to abandon its pamphlet campaign and sponsor these local volunteers. With Henry B. Stanton and John Greenleaf Whittier, Weld chose many new agents and trained them in a conference meeting in 1836. These lecturers consolidated the antislavery movement throughout the North, and under Weld's direction they deluged Congress with antislavery petitions. The drive for signatures was bolstered by the publication of tracts, with Weld writing three of the four most popular ones. The consequent rise of numerous local antislavery societies and the controversial activities of William Lloyd Garrison led to the dissolution of the national society in 1840. Garrison packed the last American Anti-Slavery Society convention with his delegates and won the society's name for his own group of reformers in New England. The original Tappan group subsequently formed the American and Foreign Anti-Slavery Society.

During the 1836 training conference Weld met ANGELINA AND SARAH GRIMKÉ, daughters of a distinguished slaveholding family of Charleston, South Carolina. The Grimké sisters had become convinced of the evil of slavery and had moved to Philadelphia to join the Society of Friends. They wrote and lectured for the antislavery cause and for WOMEN'S STATUS AND RIGHTS, becoming the first American women to publicize the movement. Weld married Angelina in 1838, and they had three children.

In 1841 Weld went to Washington and for two years served as a lobbyist for the insurgents trying to form an antislavery bloc in the Whig party. After 1844, with his wife and Sarah, Weld retired from public life and founded a school, Eaglewood, near Raritan, New Jersey. Weld turned his energy to writing, publishing his most famous book, *American Slavery As It Is*, in 1839. This work, said to be a strong influence on Harriet Beecher Stowe's *Uncle Tom's Cabin*, won many supporters to the cause of black eman-

cipation. Theodore Dwight Weld died at Hyde Park, Massachusetts, on February 3, 1895.

### Whig Party (1834–1856)

The political party known as the Whigs was formed during the second quarter of the 19th century to oppose President ANDREW JACKSON and the DEMOCRATIC PARTY. HENRY CLAY of Kentucky and DANIEL WEBSTER of Massachusetts were its leading organizers and proponents. In U.S. politics, the term *Whig* came into common use in 1834 and persisted until the disintegration of the party after the presidential election of 1856.

The name of Whig originally came into use during the 1680s in England when Protestants became threatened by the establishment of a line of Catholic Kings, starting with James II. These Protestants, who held that Parliament could prevent such a succession, came to be called Whigs after a radical Presbyterian group in Scotland, the Whigamores. During the American Revolution, many on the revolutionary side identified with the English Whigs, which continued to be the party in favor of Parliament's keeping the king in check.

The 19th-century Whig Party in the United States was primarily concerned with promoting INTERNAL IMPROVEMENTS, such as roads, canals, RAILROADS, deepening of rivers, etc. This was of interest to many westerners in this period, isolated as they were and in need of markets. Abraham Lincoln was a Whig for most of this period.

A deepening economic recession in 1834 caused the country to become more politically polarized. It was during this period that the National Republicans assumed the name Whigs. This conjured up ghosts of the antiroyal, pro-Parliament, English factions of the 17th and 18th centuries. Consequently, Jackson was labeled "King Andrew I" and depicted as a tyrant in political cartoons; he was, for example, drawn as a king holding a scepter labeled "Veto."

The Whigs did not exist as a political party before 1834, but it had its beginnings in 1824 when supporters of JOHN QUINCY ADAMS and Henry Clay joined forces against Andrew Jackson. This coalition, which later called itself the National Republican Party, increased in strength after Jackson's election in 1828 and was joined in opposition to the president by other smaller parties, the most notable being the Anti-Masonic Party. The National Republicans advocated a nationalistic economic policy known as the AMERICAN SYSTEM, much of which could be traced back to Alexander Hamilton's Federalist economic policy of 1791,

but were stymied by the rising power of the Jacksonians, who were thereafter called Democrats. Jackson's inauguration in 1829 began the period of National Republican opposition and the catalyst for the coalition of political forces leading to the formation of the Whig Party. Henry Clay and Daniel Webster became the party's leading figures.

Webster was more of a nationalist than Clay, as he demonstrated in his famed defense of national constitution authority against Robert Hayne's doctrine of states' rights (January 26–27, 1830). But both men urged a program of tariff protection, federally sponsored communication projects (internal improvements), continuation of the national bank, and a conservative public land sales policy—the American System. This program had an especially strong appeal for merchants and manufacturers whose business operations went beyond state lines. Clay made the president's veto of a bill to recharter the SECOND BANK OF THE UNITED STATES the key issue of the 1832 election, but Jackson easily won reelection.

By 1832 Jackson had also earned the enmity of such diverse groups as states' rights advocates in the South, proponents of internal improvements in the West, and businessmen and friends of the Bank of the United States in the East. This opposition had been fostered and nurtured by Henry Clay in the election that year. Two years later, in 1834, all the various groups were combined in a loose alliance.

State sovereignty, not economic nationalism, was the idea that brought a significant addition to the ranks of those opposing Jackson. JOHN C. CALHOUN of South Carolina broke his alliance with Jackson when he realized that he would not be the next Democratic president, and the split widened during South Carolina's attempt to nullify federal tariff laws. Jackson reacted sternly to this defiance, giving Clay an opportunity to introduce a compromise tariff bill in February 1833. Calhoun approved the compromise and for several years acted in uneasy association with other anti-Jacksonians.

Another source of recruits was the Anti-Masonic Party, particularly strong in New York and Pennsylvania. The stated purpose of this strange phenomenon in American history was to combat the supposed threat of Masonic power over judicial and political institutions. It also provided younger politicians with a convenient means for advancement. Among those Anti-Masons who became important Whig leaders were William H. Seward and Thurlow Weed of New York, and Thaddeus Stevens of Pennsylvania. With the addition of two more groups—antinullification states' rights southerners and the so-called Democratic Conservatives, who opposed their party's financial policies after 1836—the Whig coalition was complete but hardly united.

In the 1836 presidential election, the Whigs were not unified or strong enough to join behind a single presiden-

tial candidate; instead, several Whig candidates ran for office. The most prominent were Daniel Webster in New England, WILLIAM HENRY HARRISON in the Northwest, and Hugh Lawson White in the Southwest. The election went to the Democrat MARTIN VAN BUREN, but the Whigs grew steadily stronger.

Hard times following the PANIC OF 1837 and the popularity of the Whig candidate, William Henry Harrison, brought the party victory in 1840 over Jackson's successor, Martin Van Buren. The new Whig managers stole a turn from the Democrats by outdoing them in raucous electioneering during the "Log Cabin" campaign—the most tumultuous presidential campaign the nation had yet seen. (This was the formula for the only other Whig victory, that of ZACHARY TAYLOR in 1848). Harrison's death on April 4, 1841 (one month after assuming office), resulting in John Tyler's succession to the presidency, was especially disastrous for the party.

A definite break ensued between Tyler and the Whig leaders in Congress, a development that illustrated the Whig philosophy of government. The Whigs had originated in objection to what they considered the excessive power of the executive branch under Andrew Jackson. To them the legislative branch of the government represented the wishes of the people, and the task of the executive was to serve as the enforcing agent of the legislative branch. When Tyler ignored the counsel of his cabinet and vetoed bills that sought to reestablish the Bank of the United States, about 50 Whig congressmen met in caucus and read Tyler out of the party. With this the last pre-Civil War opportunity for passage of a modified American System had slipped by.

In 1844 the Whig Party nominated Henry Clay for president. However, Clay refused to take a definite stand on the TEXAS annexation issue, provoking northern abolitionists, who opposed its admission as a slave state, to support the LIBERTY PARTY candidate. The Whig split ensured a victory for the Democrat JAMES K. POLK. Once the MEXICAN-AMERICAN WAR (1846–48) had been declared, controversy over admitting or excluding SLAVERY from territory gained in the war further splintered the party. Antislavery Whigs known as Conscience Whigs opposed the Cotton Whigs in the proslavery states.

In 1848 the nomination slipped away from Webster and Clay and went to ZACHARY TAYLOR, who had gained wide popularity as a victorious general in the Mexican-American War. This move temporarily prevented a division of the party, and Taylor was elected. The nation had become deeply divided by the issues of slavery and national expansion. With disunion threatening, the aged Whig leaders Clay and Webster tried, in January and March 1850, to formulate a series of laws designed to resolve the main points of sectional friction. President Taylor opposed their moves, but his death on July 9, 1850, made MILLARD FILLMORE,

a Whig Party loyalist from New York, president. Fillmore supported the efforts of Clay and Webster, and the COMPROMISE OF 1850 was enacted. While the Compromise of 1850 was not solely a Whig accomplishment, the party's leadership had been prominent in its passage. Webster, now Fillmore's secretary of state, dreamed of capturing the presidency at the head of a Union movement in 1852. But both major parties accepted the Compromise, and on June 16, 1852, the Whigs reverted to form in nominating another general, WINFIELD SCOTT, for president. Two weeks later, Clay was dead; Webster died in October. The Whig Party never recovered from the loss of its two greatest figures.

The passing of Clay and Webster heralded the Whig disaster of 1852. The party's call for moderation and union, by now far more prominent than the national economic policy, became even more ineffective as the Civil War neared. Southern Whigs, fearful of northern encroachment on slaveholding rights, thought the Democrats more receptive to their interests; and a key number of northern Whigs had already moved into the antislavery FREE-SOIL PARTY, which had been formed on the eve of the 1848 election.

The rise of the REPUBLICAN PARTY and the anti-immigrant KNOW-NOTHING PARTY completed the Whig downfall. Defections to Republicanism were numerous, while the former Whig president, Fillmore, accepted the Know-Nothing nomination. A Whig national convention met in 1856, but it simply endorsed the Fillmore ticket. Thus, the party of unionism came to an end, a victim of sectional controversy. In 1860, a feeble remnant of the Whig party organized the Constitutional Union Party, a last-ditch attempt to prevent disruption of the Union. They fared badly in the election; their constitutional conservatism was politically dead, and with it had perished the Whig Party.

It is difficult to speak of Whig doctrine in a party of such diverse elements. Politically, the opposition to Jackson had dictated an attack on excessive presidential energy. Whigs believed Congress should initiate policy, not the president. Whig views of the Constitution ranged from Webster's nationalism to Tyler's states' rights views, with the nationalistic view predominating. But its national economic policy best characterized the Whigs, although not all those calling themselves Whigs accepted it. Politically, this was a premature nationalism at a time when the effective power of government remained to a large extent with the states. The Democrats, through their generally superior state political organizations and greater identification with popular interests, were usually able to maintain their ascendancy. The absence of true nationalism before the Civil War meant that the party with a national economic policy had to depend on political trumpery and war heroes for its two national victories. With no southerners in Congress during the Civil War and with a former Illinois Whig,

Abraham Lincoln, in the White House, the Republican Party finally passed much of the economic legislation on tariff and banking that the Whigs had long advocated.

**Whitman, Marcus** (1802–1847) *physician, medical missionary*

Marcus Whitman, a Presbyterian missionary, was born on September 4, 1802, in Rushville, New York, where he trained to be a doctor. After graduating in 1832, Whitman practiced in Canada for years. He also worked toward becoming an elder in the Presbyterian Church, and in this capacity he applied for work with the American Board of Commissioners for Foreign Missions.

In 1835 the missions board appointed Whitman to tour the Pacific Northwest and find a suitable locale. He accordingly traveled to Oregon with Reverend Samuel Parker, met with several representatives of the Flathead and Nez Percé communities, and was invited by the tribesmen to establish an Indian mission. He then ventured back east in 1836 to recruit volunteers. While there, he married Narcissa Prentice, herself an aspiring missionary. Later that year the Whitmans traveled to Oregon with Reverend Henry H. Spaulding, and Mrs. Whitman and Mrs. Spaulding became the first white women to cross the Rocky Mountains by land. Whitman subsequently settled down in Waiilatpu in the Walla Walla Valley, where he ministered to the Cayuse Indians despite their dangerous reputation. He labored many years among the Cayuse in a failed effort to convert them to both Christianity and settled farming.

By 1842 the board became dissatisfied with Whitman's scant results and threatened to close his mission. At this Whitman made a dramatic 3,000-mile journey to Boston in wintertime and convinced them to relent. In 1843 he led another group of settlers to Oregon, but the constant influx of whites onto Indian land was straining relations with the local tribesmen. In the late summer of 1847 a wagonload of infected migrants brought about an outbreak of measles. Whitman successfully treated many of the white children, but many Cayuse children—lacking immunity—died of the disease. Cayuse elders believed that the missionaries were deliberately killing their offspring, so on November 29, 1847, they massacred Whitman, his wife, and 12 others at the Waiilatpu mission. This act triggered a bitter war with the settlers. But Joe Meek so eloquently

conveyed news of Whitman's death to Washington, D.C., that Congress voted to create the Oregon Territory and to dispatch military forces there for the protection of citizens. Whitman College, in Walla Walla, was established in his memory.

### **Whitman, Narcissa** (1808–1847) *missionary*

The Presbyterian missionary Narcissa Prentiss was born in Prattsburg, New York, on March 14, 1808, the daughter of a sawmill owner. From her mother she inherited an acute religiosity, and she underwent a conversion at the age of 11 while a member of the Prattsburg Congregational Church. Well educated at several academies, Prentiss was determined to become a missionary, but as a single woman, her options were limited. In 1834 she became aware of the urgent call for missionaries to bring Christianity to NATIVE AMERICANS beyond the Rocky Mountains. However, her letter to the American Board of Commissioners for Foreign Missions went unanswered.

It was not until January 1836, when she married MARCUS WHITMAN, that she achieved her goal and entered actively into missionary service. That year Whitman accompanied her husband and a small group of other travelers to Oregon; on this journey she and fellow traveler Eliza Spaulding became the first white women to cross the Rocky Mountains by land. She then took up residence among the Cayuse in Waiilatpu on the Walla Walla River and began her work in earnest.

As a rule, Whitman disliked Indian life and encountered great difficulties communicating with Native Americans. Despite their best efforts, neither she nor her husband was able to overcome the linguistic and cultural divide separating them from their charges, and her eight years among them resulted in no new converts. Worse, in June 1839 her only child drowned, throwing her into a deep depression. By 1841 Whitman had undergone a second conversion and renewed her missionary work, again with little success. In the late summer of 1847 a new group of settlers brought on an outbreak of measles that ravaged local Cayuse children, and tribal leaders concluded that the Whitmans were poisoning them. On November 29, 1847, Whitman and her husband were massacred at their mission, along with several neighbors. Despite her failure as a missionary, her life demonstrated the impact of Evangelicalism on antebellum

middle-class women and the unusual opportunities it could present them.

### **Wilkes expedition** (1838–1842)

The Wilkes expedition was the first oceanic expedition sponsored by the U.S. government. In 1836 Congress authorized an extensive naval expedition whose goals were to circumnavigate the globe and chart the little-known waters of the South Pacific for merchants and whalers. Two years elapsed before the logistical arrangements were completed and an appropriate commander selected. Thanks to the intercession of President MARTIN VAN BUREN, the expedition leader chosen was Lieutenant Charles Wilkes, formerly head of the U.S. Navy Department of Charts and Instruments. The decision proved unpopular, given the availability of officers with more seniority. Nonetheless, Wilkes finally departed Norfolk, Virginia, on August 1838 with six small vessels and a complement of scientists.

Rear Admiral Charles Wilkes (*Library of Congress*)

Among them were geologist James Dwight Dana, horticulturist William Backenridge, and naturalist Titian Peale, who was also an accomplished artist.

Wilkes guided his flotilla down the coast of South America as far as Cape Horn, where the explorers established a base camp before proceeding farther south. They explored the waters of Antarctica for nearly a month without landing, then sailed up the coast of South America as far as Lima, Peru, where scientists went ashore to examine Inca ruins. The expedition next sailed west toward Australia and New Zealand, making subsequent stops in Tahiti and Samoa. The people living there did not welcome the intruders, however, and two crew members died in an attack by natives. Turning southward again in January 1840, Wilkes made his second investigation of Antarctica; the party sailed 1,600 miles along the icebound coastline before briefly glimpsing what was assumed to be a continental landmass. Again, icy conditions precluded any attempt at landing, so the expedition headed north to the Fiji Islands and Hawaii before turning east toward the North American coast.

In April 1841 the Wilkes expedition arrived in Oregon waters. Here the vessel *Peacock* struck a sand bar and sank while attempting to sail up the COLUMBIA RIVER. Undeterred, Wilkes dispatched several parties to the Snake and Sacramento Rivers, one of which ventured as far inland as Sutter's Fort (Sacramento, CALIFORNIA). Wilkes's landfall at Fort Nisqually, Puget Sound, served to bolster American claims in what became the Oregon Territory. The party then sailed for home and finally dropped anchor in New York on June 10, 1842.

The Wilkes expedition sailed 80,000 miles in less than four years while gathering data on 280 islands in the Pacific and 800 miles of streams and rivers in Oregon and California. Charts created by this expedition carefully recorded long stretches of the Antarctic coast. So meticulous was Wilkes in his preparation that many of his maps were still in use as late as World War II. The expedition also recorded various ethnic and anthropological observations, especially of the Native American tribes living in the Oregon region. In addition, it returned with thousands of animal and botanical specimens, many of which formed the basis of the Smithsonian Institution collection. In sum, the Wilkes expedition played a direct role in raising national awareness of the Pacific and Northwest territories and also contributed to scientific knowledge. It further demonstrated that the young republic was fully capable of mounting sustained scientific expeditions on a scale previously enjoyed only by Great Britain. Wilkes himself, a sneering, draconian figure, was subject to a court-martial for his alleged abuse of crew members but was eventually cleared. He spent nearly two decades editing 20 volumes of scientific findings. The stretch of the Antarctic coast that his expedition covered was subsequently christened Wilkes Land in his honor.

**Willard, Emma (Hart)** (1787–1870) *educator, textbook writer, poet*

Born in Berlin, Connecticut, the ninth child of Captain Samuel and Lydia (Hinsdale) Hart, Emma Willard spent her life teaching and advocating improvement in women's EDUCATION. From an early age, her father included her in family discussions about politics, philosophy, RELIGION, and morality. She was encouraged to learn on her own and think independently. In addition to her father's progressive teachings, she attended the local public school and later entered the Berlin Academy, one of the first academies established in Connecticut. In an era when girls attended school sporadically, if at all, and when educating girls was generally considered useless, or even potentially damaging, Willard's interest in learning (and the encouragement she received from her father) made her experience exceptional. She also proved to be an exceptionally gifted teacher and was asked to run the Berlin village school when she was only 17. To improve her knowledge as a teacher, she continued her own education, attending the Misses Patten's school in Hartford. She was then asked to run the winter school at the Berlin Academy and soon took over summer duties as well. In the spring and fall, she continued her learning at Mrs. Royse's school in Hartford. In 1807, she went to Middlebury, Vermont, to oversee all aspects of the Female Academy. She excelled in this role, winning the trust of Middlebury's leading citizens. In 1809, she left her position to marry John Willard, a local politician and physician. They had one child, John Hart Willard, in 1810.

John Willard supported his wife's continued interest in learning, encouraging her to study his medical and scientific books. One of her nephews, then attending neighboring Middlebury College, showed her his course of study. She was intrigued by what was being taught to young men in college and asked her nephew if she could study along with him. She mastered his coursework and asked him to test her on it. Her excellent performance encouraged her to continue studying the material that, she was beginning to see, had been closed off from her and other young women. Always motivated to learn and urged to do so, she began to see that the educational experience of most women was quite different from that of men. While boys and young

men were offered a comprehensive plan of study, women and girls were mostly given bits and pieces of intellectual matter. Female education emphasized music, French, embroidery, and other skills meant to display refinement and grace, not mental acumen. Realizing through her own experiences that women could learn about the higher or more difficult subjects just as well as men, Willard began to ponder how the disparity between men's and women's education might be remedied.

Obligated to teach once again because of her husband's financial difficulties, Willard began to think more seriously about ways to promote women's education. To that end, in 1814 she founded the Middlebury Female Academy, where she combined traditionally female subjects with traditionally male subjects such as mathematics and history. Barred from sitting in on classes at Middlebury to bolster her own ability to teach these subjects, she was left to teach herself and devise her own techniques for teaching these topics to her students. Her experiences in Vermont led her to think that her ideas might meet with more success in New York. In 1818, she sent an appeal to New York governor DeWitt Clinton, asking for more public funding for girls' schools. She argued that better education for women would not undermine male and female roles, but rather it would improve the prospects of the young republic by ensuring that children raised by educated mothers would be more virtuous citizens. Her *Plan for Improving Female Education* (1819) received some support when she addressed groups of New York legislators, but most of her listeners still believed that educating women would interfere with their God-given duties as helpmates for men.

Willard established another female academy in Waterford, New York, hoping the legislature would provide state funds for her endeavor. When this assistance failed to appear, the academy was saved by the intervention of prosperous citizens in nearby Troy, a booming canal town with progressive and ambitious ideas about education. Willard moved her school to Troy, where it survived and began to prosper, even without state aid. Students at the Troy Female Academy learned a combination of the lighter traditional subjects and the more rigorous intellectual subjects previously reserved for men. Always looking for better ways to teach, Willard thought the existing textbooks were inadequate and off-putting to students. With typical vigor and creativity, she began writing her own texts: *A System of World Geography* (1824); *History of the United States, or Republic of America* (1828); and *A System of Universal History in Perspective* (1835). These were hailed as more accessible tools for educating about these subjects and were some of the best-selling textbooks of the 19th century. Always zealous in promoting her cause, Willard continued to write about education reform and publicized her

Emma Willard (Hulton/Archive)

ideas energetically. She encouraged her students to serve their country by becoming teachers themselves, hoping to send her pupils out to the newly settled West to provide the schooling so lacking on the frontier. She traveled far herself, promoting the cause of education reform around the nation and in Europe.

In 1838, Willard retired from active teaching at the Troy Female Academy, but she continued to be a powerful figure at the school until her death. Her first husband, John Willard, died in 1825. After retirement and a brief, unhappy second marriage, she returned to her work, proposing ways to improve the common schools in Connecticut and other states. She continued to write, publishing books in her later years on subjects ranging from physiology to history to astronomy. While Willard opposed women's suffrage as unnecessary and politically counterproductive to the cause of women's education, she continued to advocate for women's financial independence and the liberating effects of rigorous education. She continued on as an inspiring, charismatic presence at the Troy Female Academy until her death in 1870. The academy was renamed the Emma Willard School as a tribute to the vision of its founder, the first American woman to publicly advocate better education for women. Her school became a model for other academies, seminaries, and colleges for women in the United States and around the world.

**Williams, Peter, Jr.** (ca. 1780–1840) *activist, minister*  
Born in New Jersey sometime around 1780, Peter Williams, Jr., moved to New York at an early age and became one of New York City's leading African-American clergymen and activists. The son of an enslaved man (and Revolutionary War veteran) and a black indentured woman, he was educated at one of the abolitionist schools for free blacks. As an activist, Williams published some of the earliest pamphlets by an African American against racial injustice. His first such essay, entitled *An Oration on the Abolition of the Slave Trade*, was published in 1808. While celebrating the recent congressional ban on slave imports, Williams also attacked continued racial oppression.

Throughout his life, Williams worked passionately for such issues as black EDUCATION, community uplift, and the ABOLITION MOVEMENT. He was a member of the African Society for Mutual Relief; a supporter of the first black-run newspaper, *Freedom's Journal* (inaugurated in New York City in 1827); and, later in his life, a founder of two educational groups, the African Dorcas Association (1828) and the Phoenix Society (1833). In addition, Williams joined the new generation of immediate abolitionists rising in American culture during the 1830s. As the editors of *The Black Abolitionist Papers* put it, "Williams firmly established his credentials as a leading black abolitionist by the 1830s." From 1833 to 1836, he served on the American Anti-Slavery Society's Board of Managers and was one of its very few black Executive Committee members.

Williams also gained fame for starting St. Phillips Episcopal Church in New York City. After a period of tutelage under a white Episcopal theologian, and after having led a group of black Episcopalians in worship, Williams organized St. Phillips 1819. The congregation expanded to more than 200 families during the next several years, making St. Phillips one of the city's leading African-American churches. Williams became an ordained Episcopal priest in 1826. According to *The Black Abolitionist Papers*, Williams encountered hardship during the 1830s when "rumors that he had conducted an interracial marriage provoked a white mob to destroy his church and Rectory." Told by a bishop in 1834 to formally resign his station in antislavery societies promulgating racial equality, Williams did so but remained at the head of his congregation. He continued to work as an abolitionist, however, attending antislavery meetings and promoting his activist views. One of Williams's last acts in this regard came in 1836 when he received a passport for a trip to England. Although he endured discrimination during his travels, he also claimed American citizenship

through the passport, thereby justifying many black abolitionists' claims to equality.

**Wilmot Proviso** See VOLUME V.

### women's status and rights

In the Antebellum United States, a woman's status and rights depended on the law, economics, culture, custom, EDUCATION, ethnicity, and race. By 1860, the efforts of reformers had begun to expand the boundaries of women's concerns, challenge the cultural prejudices that limited their experiences, and set them on the road toward suffrage.

The most basic element of a woman's status was whether she was free or enslaved. Legally, enslaved women were considered the property of their owners and counted as three-fifths of a person for the purpose of the census. As property, enslaved women could not contract and therefore could not marry in the eyes of the law. While many enslaved men and women did engage in fulfilling, consensual relationships that constituted marriage by any other name, the law did not recognize them as such, allowing owners to separate husbands and wives on a whim. An enslaved woman's children were not hers to keep, but rather the property of her owner, who could sell them or remove them at any time. Conception itself was often out of an enslaved woman's control, as sexual abuse was common and her right to seek legal redress often nil. An enslaved woman's status in American society was further compromised by stereotypes. Young women were painted as sly, sexual predators who could not be trusted, while older women were represented as slow, unfeminine, and devoted to their owner's family. These stereotypes suggested that enslaved women did not have or care for families of their own, that they had no relationships within the slave community that were as important as those they had with whites, and that they were intrinsically unsuited for freedom.

These marks of status were imposed from outside the slave community and did not encompass an enslaved woman's own sense of self. Enslaved men and women engaged in sexual, romantic, and emotional relationships with one another, regardless of the law's opinion of the same. Extended family networks were created and maintained through blood ties and friendship, despite the separations imposed by the institution under which they lived. Enslaved men and women engaged in slowdowns, outright disobedience, and rebellion, and sometimes they ran away. Each of

these acts spoke of their own sense of identity and status, pushing back against the expectations of white culture.

A free woman's legal status depended most significantly on whether she was married or not. An unmarried single woman over the age of 18 was able to contract, sue, be charged with criminal activity, own property, make wills, run a business in her own name, and keep her earnings. Once married, however, a woman's legal identity was suspended in that of her husband. He gained control of all property she brought to the marriage, any she gained afterward, her earnings, her ability to contract and sue, and sexual access to her body. A wife could not testify against her husband since the two were legally one, and their children were considered to be in his custody. There were exceptions to these rules, brokered by courts of equity, by some criminal matters, and by premarital trusts. For the majority of women, however, marriage made them the legal dependents of their spouse.

Divorce did exist in the early 19th-century United States, but it was difficult to obtain. Originally judged by state and territorial legislatures, and later by the courts, successful divorce petitions had to demonstrate that one party was guilty of a moral offense against the other and that the latter had remained blameless. A woman whose husband had committed adultery, for example, might be successful in obtaining a divorce. A couple who had both committed adultery and were unhappy together, however, would rarely be able to divorce, since there was no innocent party in the marriage for the courts or legislatures to protect. The most common grounds for divorce were adultery or impotence. Many states and territories would allow couples to legally separate if there were evidence of extreme violence in the marriage, a failure of the husband to provide, or if one or the other spouse had been abandoned. The rules of divorce varied from state to state, causing some husbands and wives to move in order to benefit from more liberal laws. Indiana and Utah gained reputations as "divorce-mills," churning out divorces as if they were products for sale, yet South Carolina refused to allow any divorce until 1868.

A free woman's choice to marry or stay single, however, was conditioned by the economic opportunities available to her. Women were prohibited from most professions, trades, and apprenticeships during the early 19th century, leaving few women with the personal or familial wealth to be able to support themselves without getting married. Even if they possessed such wealth, they were legally prohibited from engaging in sexual relationships outside the bonds of matrimony. A woman who wanted such a relationship, therefore, was forced to marry or face the fierce moral and cultural disapproval of her family and peers.

Wealth had always provided individuals with a certain status in America, but as the 19th century progressed, industrialization changed and heightened the link between

the two. In preindustrial America, almost everyone worked in or around their home. Goods and services were bartered and traded for one another, and few items were bought or sold for cash. With the advent of industrialization, however, many families moved to cities, and work became synonymous with laboring for wages outside the home. For women, the change had two repercussions. The first was that labor inside the home—the business of housekeeping for your own family, for example—ceased to be recognized as work. The second was that working for wages became a mark of your low social rank.

For many social critics, journalists, editors, preachers, and politicians, the social changes unleashed by INDUSTRIALIZATION were disruptive and often frightening. Stability quickly became associated with the actions of women, whose role as mothers provided a constant amid a sea of change. A woman's role in the home was lauded by popular culture, identified as a vital balance to the struggles of the working world. It quickly became a mark of status for a man to make enough money to afford to keep his wife at home, whether he managed a factory or worked in the fields.

Women who did stay at home were not, as popular culture suggested, ladies of leisure. Housekeeping, even with the aid of hired help, required constant attention, a situation complicated further by the standards of decoration and entertainment that became associated with maintaining a high social rank. Elaborate furniture required meticulous dusting, while the fashion for embroidered chairs and wall hangings demanded creativity, planning, and time. Women communicated their status to others by their dress and appearance; such dress-making and hair styling were time-consuming affairs. High-ranking women produced status through their labor in the home just as much as their husbands did through their work outside it.

Most working families became stigmatized by these cultural ideals. Men who could not support their families were considered unmasculine. Women were castigated for failing themselves and their children by working outside the home. Health problems, poverty, domestic violence, and illiteracy were all at some time or another blamed on the "problem" of the working wife. Yet working women often faced a bitter choice: work outside the home or face the possibility of hunger and homelessness.

The theory that women were domestic nurturers spilled over into other areas of their lives. Since the American Revolution, the idea that women should be educated in order to raise properly patriotic sons and daughters had smoothed the way for the foundation of a number of female-oriented schools. While the rich had easier access to education than the poor, literacy rates for women rose steadily throughout the 19th century, and many went on to become teachers. Lauded by reformers such as Catharine Beecher, teaching was considered an extension of

motherhood and therefore a fitting profession for women to enter. School boards and districts also paid women less than men (rationalizing that they had no families to support), making female teachers a cost-effective way to expand the provision of education.

It was also as mothers (and mothers-to-be) that many women became involved in social reform. The TEMPERANCE MOVEMENT of the early 19th century was particularly noteworthy in this respect. Women argued that wives needed protection from the violence and wastefulness of drunken husbands. As concerned mothers, they lobbied politicians, circulated petitions, and held public lectures to raise social awareness about their cause. The earliest changes in a woman's legal status also relied on the rhetoric of motherhood. The married women's property acts of the early 19th century, first passed in Mississippi in 1839, allowed women to regain control of their property after marriage in order to protect them against their husbands' debts. The reforms had little to do with equality, but rather with protecting women and children from neglect.

The same qualities presumed to make women excellent mothers and guardians of the home lent themselves to the suggestion that women were, generally, morally superior to men. So rose the concept of "public housekeeping"—the idea that women were the guardians of a society's morals and that the talents they used at home made them invaluable beyond its bounds. Abolitionist women made particular use of this argument. In 1836, for example, Angelina Grimké wrote *An Appeal to the Christian Women of the South*, in which she argued that southern women had a particular responsibility to sway their husbands, fathers, brothers, and sons to the ABOLITION MOVEMENT. While such rhetoric allowed many women to gain acceptance as public reformers, they still faced opposition. Grimké's pamphlet was burned in the South, and her lectures were condemned by the clergy of Massachusetts as improper and unfeminine.

By the mid-19th century, however, such rhetoric began to change. In 1848, a women's rights convention was held at SENECA FALLS, New York. The brainchild of abolitionist and Quaker minister LUCRETIA MOTT and reformer Elizabeth Cady Stanton, the convention brought together around 300 men and women who believed that women's rights needed direct and urgent redress. The participants at the convention debated and signed "The Declaration of Sentiments," a document penned by Stanton and based on the Declaration of Independence. "We hold these truths to be self evident," claimed the convention goers, "that all men and women are created equal."

The document claimed specific grievances. It lamented the exclusion of women from the electoral, legislative, and judicial process and argued that marriage reduced them to legal infants. The women of Seneca Falls opposed paying taxes to a government that did not represent them, and they

demanded control over their property, contracts, and deeds. They charged society at large with limiting them through a moral double standard and abhorred the prejudice that kept them out of higher education, professions, and business. Man had no right to limit woman's desires or achievements, they argued. Such a prerogative belonged solely to God.

The convention-goers did not ask for rights so that they might be better wives and mothers. Instead, they asked for the rights due to them as citizens of the United States. The "Declaration of Sentiments," steeped in Revolutionary War ideology, demanded no less than a social, political, and economic revolution on behalf of women. The convention launched an organized women's rights movement in the nation that would span decades. This movement often clashed with traditional women's reform because of its unapologetic claim that women deserved the same legal and social rights as men without qualification or concession to cultural norms.

The drive for women's rights developed an impetus all its own over the following decade and quickly separated itself from issues and organizations better associated with temperance and abolition. Within months of the Seneca Falls convention, other women's gatherings cropped up in New York, Massachusetts, and Ohio, and in October 1850 the first national women's rights convention met in Worcester, Massachusetts. Paulina Wright Davis, more celebrated as an abolitionist and women's health reformer, served as president and articulated a broader-based movement that would encompass education, business, professional, and, above all, political reform. Her appeal resonated with many like-minded activists, and they readily took to writing newspaper columns, lecturing, and organizing other conventions. Henceforth, timid acceptance of domesticity began receding and was replaced with a vocal chorus for change.

The 1850s was also a period of press radicalization, and it witnessed the first women's publications, such as *Una*, *Lily*, and *Woman's Advocate*, all of which openly discussed women's rights as well as literary, labor, and other reform issues. This coincided with a rebellion against accepted women's fashions, which many activists felt were constraining and even detrimental to women's health. Foremost among them was AMELIA BLOOMER, who railed against conventional attire such as hoopskirts and tight-fitting corsets and championed a looser "Turkish dress" featuring loose-fitting pants or "bloomers." The style never caught on in fashion circles, but it established a political precedent. By mid-decade female speakers and authors who proposed sweeping reform in virtually every aspect of women's lives were met with grudging male acceptance. Considering the initial resistance, even among women active in the temperance and abolition movements, this was a significant development, and it empowered and emboldened the women's rights movement. The growth and maturation of the move-

ment during the antebellum period was considerable and carried it to greater levels of public visibility in the post-Civil War period.

Despite this visibility, the movement was culturally specific. Enormous problems arose, for example, when reformers turned their attention to Native American women. Rather than seeking to understand the complexity of American Indian cultures, reformers compared the role of men and women in various tribal societies to their own understanding of appropriate gender behavior and rights. The result was an effort to remake Native American societies in the image of Euro-America. This effort spanned the entire 19th century, and involved education, missionary work, and legal reform. The result, however, was often the impoverishment of tribal communities and the disruption of their traditions, sparking massive resistance from many American Indian women and men.

**Wright, Fanny** (1795–1852) *abolitionist, women's rights activist, commune founder*

Frances (Fanny) Wright was born in Dundee, Scotland, on September 6, 1795. By the age of two, she had lost both

her parents and was sent with her sister to be raised by relatives in London, England. There she stayed until the age of 21, when she returned to Scotland to live with James Milne, her great-uncle and a professor at Glasgow College. Fanny used the time to her advantage, studying in the college's vast library. A year later, armed with a keen mind and the fortune left to her by her parents, she journeyed to the United States. Wright was favorably impressed by what she saw, considering American society to be extremely progressive compared to the Europe she had left behind. On her return to England, Wright published her thoughts in *Views of Society and Manners in America*. The book caught the attention of the Marquis de Lafayette, the French hero of the American Revolution, and the two became friends. Wright accompanied Lafayette on his 1824 trip to the United States, where she had the opportunity to meet Thomas Jefferson and James Madison, among others.

Wright's travels throughout the United States brought her into close contact with the institution of SLAVERY. The brutality of the system appalled her, and she became an increasingly vocal proponent of gradual emancipation. Wright believed that abolition should be the concern of the federal government and advocated that Congress set aside land on which slaves could be relocated, trained for freedom, and allowed to work to purchase their liberty. In the hopes of convincing others of her ideas, Wright purchased 640 acres of land in western Tennessee in 1825, naming the property Nashoba. There she settled a community of enslaved men and women, promising them their eventual freedom. The experiment was plagued with difficulties from the outset, including sensational reporting in the press and outbreaks of swamp fever. By 1830, Wright was forced to admit that her plan had failed, and she freed the slaves, arranging for their transportation to Haiti.

The failure of the Nashoba experiment did nothing to dampen Wright's commitment to the ABOLITION MOVEMENT or a variety of other social causes. During this period, Wright became friends with ROBERT OWEN and went to live at his utopian community in New Harmony, Indiana. There she became editor of the *New Harmony Gazette* and later of the *New York Free Enquirer*, a newspaper particularly well known for its advocacy of public EDUCATION and working-class activism. At the same time, she entered the lecture circuit, arguing for changes in popular and legal conceptions of marriage, more lenient divorce laws, the safe and widespread practice of birth control, abolition, and the education of women. She also spoke against the practice of capital punishment. Wright published these ideas in two volumes of *Courses of Popular Lectures* in 1829 and 1836. Many Victorians considered her lectures to be scandalous. Not only did Wright speak publicly about issues of sexuality and women's rights, she also spoke to mixed audiences of men and women, defying polite convention.

In 1830 Wright traveled to France, where she met Guillaume Sylvan Casimi Piquetpal D'Arusmont. The pair were married in 1831, and Wright divided much of her time in the 1830s between France and the United States. She campaigned for the DEMOCRATIC PARTY in 1836 and 1838 and continued to give periodic lectures on social issues for the remainder of her life. She and her husband divorced in 1850, and Wright died two years later in Cincinnati, Ohio. Her ideas exerted a lasting influence on women's rights activists throughout the 19th century.

**Wyeth, Nathaniel J.** (1802–1856) *American entrepreneur, fur trader*

Nathaniel Jarvis Wyeth was an entrepreneur who raised Americans' awareness of the opportunities of the West. Born in Cambridge, Massachusetts, on January 29, 1802, Wyeth was the son of a hotel owner. As a young man he worked cutting ice for shipment and eventually patented a horse-drawn ice-cutting device. However, Wyeth dreamed of building a trading empire in the Oregon Territory, and in 1832 he departed with 25 men to establish a fur-trading company on the COLUMBIA RIVER. Several of Wyeth's party deserted him by the time they reached Pierre's Hole

(Wyoming), and he commanded a party of only 18 when he arrived at FORT VANCOUVER. Worse, the vessel he had contracted to meet him there, the *Sultana*, had shipwrecked in the South Pacific. Undeterred, Wyeth spent the next five years trying to establish himself as a force in the fur trade, dealing variously with the AMERICAN FUR COMPANY and the Hudson's Bay Company. But exceptional bad luck thwarted him, and he came home in 1833.

That year Wyeth established his own mercantile business in Boston, the Columbia River Fishing and Trading Company. The following year he joined JASON LEE's missionaries and a handful of scientists returning to Oregon, but his business efforts proved no more successful. He attempted to trap for the ROCKY MOUNTAIN FUR COMPANY, but they refused to purchase his goods. Wyeth then spent additional funds constructing Fort Hall on the Snake River as a base to conduct his own fur trading. An attempt to enter the salmon-packing business also failed when the vessel he had contracted was damaged en route and showed up three months after the fishing season ended. Wyeth finally abandoned his effort in 1836 and returned to Boston. He was successful in the ice and refrigeration business until his death in Cambridge on August 31, 1856. Though marginal in overall impact, Wyeth helped to advertise and glamorize western immigration through his extensive correspondence with eastern businessmen and political figures.

**Young, Brigham** (1801–1877) *Second president of the Church of Jesus Christ of Latter-Day Saints*

Brigham Young was one of the most important colonizers in the American West in the 19th century. He was born in Whittingham, Vermont, and, like the Mormon prophet JOSEPH SMITH, JR., grew up in a poor, rural environment. The family moved constantly, eventually setting in upstate New York. Young's large family—he was the ninth of 11 surviving children—was intensely moral and religious. Like others in his rural and isolated world, he had little formal EDUCATION, and he apprenticed himself as a carpenter and painter. In 1824, he married his first wife, Miriam Works.

Originally a Methodist, Young came into contact with the Mormon Church in 1830, the year Joseph Smith published the Book of Mormon and incorporated the church under New York State law. Young gradually became converted to the millennialist core of the church, its moralist beliefs, and, above all, the magnetism and presence of its founder and prophet, Joseph Smith, Jr. Perhaps Young was also attracted to the idea of a lay priesthood in which male members of the church came to exercise authority and influence. Whatever his reasons, Young and his family joined the church in 1832.

From the beginning, Young labored full-time on behalf of his new church, going on several missions and fulfilling other ministerial tasks. The church had become both a route to salvation and an avenue to worldly advancement. In 1835, Smith appointed him to the Council of Twelve, the ruling body of the church. After the Mormon community in Missouri disintegrated under the pressure of casual violence and official condemnation, Young, as the senior member at large (Smith and other church leaders were then in a Missouri jail) took charge of the Mormon immigration from Missouri to Illinois. He would later demonstrate this organizational skill in directing other Mormon migrations. When Smith established the Mormon settlements at NAUVOO, he sent Young to

head missionary activities in England, where he was enormously successful.

In 1841 Young returned to Nauvoo, where he was quickly initiated into the new Mormon rituals. The most dramatic was the doctrine of POLYGAMY, or plural wives, which was secret, publicly disavowed by the church, and practiced by only a few leaders. Young immediately embraced the new policy; he would eventually marry 55 women. In 1844, Smith announced himself a candidate for president of the United States, and Young journeyed east to work on behalf of the Mormon prophet's candidacy.

Young was in Boston when he received news of Smith's assassination in June 1844. He immediately returned to Nauvoo, where he was elected as the church's leader. His first duty was to arrange a truce with the neighboring mobs, and in this he was partially successful. His refusal to seek revenge for Smith's death won him a period of quiet, but he could not make a lasting peace. In 1845, attacks on outlying Mormon settlements began again, and the entire Mormon community around Nauvoo was in danger. Young rapidly organized the emigration of the entire church to the West. The first party left in the middle of winter and crossed the Mississippi on the ice, moving across Iowa to a camping site near Omaha. Young directed that a series of outfitting stations be established along the route to serve subsequent parties. "Winter Quarters," as it came to be known, was an elaborate community of some 12,000 governed by a theocracy, but it was only temporary. In spring 1847, Young led a pioneer company to the West, and when he reached the Great Salt Lake Valley, he pronounced it the site of the future gathering of Zion. On his return, he called a meeting of church leaders and had himself declared "prophet, seer, and revelator." He was now the absolute leader of the church, with the same powers of the original prophet Joseph Smith.

The Great Basin was an ideal location for the church. It was possessed of enough natural resources to make a thriving community possible, and it was sufficiently remote

Brigham Young (*Library of Congress*)

to keep it distant from other settlers. Young sought to insure the safety of the church by laying out a vast territory that he called the **STATE OF DESERET**. The limits of the territory included some of present-day Idaho, Nevada, and **CALIFORNIA**. In order to ease the migration of converts from Europe (especially England), he established a warm-weather route of access through Southern California, by way of San Bernadino to St. George, and thence to the Great Salt Lake Valley. Young established numerous settlements in Nevada to protect his Southern California connection. He laid out numerous towns along the base of the Wasatch Range, including (in addition to Salt Lake City) Provo, Utah, and Lemhi, Idaho.

Young established a structure of government in the form of a theocracy. The church and its leaders, principally Young himself, made all the important decisions, with the church at the head. The church, in the person of its leader Brigham Young, granted land and water rights to chosen settlers. He brought together in himself the branches of the executive, legislature, and judiciary. When Congress organized Utah Territory in 1850, the president appointed Young governor of the territory, recognizing the reality of the Utah settlement. But the judges appointed to serve the territory were non-Mormons. They quickly found them-

selves ostracized and their authority circumscribed by the activities of the church bishops in referring legal cases to the church courts. The relations of the federal government with Young and the Mormons were further strained by Young's public announcement of the doctrine of polygamy in 1852.

Conflict between Young and the U.S. government grew throughout the 1850s, in the midst of a growing sectional violence over **SLAVERY** in the East and a rising strain of anti-Mormon feeling, rising to a fever pitch over the issue of polygamy. In 1857, President James Buchanan declared the Mormons and their leader in rebellion against the nation and ordered U.S. troops to Utah Territory, an action known as the **MORMON WAR**. After much deliberation, Young decided not to oppose the invasion by force. Instead, he and other church leaders went into hiding, and an army of occupation settled into Utah Territory for two years. This period of occupation was characterized by a degree of accommodation on both sides, but Young never compromised what he regarded as the will of the church. He was eventually removed as governor of the territory, and the troops retired to the East with the coming of the Civil War (1861–65).

The war provided a prolonged period for Young to direct the affairs of the church without interference. Although the federal government had reduced the size of the State of Deseret to the boundary of the present state of Utah (Young had sold the ranch in San Bernadino), he continued to supervise the founding of settlements throughout the limits of the territory. He also laid the foundations of a self-sufficient **ECONOMY** through the Zion's Cooperative Mercantile Institution and several other cooperatives. Young finally had to come to terms with the growing proximity and influence of American society into the affairs of his church domain, as exemplified by the arrival of the transcontinental railroad at Promontory Point, Utah, in 1869. That he was able to make these transitions and expand the scope and influence of the Mormon church throughout the American West was a final tribute to his genius.

Young was not an important figure in Mormon doctrine, as he built on the dogma and rituals of Joseph Smith and vigorously defended unpopular practices such as polygamy. He is perhaps best known in the modern age for his pronouncement in 1847 that black men could not hold the office of the priesthood, a condition of participation in the affairs of the church open to all men. (This ban on **AFRICAN AMERICANS** as priests in the church remained in effect until 1978.) But as an organizer and colonizer, Young proved himself a remarkable leader, presiding over church expansion in area and numbers. When he died in 1877, the Mormon population in Utah numbered 125,000, and its settlements more than 200.

In his personal life, Young had at least 55 wives (some historians say more); and 16 of his wives would bear him 57 children. Young was also a successful pioneer businessman in the Great Basin. Among his various business enterprises were a ferryboat company, a wagon-express company, and later interest in a railroad. He also owned extensive valuable real estate and operated a number of successful early manufacturing businesses. His estate exceeded \$600,000, making him the wealthiest member of the church at the time.

# Chronology

## 1812

In response to British attacks on American shipping, the United States declares war on Great Britain; the conflict is known as the War of 1812.

Indian leaders Tecumseh and Black Hawk ally their forces with the British.

## 1813

American forces are victorious at the Battle of the Thames, which also results in the death of Tecumseh.

James Madison begins his second term as president.

## 1814

British forces seize Washington, D.C., and burn the White House and the Capitol.

The Treaty of Ghent, negotiated largely by Albert Gallatin and John Quincy Adams, ends the War of 1812.

## 1815

Unaware that the War of 1812 has ended, British troops instigate the Battle of New Orleans; they are defeated by an American army led by General Andrew Jackson.

Red Jacket becomes a powerful leader of the Seneca Indian nation.

## 1816

Democratic-Republican James Monroe is elected president over Federalist Rufus King.

*Martin v. Hunter's Lessee* affirms the U.S. Supreme Court's right to review the decisions of state courts in all cases involving U.S. laws, treaties, and the Constitution.

Jim P. Beckwourth, one of the first mountain men, becomes a scout for the Ashley fur trading expedition.

## 1817

The First Seminole War, between the United States and the Seminole Indians of Florida, begins; many runaway slaves support the Native Americans in battle.

DeWitt Clinton, governor of New York, authorizes the construction of the Erie Canal.

Davy Crockett serves as a scout in the conflict between western settlers and the Creek Indians.

The American Colonization Society is founded to send former slaves back to Africa.

Great Britain and the United States agree to the mutual demilitarization of the Great Lakes and Lake Champlain in the Rush-Bagot Agreement of 1817.

## 1818

The Convention of London resolves U.S.-British disputes over the northern boundary of the Louisiana Purchase and the settlement of the Oregon Territory.

## 1819

Spain cedes all of Florida to the United States in the Adams-Onís Treaty.

In *Dartmouth College v. Woodward*, the U.S. Supreme Court upholds the sanctity of the college charter as a contract under the Constitution. The decision encourages business growth by limiting state control over charters or private corporations.

The U.S. Supreme Court finds in *McCullough v. Maryland* that the state of Maryland's imposition of a tax on the Bank of the United States is unconstitutional.

## 1820

While on a sailing voyage in the South Atlantic, Captain Nathaniel Brown Palmer discovers the continent of Antarctica.

The U.S. Congress adopts the Missouri Compromise, or the Missouri Enabling Act, which aims for a balance between free and slave states. The compromise eases tensions between the increasingly industrial North and the

## 412 Chronology

agricultural, slaveholding South by prohibiting slavery in the Louisiana Purchase north of the 36°30' latitude.

The Land Act of 1820 abolishes the credit system and establishes the principle of cash only for the purchase of public lands.

### 1821

Chancellor of Columbia College James Kent's "Universal Suffrage" speech argues against the proposal to abolish the property ownership requirement for voter eligibility.

James Monroe assumes his second term as president.

### 1822

Denmark Vesey's plan for revolt, involving 9,000 slaves, is foiled in Charleston, South Carolina. Vesey and his aides are hanged.

Sequoyah, a Cherokee Indian, begins teaching his alphabet to his people, thereby creating the first Native American written language.

### 1823

The Monroe Doctrine is announced. The doctrine warns European powers that the United States will not tolerate intervention in the newly independent nations of the Western Hemisphere.

### 1824

Thomas L. McKenney is appointed the first chief of the Bureau of Indian Affairs.

The Tariff Act of 1824 increases protective duties on wool, iron, lead, glass, silk, linens, cutlery, hemp, and cotton bagging.

The U.S. Supreme Court decision *Gibbons v. Ogden* establishes the federal government's jurisdiction over interstate commerce.

Democratic-Republican John Quincy Adams wins a close presidential race over three other candidates: Henry Clay, William H. Crawford, and Andrew Jackson.

### 1825

Native American leaders of Wisconsin settle land claims with the U.S. government at the Council of Prairie du Chien.

The Erie Canal opens; it links the Great Lakes with the Atlantic Ocean, thus greatly increasing trade between the East and the West.

### 1826

John B. Russwurm, one of the first African Americans to earn a college degree, graduates from Bowdoin College.

James Fenimore Cooper publishes *The Last of the Mohicans*.

### 1827

The first black-owned newspaper is published by Samuel Cornish and John B. Russwurm.

The Massachusetts High School Law mandates the establishment of high schools throughout the state. It is the first such law enacted in the United States.

The Constitution of the Cherokee Nation is drafted.

Publication of *The Birds of America* by John Audubon begins.

### 1828

Construction of the Baltimore & Ohio (B&O) Railroad, the first U.S. passenger railroad, begins.

The Tariff Act of 1828 imposes duties on foreign manufactured goods and imported raw materials.

John C. Calhoun's South Carolina Exposition voices strong opposition to the Tariff Act of 1828 and legitimizes North Carolina's authority to nullify the law.

John Quincy Adams runs for reelection but is defeated by Democrat Andrew Jackson.

The "tariff of abominations" is passed.

### 1829

David Walker, a freeborn merchant in Boston, publishes *Appeal to the Colored Citizens of the World*, an antislavery pamphlet in which he urges slaves to kill their masters.

### 1830

The Indian Removal Act is signed into law, ordering the Five Civilized Tribes of the Southeast to relocate west of the Mississippi.

Senators Daniel Webster of Massachusetts and Robert Y. Hayne of South Carolina debate the importance of states' rights versus nationalism.

The first covered wagons cross the Rocky Mountains.

Dan Rice popularizes "Jim Crow" minstrel acts.

Joseph Smith, Jr., founds the Mormon Church.

### 1831

Cyrus Hall McCormick invents the mechanical reaper.

The U.S. Supreme Court decides in *Cherokee Nation v. Georgia* that it does not have jurisdiction to rule on a case where a state enforces its laws on the Cherokee.

William Lloyd Garrison publishes the first issue of the *Liberator*, a radical abolitionist newspaper.

Nat Turner leads a slave rebellion in Southampton County, Virginia.

### 1831–1861

The Underground Railroad is established by a group of antislavery activists. Over the next 30 years, some 30,000 slaves use it to escape from the South.

**1832**

The Tariff Act of 1832 lowers the high protective duties of the Tariff Act of 1828, but is labeled as a sectional measure that benefits the northern industrialized states.

The Seminole Treaty is signed. The Seminole people agree to cede lands in Florida and relocate west of the Mississippi.

The Black Hawk War, a conflict in Illinois and Wisconsin between settlers and Native Americans, ends with the defeat of Chief Black Hawk.

Andrew Jackson is reelected president over Henry Clay of the Whig Party.

Archduke Maximilian of Germany and Karl Bodmer travel among the Plains Indians.

Crisis over states' rights and the doctrine of nullification develops.

**1833**

William Lloyd Garrison founds the American Anti-Slavery Society.

The U.S. Supreme Court decision *Barron v. Baltimore* holds that the Bill of Rights is binding upon the federal government, but not upon state governments.

The Tariff Act of 1833 resolves the national dispute over tariff laws passed in 1828 and 1832.

President Jackson and Attorney General Roger Taney remove federal deposits from the Bank of the United States.

**1834**

The Currency Act of 1834 sets standards for the weight and quantity of metal in gold coins minted in the United States.

**1835**

A severe smallpox epidemic almost wipes out the Mandan, Hidatsa, and Arikara nations along the Missouri River.

Alexis de Tocqueville's *Democracy in America* is the Frenchman's analysis of the American political system.

The Texas Rangers are formed, primarily to protect white settlers against Comanche raids in Texas.

Antislavery pamphlets are removed from the U.S. mails and burned in public.

Seminole chief Osceola leads the Indians of Florida in the Second Seminole War (1835–42), resisting the federal government's order to relocate.

George McDuffie's "On the Question of Slavery" speech defends slavery and denounces antislavery campaigners for stirring insurrection and endangering the lives of white families.

In the Treaty of New Echota, the Cherokee nation relinquishes claim to its capital city, New Echota, and over 7 million acres of land.

**1836**

American settlers in the Mexican province of Texas rebel against Mexican rule. Texan defeats at Goliad and the Alamo are followed by a decisive victory at San Jacinto, and Texas becomes an independent republic under the leadership of Sam Houston.

President Jackson's Specie Circular of 1836 requires the U.S. Treasury to accept only specie (gold or silver), not paper money, as payment in the sale of public lands.

Democrat Martin Van Buren defeats Whig candidate William Henry Harrison in the presidential election.

Ralph Waldo Emerson's first volume of essays, *Nature*, is hailed as a landmark in transcendentalist literature.

Henry Blair invents a corn harvester and becomes the first African American to receive a patent.

**1837**

Elijah P. Lovejoy, a white owner of an abolitionist newspaper, is killed in a proslavery riot.

Osceola, leader of the Seminole Indians in Florida, is captured.

School reformer Horace Mann leads the Massachusetts Board of Education, which becomes a national model for public school administration.

**1838**

The first African-American magazine, *The Mirror of Liberty*, is published by abolitionist David Ruggles in New York City.

Charles Lenox Remond, a freeborn African American from Massachusetts, is hired as the first black lecturer for an antislavery society.

General Winfield Scott commands the removal of the Cherokee Indians from the southern states to the Indian Territory (now the state of Oklahoma) west of the Mississippi River.

**1839**

Samuel F. B. Morse invents the telegraph.

Joseph Cinqué and about 50 enslaved Africans revolt aboard a Spanish ship, the *Amistad*, and kill the captain and crew.

The Liberty Party, the first political party built around the antislavery cause, is organized in Warsaw, New York.

**1840**

In a spirited presidential race, William Henry Harrison defeats incumbent Martin Van Buren by a small margin.

**1841**

Frederick Douglass, an escaped slave from Maryland, begins lecturing for the Massachusetts Anti-Slavery Society.

The Land Act of 1841 establishes the principle of “preemption,” under which early settlers may buy their tracts with improvements for the minimum price.

The Oregon Trail opens.

William Henry Harrison dies in office; John Tyler succeeds him as president.

Edgar Allan Poe publishes *The Murders in the Rue Morgue*, the first American detective story.

#### **1842**

U.S. secretary of state Daniel Webster and British minister Alexander Baring, Lord Ashburton, negotiate the Webster-Ashburton Treaty of 1842 to settle heated border disputes between the United States and Great Britain.

Rhode Islanders wage the Dorr Rebellion to protest discriminatory property laws.

John C. Frémont and Kit Carson explore the Pacific Northwest; Frémont’s writings encourage emigration to Oregon.

#### **1843**

Dorothea Dix delivers an influential report to the Massachusetts legislature in which she criticizes the cruel treatment of the mentally ill in state institutions.

Sojourner Truth, a former slave, begins her career as a lecturer; she denounces slavery and promotes women’s rights.

#### **1844**

The Treaty of Wanghia opens selected Chinese ports to trade with the United States.

Painter George Caleb Bingham begins portraying life on the western frontier.

Democrat James Knox Polk is elected president over Whig Henry Clay.

#### **1845**

The U.S. Congress enacts the joint resolution that makes possible the annexation of Texas by the United States; Mexico refuses to accept Texan independence.

#### **1846**

The Independent Treasury Act of 1846 establishes an independent treasury separate from the national banking and financial system.

The Walker Tariff Act of 1846 establishes a moderate protective and revenue-generating tariff.

Three Cherokee political factions settle reimbursement issues from the Treaty of 1835 in a treaty with the Cherokee nation.

In the Bidlack Treaty between the United States and New Granada (Colombia and Panama), the United States gains rights of transit across the isthmus of Panama.

The Senate ratifies the Oregon Treaty of 1846, which sets the U.S.-Canadian border at the 49th parallel.

U.S. and Mexican troops clash on the disputed Texas-Mexico border, starting the Mexican-American War; General Zachary Taylor and his forces move into Mexico.

The House of Representatives passes the Wilmot Proviso to limit slavery in the lands acquired in the war with Mexico, and so reintroduces the volatile issue of slavery into American political life.

#### **1847**

An American force under General Winfield Scott lands at Veracruz, Mexico, marches inland, and captures Mexico City.

Henry Ward Beecher, pastor of the Plymouth Church in Brooklyn, New York, begins to advocate publicly for woman suffrage and abolition.

*Evangeline* by Henry Wadsworth Longfellow is published.

#### **1848**

James W. Marshall discovers gold on the American River in California.

The Treaty of Guadalupe Hidalgo ends the Mexican-American War; the United States gains the territory that will become the states of California, Nevada, and Utah, and most of the land that will make up New Mexico, Colorado, and Arizona. The southwestern Indians, including the Navajo, are now under U.S. jurisdiction.

The women’s rights convention at Seneca Falls, New York, is led by Elizabeth Cady Stanton, Lucretia Mott, and Lucy Stone; the meeting marks the beginning of the women’s rights movement.

The New York Married Women’s Property Act grants women the right to their own property once married, control of their own wages, and custody of their children.

Zachary Taylor, the Whig candidate, is elected president, defeating Democrat Lewis Cass.

#### **1849**

Henry David Thoreau’s essay “Civil Disobedience” advocates civil disobedience as a means for an individual to protest governmental actions that he considers unjust.

Escaped slave Harriet Tubman begins the first of her 19 Underground Railroad trips.

Amelia Jenks Bloomer begins editing the *Lily*, a newspaper concerned with women’s rights, abolition, and temperance.

The California gold rush sends thousands of prospectors across the country, hoping to get rich.

Cornelius Vanderbilt establishes a company to transport miners to California by way of Central America; the company becomes the basis of his great fortune.

Elizabeth Blackwell graduates from Geneva Medical College, becoming the first American woman to earn an M.D.

### 1850

President Zachary Taylor dies in office; Millard Fillmore succeeds him.

U.S. and British diplomats negotiate the Clayton-Bulwer Treaty of 1850 to guarantee the strict neutrality of any interoceanic canal opened in Nicaragua or elsewhere in Central America.

Nathaniel Hawthorne publishes his novel *The Scarlet Letter*.

Amid bitter debate, the U.S. Congress enacts the Compromise of 1850; the bill repeals much of the Missouri Compromise and requires northern states to assist in the capture of escaped slaves.

As part of the Compromise of 1850, the Fugitive Slave Act of 1850 requires U.S. marshals to seize runaway slaves and imposes severe penalties on anyone who aids fugitives.

Senator John C. Calhoun denounces abolitionist activity and voices his opposition to the Compromise of 1850 in his final address delivered to U.S. Congress.

### 1851

In Sojourner Truth's "A'n't I a Woman?" speech, the abolitionist argues in favor of women's equality.

At a conference at Camp Traverse des Sioux, the Santee Sioux cede large portions of land in the Minnesota Territory to the United States.

William C. Nell publishes the first historical treatment of African Americans, titled *Services of Colored Americans in the Wars of 1776 and 1812*.

### 1852

Harriet Beecher Stowe denounces slavery in *Uncle Tom's Cabin, or Life Among the Lowly*. A best-seller, it rouses

antislavery sentiment and increases the tension between the North and South.

Anthony Burns, the last fugitive slave to be returned from Massachusetts, is escorted out of Boston by 2,000 U.S. troops.

Franklin Pierce is elected 14th president of the U.S., defeating Mexican-American War hero Winfield Scott.

### 1853

*Clotel, or The President's Daughter*, by William Wells Brown, is published in England; it is the first novel by an African American.

Commodore Matthew Calbraith Perry of the U.S. Navy leads a mission that "opens" Japan to the western world.

In the Gadsden Treaty of 1853, the United States buys a strip of land from Mexico in order to build a transcontinental railroad.

Mrs. Douglass, a Virginia schoolteacher, is arrested in Norfolk for violating the state law against teaching black children to read.

### 1854

Stephen A. Douglas introduces the Kansas-Nebraska Act of 1854, which grants "popular sovereignty" to territorial governments in decisions involving slavery.

The modern Republican Party is formed.

Henry David Thoreau's *Walden* is published. His transcendentalist work communicates a reverence for nature.

### 1855

Tribal leaders from the Washington Territory cede 60,000 square miles of land to the United States at a conference in Walla Walla.

Free-Soilers in the Kansas Territory adopt their own state constitution.

Walt Whitman publishes his controversial book of poetry *Leaves of Grass*.

## War Message (1812) President James Madison

In Gaillard Hunt, ed. *The Writings of James Madison*,  
Vol. 8 (New York: G. P. Putnam's Sons,  
1900–1910), pp. 192–200

Washington, D.C.  
June 1, 1812

To the Senate and House of Representatives of the United States:

I communicate to Congress certain documents, being a continuation of those heretofore laid before them on the subject of our affairs with Great Britain.

Without going back beyond the renewal in 1803 of the war in which Great Britain is engaged, and omitting unrepaid wrongs of inferior magnitude, the conduct of her Government presents a series of acts hostile to the United States as an independent and neutral nation.

British cruisers have been in the continued practice of violating the American flag on the great highway of nations, and of seizing and carrying off persons sailing under it, not in the exercise of a belligerent right founded on the law of nations against an enemy, but of a municipal prerogative over British subjects. British jurisdiction is thus extended to neutral vessels in a situation where no laws can operate but the law of nations and the laws of the country to which the vessels belong, and a self-redress is assumed which, if British subjects were wrongfully detained and alone concerned, is that substitution of force for a resort to the responsible sovereign which falls within the definition of war . . .

The practice, hence, is so far from affecting British subjects alone that, under the pretext of searching for these, thousands of American citizens, under the safeguard of public law and of their national flag, have been torn from their country and from everything dear to them; have been

dragged on board ships of war of a foreign nation and exposed, under the severities of their discipline, to be exiled to the most distant and deadly climes, to risk their lives in the battles of their oppressors, and to be the melancholy instruments of taking away those of their own brethren.

Against this crying enormity, which Great Britain would be so prompt to avenge if committed against herself, the United States have in vain exhausted remonstrances and expostulations, and that no proof might be wanting of their conciliatory dispositions, and no pretext left for a continuance of the practice, the British Government was formally assured of the readiness of the United States to enter into arrangements such as could not be rejected if the recovery of British subjects were the real and the sole object. The communication passed without effect.

British cruisers have been in the practice also of violating the rights and the peace of our coasts. They hover over and harass our entering and departing commerce. To the most insulting pretensions they have added the most lawless proceedings in our very harbors, and have wantonly spilt American blood within the sanctuary of our territorial jurisdiction. The principles and rules enforced by that nation, when a neutral nation, against armed vessels of belligerents hovering near her coasts and disturbing her commerce are well known. When called on, nevertheless, by the United States to punish the greater offenses committed by her own vessels, her Government has bestowed on their commanders additional marks of honor and confidence.

Under pretended blockades, without the presence of an adequate force and sometimes without the practicability of applying one, our commerce has been plundered in every sea, the great staples of our country have been cut off from their legitimate markets, and a destructive blow aimed at our agricultural and maritime interests. In aggravation of these predatory measures they have been considered as in force from the dates of their notification, a

retrospective effect being thus added, as has been done in other important cases, to the unlawfulness of the course pursued. And to render the outrage the more signal these mock blockades have been reiterated and enforced in the face of official communications from the British Government declaring as the true definition of a legal blockade “that particular ports must be actually invested and previous warning given to vessels bound to them not to enter.”

Not content with these occasional expedients for laying waste our neutral trade, the cabinet of Britain resorted at length to the sweeping system of blockades, under the name of orders in council, which has been molded and managed as might best suit its political views, its commercial jealousies, or the avidity of British cruisers . . .

Abandoning still more all respect for the neutral rights of the United States and for its own consistency, the British Government now demands as prerequisites to a repeal of its orders as they relate to the United States that a formality should be observed in the repeal, of the French decrees nowise necessary to their termination nor exemplified by British usage, and that the French repeal besides including that portion of the decrees which operates within a territorial jurisdiction, as well as that which operates on the high seas, against the commerce of the United States should not be a single and special repeal in relation to the United States, but should be extended to whatever other neutral nations unconnected with them may be affected by those decrees. And as an additional insult, they are called on for a formal disavowal of conditions and pretensions advanced by the French Government for which the United States are so far from having made themselves responsible that, in official explanations which have been published to the world, and in a correspondence of the American minister at London with the British minister for foreign affairs such a responsibility was explicitly and emphatically disclaimed.

It has become, indeed, sufficiently certain that the commerce of the United States is to be sacrificed, not as interfering with the belligerent rights of Great Britain; not as supplying the wants of her enemies, which she herself supplies; but as interfering with the monopoly which she covets for her own commerce and navigation. She carries on a war against the lawful commerce of a friend that she may the better carry on a commerce with an enemy—a commerce polluted by the forgeries and perjuries which are for the most part the only passports by which it can succeed . . .

In reviewing the conduct of Great Britain toward the United States our attention is necessarily drawn to the warfare just renewed by the savages on one of our extensive frontiers—a warfare which is known to spare neither age nor sex and to be distinguished by features peculiarly shocking to humanity. It is difficult to account for the activity and combinations which have for some time been developing

themselves among tribes in constant intercourse with British traders and garrisons without connecting their hostility with that influence and without recollecting the authenticated examples of such interpositions heretofore furnished by the officers and agents of that Government.

Such is the spectacle of injuries and indignities which have been heaped on our country, and such the crisis which its unexampled forbearance and conciliatory efforts have not been able to avert. It might at least have been expected that an enlightened nation, if less urged by moral obligations or invited by friendly dispositions on the part of the United States, would have found its true interest alone a sufficient motive to respect their rights and their tranquillity on the high seas; that an enlarged policy would have favored that free and general circulation of commerce in which the British nation is at all times interested, and which in times of war is the best alleviation of its calamities to herself as well as to other belligerents; and more especially that the British cabinet would not, for the sake of a precarious and surreptitious intercourse with hostile markets, have persevered in a course of measures which necessarily put at hazard the invaluable market of a great and growing country, disposed to cultivate the mutual advantages of an active commerce.

Other counsels have prevailed. Our moderation and conciliation have had no other effect than to encourage perseverance and to enlarge pretensions. We behold our seafaring citizens still the daily victims of lawless violence, committed on the great common and highway of nations, even within sight of the country which owes them protection. We behold our vessels, freighted with the products of our soil and industry, or returning with the honest proceeds of them, wrested from their lawful destinations, confiscated by prize courts no longer the organs of public law but the instruments of arbitrary edicts, and their unfortunate crews dispersed and lost, or forced or inveigled in British ports into British fleets, whilst arguments are employed in support of these aggressions which have no foundation but in a principle equally supporting a claim to regulate our external commerce in all cases whatsoever.

We behold, in fine, on the side of Great Britain, a state of war against the United States, and on the side of the United States a state of peace toward Great Britain.

Whether the United States shall continue passive under these progressive usurpations and these accumulating wrongs, or, opposing force to force in defense of their national rights, shall commit a just cause into the hands of the Almighty Disposer of Events, avoiding all connections which might entangle it in the contest or views of other powers, and preserving a constant readiness to concur in an honorable re-establishment of peace and friendship, is a solemn question which the Constitution wisely confides to the legislative department of the Government. In recommending it to their early deliberations I am happy in the

assurance that the decision will be worthy the enlightened and patriotic councils of a virtuous, a free, and a powerful nation . . .

#### **Treaty of Peace and Amity**

Between his Britannic Majesty and the United States of America.

His Britannic Majesty and the United States of America, desirous of terminating the war which has unhappily subsisted between the two countries, and of restoring, upon principles of perfect reciprocity, peace, friendship, and good understanding between them, have, for that purpose, appointed their respective plenipotentiaries, that is to say: His Britannic Majesty, on his part, has appointed the right honorable James Lord Gambier, late admiral of the white, now admiral of the red squadron of His Majesty's fleet, Henry Goulburn Esquire, a member of the Imperial Parliament, and under Secretary of State, and William Adams, Esquire, Doctor of Civil Laws:—And the President of the United States, by and with the advice and consent of the Senate thereof, has appointed John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell and Albert Gallatin, citizens of the United States, who, after a reciprocal communication of their respective full powers, have agreed upon the following articles:

#### **Article the First**

There shall be a firm and universal peace between His Britannic Majesty and the United States, and between their respective countries, territories, cities, towns, and people, of every degree, without exception of places or persons. All hostilities, both by sea and land, shall cease as soon as this treaty shall have been ratified by both parties, as hereinafter mentioned. All territory, places, and possessions whatsoever, taken by either party from the other, during the war, or which may be taken after the signing of this treaty, excepting only the islands hereinafter mentioned, shall be restored without delay, and without causing any destruction, or carrying away any of the artillery or other public property originally captured in the said forts or places, and which shall remain therein upon the exchange of the ratifications of this treaty, or any slaves or other private property. And all archives, records, deeds, and papers, either of a public nature, or belonging to private persons, which, in the course of the war, may have fallen into the hands of the officers of either party, shall be, as far as may be practica-

ble, forthwith restored and delivered to the proper authorities and persons to whom they respectively belong. Such of the islands in the Bay of Passamaquoddy as are claimed by both parties, shall remain in the possession of the party in whose occupation they may be at the time of the exchange of the ratifications of this treaty, until the decision respecting the title to the said islands shall have been made in conformity with the fourth article of this treaty. No disposition made by this treaty, as to such possession of the islands and territories claimed by both parties, shall, in any manner whatever, be construed to affect the right of either.

#### **Article the Second**

Immediately after the ratifications of this treaty by both parties, as hereinafter mentioned, orders shall be sent to the armies, squadrons, officers, subjects and citizens, of the two powers, to cease from all hostilities. And to prevent all causes of complaint which might arise on account of the prizes which may be taken at sea after the said ratifications of this treaty, it is reciprocally agreed, that all vessels and effects which may be taken after the space of twelve days from the said ratifications, upon all parts of the coast of North America, from the latitude of twenty-three degrees north, to the latitude of fifty degrees north, and as far eastward in the Atlantic ocean, as the thirty-sixth degree of west longitude from the meridian of Greenwich, shall be restored on each side: That the time shall be thirty days in all other parts of the Atlantic ocean, north of the equinoctial line or equator, and the same time for the British and Irish channels, for the Gulf of Mexico and all parts of the West Indies: Forty days for the North seas, for the Baltic, and for all parts of the Mediterranean: Sixty days for the Atlantic ocean south of the equator, as far as the latitude of the Cape of Good Hope: Ninety days for every other part of the world south of the equator: And one hundred and twenty days for all other parts of the world, without exception.

#### **Article the Third**

All prisoners of war taken on either side, as well by land as by sea, shall be restored as soon as practicable after the ratifications of this treaty, as hereinafter mentioned, on their paying the debts which they may have contracted during their captivity. The two contracting parties respectively engage to discharge, in specie, the advances which may have been made by the other for the sustenance and maintenance of such prisoners.

#### **Article the Fourth**

Whereas it was stipulated by the second article in the treaty of peace, of one thousand seven hundred and eighty-three, between His Britannic Majesty and the United States of America, that the boundary of the United States should

comprehend all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries, between Nova Scotia, on the one part, and East Florida on the other, shall respectively touch the bay of Fundy, and the Atlantic ocean, excepting such islands as now are, or heretofore have been, within the limits of Nova Scotia; and whereas the several islands in the Bay of Passamaquoddy, which is part of the Bay of Fundy, and the island of Grand Menan in the said Bay of Fundy, are claimed by the United States as being comprehended within their aforesaid boundaries, which said islands are claimed as belonging to his Britannic Majesty, as having been at the time of, and previous to, the aforesaid treaty of one thousand seven hundred and eighty-three, within the limits of the province of Nova Scotia: In order, therefore, finally to decide upon these claims, it is agreed that they shall be referred to two commissioners to be appointed in the following manner, viz: one commissioner shall be appointed by his Britannic Majesty, and one by the president of the United States, by and with the advice and consent of the Senate thereof, and the said two commissioners so appointed shall be sworn impartially to examine and decide upon the said claims according to such evidence as shall be laid before them on the part of his Britannic Majesty and of the United States respectively. The said commissioners shall meet at Saint Andrews, in the province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said commissioners shall, by a declaration or report under their hands and seals, decide to which of the two contracting parties the several islands aforesaid do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three. And if the said commissioners shall agree in their decision, both parties shall consider such decision as final and conclusive. It is further agreed, that in the event of the two commissioners differing upon all or any of the matters so referred to them, or in the event of both or either of the said commissioners refusing, or declining, or wilfully omitting, to act as such, they shall make jointly or separately, a report or reports, as well to the Government of his Britannic majesty as to that of the United States, stating in detail the points on which they differ, and the grounds upon which their respective opinions have been formed, or the grounds upon which they, or either of them, have so refused, declined, or omitted to act. And his Britannic majesty, and the government of the United States, hereby agree to refer the report or reports of the said commissioners, to some friendly sovereign or state, to be then named for that purpose, and who shall be requested to decide on the differences which may be stated in the said report or reports, or upon the report of one commissioner, together

with the grounds upon which the other commissioner shall have refused, declined, or omitted to act, as the case may be. And if the commissioner so refusing, declining, or omitting to act, shall also wilfully omit to state the grounds upon which he has so done, in such manner that the said statement may be referred to such friendly sovereign or state, together with the report of such other commissioner, then such sovereign or state shall decide *ex parte* upon the said report alone. And his Britannic Majesty and the government of the United States engage to consider the decision of such friendly sovereign or state to be final and conclusive on all the matters so referred.

#### ***Article the Fifth***

Whereas neither that point of the high lands lying due north from the source of the river St. Croix, and designated in the former treaty of peace between the two powers as the northwest angle of Nova-Scotia, nor the northwesternmost head of Connecticut river, has yet been ascertained; and whereas that part of the boundary line between the dominions of the two powers which extends from the source of the river St. Croix directly north to the abovementioned northwest angle of Nova-Scotia, thence along the said highlands which divide those rivers that empty themselves into the river St. Lawrence from those which fall into the Atlantic ocean to the northwesternmost head of Connecticut river, thence down along the middle of that river to the forty-fifth degree of north latitude; thence by a line due west on said latitude until it strikes the river Iroquois or Cataraguy, has not yet been surveyed: it is agreed, that for these several purposes two commissioners shall be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in the present article. The said commissioners shall meet at St. Andrews, in the province of New-Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said commissioners shall have power to ascertain and determine the points abovementioned, in conformity with the provisions of the said treaty of peace of one thousand seven hundred and eighty three, and shall cause the boundary aforesaid, from the source of the river St. Croix to the river Iroquois or Cataraguy, to be surveyed and marked according to the said provisions. The said commissioners shall make a map of the said boundary, and annex to it a declaration under their hands and seals, certifying it to be the true map of the said boundary, and particularizing the latitude and longitude of the northwest angle of Nova-Scotia, of the northwesternmost head of Connecticut river, and of such other points of the said boundary as they may deem proper. And both parties agree to consider such map and declaration as finally and conclusively fixing the said

boundary. And in the event of the said two commissioners differing, or both, or either, of them, refusing, declining, or wilfully omitting to act, such reports, declarations, or statements, shall be made by them, or either of them, and such reference to a friendly sovereign or state, shall be made, in all respects, as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

#### ***Article the Sixth***

Whereas, by the former treaty of peace that portion of the boundary of the United States from the point where the forty-fifth degree of north latitude strikes the river Iroquois or Cataraguy to the lake Superior, was declared to be “along the middle of said river into lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and lake Erie, thence along the middle of said communication into lake Erie, through the middle of said lake until it arrives at the water communication into the lake Huron, thence through the middle of said lake to the water communication between that lake and lake Superior.” And whereas doubts have arisen what was the middle of the said river, lakes and water communications, and whether certain islands lying in the same were within the dominions of his Britannic majesty or of the United States: In order, therefore, finally to decide these doubts, they shall be referred to two commissioners, to be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in this present article. The said commissioners shall meet, in the first instance, at Albany, in the state of New-York, and shall have power to adjourn to such other place or places as they shall think fit: The said commissioner shall, by a report or declaration, under their hands and seals, designate the boundary through the said river, lakes, and water communications, and decide to which of the two contracting parties the several islands lying within the said rivers, lakes, and water communications, do respectively belong, in conformity with the true intent of the said treaty of one thousand seven hundred and eighty-three. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two commissioners differing, or both, or either of them, refusing, declining, or wilfully omitting to act, such reports, declarations or statements, shall be made by them, or either of them, and such reference to a friendly sovereign or state shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

#### ***Article the Seventh***

It is further agreed that the said two last-mentioned commissioners, after they shall have executed the duties

assigned to them in the preceding article, shall be, and they are hereby authorized, upon their oaths impartially to fix and determine, according to the true intent of the said treaty of peace, of one thousand seven hundred and eighty-three, that part of the boundary between the dominions of the two powers, which extends from the water communication between lake Huron, and lake Superior, to the most north-western point of the lake of the Woods, to decide to which of the two parties the several islands lying in the lakes, water communications, and rivers, forming the said boundary, do respectively belong, in conformity with the true intent of the said treaty of peace, of one thousand seven hundred and eighty-three; and to cause such parts of the said boundary, as require it, to be surveyed and marked. The said commissioners shall, by a report or declaration under their hands and seals, designate the boundary aforesaid, state their decision on the points thus referred to them, and particularize the latitude and longitude of the most north-western point of the lake of the Woods, and of such other parts of the said boundary as they may deem proper. And both parties agree to consider such designation and decision as final and conclusive. And, in the event of the said two commissioners differing, or both, or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements, shall be made by them, or either of them and such reference to a friendly sovereign or state, shall be made in all respects, as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

#### ***Article the Eighth***

The several boards of two commissioners mentioned in the four preceding articles, shall respectively have power to appoint a secretary, and to employ such surveyors or other persons as they shall judge necessary. Duplicates of all their respective reports, declarations, statements and decisions, and of their accounts, and of the journal of their proceedings, shall be delivered by them to the agents of his Britannic majesty, and to the agents of the United States, who may be respectively appointed and authorized to manage the business on behalf of their respective governments. The said commissioners shall be respectively paid in such manner as shall be agreed between the two contracting parties, such agreement being to be settled at the time of the exchange of the ratifications of this treaty. And all other expenses attending the said commissions shall be defrayed equally by the two parties. And in the case of death, sickness, resignation, or necessary absence, the place of every such commissioner, respectively, shall be supplied in the same manner as such commissioner was first appointed, and the new commissioner shall take the same oath or affirmation, and do the same duties. It is further agreed between the two contracting parties, that in

case any of the islands mentioned in any of the preceding articles, which were in the possession of one of the parties prior to the commencement of the present war between the two countries, should, by the decision of any of the boards of commissioners aforesaid, or of the sovereign or state so referred to, as in the four next preceding articles contained, fall within the dominions of the other party, all grants of land made previous to the commencement of the war, by the party having had such possession, shall be as valid as if such island or islands had, by such decision or decisions, been adjudged to be within the dominions of the party having had such possession.

#### **Article the Ninth**

The United States of America engage to put an end, immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom they may be at war at the time of such ratification; and forthwith to restore to such tribes or nations, respectively, all the possessions, rights, and privileges, which they may have enjoyed or been entitled to in one thousand eight hundred and eleven, previous to such hostilities: *Provided always*, That such tribes or nations shall agree to desist from all hostilities, against the United States of America, their citizens and subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly. And his Britannic majesty engages, on his part, to put an end immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom he may be at war at the time of such ratification, and forthwith to restore to such tribes or nations, respectively, all the possessions, rights, and privileges, which they may have enjoyed or been entitled to, in one thousand eight hundred and eleven, previous to such hostilities:

*Provided always*, That such tribes or nations shall agree to desist from all hostilities against his Britannic majesty, and his subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly.

#### **Article the Tenth**

Whereas the traffic in slaves is irreconcilable with the principles of humanity and justice, and whereas both his Majesty and the United States are desirous of continuing their efforts to promote its entire abolition, it is hereby agreed that both the contracting parties shall use their best endeavors to accomplish so desirable an object.

#### **Article the Eleventh**

This treaty, when the same shall have been ratified on both sides, without alteration by either of the contracting parties,

and the ratifications mutually exchanged, shall be binding on both parties, and the ratifications shall be exchanged at Washington, in the space of four months from this day, or sooner, if practicable. In faith whereof, we, the respective plenipotentiaries, have signed this treaty, and have thereunto affixed our seals.

Done, in triplicate, at Ghent, the twenty-fourth day of December, one thousand eight hundred and fourteen.

#### **Treaty of Amity, Settlement, and Limits**

Between the United States of America and his Catholic Majesty.

The United States of America and his Catholic Majesty, desiring to consolidate, on a permanent basis, the friendship and good correspondence which happily prevails between the two parties, have determined to settle and terminate all their differences and pretensions, by a Treaty, which shall designate, with precision, the limits of their respective bordering territories in North America.

With this intention, the President of the United States has furnished with their full powers John Quincy Adams, Secretary of State of the said United States; and his Catholic Majesty has appointed the most excellent Lord Don Luis De Onís, Gonzales, Lopez y Vara, Lord of the town of Rayaces, perpetual Regidor of the Corporation of the City of Salamanca, Knight Grand-Cross of the Royal American Order of Isabella the Catholic, decorated with the Lys of La Vendee, Knight Pensioner of the Royal and distinguished Spanish Order of Charles the Third, Member of the Supreme Assembly of the said Royal Order, of the Council of his Catholic Majesty; his Secretary, with Exercise of Decrees, and his Envoy Extraordinary and Minister Plenipotentiary near the United States of America.

And the said Plenipotentiaries, after having exchanged their powers, have agreed upon and concluded the following articles:

#### **Article 1**

There shall be a firm and inviolable peace and sincere friendship between the United States and their citizens,

and his Catholic Majesty, his successors and subjects, without exception of persons or places.

#### **Article 2**

His Catholic Majesty cedes to the United States, in full property and sovereignty, all the territories which belong to him, situated to the eastward of the Mississippi, known by the name of East and West Florida. The adjacent islands dependent on said provinces, all public lots and squares, vacant lands, public edifices, fortifications, barracks, and other buildings, which are not private property, archives and documents, which relate directly to the property and sovereignty of said provinces, are included in this article. The said archives and documents shall be left in possession of the commissaries or officers of the United States, duly authorized to receive them . . .

#### **Article 5**

The inhabitants of the ceded territories shall be secured in the free exercise of their religion, without any restriction; and all those who may desire to remove to the Spanish dominions, shall be permitted to sell or export their effects, at any time whatever, without being subject, in either case, to duties.

#### **Article 6**

The inhabitants of the territories which his Catholic Majesty cedes to the United States, by this Treaty, shall be incorporated in the Union of the United States, as soon as may be consistent with the principles of the Federal Constitution, and admitted to the enjoyment of all the privileges, rights, and immunities, of the citizens of the United States. . .

#### **Article 11**

The United States, exonerating Spain from all demands in future, on account of the claims of their citizens to which the renunciations herein contained extend, and considering them entirely cancelled, undertake to make satisfaction for the same, to an amount not exceeding five millions of dollars. To ascertain the full amount the validity of those claims, a Commission, to consist of three Commissioners, citizens of the United States, shall be appointed by the President, by and with the advice and consent of the Senate . . .

#### **Article 15**

The United States, to give to his Catholic Majesty a proof of their desire to cement the relations of amity subsisting between the two nations, and to favour the commerce of the subjects of his Catholic Majesty, agree that Spanish vessels, coming laden only with productions of Spanish growth or manufactures, directly from the ports of Spain, or of her colonies, shall be admitted, for the term of twelve years, to

the ports of Pensacola and St. Augustine, in the Floridas, without paying other or higher duties on their cargoes, or of tonnage, than will be paid by the vessels of the United States. During the said term, no other nation shall enjoy the same privileges within the ceded territories. The twelve years shall commence three months after the exchange of the ratifications of this Treaty.

#### **Article 16**

The present Treaty shall be ratified in due form, by the contracting parties, and the ratifications shall be exchanged in six months from this time, or sooner, if possible. In witness whereof, we, the under written Plenipotentiaries of the United States of America and of his Catholic Majesty, have signed, by virtue of our powers, the present Treaty of Amity, Settlement, and Limits, and have thereunto affixed our seals, respectively.

Done at Washington, this twenty-second day of February, one thousand eight hundred and nineteen.

John Quincy Adams, (L. S.) Luis De Onís, (L. S.)

### **The Missouri Compromise (1819–1821)**

#### **Tallmadge Amendment (1819)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
(Englewood Cliffs, N.J.: Prentice Hall, 1988), p. 225

*And provided also*, That the further introduction of slavery or involuntary servitude be prohibited, except for the punishment of crimes, whereof the party shall be duly convicted; and that all children of slaves, born within the said state, after the admission thereof into the Union, shall be free but may be held to service until the age of twenty-five years.

#### **Taylor Amendment (1820)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
(Englewood Cliffs, N.J.: Prentice Hall, 1988), p. 225

*The reading of the bill proceeded as far as the fourth section; when Mr. Taylor, of New York, proposed to amend the bill by incorporating in that section the following provision:*

Section 4, line 25, insert the following after the word "States"; "And shall ordain and establish, that there shall be neither slavery nor involuntary servitude in the said State, otherwise than in the punishment of crimes, whereof the party shall have been duly convicted: Provided, always, That any person escaping into the same, from whom labor or service is lawfully claimed in any other State, such fugitive may be lawfully reclaimed, and conveyed to the person

claiming his or her labor or service as aforesaid: *And provided, also*, That the said provision shall not be construed to alter the condition or civil rights of any person now held to service or labor in the said Territory.”

### **Thomas Amendment (1820)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
 (Englewood Cliffs, N.J.: Prentice Hall, 1988), p. 225

*And be it further enacted*, That, in all that territory ceded by France to the United States, under the name of Louisiana, which lies north of thirty-six degrees and thirty minutes north latitude, excepting only such part thereof as is included within the limits of the State contemplated by this act, slavery and involuntary servitude, otherwise than in the punishment of crimes whereof the party shall have been duly convicted, shall be and is hereby forever prohibited. *Provided always*, That any person escaping into the same, from whom labor or service is lawfully claimed in any State or Territory of the United States, such fugitive may be lawfully reclaimed, and conveyed to the person claiming his or her labor or service, as aforesaid.

### **Missouri Enabling Act (1820)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
 (Englewood Cliffs, N.J.: Prentice Hall, 1988), p. 226

#### **An Act**

*To authorize the people of the Missouri territory to form a constitution and state government, and for the admission of such state into the Union on an equal footing with the original states, and to prohibit slavery in certain territories.*

*Be it enacted* That the inhabitants of that portion of the Missouri territory included within the boundaries hereinafter designated, be, and they are hereby, authorized to form for themselves a constitution and state government, and to assume such name as they shall deem proper; and the said state, when formed, shall be admitted into the Union, upon an equal footing with the original states, in all respects whatsoever.

Sec. 2. That the said state shall consist of all the territory included within the following boundaries, to wit: Beginning in the middle of the Mississippi river, on the parallel of thirty-six degrees of north latitude; thence west, along that parallel of latitude, to the St. Francois river; thence up, and following the course of that river, in the middle of the main channel thereof, to the parallel of latitude of thirty-six degrees and thirty minutes; thence west, along the same, to a point where the said parallel is intersected by a meridian line passing through the middle of the mouth of the Kansas river, where the same empties

into the Missouri river, thence, from the point aforesaid north, along the said meridian line, to the intersection of the parallel of latitude which passes through the rapids of the river Des Moines, making the said line to correspond with the Indian boundary line; thence east, from the point of intersection last aforesaid, along the said parallel of latitude, to the middle of the channel of the main fork of the said river Des Moines; thence down and along the middle of the main channel of the said river Des Moines, to the mouth of the same, where it empties into the Mississippi river; thence, due east, to the middle of the main channel of the Mississippi river; thence down, and following the course of the Mississippi river, in the middle of the main channel thereof, to the place of beginning: . . .

Sec. 3. That all free white male citizens of the United States, who shall have arrived at the age of twenty-one years, and have resided in said territory three months previous to the day of election, and all other persons qualified to vote for representatives to the general assembly of the said territory, shall be qualified to be elected, and they are hereby qualified and authorized to vote, and choose representatives to form a convention: . . .

Sec. 8. That in all that territory ceded by France to the United States, under the name of Louisiana, which lies north of thirty-six degrees and thirty minutes north latitude, not included within the limits of the state, contemplated by this act, slavery and involuntary servitude, otherwise than in the punishment of crimes, whereof the parties shall have been duly convicted, shall be, and is hereby, forever prohibited: *Provided always*, That any person escaping into the same, from whom labour or service is lawfully claimed, in any state or territory of the United States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labour or service as aforesaid.

### **Constitution of Missouri (1820)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
 (Englewood Cliffs, N.J.: Prentice Hall, 1988), pp. 226–227

Sec. 26. The general assembly shall not have power to pass laws—

1. For the emancipation of slaves without the consent of their owners; or without paying them, before such emancipation, a full equivalent for such slaves so emancipated; and,

2. To prevent *bona-fide* immigrants to this State, or actual settlers therein, from bringing from any of the United States, or from any of their Territories, such persons as may there be deemed to be slaves, so long as any persons of the same description are allowed to be held as slaves by the laws of this State.

They shall have power to pass laws—

1. To prevent *bona-fide* immigrants to this State of any slaves who may have committed any high crime in any other State or Territory;

2. To prohibit the introduction of any slave for the purpose of speculation, or as an article of trade or merchandise;

3. To prohibit the introduction of any slave, or the offspring of any slave, who heretofore may have been, or who hereafter may be, imported from any foreign country into the United States, or any Territory thereof, in contravention of any existing statute of the United States; and,

4. To permit the owners of slaves to emancipate them, saving the right of creditors, where the person so emancipating will give security that the slave so emancipated shall not become a public charge.

It shall be their duty, as soon as may be, to pass such laws as may be necessary—

1. To prevent free negroes and [and] mulattoes from coming to and settling in this State, under any pretext whatsoever; and,

2. To oblige the owners of slaves to treat them with humanity, and to abstain from all injuries to them extending to life or limb.

#### **Resolution for the Admission of Missouri (1821)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
 (Englewood Cliffs, N.J.: Prentice Hall, 1988), p. 227

*Resolution providing for the admission of the State of Missouri into the Union, on a certain condition.*

*Resolved*, That Missouri shall be admitted into this union on an equal footing with the original states, in all respects whatever, upon the fundamental condition, that the fourth clause of the twenty-sixth section of the third article of the constitution submitted on the part of said state to Congress, shall never be construed to authorize the passage of any law, and that no law shall be passed in conformity thereto, by which any citizen, of either of the states in this Union, shall be excluded from the enjoyment of any of the privileges and immunities to which such citizen is entitled under the constitution of the United States: *Provided*, That the legislature of the said state, by a solemn public act, shall declare the assent of the said state to the said fundamental condition, and shall transmit to the President of the United States, on or before the fourth Monday in November next, an authentic copy of the said act; upon the receipt whereof, the President, by proclamation, shall announce the fact; whereupon, and without any further proceeding on the part of Congress, the admission of the said state into this Union shall be considered as complete.

 (Washington, D.C.: 1998), pp. 207–220

Washington

December 2, 1823.

Fellow-Citizens of the Senate and House of Representatives:

Many important subjects will claim your attention during the present session, of which I shall endeavor to give, in aid of your deliberations, a just idea in this communication. I undertake this duty with diffidence, from the vast extent of the interests on which I have to treat and of their great importance to every portion of our Union. I enter on it with zeal from a thorough conviction that there never was a period since the establishment of our Revolution when, regarding the condition of the civilized world and its bearing on us, there was greater necessity for devotion in the public servants to their respective duties, or for virtue, patriotism, and union in our constituents.

Meeting in you a new Congress, I deem it proper to present this view of public affairs in greater detail than might otherwise be necessary. I do it, however, with peculiar satisfaction, from a knowledge that in this respect I shall comply more fully with the sound principles of our Government. The people being with us exclusively the sovereign, it is indispensable that full information be laid before them on all important subjects, to enable them to exercise that high power with complete effect. If kept in the dark, they must be incompetent to it. We are all liable to error, and those who are engaged in the management of public affairs are more subject to excitement and to be led astray by their particular interests and passions than the great body of our constituents, who, living at home in the pursuit of their ordinary avocations, are calm but deeply interested spectators of events and of the conduct of those who are parties to them. To the people every department of the Government and every individual in each are responsible, and the more full their information the better they can judge of the wisdom of the policy pursued and of the conduct of each in regard to it. From their dispassionate judgment much aid may always be obtained, while their approbation will form the greatest incentive and most gratifying reward for virtuous actions, and the dread of their censure the best security against the abuse of their confidence. Their interests in all vital questions are the same, and the bond, by sentiment as well as by interest, will be proportionably strengthened as they are better informed of the real state of public affairs, especially in difficult conjunctures. It is by such knowledge that local prejudices and jealousies are surmounted, and that

a national policy, extending its fostering care and protection to all the great interests of our Union, is formed and steadily adhered to.

A precise knowledge of our relations with foreign powers as respects our negotiations and transactions with each is thought to be particularly necessary. Equally necessary is it that we should form a just estimate of our resources, revenue, and progress in every kind of improvement connected with the national prosperity and public defense. It is by rendering justice to other nations that we may expect it from them. It is by our ability to resent injuries and redress wrongs that we may avoid them.

The commissioners under the fifth article of the treaty of Ghent, having disagreed in their opinions respecting that portion of the boundary between the Territories of the United States and of Great Britain the establishment of which had been submitted to them, have made their respective reports in compliance with that article, that the same might be referred to the decision of a friendly power. It being manifest, however, that it would be difficult, if not impossible, for any power to perform that office without great delay and much inconvenience to itself, a proposal has been made by this Government, and acceded to by that of Great Britain, to endeavor to establish that boundary by amicable negotiation. It appearing from long experience that no satisfactory arrangement could be formed of the commercial intercourse between the United States and the British colonies in this hemisphere by legislative acts while each party pursued its own course without agreement or concert with the other, a proposal has been made to the British Government to regulate this commerce by treaty, as it has been to arrange in like manner the just claim of the citizens of the United States inhabiting the States and Territories bordering on the lakes and rivers which empty into the St. Lawrence to the navigation of that river to the ocean. For these and other objects of high importance to the interests of both parties a negotiation has been opened with the British Government which it is hoped will have a satisfactory result.

The commissioners under the sixth and seventh articles of the treaty of Ghent having successfully closed their labors in relation to the sixth, have proceeded to the discharge of those relating to the seventh. Their progress in the extensive survey required for the performance of their duties justifies the presumption that it will be completed in the ensuing year.

The negotiation which had been long depending with the French Government on several important subjects, and particularly for a just indemnity for losses sustained in the late wars by the citizens of the United States under unjustifiable seizures and confiscations of their property, has not as yet had the desired effect. As this claim rests on the same principle with others which have been admitted

by the French Government, it is not perceived on what just ground it can be rejected. A minister will be immediately appointed to proceed to France and resume the negotiation on this and other subjects which may arise between the two nations.

At the proposal of the Russian Imperial Government, made through the minister of the Emperor residing here, a full power and instructions have been transmitted to the minister of the United States at St. Petersburg to arrange by amicable negotiation the respective rights and interest of the two nations on the northwest coast of this continent. A similar proposal had been made by His Imperial Majesty to the Government of Great Britain, which has likewise been acceded to. The Government of the United States has been desirous by this friendly proceeding of manifesting the great value which they have invariably attached to the friendship of the Emperor and their solicitude to cultivate the best understanding with his Government. In the discussions to which this interest has given rise and in the arrangements by which they may terminate the occasion has been judged proper for asserting, as a principle in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers. . . .

It was stated at the commencement of the last session that a great effort was then making in Spain and Portugal to improve the condition of the people of those countries, and that it appeared to be conducted with extraordinary moderation. It need scarcely be remarked that the result has been so far very different from what was then anticipated. Of events in that quarter of the globe, with which we have so much intercourse and from which we derive our origin, we have always been anxious and interested spectators. The citizens of the United States cherish sentiments the most friendly in favor of the liberty and happiness of their fellow-men on that side of the Atlantic. In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective Governments; and to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe

it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States. In the war between those new Governments and Spain we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere, provided no change shall occur which, in the judgment of the competent authorities of this Government, shall make a corresponding change on the part of the United States indispensable to their security.

The late events in Spain and Portugal shew that Europe is still unsettled. Of this important fact no stronger proof can be adduced than that the allied powers should have thought it proper, on any principle satisfactory to themselves, to have interposed by force in the internal concerns of Spain. To what extent such interposition may be carried, on the same principle, is a question in which all independent powers whose governments differ from theirs are interested, even those most remote, and surely none more so than the United States. Our policy in regard to Europe, which was adopted at an early stage of the wars which, have so long agitated that quarter of the globe, nevertheless remains the same, which is, not to interfere in the internal concerns of any of its powers; to consider the government *de facto* as the legitimate government for us; to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to injuries from none. But in regard to those continents circumstances are eminently and conspicuously different. It is impossible that the allied powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor can anyone believe that our southern brethren, if left to themselves, would adopt it of their own accord. It is equally impossible, therefore, that we should behold such interposition in any form with indifference. If we look to the comparative strength and resources of Spain and those new Governments, and their distance from each other, it must be obvious that she can never subdue them. It is still the true policy of the United States to leave the parties to themselves, in the hope that other powers will pursue the same course.

If we compare the present condition of our Union with its actual state at the close of our Revolution, the history of the world furnishes no example of a progress in improvement in all the important circumstances which constitute the happiness of a nation which bears any resemblance to it. At the first epoch our population did not exceed 3,000,000. By the last census it amounted to about 10,000,000, and, what is more extraordinary, it is almost altogether native, for the immigration from other countries has been inconsiderable. At the first epoch half the territory within our acknowledged limits was uninhabited and a wilderness. Since then new territory has been acquired of vast extent, comprising within it many rivers, particularly the Mississippi, the navigation of which to the ocean was of the highest importance to the original States. Over this territory our population has expanded in every direction, and new States have been established almost equal in number to those which formed the first bond of our Union. This expansion of our population and accession of new States to our Union have had the happiest effect on all its highest interests. That it has eminently augmented our resources and added to our strength and respectability as a power is admitted by all. But it is not in these important circumstances only that this happy effect is felt. It is manifest that by enlarging the basis of our system and increasing the number of States the system itself has been greatly strengthened in both its branches. Consolidation and disunion have thereby been rendered equally impracticable. Each Government, confiding in its own strength, has less to apprehend from the other, and in consequence each, enjoying a greater freedom of action, is rendered more efficient for all the purposes for which it was instituted. It is unnecessary to treat here of the vast improvement made in the system itself by the adoption of this Constitution and of its happy effect in elevating the character and in protecting the rights of the nation as well as of individuals. To what, then, do we owe these blessings? It is known to all that we derive them from the excellence of our institutions. Ought we not, then, to adopt every measure which may be necessary to perpetuate them?

James Monroe

## The Indian Removal Act (1830)

### U.S. Congress

*United States Statutes at Large* (21st Cong., 1st sess., chap. 148), pp. 411–412

An Act to provide for an exchange of lands with the Indians residing in any of the states or territories, and for their removal west of the river Mississippi.

*Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,* That it shall and may be lawful for the President of

the United States to cause so much of any territory belonging to the United States, west of the river Mississippi, not included in any state or organized territory, and to which the Indian title has been extinguished, as he may judge necessary, to be divided into a suitable number of districts, for the reception of such tribes or nations of Indians as may choose to exchange the lands where they now reside, and remove there; and to cause each of said districts to be so described by natural or artificial marks, as to be easily distinguished from every other.

Sec. 2. *And be it further enacted*, That it shall and may be lawful for the President to exchange any or all of such districts, so to be laid off and described, with any tribe or nation of Indians now residing within the limits of any of the states or territories, and with which the United States have existing treaties, for the whole or any part or portion of the territory claimed and occupied by such tribe or nation, within the bounds of any one or more of the states or territories, where the land claimed and occupied by the Indians, is owned by the United States, or the United States are bound to the state within which it lies to extinguish the Indian claim thereto.

Sec. 3. *And be it further enacted*, That in the making of any such exchange or exchanges, it shall and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made, that the United States will forever secure and guaranty to them, and their heirs or successors, the country so exchanged with them; and if they prefer it, that the United States will cause a patent or grant to be made and executed to them of the same: *Provided always*, That such lands shall revert to the United States, if the Indians become extinct, or abandon the same.

Sec. 4. *And be it further enacted*, That if, upon any of the lands now occupied by the Indians, and to be exchanged for, there should be such improvements as add value to the land claimed by any individual or individuals of such tribes or nations, it shall and may be lawful for the President to cause such value to be ascertained by appraisement or otherwise, and to cause such ascertained value to be paid to the person or persons rightfully claiming such improvements. And upon the payment of such valuation, the improvements so valued and paid for, shall pass to the United States, and possession shall not afterwards be permitted to any of the same tribe.

Sec. 5. *And be it further enacted*, That upon the making of any such exchange as is contemplated by this act, it shall and may be lawful for the President to cause such aid and assistance to be furnished to the emigrants as may be necessary and proper to enable them to remove to, and settle in, the country for which they may have exchanged; and also, to give them such aid and assistance as may be necessary for their support and subsistence for the first year after their removal.

Sec. 6. *And be it further enacted*, That it shall and may be lawful for the President to cause such tribe or nation to be protected, at their new residence, against all interruption or disturbance from any other tribe or nation of Indians, or from any other person or persons whatever.

Sec. 7. *And be it further enacted*, That it shall and may be lawful for the President to have the same superintendence and care over any tribe or nation in the country to which they may remove, as contemplated by this act, that he is now authorized to have over them at their present places of residence: *Provided*, That nothing in this act contained shall be construed as authorizing or directing the violation of any existing treaty between the United States and any of the Indian tribes.

Sec. 8. *And be it further enacted*, That for the purpose of giving effect to the provisions of this act, the sum of five hundred thousand dollars is hereby appropriated, to be paid out of any money in the treasury, not otherwise appropriated.

### ***Liberator* Editorial, First Issue (January 1, 1831)** **William Lloyd Garrison**

*Writings and Speeches of William Lloyd Garrison*,  
(Boston: R. F. Walcott), pp. 62–64

#### **Commencement of the *Liberator***

In the month of August, I issued proposals for publishing ‘The *Liberator*’ in Washington city; but the enterprise, though hailed approvingly in different sections of the country, was palsied by public indifference. Since that time, the removal of the ‘Genius of Universal Emancipation’ to the Seat of Government has rendered less imperious the establishment of a similar periodical in that quarter.

During my recent tour for the purpose of exciting the minds of the people by a series of discourses on the subject of slavery, every place that I visited gave fresh evidence of the fact, that a greater revolution in public sentiment was to be effected in the free States—and particularly in New England—than at the South. I found contempt more bitter, opposition more active, detraction more relentless, prejudice more stubborn, and apathy more frozen, than among slave owners themselves. Of course, there were individual exceptions to the contrary. This state of things afflicted, but did not dishearten me. I determined, at every hazard, to lift up the standard of emancipation in the eyes of the nation, within sight of Bunker Hill, and in the birth-place of liberty. That standard is now unfurled; and long may it float, unhurt by the spoliations of time or the missiles of a desperate foe; yea, till every chain be broken, and every bondman set free! Let Southern oppressors tremble; let their secret abettors tremble; let their Northern apolo-

gists tremble; let all the enemies of the persecuted blacks tremble.

Assenting to the 'self-evident truths' maintained in the American Declaration of Independence, 'that all men are created equal, and endowed by their Creator with certain inalienable rights—among which are life, liberty, and the pursuit of happiness,' I shall strenuously contend for the immediate enfranchisement of our slave population. In Park Street Church, on the Fourth of July, 1829, in an address on slavery, I unreflectingly assented to the popular but pernicious doctrine of gradual abolition. I seize this opportunity to make a full and unequivocal recantation, and thus publicly to ask pardon of my God, of my country, and of my brethren, the poor slaves, for having uttered a sentiment so full of timidity, injustice and absurdity. A similar recantation, from my pen, was published in the 'Genius of Universal Emancipation,' at Baltimore, in September, 1829. My conscience is now satisfied.

I am aware, that many object to the severity of my language; but is there not cause for severity? I will be as harsh as truth, and as uncompromising as justice. On this subject, I do not wish to think, or speak, or write, with moderation. No! no! Tell a man, whose house is on fire, to give a moderate alarm; tell him to moderately rescue his wife from the hands of the ravisher; tell the mother to gradually extricate her babe from the fire into which it has fallen; but urge me not to use moderation in a cause like the present! I am in earnest. I will not equivocate—I will not excuse—I will not retreat a single inch—and I will be heard. The apathy of the people is enough to make every statue leap from its pedestal, and to hasten the resurrection of the dead.

It is pretended, that I am retarding the cause of emancipation by the coarseness of my invective, and the precipitancy of my measures. The charge is not true. On this question, my influence, humble as it is, is felt at this moment to a considerable extent, and shall be felt in coming years—not perniciously, but beneficially—not as a curse, but as a blessing; and posterity will bear testimony that I was right. I desire to thank God, that he enables me to disregard 'the fear of man which bringeth a snare,' and to speak his truth in its simplicity and power. And here I close with this fresh dedication:— 'Oppression! I have seen thee, face to face, And met thy cruel eye and cloudy brow; But thy soul-withering glance I fear not now—For dread to prouder feelings doth give place, Of deep abhorrence! Scorning the disgrace Of slavish knees that at thy footstool bow, I also kneel—but with far other vow Do hail thee and thy herd of hirelings base:—I swear, while life-blood warms my throbbing veins, Still to oppose and thwart, with heart and hand, Thy brutalizing sway—till Africa's chains Are burst, and Freedom rules the rescued land, Trampling Oppression and his iron rod:—Such is the vow I take—so help me, God!' Boston, January 1, 1831.

## Texas Declaration of Independence (1836)

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
(Englewood Cliffs, N.J.: Prentice Hall, 1988), pp. 281–283

Washington, Texas  
March 2, 1836

When a government has ceased to protect the lives liberty and property of its people, from whom its legitimate powers are derived, and for the advancement of whose happiness it was instituted, and so far from being a guarantee for the enjoyment of those inestimable and inalienable rights, becomes an instrument in the hands of evil rulers for their oppression: When the Federal Republican Constitution of their country, which they have sworn to support, no longer has a substantial existence, and the whole nature of their government has been forcibly changed without their consent, from a restricted federative republic, composed of sovereign states of a consolidated central military despotism in which every interest is disregarded but that of the army and the priesthood—both the eternal enemies of civil liberty, the ever-ready minions of power, and the usual instruments of tyrants:

When, long after the spirit of the constitution has departed, moderation is at length so far lost by those in power that even the semblance of freedom is removed, and the forms, themselves, of the constitution discontinued; and so far from their petitions and remonstrances being regarded, the agents who bear them are thrown into dungeons; and mercenary armies sent forth to force a new government upon them at the point of the bayonet: When, in consequence of such acts of malfeasance and abdication, on the part of the government, anarchy prevails, and Civil Society is dissolved into its original elements. In such a crisis, the first law of nature, the right of self-preservation—the inherent and unalienable right of the people to appeal to first principles and take their political affairs into their own hands in extreme cases enjoins it as a right towards themselves and a sacred obligation to their posterity to abolish such government and create another in its stead, calculated to rescue them from impending dangers, and to secure their future welfare and happiness.

Nations, as well as individuals, are amenable for their acts to the public opinion of mankind. Statement of a part of our grievance is, therefore, submitted to an impartial world, in justification of the hazardous but unavoidable step now taken of severing our political connection with the Mexican people, and assuming an independent attitude among the nations of the earth.

The Mexican government, by its colonization laws, invited and induced the Anglo-American population of Texas to colonize its wilderness under the pledged faith of a written constitution that they should continue to enjoy

that constitutional liberty and republican government to which they had been habituated in the land of their birth, the United States of America. In this expectation they have been cruelly disappointed, in as much as the Mexican nation has acquiesced in the late changes made in the government by General Antonio Lopez de Santa Anna, who, having overturned the constitution of his country, now offers as the cruel alternative either to abandon our homes, acquired by so many privations, or submit to the most intolerable of all tyranny, the combined despotism of the sword and the priesthood.

It has sacrificed our welfare to the State of Coahuila, by which our interests have been continually depressed through a jealous and partial course of legislation carried on at a far distant seat of government by a hostile majority, in an unknown tongue; and this to, notwithstanding we have petitioned in the humblest terms, for the establishment of a separate state government, and have, in accordance with the provisions of the national constitution presented to the General Congress a republican constitution which was, without just cause, contemptuously rejected.

It incarcerated in a dungeon, for a long time, one of our citizens, for no other cause but a zealous endeavor to procure the acceptance of our constitution and the establishment of a state government.

It has failed and refused to secure on a firm basis, the right of trial by jury, that palladium of civil liberty, and only safe guarantee for the life, liberty, and property of the citizen. It has failed to establish any public system of education, although possessed of almost boundless resources (the public domain) and although it is an axiom in political science, that unless a people are educated and enlightened it is idle to expect the continuance of civil liberty, or the capacity for self-government.

It has suffered the military commandants stationed among us to exercise arbitrary acts of oppression and tyranny; thus trampling upon the most sacred rights of the citizen and rendering the military superior to the civil power.

It has dissolved by force of arms, the State Congress of Coahuila and Texas, and obliged our representatives to fly for their lives from the seat of government; thus depriving us of the fundamental political right of representation.

It has demanded the surrender of a number of our citizens and ordered military detachments to seize and carry them into the interior for trial; in contempt of the civil authorities, and in defiance of the laws and the constitution.

It has made piratical attacks upon our commerce, by commissioning foreign desperadoes, and authorizing them to seize our vessels, and convey the property of our citizens to far distant ports for confiscation.

It denies us the right of worshipping the Almighty according to the dictates of our own conscience, by the

support of a national religion calculated to promote the temporal interest of its human functionaries rather than the glory of the true and living God. It has demanded us to deliver up our arms, which are essential to our defence, the rightful property of freemen, and formidable only to tyrannical governments.

It has invaded our country by sea and by land, with intent to lay waste our territory and drive us from our homes, and has now a large mercenary army advancing to carry on against us a war of extermination.

It has, through its emissaries, incited the merciless savage, with the tomahawk and scalping knife, to massacre the inhabitants of our defenceless frontiers.

It hath been, during the whole time of our connection with it, the contemptible sport and victim of successive military revolutions, and hath continually exhibited every characteristic of a weak, corrupt, and tyrannical government.

These, and other grievances, were patiently borne by the people of Texas until they reached that point at which forbearance ceases to be a virtue. We then took up arms in defence of the national constitution. We appealed to our Mexican brethren for assistance. Our appeal has been made in vain. Though months have elapsed, no sympathetic response has yet been heard from the interior. We are, therefore, forced to the melancholy conclusion that the Mexican people have acquiesced in the destruction of their liberty and the substitution therefore of a Military Government—that they are unfit to be free and incapable of self-government.

The necessity of self-preservation, therefore, now decrees our eternal political separation. We therefore, the delegates with plenary powers, of the people of Texas, in solemn convention assembled, appealing to a candid world for the necessities of our condition, do hereby resolve and declare that our political connection with the Mexican Nation has forever ended; and that the people of Texas do now constitute a free sovereign and independent republic, and are fully invested with all the rights and attributes which properly belong to independent nations; and conscious of the rectitude of our intentions, we fearlessly and confidently commit the issue to the decision of the Supreme Arbiter of the destinies of Nations.

Richard Ellis, *President*

### From "Appeal to the Christian Women of the South," (September, 1836)

Angelina Grimké

In Kathryn Cullen-DuPont. *Encyclopedia of Women's History*, 2d ed. (New York: Facts On File, Inc., 2000), pp. 306–309

I have thus, I think, clearly proved to you seven propositions, viz.: First, that slavery is contrary to the declaration

of our independence. Second, that it is contrary to the first charter of human rights given to Adam, and renewed to Noah. Third, that the fact of slavery having been the subject of prophecy, furnishes *no* excuse whatever to slave dealers. Fourth, that no such system existed under the patriarchal dispensation. Fifth, that *slavery never* existed under the Jewish dispensation; but so far otherwise, that every servant was placed under the *protection of law*, and care taken not only to prevent all *involuntary* servitude, but all *voluntary perpetual* bondage. Sixth, that slavery in America reduces a *man* to a *thing*, a “chattel personal,” *robs him of all* his rights as a *human being*, fetters both his mind and body, and protects the *master* in the most unnatural and unreasonable power, whilst it *throws him out* of the protection of law. Seventh, that slavery is contrary to the example and precepts of our holy and merciful Redeemer, and of his apostles.

But perhaps you will be ready to query, why appeal to *women* on this subject? We do not make the laws which perpetuate slavery. No legislative power is vested in *us*; we can do nothing to overthrow the system, even if we wished to do so. To this I reply, I know you do not make the laws, but I also know that *you are the wives and mothers, the sisters and daughters of those who do*; and if you really suppose *you* can do nothing to overthrow slavery, you are greatly mistaken. You can do much in every way: four things I will name. 1st. You can read on this subject. 2d. You can pray over this subject. 3d. You can speak on this subject. 4th. You can *act* on this subject. I have not placed reading before praying because I regard it more important, but because, in order to pray aright, we must understand what we are praying for; it is only then we can “pray with the understanding and the spirit also.”

1. Read then on the subject of slavery. Search the Scriptures daily, whether the things I have told you are true. Other books and papers might be a great help to you in this investigation, but they are not necessary, and it is hardly probable that your Committees of Vigilance will allow you to have the other. The *Bible* then is the book I want you to read in the spirit of inquiry, and the spirit of prayer. Even the enemies of Abolitionists, acknowledged that their doctrines are drawn from it. In the great mob in Boston, last autumn, when the books and papers of the Anti-Slavery Society, were thrown out of the windows of their office, one individual laid hold of the Bible and was about tossing it out to the ground, when another reminded him that it was the Bible he had in his hand. “*O! ’tis all one,*” he replied, and out went the sacred volume, along with the rest. We thank him for the acknowledgment. Yes, “*it is all one,*” for our books and papers are mostly commentaries on the Bible, and the Declaration. Read the *Bible* then, it contains the words of Jesus, and they are spirit and life. Judge for yourself whether *he sanctioned* such a system of oppression and crime.

2. Pray over this subject. When you have entered into your closets, and shut to the doors, then pray to your father, who seeth in secret, that he would open your eyes to see whether slavery is *sinful*, and if it is, that he would enable you to bear a faithful, open and unshrinking testimony against it, and to do whatsoever your hand find to do, leaving the consequences entirely to him, who still says to us whenever we try to reason away duty from the fear of consequences, “*What is that to thee, follow thou me.*” Pray also for that poor slave, that he may be kept patient and submissive under his hard lot, until God is pleased to open the door of freedom to him without violence or bloodshed. Pray too for the master that his heart may be softened, and he made willing to acknowledge, as Joseph’s brethren did, “*Verily we are guilty concerning our brother,*” before he will be compelled to add in consequence of Divine judgment, “*therefore is all this evil come upon us.*” Pray also for all your brethren and sisters who are laboring in the righteous cause of Emancipation in the Northern States, England and the world. There is great encouragement for prayer in these words of our Lord. “*Whatsoever ye shall ask the Father in my name, he will give it to you*”—Pray then without ceasing, in the closet and the social circle.

3. Speak on this subject. It is through the tongue, the pen, and the press, that truth is principally propagated. Speak then to your relatives, your friends, your acquaintances on the subject of slavery; be not afraid if you are conscientiously convinced it is *sinful*, to say so openly, but calmly, and to let your sentiments be known. If you are served by the slaves of others, try to ameliorate their condition as much as possible; never aggravate their faults, and thus add fuel to the fire of anger already kindled, in a master and mistress’s bosom, remember their extreme ignorance, and consider them as your Heavenly Father does the *less* culpable on this account, even when they do wrong things. Discountenance *all* cruelty to them, all starvation, all corporal chastisement; these may brutalize and *break* their spirits, but will never bend them to willing, cheerful obedience. If possible, see that they are comfortably and *seasonably* fed, whether in the house or the field; it is unreasonable and cruel to expect slaves to wait for their breakfast until eleven o’clock, when they rise at five or six. Do all you can, to induce their owners to clothe them well, and to allow them many little indulgences which would contribute to their comfort. Above all, try to persuade your husband, father, brothers and sons, that *slavery is a crime against God and man*, and that it is a great sin to keep *human beings* in such abject ignorance; to deny them the privilege of learning to read and write. The Catholics are universally condemned, for denying the Bible to the common people, but, *slaveholders must not* blame them, for *they* are doing the *very same thing*, and for the very same reason, neither of these systems can bear the light

which bursts from the pages of that Holy Book. And lastly, endeavour to inculcate submission on the part of the slaves, but whilst doing this be faithful in pleading the cause of the oppressed.

“Will *you* behold unheeding,  
Life’s holiest feelings crushed,  
Where *woman’s* heart is bleeding,  
Shall *woman’s* voice be hushed?”

4. Act on this subject. Some of you *own* slaves yourselves. If you believe slavery is *sinful*, set them at liberty, “undo the heavy burdens and let the oppressed go free.” If they wish to remain with you, pay them wages, if not let them leave you. Should they remain, teach them, and have them taught the common branches of an English education; they have minds and those minds, *ought to be improved*. So precious a talent as intellect, never was given to be wrapt in a napkin and buried in the earth. It is the *duty* of all, as far as they can, to improve their own mental faculties, because we are commanded to love God with *all our minds*, as well as with all our hearts, and we commit a great sin, if we *forbid or prevent* that cultivation of the mind in others, which would enable them to perform this duty. Teach your servants then to read &c, and encourage them to believe it is their *duty* to learn, if it were only that they might read the Bible.

But some of you will say, we can neither free our slaves nor teach them to read, for the laws of our state forbid it. Be not surprised when I say such wicked laws *ought to be no barrier* in the way of your duty, and I appeal to the Bible to prove this position. What was the conduct of Shiphrah and Puah, when the king of Egypt issued his cruel mandate, with regard to the Hebrew children? “*They feared God*, and did *not* as the King of Egypt commanded them, but saved the men children alive.” Did these *women* do right in disobeying that monarch? “*Therefore* (says the sacred text,) *God dealt well* with them, and made them houses” Ex. i. What was the conduct of Shadrach, Meshach, and Abednego, when Nebuchadnezzar set up a golden image in the plain of Dura, and commanded all people, nations, and languages to fall down and worship it? “Be it known, unto thee, (said these faithful *Jews*) O king, that we will not serve thy gods, nor worship the image which thou hast set up.” Did these men *do right in disobeying the law* of their sovereign? Let their miraculous deliverance from the burning fiery furnace, answer; Dan. iii. . . .

But some of you may say, if we do free our slaves, they will be taken up and sold, therefore there will be no use in doing it. Peter and John might just as well have said, we will not preach the gospel, for if we do, we shall be taken up and put in prison, therefore there will be no use in our preaching. *Consequences*, my friends, belong no more to

*you*, than they did to these apostles. Duty is ours and events are God’s. If you think slavery is sinful, all *you* have to do is to set your slaves at liberty, do all you can to protect them, and in humble faith and fervent prayer, commend them to your common Father. He can take care of them; but if for wise purposes he sees fit to allow them to be sold, this will afford you an opportunity of testifying openly, wherever you go, against the crime of *manstealing*. Such an act will be *clear robbery*, and if exposed, might, under the Divine direction, do the cause of Emancipation more good, than any thing that could happen, for, “He makes even the wrath of man to praise him, and the remainder of wrath he will restrain.”

I know that this doctrine of obeying *God*, rather than man, will be considered as dangerous, and heretical by many, but I am not afraid openly to avow it, because it is the doctrine of the Bible; but I would not be understood to advocate resistance to any law however oppressive if, in obeying it, I was not obliged to commit *sin*. If for instance, there was a law, which imposed imprisonment or a fine upon me if I manumitted a slave, I would on no account resist that law, I would set the slave free, and then go to prison or pay the fine. If a law commands me to *sin* I will break it; if it calls me to *suffer*, I will let it take its course *unresistingly*. The doctrine of blind obedience and unqualified submission to *any human* power, whether civil or ecclesiastical, is the doctrine of despotism, and ought to have no place among Republicans and Christians.

But you will perhaps say, such a course of conduct would inevitably expose us to great suffering. Yes! my christian friends, I believe it would, but this will *not* excuse you or any one else for the neglect of *duty*. If Prophets and Apostles, Martyrs, and Reformers had not been willing to suffer for the truth’s sake, where would the world have been now? If they had said, we cannot speak the truth, we cannot do what we believe is right, because the *laws of our country or public opinion are against us*, where would our holy religion have been now? . . .

But you may say we are *women*, how can our hearts endure persecution? And why not? Have not women stood up in all the dignity and strength of moral courage to be the leaders of the people, and to bear a faithful testimony for the truth whenever the providence of God has called them to do so? Are there no *women* in that noble army of martyrs who are now singing the song of Moses and the Lamb? Who led out the women of Israel from the house of bondage, striking the timbrel, and singing the song of deliverance on the banks of that sea whose waters stood up like walls of crystal to open a passage for their escape? It was a *woman*: Miriam, the prophetess, the sister of Moses and Aaron. Who went up with Barak to Kadesh to fight against Jabin, King of Canaan, into whose hand Israel had been sold because of their iniquities? It was a *woman*! Deborah,

the wife of Lapidoth, the judge, as well as the prophetess of that backsliding people; Judges iv, 9. Into whose hands was Sisera, the captain of Jabin's host delivered? Into the hands of a *woman*. Jael the wife of Heber! Judges vi, 21. Who dared to *speaking the truth* concerning those judgments which were coming upon Judea, when Josiah, alarmed at finding that his people "had not kept the word of the Lord to do after all that was written in the book of the Law," sent to enquire of the Lord concerning these things? It was a *woman*. Huldah the prophetess, the wife of Shalum; 2, Chron. xxxiv, 22. Who was chosen to deliver the whole Jewish nation from that murderous decree of Persia's King, which wicked Haman had obtained by calumny and fraud? It was a *woman*; Esther the Queen; yes, weak and trembling *woman* was the instrument appointed by God, to reverse the bloody mandate of the eastern monarch, and save the *whole visible church* from destruction. What human voice first proclaimed to Mary that she should be the mother of our Lord? It was a *woman*! Elizabeth, the wife of Zacharias; Luke i, 42, 43. Who united with the good old Simeon in giving thanks publicly in the temple, when the child, Jesus, was presented there by his parents, "and spake of him to all them that looked for redemption in Jerusalem?" It was a *woman*! Anna the prophetess. Who first proclaimed Christ as the true Messiah in the streets of Samaria, once the capital of the ten tribes? It was a *woman*! Who ministered to the Son of God whilst on earth, a despised and persecuted Reformer, in the humble garb of a carpenter? They were *women*! Who followed the rejected King of Israel, as his fainting footsteps trod the road to Calvary? "A great company of people and of *women*;" and it is remarkable that to *them alone*, he turned and addressed the pathetic language, "Daughters of Jerusalem, weep not for me, but weep for yourselves and your children." Ah! who sent unto the Roman Governor when he was set down on the judgment seat, saying unto him, "Have thou nothing to do with that just man, for I have suffered many things this day in a dream because of him?" It was a *woman*! the wife of Pilate. Although "*he knew* that for envy the Jews had delivered Christ," yet *he* consented to surrender the Son of God into the hands of a brutal soldiery, after having himself scourged his naked body. Had the *wife* of Pilate sat upon that judgment seat, what would have been the result of the trial of this "just person?" . . .

And what, I would ask in conclusion, have *women* done for the great and glorious cause of Emancipation? Who wrote that pamphlet which moved the heart of Wilberforce to pray over the wrongs, and his tongue to plead the cause of the oppressed African? It was a *woman*, Elizabeth Heyrick. Who labored assiduously to keep the sufferings of the slave continually before the British public? They were *women*. And how did they do it? By their needles, paint brushes and pens, by speaking the truth, and petitioning Parliament

for the abolition of slavery. And what was the effect of their labors? Read it in the Emancipation bill of Great Britain. Read it, in the present state of her West India Colonies. Read it, in the impulse which has been given to the cause of freedom, in the United States of America. Have English women then done so much for the negro, and shall American women do nothing? Oh no! Already are there sixty female Anti-Slavery Societies in operation. These are doing just what the English women did, telling the story of the colored man's wrongs, praying for his deliverance, and presenting his kneeling image constantly before the public eye on bags and needle-books, card-racks, pen-wipers, pin-cushions, &c. Even the children of the north are inscribing on their handy work, "May the points of our needles prick the slaveholder's conscience." Some of the reports of these Societies exhibit not only considerable talent, but a deep sense of religious duty, and a determination to persevere through evil as well as good report, until every scourge, and every shackle, is buried under the feet of the manumitted slave.

The Ladies' Anti-Slavery Society of Boston was called last fall, to a severe trial of their faith and constancy. They were mobbed by "the gentlemen of property and standing," in that city at their anniversary meeting, and their lives were jeopardized by an infuriated crowd; but their conduct on that occasion did credit to our sex, and affords a full assurance that they will *never* abandon the cause of the slave. The pamphlet, *Right and Wrong in Boston*, issued by them in which a particular account is given of that "mob of broad cloth in broad day," does equal credit to the head and the heart of her who wrote it. I wish my Southern sisters could read it; they would then understand that the women of the North have engaged in this work from a sense of *religious duty*, and that nothing will ever induce them to take their hands from it until it is fully accomplished. They feel no hostility to you, no bitterness nor wrath; they rather sympathize in your trials and difficulties; but they well know that the first thing to be done to help you, is to pour in the light of truth on your minds, to urge you to reflection, and pray over the subject. This is all *they* can do for you, *you* must work out your own deliverance with fear and trembling, and with the direction and blessing of God, *you can do it*. Northern women may labor to produce a correct public opinion as the North, but if Southern women sit down in listless indifference and criminal idleness, public opinion cannot be rectified and purified at the South. It is manifest to every reflecting mind, that slavery must be abolished; the era in which we live, and the light which is overspreading the whole world on this subject, clearly show that the time cannot be distant when it will be done. Now there are only two ways in which it can be effected, by moral power or physical force, and it is for *you* to choose which of these you prefer. Slavery always has, and always will produce

insurrections wherever it exists, because it is a violation of the natural order of things, and no human power can much longer perpetuate it . . .

The *women of the South can overthrow* this horrible system of oppression and cruelty, licentiousness and wrong. Such appeals to your legislatures would be irresistible, for there is something in the heart of man which *will bend under moral suasion*. There is a swift witness for truth in his bosom, which *will respond to truth* when it is uttered with calmness and dignity. If you could obtain but six signatures to such a petition in only one state, I would say send up that petition, and be not in the least discouraged by the scoffs and jeers of the heartless, or the resolution of the house to lay it on the table. It will be a great thing if the subject can be introduced into your legislatures in any way, even by *women*, and *they* will be the most likely to introduce it there in the best possible manner, as a matter of *morals* and *religion*, not of expediency or politics. You may petition, too, the different ecclesiastical bodies of the slave states. Slavery must be attacked with the whole power of truth and the sword of the spirit. You must take it up on *Christian* ground, and fight against it with Christian weapons, whilst your feet are shod with the preparation of the gospel of peace. And *you are now* loudly called upon by the cries of the widow and the orphan, to arise and gird yourselves for this great moral conflict, with the whole armour of righteousness upon the right hand and on the left.

***United States v. Libellants and Claimants of the Schooner Amistad, (1841)***  
***United States Supreme Court***

40 U.S. 518 (1841)

APPEAL FROM THE CIRCUIT COURT  
 OF CONNECTICUT

**Opinions**

**STORY, J., Opinion of the Court**

Mr. Justice STORY delivered the opinion of the Court.

This is the case of an appeal from the decree of the Circuit Court of the District of Connecticut, sitting in admiralty. The leading facts, as they appear upon the transcript of the proceedings, are as follows: On the 27th of June, 1839, the schooner *L'Amistad*, being the property of Spanish subjects, cleared out from the port of Havana, in the island of Cuba, for Puerto Principe, in the same island. On board of the schooner were the captain, Ransom Ferrer, and Jose Ruiz, and Pedro Montez, all Spanish subjects. The former had with him a negro boy, named Antonio, claimed to be his slave. Jose Ruiz had with him

forty-nine negroes, claimed by him as his slaves, and stated to be his property, in a certain pass or document, signed by the Governor General [p\*588] of Cuba. Pedro Montez had with him four other negroes, also claimed by him as his slaves, and stated to be his property, in a similar pass or document, also signed by the Governor General of Cuba. On the voyage, and before the arrival of the vessel at her port of destination, the negroes rose, killed the captain, and took possession of her. On the 26th of August, the vessel was discovered by Lieutenant Gedney, of the United States brig *Washington*, at anchor on the high seas, at the distance of half a mile from the shore of Long Island. A part of the negroes were then on shore at Culloden Point, Long Island; who were seized by Lieutenant Gedney, and brought on board. The vessel, with the negroes and other persons on board, was brought by Lieutenant Gedney into the district of Connecticut, and there libelled for salvage in the District Court of the United States. A libel for salvage was also filed by Henry Green and Pelatiah Fordham, of Sag Harbour, Long Island. On the 18th of September, Ruiz and Montez filed claims and libels, in which they asserted their ownership of the negroes as their slaves, and of certain parts of the cargo, and prayed that the same might be "delivered to them, or to the representatives of her Catholic majesty, as might be most proper." On the 19th of September, the Attorney of the United States, for the district of Connecticut, filed an information or libel, setting forth, that the Spanish minister had officially presented to the proper department of the government of the United States, a claim for the restoration of the vessel, cargo, and slaves, as the property of Spanish subjects, which had arrived within the jurisdictional limits of the United States, and were taken possession of by the said public armed brig of the United States; under such circumstances as made it the duty of the United States to cause the same to be restored to the true proprietors, pursuant to the treaty between the United States and Spain: and praying the Court, on its being made legally to appear that the claim of the Spanish minister was well founded, to make such order for the disposal of the vessel, cargo, and slaves, as would best enable the United States to comply with their treaty stipulations. But if it should appear, that the negroes were persons transported from Africa, in violation of the laws of the United States, and brought within the United States contrary to the same laws; he then prayed the Court to make such order for their removal to the coast of Africa, pursuant to the laws of the United States, as it should deem fit.

On the 19th of November, the Attorney of the United States [p\*589] filed a second information or libel, similar to the first, with the exception of the second prayer above set forth in his former one. On the same day, Antonio G. Vega, the vice-consul of Spain, for the state of Connecticut, filed his libel, alleging that Antonio was a slave, the property

of the representatives of Ramon Ferrer, and praying the Court to cause him to be delivered to the said vice-consul, that he might be returned by him to his lawful owner in the island of Cuba.

On the 7th of January, 1840, the negroes, Cinque and others, with the exception of Antonio, by their counsel, filed an answer, denying that they were slaves, or the property of Ruiz and Montez, or that the Court could, under the Constitution or laws of the United States, or under any treaty, exercise any jurisdiction over their persons, by reason of the premises; and praying that they might be dismissed. They specially set forth and insist in this answer, that they were native born Africans; born free, and still of right ought to be free and not slaves; that they were, on or about the 15th of April, 1839, unlawfully kidnapped, and forcibly and wrongfully carried on board a certain vessel on the coast of Africa, which was unlawfully engaged in the slave trade, and were unlawfully transported in the same vessel to the island of Cuba, for the purpose of being there unlawfully sold as slaves; that Ruiz and Montez, well knowing the premises, made a pretended purchase of them: that afterwards, on or about the 28th of June, 1839, Ruiz and Montez, confederating with Ferrer, (captain of the *Amistad*,) caused them, without law or right, to be placed on board of the *Amistad*, to be transported to some place unknown to them, and there to be enslaved for life; that, on the voyage, they rose on the master, and took possession of the vessel, intending to return therewith to their native country, or to seek an asylum in some free state; and the vessel arrived, about the 26th of August, 1839, off Montauk Point, near Long Island; a part of them were sent on shore, and were seized by Lieutenant Gedney, and carried on board; and all of them were afterwards brought by him into the district of Connecticut.

On the 7th of January, 1840, Jose Antonio Tellincas, and Messrs. Aspe and Laca, all Spanish subjects, residing in Cuba, filed their [p\*590] claims, as owners to certain portions of the goods found on board of the schooner *L'Amistad*.

On the same day, all the libellants and claimants, by their counsel, except Jose Ruiz and Pedro Montez, (whose libels and claims, as stated of record, respectively, were pursued by the Spanish minister, the same being merged in his claims,) appeared, and the negroes also appeared by their counsel; and the case was heard on the libels, claims, answers, and testimony of witnesses.

On the 23d day of January, 1840, the District Court made a decree. By that decree, the Court rejected the claim of Green and Fordham for salvage, but allowed salvage to Lieutenant Gedney and others, on the vessel and cargo, of one-third of the value thereof, but not on the negroes, Cinque and others; it allowed the claim of Tellincas, and Aspe and Laca with the exception of the above-mentioned

salvage; it dismissed the libels and claims of Ruiz and Montez, with costs, as being included under the claim of the Spanish minister; it allowed the claim of the Spanish vice-consul for Antonio, on behalf of Ferrer's representatives; it rejected the claims of Ruiz and Montez for the delivery of the negroes, but admitted them for the cargo, with the exception of the above-mentioned salvage; it rejected the claim made by the Attorney of the United States on behalf of the Spanish minister, for the restoration of the negroes under the treaty; but it decreed that they should be delivered to the President of the United States, to be transported to Africa, pursuant to the act of 3d March, 1819.

From this decree the District Attorney, on behalf of the United States, appealed to the Circuit Court, except so far as related to the restoration of the slave Antonio. The claimants, Tellincas, and Aspe and Laca, also appealed from that part of the decree which awarded salvage on the property respectively claimed by them. No appeal was interposed by Ruiz or Montez, or on behalf of the representatives of the owners of the *Amistad*. The Circuit Court, by a mere pro forma decree, affirmed the decree of the District Court, reserving the question of salvage upon the claims of Tellincas, and Aspe and Laca. And from that decree the present appeal has been brought to this Court.

The cause has been very elaborately argued, as well upon the [p\*591] merits, as upon a motion on behalf of the appellees to dismiss the appeal. On the part of the United States, it has been contended, 1. That due and sufficient proof concerning the property has been made to authorize the restitution of the vessel, cargo, and negroes to the Spanish subjects on whose behalf they are claimed pursuant to the treaty with Spain, of the 27th of October, 1795. 2. That the United States had a right to intervene in the manner in which they have done, to obtain a decree for the restitution of the property, upon the application of the Spanish minister. These propositions have been strenuously denied on the other side. Other collateral and incidental points have been stated, upon which it is not necessary at this moment to dwell.

Before entering upon the discussion of the main points involved in this interesting and important controversy, it may be necessary to say a few words as to the actual posture of the case as it now stands before us. In the first place, then, the only parties now before the Court on one side, are the United States, intervening for the sole purpose of procuring restitution of the property as Spanish property, pursuant to the treaty, upon the grounds stated by the other parties claiming the property in their respective libels. The United States do not assert any property in themselves, or any violation of their own rights, or sovereignty, or laws, by the acts complained of. They do not insist that these negroes have been imported into the United States, in contravention of our own slave trade acts. They do not seek to

have these negroes delivered up for the purpose of being transported to Cuba as pirates or robbers, or as fugitive criminals against the laws of Spain. They do not assert that the seizure, and bringing the vessel, and cargo, and negroes into port, by Lieutenant Gedney, for the purpose of adjudication, is a tortious act. They simply confine themselves to the right of the Spanish claimants to the restitution of their property, upon the facts asserted in their respective allegations.

In the next place, the parties before the Court on the other side as appellees, are Lieutenant Gedney, on his libel for salvage, and the negroes, (Cinque, and others,) asserting themselves, in their answer, not to be slaves, but free native Africans, kidnapped [p\*592] in their own country, and illegally transported by force from that country; and now entitled to maintain their freedom.

No question has been here made, as to the proprietary interests in the vessel and cargo. It is admitted that they belong to Spanish subjects, and that they ought to be restored. The only point on this head is, whether the restitution ought to be upon the payment of salvage or not? The main controversy is, whether these negroes are the property of Ruiz and Montez, and ought to be delivered up; and to this, accordingly, we shall first direct our attention.

It has been argued on behalf of the United States, that the Court are bound to deliver them up, according to the treaty of 1795, with Spain, which has in this particular been continued in full force, by the treaty of 1819, ratified in 1821. The sixth article of that treaty, seems to have had, principally, in view cases where the property of the subjects of either state had been taken possession of within the territorial jurisdiction of the other, during war. The eighth article provides for cases where the shipping of the inhabitants of either state are forced, through stress of weather, pursuit of pirates, or enemies, or any other urgent necessity, to seek shelter in the ports of the other. There may well be some doubt entertained, whether the present case, in its actual circumstances, falls within the purview of this article. But it does not seem necessary, for reasons hereafter stated, absolutely to decide it. The ninth article provides, "that all ships and merchandise, of what nature soever, which shall be rescued out of the hands of any pirates or robbers, on the high seas, shall be brought into some port of either state, and shall be delivered to the custody of the officers of that port, in order to be taken care of and restored entire to the true proprietor, as soon as due and sufficient proof shall be made concerning the property thereof." This is the article on which the main reliance is placed on behalf of the United States, for the restitution of these negroes. To bring the case within the article, it is essential to establish, First, That these negroes, under all the circumstances, fall within the description of merchandise, in the sense of the treaty. Secondly, That there has been a rescue of them on the high

seas, out of the hands of the pirates and robbers; which, in the present case, can only be, by showing that they [p\*593] themselves are pirates and robbers; and, Thirdly, That Ruiz and Montez, the asserted proprietors, are the true proprietors, and have established their title by competent proof.

If these negroes were, at the time, lawfully held as slaves under the laws of Spain, and recognised by those laws as property capable of being lawfully bought and sold; we see no reason why they may not justly be deemed within the intent of the treaty, to be included under the denomination of merchandise, and, as such, ought to be restored to the claimants: for, upon that point, the laws of Spain would seem to furnish the proper rule of interpretation. But, admitting this, it is clear, in our opinion, that neither of the other essential facts and requisites has been established in proof; and the onus probandi of both lies upon the claimants to give rise to the causes *foederis*. It is plain beyond controversy, if we examine the evidence, that these negroes never were the lawful slaves of Ruiz or Montez, or of any other Spanish subjects. They are natives of Africa, and were kidnapped there, and were unlawfully transported to Cuba, in violation of the laws and treaties of Spain, and the most solemn edicts and declarations of that government. By those laws, and treaties, and edicts, the African slave trade is utterly abolished; the dealing in that trade is deemed a heinous crime; and the negroes thereby introduced into the dominions of Spain, are declared to be free. Ruiz and Montez are proved to have made the pretended purchase of these negroes, with a full knowledge of all the circumstances. And so cogent and irresistible is the evidence in this respect, that the District Attorney has admitted in open Court, upon the record, that these negroes were native Africans, and recently imported into Cuba, as alleged in their answers to the libels in the case. The supposed proprietary interest of Ruiz and Montez, is completely displaced, if we are at liberty to look at the evidence of the admissions of the District Attorney.

It, then, these negroes are not slaves, but are kidnapped Africans, who, by the laws of Spain itself, are entitled to their freedom, and were kidnapped and illegally carried to Cuba, and illegally detained and restrained on board of the *Amistad*; there is no pretence to say, that they are pirates or robbers. We may lament the dreadful acts, by which they asserted their liberty, and took possession of the *Amistad*, and endeavoured to regain their native [p\*594] country; but they cannot be deemed pirates or robbers in the sense of the law of nations, or the treaty with Spain, or the laws of Spain itself; at least so far as those laws have been brought to our knowledge. Nor do the libels of Ruiz or Montez assert them to be such.

This posture of the facts would seem, of itself, to put an end to the Whole inquiry upon the merits. But it is argued, on behalf of the United States, that the ship, and cargo,

and negroes were duly documented as belonging to Spanish subjects, and this Court have no right to look behind these documents; that full faith and credit is to be given to them; and that they are to be held conclusive evidence in this cause, even although it should be established by the most satisfactory proofs, that they have been obtained by the grossest frauds and impositions upon the constituted authorities of Spain. To this argument we can, in no wise, assent. There is nothing in the treaty which justifies or sustains the argument. We do not here meddle with the point, whether there has been any connivance in this illegal traffic, on the part of any of the colonial authorities or subordinate officers of Cuba; because, in our view, such an examination is unnecessary, and ought not to be pursued, unless it were indispensable to public justice, although it has been strongly pressed at the bar. What we proceed upon is this, that although public documents of the government, accompanying property found on board of the private ships of a foreign nation, certainly are to be deemed *prima facie* evidence of the facts which they purport to state, yet they are always open to be impugned for fraud; and whether that fraud be in the original obtaining of these documents, or in the subsequent fraudulent and illegal use of them, when once it is satisfactorily established, it overthrows all their sanctity, and destroys them as proof. Fraud will vitiate any, even the most solemn transactions; and an asserted title to property, founded upon it, is utterly void. The very language of the ninth article of the treaty of 1795, requires the proprietor to make due and sufficient proof of his property. And how can that proof be deemed either due or sufficient, which is but a connected, and stained tissue of fraud? This is not a mere rule of municipal jurisprudence. Nothing is more clear in the law of nations, as an established rule to regulate their rights, and duties, [p\*595] and intercourse, than the doctrine, that the ship's papers are but *prima facie* evidence, and that, if they are shown to be fraudulent, they are not to be held proof of any valid title. This rule is familiarly applied, and, indeed, is of every-days occurrence in cases of prize, in the contests between belligerents and neutrals, as is apparent from numerous cases to be found in the Reports of this Court; and it is just as applicable to the transactions of civil intercourse between nations in times of peace. If a private ship, clothed with Spanish papers, should enter the ports of the United States, claiming the privileges, and immunities, and rights belonging to bona fide subjects of Spain, under our treaties or laws, and she should, in reality, belong to the subjects of another nation, which was not entitled to any such privileges, immunities, or rights, and the proprietors were seeking, by fraud, to cover their own illegal acts, under the flag of Spain; there can be no doubt, that it would be the duty of our Courts to strip off the disguise, and to look at the case according to its naked realities. In the solemn treaties between nations, it

can never be presumed that either state intends to provide the means of perpetrating or protecting frauds; but all the provisions are to be construed as intended to be applied to bona fide transactions. The seventeenth article of the treaty with Spain, which provides for certain passports and certificates, as evidence of property on board of the ships of both states, is, in its terms, applicable only to cases where either of the parties is engaged in a war. This article required a certain form of passport to be agreed upon by the parties, and annexed to the treaty. It never was annexed; and, therefore, in the case of the *Amiable Isabella*, 6 Wheaton, 1, it was held inoperative.

It is also a most important consideration in the present case, which ought not to be lost sight of, that, supposing these African negroes not to be slaves, but kidnapped, and free negroes, the treaty with Spain cannot be obligatory upon them; and the United States are bound to respect their rights as much as those of Spanish subjects. The conflict of rights between the parties under such circumstances, becomes positive and inevitable, and must be decided upon the eternal principles of justice and international law. If the contest were about any goods on board of this ship, to which American citizens asserted a title, which was [p\*596] denied by the Spanish claimants, there could be no doubt of the right of such American citizens to litigate their claims before any competent American tribunal, notwithstanding the treaty with Spain. A fortiori, the doctrine must apply where human life and human liberty are in issue; and constitute the very essence of the controversy. The treaty with Spain never could have intended to take away the equal rights of all foreigners, who should contest their claims before any of our Courts, to equal justice; or to deprive such foreigners of the protection given them by other treaties, or by the general law of nations. Upon the merits of the case, then, there does not seem to us to be any ground for doubt, that these negroes ought to be deemed free; and that the Spanish treaty interposes no obstacle to the just assertion of their rights.

There is another consideration growing out of this part of the case, which necessarily rises in judgment. It is observable, that the United States, in their original claim, filed it in the alternative, to have the negroes, if slaves and Spanish property, restored to the proprietors; or, if not slaves, but negroes who had been transported from Africa, in violation of the laws of the United States, and brought into the United States contrary to the same laws, then the Court to pass an order to enable the United States to remove such persons to the coast of Africa, to be delivered there to such agent as may be authorized to receive and provide for them. At a subsequent period, this last alternative claim was not insisted on, and another claim was interposed, omitting it; from which the conclusion naturally arises that it was abandoned. The decree of the District

Court, however, contained an order for the delivery of the negroes to the United States, to be transported to the coast of Africa, under the act of the 3d of March, 1819, ch. 224. The United States do not now insist upon any affirmance of this part of the decree; and, in our judgment, upon the admitted facts, there is no ground to assert that the case comes within the purview of the act of 1819, or of any other of our prohibitory slave trade acts. These negroes were never taken from Africa, or brought to the United States in contravention of those acts. When the *Amistad* arrived she was in possession of the negroes, asserting their freedom; and in no sense could they possibly intend to import themselves here, as [p\*597] slaves, or for sale as slaves. In this view of the matter, that part of the decree of the District Court is unmaintainable, and must be reversed.

The view which has been thus taken of this case, upon the merits, under the first point, renders it wholly unnecessary for us to give any opinion upon the other point, as to the right of the United States to intervene in this case in the manner already stated. We dismiss this, therefore, as well as several minor points made at the argument.

As to the claim of Lieutenant Gedney for the salvage service, it is understood that the United States do not now desire to interpose any obstacle to the allowance of it, if it is deemed reasonable by the Court. It was a highly meritorious and useful service to the proprietors of the ship and cargo; and such as, by the general principles of maritime law, is always deemed a just foundation for salvage. The rate allowed by the Court, does not seem to us to have been beyond the exercise of a sound discretion, under the very peculiar and embarrassing circumstances of the case.

Upon the whole, our opinion is, that the decree of the Circuit Court, affirming that of the District Court, ought to be affirmed, except so far as it directs the negroes to be delivered to the President, to be transported to Africa, in pursuance of the act of the 3d of March, 1819; and, as to this, it ought to be reversed: and that the said negroes be declared to be free, and be dismissed from the custody of the Court, and go without day.

This cause came on to be heard on the transcript of the record from the Circuit Court of the United States, for the District of Connecticut, and was argued by counsel. On consideration whereof, it is the opinion of this Court, that there is error in that part of the decree of the Circuit Court, affirming the decree of the District Court, which ordered the said negroes to be delivered to the President of the United States, to be transported to Africa, in pursuance of the act of Congress, of the 3d of March, 1819; and that, as to that part, it ought to be reversed: and, in all other respects, that the said decree of the Circuit Court ought to be affirmed. It is therefore ordered adjudged, and decreed by this Court, that the decree of the said Circuit Court be, and the same is hereby, affirmed, except as to the part afore-

said, and as to that part, that it be reversed; and that the cause be remanded to the Circuit Court, with directions to enter, in lieu of that part, a decree, that the said negroes be, and are hereby, declared to be free, and that they be dismissed from the custody of the Court, and be discharged from the suit and go thereof quit without day. This cause came on to be heard on the transcript of the record from the Circuit Court of the United States, for the District of Connecticut, and was argued by counsel. On consideration whereof, it is the opinion of this Court, that there is error in that part of the decree of the Circuit Court, affirming the decree of the District Court, which ordered the said negroes to be delivered to the President of the United States, to be transported to Africa, in pursuance of the act of congress of the 3d of March, 1819; and that, as to that part, it ought to be reversed: and in all other respects, that the said decree of the [p\*598] Circuit Court ought to be affirmed. It is therefore ordered adjudged, and decreed by this Court, that the decree of the said Circuit Court be, and the same is hereby, affirmed, except as to the part aforesaid, and as to that part, that it be reversed; and that the cause be remanded to the Circuit Court, with directions to enter, in lieu of that part, a decree, that the said negroes be and are hereby, declared to be free, and that they be dismissed from the custody of the Court, and be discharged from the suit and go thereof quit without day.

### Annexation of Texas (1845)

*United States Statutes at Large* (29th Cong.,  
1st sess., chap. 1), pp. 1-2

March 1, 1845

#### An Act

*To extend the Laws of the United States over the State of Texas, and for other Purposes. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That all the laws of the United States are hereby declared to extend to and over, and to have full force and effect within, the State of Texas, admitted at the present session of Congress into the Confederacy and Union of the United States.

Sec. 2. *And be it further enacted,* That the said State of Texas shall constitute one judicial district, to be called the District of Texas, for which one judge shall be appointed, who shall reside therein, and who shall receive a salary of two thousand dollars per annum, and who shall hold the first term of said court at Galveston, on the first Monday of February next, and at such other times and places in said district as may be provided by law, or as said judge may order; and that said court shall have and exercise the same powers and jurisdiction as have been conferred by

law on the District Courts of the United States; and, also, shall have and exercise the powers and jurisdiction of a Circuit Court of the United States; and appeals and writs of error shall lie from the decisions of said District and Circuit Courts for the District of Texas to the Supreme Court of the United States, in the same cases as from a Circuit Court of the United States to said Supreme Court, and under the same regulations.

Sec. 3. *And be it further enacted*, That there shall be appointed in and for said district a person learned in the law, to act as attorney of the United States for said district, and also a person to act as marshal of the United States for said district, each of whom shall receive an annual salary of two hundred dollars, and also such compensation and fees for official services as have been or may be provided by law for United States district attorneys and marshals; and the judge of said court shall appoint a clerk therefor, who shall receive like compensation and fees as have been or may be allowed by law to clerks of the District and Circuit Courts of the United States. Approved, December 29, 1845.

### Oregon Boundary Treaty (1846)

*U. S. Statutes at Large* 9 (1845–51), pp. 869–870

June 15, 1846

#### Treaty with Great Britain

In Regard to Limits Westward of the Rocky Mountains.

*The United States of America and her Majesty the Queen of the United Kingdom of Great Britain and Ireland*, deeming it to be desirable for the future welfare of both countries that the state of doubt and uncertainty which has hitherto prevailed respecting the sovereignty and government of the territory on the northwest coast of America, lying westward of the Rocky or Stony Mountains, should be finally terminated by an amicable compromise of the rights mutually asserted by the two parties over the said territory, have respectively named plenipotentiaries to treat and agree concerning the terms of such settlement—that is to say: the President of the United States of America has, on his part, furnished with full powers James Buchanan, Secretary of State of the United States, and her Majesty the Queen of the United Kingdom of Great Britain and Ireland has, on her part, appointed the Right Honorable Richard Pakenham, a member of her Majesty's Most Honorable Privy Council, and her Majesty's Envoy Extraordinary and Minister Plenipotentiary to the United States; who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:—

#### Article I

From the point on the forty-ninth parallel of north latitude, where the boundary laid down in existing treaties and conventions between the United States and Great Britain terminates, the line of boundary between the territories of the United States and those of her Britannic Majesty shall be continued westward along the said forty-ninth parallel of north latitude to the middle of the channel which separates the continent from Vancouver's Island, and thence southerly through the middle of the said channel, and of Fuca's Straits, to the Pacific Ocean: *Provided, however*, That the navigation of the whole of the said channel and straits, south of the forty-ninth parallel of north latitude, remain free and open to both parties.

#### Article II

From the point at which the forty-ninth parallel of north latitude shall be found to intersect the great northern branch of the Columbia River, the navigation of the said branch shall be free and open to the Hudson's Bay Company, and to all British subjects trading with the same, to the point where the said branch meets the main stream of the Columbia, and thence down the said main stream to the ocean, with free access into and through the said river or rivers, it being understood that all the usual portages along the line thus described shall, in like manner, be free and open. In navigating the said river or rivers, British subjects, with their goods and produce, shall be treated on the same footing as citizens of the United States; it being, however, always understood that nothing in this article shall be construed as preventing, or intended to prevent, the government of the United States from making any regulations respecting the navigation of the said river or rivers not inconsistent with the present treaty.

#### Article III

In the future appropriation of the territory south of the forty-ninth parallel of north latitude, as provided in the first article of this treaty, the possessory rights of the Hudson's Bay Company, and of all British subjects who may be already in the occupation of land or other property lawfully acquired within the said territory, shall be respected.

#### Article IV

The farms, lands, and other property of every description, belonging to the Puget's Sound Agricultural Company, on the north side of the Columbia River, shall be confirmed to the said company. In case, however, the situation of those farms and lands should be considered by the United States to be of public and political importance, and the United States government should signify a desire

to obtain possession of the whole, or of any part thereof, the property so required shall be transferred to the said government, at a proper valuation, to be agreed upon between the parties.

#### **Article V**

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by her Britannic Majesty; and the ratifications shall be exchanged at London, at the expiration of six months from the date hereof, or sooner, if possible.

In witness whereof, the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Washington, the fifteenth day of June, in the year of our Lord one thousand eight hundred and forty-six. James Buchanan. [L. S.] Richard Pakenham. [L. S.]

### **Treaty of Guadalupe-Hidalgo (1848)**

Charles I. Bevans, ed., *Treaties and Other International Agreements of the United States, 1776–1947* (Washington, D.C.: Dept. of State, 1968–), pp. 791–806

Guadalupe-Hidalgo, Mexico  
February 2, 1848

*In the name of Almighty God:*

*The United States of America, and the United Mexican States*, animated by a sincere desire to put an end to the calamities of the war which unhappily exists between the two Republics, and to establish upon a solid basis relations of peace and friendship, which shall confer reciprocal benefits upon the citizens of both, and assure the concord, harmony and mutual confidence, wherein the two Peoples should live, as good Neighbours, have for that purpose appointed their respective Plenipotentiaries: that is to say, the President of the United States has appointed Nicholas P. Trist, a citizen of the United States, and the President of the Mexican Republic has appointed Don Luis Gonzaga Cuevas, Don Bernardo Couto, and Don Miguel Atristain, citizens of the said Republic; who, after a reciprocal communication of their respective full powers, have under the protection of Almighty God, the author of Peace, arranged, agreed upon, and signed the following

*TREATY OF PEACE, FRIENDSHIP, LIMITS AND SETTLEMENT BETWEEN the United States of America and the Mexican Republic*

#### **Article I**

There shall be firm and universal peace between the United States of America and the Mexican Republic, and between

their respective Countries, territories, cities, towns and people, without exception of places or persons . . .

#### **Article V**

The Boundary line between the two Republics shall commence in the Gulf of Mexico, three leagues from land, opposite the mouth of the Rio Grande, otherwise called Rio Bravo del Norte, or opposite the mouth of its deepest branch, if it should have more than one branch emptying directly into the sea; from thence, up the middle of that river, following the deepest channel, where it has more than one to the point where it strikes the Southern boundary of New Mexico; thence, westwardly along the whole Southern Boundary of New Mexico (which runs north of the town called *Paso*) to its western termination; thence, northward, along the western line of New Mexico, until it intersects the first branch of the river Gila; (or if it should not intersect any branch of that river, then, to the point on the said line nearest to such branch, and thence in a direct line to the same;) thence down the middle of the said branch and of the said river, until it empties into the Rio Colorado; thence, across the Rio Colorado, following the division line between Upper and Lower California to the Pacific Ocean . . .

#### **Article VII**

The river Gila, and the part of the Rio Bravo del Norte lying below the southern boundary of New Mexico, being, agreeably to the fifth Article, divided in the middle between the two Republics, the navigation of the Gila and the Bravo below said boundary shall be free and common to the vessels and citizens of both countries; and neither shall, without the consent of the other, construct any work that may impede or interrupt, in whole or in part, the exercise of this right: not even for the purpose of favoring new methods of navigation . . .

#### **Article VIII**

Mexicans now established in territories previously belonging to Mexico, and which remain for the future within the limits of the United States, as defined by the present Treaty, shall be free to continue where they now reside, or to remove at any time to the Mexican Republic, retaining the property which they possess in the said territories, or disposing thereof and removing the proceeds wherever they please; without their being subjected, on this account, to any contribution, tax or charge whatever. . .

#### **Article XII**

In consideration of the extension acquired by the boundaries of the United States, as defined in the fifth Article of the present treaty, the Government of the United States engages to pay to that of the Mexican Republic the sum of fifteen Millions of Dollars . . .

**Article XIII**

The United States engage moreover, to assume and pay to the claimants all the amounts now due them, and those hereafter to become due, by reason of the claims already liquidated and decided against the Mexican Republic, under the conventions between the two Republics, severally concluded on the eleventh day of April eighteen hundred and thirty-nine, and on the thirtieth day of January eighteen hundred and forty three: so that the Mexican Republic shall be absolutely exempt for the future, from all expense whatever on account of the said claims.

**Article XIV**

The United States do furthermore discharge the Mexican Republic from all claims of citizens of the United States, not heretofore decided against the Mexican Government, which may have arisen previously to the date of the signature of this treaty: which discharge shall be final and perpetual, whether the said claims be rejected or to be allowed by the Board of Commissioners provided for in the following Article, and whatever shall be the total amount of those allowed.

**Article XV**

The United States, exonerating Mexico from all demands on account of the claims of their citizens mentioned in the preceding Article, and considering them entirely and forever cancelled, whatever their amount may be, undertake to make satisfaction for the same, to an amount not exceeding three and one quarter millions of dollars . . .

**Article XXI**

If unhappily any disagreement should hereafter arise between the Governments of the two Republics, whether with respect to the interpretation of any stipulation in this treaty, or with respect to any other particular concerning the political or commercial relations of the two Nations, the said Governments, in the name of those Nations, do promise to each other, that they will endeavour, in the most sincere and earnest manner, to settle the differences so arising, and to preserve the state of peace and friendship, in which the two countries are now placing themselves: using, for this end, mutual representations and pacific negotiations. And if, by these means, they should not be enabled to come to an agreement, a resort shall not, on this account, be had to reprisals, aggression or hostility of any kind, by the one Republic against the other, until the Government of that which deems itself aggrieved, shall have maturely considered, in the spirit of peace and good neighbourship, whether it would not be better that such difference should be settled by the arbitration of Commissioners appointed on each side, or by that of a friendly nation. And should such course be proposed by either party, it shall be acceded

to by the other, unless deemed by it altogether incompatible with the nature of the difference, or the circumstances of the case.

**Declaration of Women's Rights (1848)**

Henry Steele Commager and Milton Cantor, eds.  
*Documents of American History*, 10th ed.  
 (Englewood Cliffs, N.J.: Prentice Hall, 1988) pp. 315–317

July 19, 1848

**1. Declaration of Sentiments**

When, in the course of human events, it becomes necessary for one portion of the family of man to assume among the people of the earth a position different from that which they have hitherto occupied, but one to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes that impel them to such a course.

We hold these truths to be self-evident: that all men and women are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted, deriving their just powers from the consent of the governed. Whenever any form of government becomes destructive of these ends, it is the right of those who suffer from it to refuse allegiance to it, and to insist upon the institution of a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their duty to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of the women under this government, and such is now the necessity which constrains them to demand the equal station to which they are entitled.

The history of mankind is a history of repeated injuries and usurpations on the part of man toward woman, having in direct object the establishment of an absolute tyranny over her. To prove this, let facts be submitted to a candid world.

He has never permitted her to exercise her inalienable right to the elective franchise.

He has compelled her to submit to laws, in the formation of which she had no voice.

He has withheld from her rights which are given to the most ignorant and degraded men—both natives and foreigners.

Having deprived her of this first right of a citizen, the elective franchise, thereby leaving her without representation in the halls of legislation, he has oppressed her on all sides.

He has made her, if married, in the eye of the law, civilly dead.

He has taken from her all right in property, even to the wages she earns.

He has made her, morally, an irresponsible being, as she can commit many crimes with impunity, provided they be done in the presence of her husband. In the covenant of marriage, she is compelled to promise obedience to her husband, he becoming, to all intents and purposes, her master—the law giving him power to deprive her of her liberty, and to administer chastisement.

He has so framed the laws of divorce, as to what shall be the proper causes, and in case of separation, to whom the guardianship of the children shall be given, as to be wholly regardless of the happiness of women—the law, in all cases, going upon a false supposition of the supremacy of man, and giving all power into his hands.

After depriving her of all rights as a married woman, if single, and the owner of property, he has taxed her to support a government which recognizes her only when her property can be made profitable to it.

He has monopolized nearly all the profitable employments, and from those she is permitted to follow, she receives but a scanty remuneration. He closes against her all the avenues to wealth and distinction which he considers most honorable to himself. As a teacher of theology, medicine, or law, she is not known.

He has denied her the facilities for obtaining a thorough education, all colleges being closed against her.

He allows her in Church, as well as State, but a subordinate position, claiming Apostolic authority for her exclusion from the ministry, and, with some exceptions, from any public participation in the affairs of the Church.

He has created a false public sentiment by giving to the world a different code of morals for men and women, by which moral delinquencies which exclude women from society, are not only tolerated, but deemed of little account in man.

He has usurped the prerogative of Jehovah himself, claiming it as his right to assign for her a sphere of action, when that belongs to her conscience and to her God.

He has endeavored, in every way that he could, to destroy her confidence in her own powers, to lessen her self-respect and to make her willing to lead a dependent and abject life.

Now, in view of this entire disfranchisement of one-half the people of this country, their social and religious degradation—in view of the unjust laws above mentioned, and because women do feel themselves aggrieved, oppressed, and fraudulently deprived of their most sacred rights, we insist that they have immediate admission to all the rights and privileges which belong to them as citizens of the United States.

In entering upon the great work before us, we anticipate no small amount of misconception, misrepresentation, and ridicule; but we shall use every instrumentality within our power to effect our object. We shall employ agents, circulate tracts, petition the State and National legislatures, and endeavor to enlist the pulpit and the press in our behalf. We hope this Convention will be followed by a series of Conventions embracing every part of the country.

## 2. Resolutions

Whereas, The great precept of nature is conceded to be, that “man shall pursue his own true and substantial happiness.” Blackstone in his Commentaries remarks, that this law of Nature being coeval with mankind, and dictated by God himself, is of course superior in obligation to any other. It is binding over all the globe, in all countries and at all times; no human laws are of any validity if contrary to this, and such of them as are valid, derive all their force, and all their validity, and all their authority, mediately and immediately, from this original; therefore,

*Resolved*, That all laws which prevent woman from occupying such a station in society as her conscience shall dictate, or which place her in a position inferior to that of man, are contrary to the great precept of nature, and therefore of no force or authority.

*Resolved*, That woman is man’s equal—was intended to be so by the Creator, and the highest good of the race demands that she should be recognized as such.

*Resolved*, That the women of this country ought to be enlightened in regard to the laws under which they live, that they may no longer publish their degradation by declaring themselves satisfied with their present position, nor their ignorance, by asserting that they have all the rights they want.

*Resolved*, That inasmuch as man, while claiming for himself intellectual superiority, does accord to woman moral superiority, it is pre-eminently his duty to encourage her to speak and teach, as she has an opportunity, in all religious assemblies.

*Resolved*, That the same amount of virtue, delicacy, and refinement of behavior that is required of woman in the social state, should also be required of man, and the same transgressions should be visited with equal severity on both man and woman.

*Resolved*, That the objection of indelicacy and impropriety, which is so often brought against woman when she addresses a public audience, comes with a very ill-grace from those who encourage, by their attendance, her appearance on the stage, in the concert, or in feats of the circus.

*Resolved*, That woman has too long rested satisfied in the circumscribed limits which corrupt customs and a perverted application of the Scriptures have marked out for her, and that it is time she should move in the enlarged sphere which her great Creator has assigned her.

*Resolved*, That it is the duty of the women of this country to secure to themselves their sacred right to the elective franchise.

*Resolved*, That the equality of human rights results necessarily from the fact of the identity of the race in capabilities and responsibilities.

*Resolved*, That the speedy success of our cause depends upon the zealous and untiring efforts of both men and women, for the overthrow of the monopoly of the pulpit, and for the securing to women an equal participation with men in the various trades, professions, and commerce.

*Resolved, therefore*, That, being invested by the creator with the same capabilities, and the same consciousness of responsibility for their exercise, it is demonstrably the right and duty of woman, equally with man, to promote every righteous cause by every righteous means; and especially in regard to the great subjects of morals and religion, it is self-evidently her right to participate with her brother in teaching them, both in private and in public, by writing and by speaking, by any instrumentalities proper to be used, and in any assemblies proper to be held; and this being a self-evident truth growing out of the divinely implanted principles of human nature, any custom or authority adverse to it, whether modern or wearing the hoary sanction of antiquity, is to be regarded as a self-evident falsehood, and at war with mankind.

### **“Civil Disobedience” (1849)**

**Henry David Thoreau**

Brooks Atkinson, ed., *Walden and Other Writings of Henry David Thoreau* (New York: The Modern Library, 1965)

I heartily accept the motto,—“That government is best which governs least;” and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe,—“That government is best which governs not at all;” and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient. The objections which have been brought against a standing army, and they are many and

weighty, and deserve to prevail, may also at last be brought against a standing government. The standing army is only an arm of the standing government. The government itself, which is only the mode which the people have chosen to execute their will, is equally liable to be abused and perverted before the people can act through it. Witness the present Mexican war, the work of comparatively a few individuals using the standing government as their tool; for, in the outset, the people would not have consented to this measure.

This American government,—what is it but a tradition, though a recent one, endeavoring to transmit itself unimpaired to posterity, but each instant losing some of its integrity? It has not the vitality and force of a single living man; for a single man can bend it to his will. It is a sort of wooden gun to the people themselves. But it is not the less necessary for this; for the people must have some complicated machinery or other, and hear its din, to satisfy that idea of government which they have. Governments show thus how successfully men can be imposed on, even impose on themselves, for their own advantage. It is excellent, we must all allow. Yet this government never of itself furthered any enterprise, but by the alacrity with which it got out of its way. *It* does not keep the country free. *It* does not settle the West. *It* does not educate. The character inherent in the American people has done all that has been accomplished; and it would have done somewhat more, if the government had not sometimes got in its way. For government is an expedient by which men would fain succeed in letting one another alone; and, as has been said, when it is most expedient, the governed are most let alone by it. Trade and commerce, if they were not made of India-rubber, would never manage to bounce over the obstacles which legislators are continually putting in their way; and, if one were to judge these men wholly by the effects of their actions and not partly by their intentions, they would deserve to be classed and punished with those mischievous persons who put obstructions on the railroads.

But, to speak practically and as a citizen, unlike those who call themselves no-government men, I ask for, not at once no government, but *at once* a better government. Let every man make known what kind of government would command his respect, and that will be one step toward obtaining it.

After all, the practical reason why, when the power is once in the hands of the people, a majority are permitted, and for a long period continue, to rule is not because they are most likely to be in the right, nor because this seems fairest to the minority, but because they are physically the strongest. But a government in which the majority rule in all cases cannot be based on justice, even as far as men understand it. Can there not be a government in which majorities do not virtually decide right and wrong,

but conscience?—in which majorities decide only those questions to which the rule of expediency is applicable? Must the citizen ever for a moment, or in the least degree, resign his conscience to the legislator? Why has every man a conscience, then? I think that we should be men first, and subjects afterward. It is not desirable to cultivate a respect for the law, so much as for the right. The only obligation which I have a right to assume is to do at any time what I think right. It is truly enough said, that a corporation has no conscience; but a corporation of conscientious men is a corporation *with* a conscience. Law never made men a whit more just; and, by means of their respect for it, even the well-disposed are daily made the agents of injustice. A common and natural result of an undue respect for law is, that you may see a file of soldiers, colonel, captain, corporal, privates, powder-monkeys, and all, marching in admirable order over hill and dale to the wars, against their wills, ay, against their common sense and consciences, which makes it very steep marching indeed, and produces a palpitation of the heart. They have no doubt that it is a damnable business in which they are concerned; they are all peaceably inclined. Now, what are they? Men at all? or small movable forts and magazines, at the service of some unscrupulous man in power? Visit the Navy-Yard, and behold a marine, such a man as an American government can make, or such as it can make a man with its black arts,—a mere shadow and reminiscence of humanity, a man laid out alive and standing, and already, as one may say, buried under arms with funeral accompaniments, though it may be,—

“Not a drum was heard, not a funeral note,  
As his corse to the rampart we hurried;  
Not a soldier discharged his farewell shot  
O’er the grave where our hero we buried.”

The mass of men serve the state thus, not as men mainly, but as machines, with their bodies. They are the standing army, and the militia, jailors, constables, posse comitatus, etc. In most cases there is no free exercise whatever of the judgment or of the moral sense; but they put themselves on a level with wood and earth and stones; and wooden men can perhaps be manufactured that will serve the purpose as well. Such command no more respect than men of straw or a lump of dirt. They have the same sort of worth only as horses and dogs. Yet such as these even are commonly esteemed good citizens. Others—as most legislators, politicians, lawyers, ministers, and office-holders—serve the state chiefly with their heads; and, as they rarely make any moral distinctions, they are as likely to serve the Devil, without *intending* it, as God. A very few, as heroes, patriots, martyrs, reformers in the great sense, and *men*, serve the state with their consciences also, and

so necessarily resist it for the most part; and they are commonly treated as enemies by it. A wise man will only be useful as a man, and will not submit to be “clay,” and “stop a hole to keep the wind away,” but leave that office to his dust at least:—

“I am too high-born to be propertied,  
To be a secondary at control,  
Or useful serving-man and instrument  
To any sovereign state throughout the world.”

He who gives himself entirely to his fellow-men appears to them useless and selfish; but he who gives himself partially to them is pronounced a benefactor and philanthropist.

How does it become a man to behave toward this American government to-day? I answer, that he cannot without disgrace be associated with it. I cannot for an instant recognize that political organization as *my* government which is the *slave’s* government also.

All men recognize the right of revolution; that is, the right to refuse allegiance to, and to resist, the government, when its tyranny or its inefficiency are great and unendurable. But almost all say that such is not the case now. But such was the case, they think, in the Revolution of ‘75. If one were to tell me that this was a bad government because it taxed certain foreign commodities brought to its ports, it is most probable that I should not make an ado about it, for I can do without them. All machines have their friction; and possibly this does enough good to counterbalance the evil. At any rate, it is a great evil to make a stir about it. But when the friction comes to have its machine, and oppression and robbery are organized, I say, let us not have such a machine any longer. In other words, when a sixth of the population of a nation which has undertaken to be the refuge of liberty are slaves, and a whole country is unjustly overrun and conquered by a foreign army, and subjected to military law, I think that it is not too soon for honest men to rebel and revolutionize. What makes this duty the more urgent is the fact that the country so overrun is not our own, but ours is the invading army.

Paley, a common authority with many on moral questions, in his chapter on the “Duty of Submission to Civil Government,” resolves all civil obligation into expediency; and he proceeds to say, “that so long as the interest of the whole society requires it, that is, so long as the established government cannot be resisted or changed without public inconveniency, it is the will of God that the established government be obeyed, and no longer. . . . This principle being admitted, the justice of every particular case of resistance is reduced to a computation of the quantity of the danger and grievance on the one side, and of the probability and expense of redressing it on the other.” Of this, he

says, every man shall judge for himself. But Paley appears never to have contemplated those cases to which the rule of expediency does not apply, in which a people, as well as an individual, must do justice, cost what it may. If I have unjustly wrested a plank from a drowning man, I must restore it to him though I drown myself. This, according to Paley, would be inconvenient. But he that would save his life, in such a case, shall lose it. This people must cease to hold slaves, and to make war on Mexico, though it cost them their existence as a people . . .

I meet this American government, or its representative, the state government, directly, and face to face, once a year—no more—in the person of its tax-gatherer; this is the only mode in which a man situated as I am necessarily meets it; and it then says distinctly, Recognize me; and the simplest, most effectual, and, in the present posture of affairs, the indispensable mode of treating with it on this head, of expressing your little satisfaction with and love for it, is to deny it then. My civil neighbor, the tax-gatherer, is the very man I have to deal with,—for it is, after all, with men and not with parchment that I quarrel,—and he has voluntarily chosen to be an agent of the government. How shall he ever know well what he is and does as an officer of the government, or as a man, until he is obliged to consider whether he shall treat me, his neighbor, for whom he has respect, as a neighbor and well-disposed man, or as a maniac and disturber of the peace, and see if he can get over this obstruction to his neighborliness without a ruder and more impetuous thought or speech corresponding with his action. I know this well, that if one thousand, if one hundred, if ten men whom I could name,—if ten *honest* men only,—ay, if *one* honest man, in this State of Massachusetts, *ceasing to hold slaves*, were actually to withdraw from this copartnership, and be locked up in the county jail therefor, it would be the abolition of slavery in America. For it matters not how small the beginning may seem to be: what is once well done is done forever. But we love better to talk about it: that we say is our mission. Reform keeps many scores of newspapers in its service, but not one man. If my esteemed neighbor, the State's ambassador, who will devote his days to the settlement of the question of human rights in the Council Chamber, instead of being threatened with the prisons of Carolina, were to sit down the prisoner of Massachusetts, that State which is so anxious to foist the sin of slavery upon her sister,—though at present she can discover only an act of inhospitality to be the ground of a quarrel with her,—the Legislature would not wholly waive the subject the following winter.

Under a government which imprisons any unjustly, the true place for a just man is also a prison. The proper place to-day, the only place which Massachusetts has provided for her freer and less desponding spirits, is in her prisons,

to be put out and locked out of the State by her own act, as they have already put themselves out by their principles. It is there that the fugitive slave, and the Mexican prisoner on parole, and the Indian come to plead the wrongs of his race should find them; on that separate, but more free and honorable ground, where the State places those who are not *with* her, but *against* her,—the only house in a slave State in which a free man can abide with honor. If any think that their influence would be lost there, and their voices no longer afflict the ear of the State, that they would not be as an enemy within its walls, they do not know by how much truth is stronger than error, nor how much more eloquently and effectively he can combat injustice who has experienced a little in his own person. Cast your whole vote, not a strip of paper merely, but your whole influence. A minority is powerless while it conforms to the majority; it is not even a minority then; but it is irresistible when it clogs by its whole weight. If the alternative is to keep all just men in prison, or give up war and slavery, the State will not hesitate which to choose. If a thousand men were not to pay their tax-bills this year, that would not be a violent and bloody measure, as it would be to pay them, and enable the State to commit violence and shed innocent blood. This is, in fact, the definition of a peaceable revolution, if any such is possible. If the tax-gatherer, or any other public officer, asks me, as one has done, "But what shall I do?" my answer is, "If you really wish to do anything, resign your office." When the subject has refused allegiance, and the officer has resigned his office, then the revolution is accomplished. But even suppose blood should flow. Is there not a sort of blood shed when the conscience is wounded? Through this wound a man's real manhood and immortality flow out, and he bleeds to an everlasting death. I see this blood flowing now . . .

The authority of government, even such as I am willing to submit to,—for I will cheerfully obey those who know and can do better than I, and in many things even those who neither know nor can do so well,—is still an impure one: to be strictly just, it must have the sanction and consent of the governed. It can have no pure right over my person and property but what I concede to it. The progress from an absolute to a limited monarchy, from a limited monarchy to a democracy, is a progress toward a true respect for the individual. Even the Chinese philosopher was wise enough to regard the individual as the basis of the empire. Is a democracy, such as we know it, the last improvement possible in government? Is it not possible to take a step further towards recognizing and organizing the rights of man? There will never be a really free and enlightened State until the State comes to recognize the individual as a higher and independent power, from which all its own power and authority are derived, and treats him accordingly. I please myself with imagining a State at last which can afford to

be just to all men, and to treat the individual with respect as a neighbor; which even would not think it inconsistent with its own repose if a few were to live aloof from it, not meddling with it, nor embraced by it, who fulfilled all the duties of neighbors and fellow-men. A State which bore this kind of fruit, and suffered it to drop off as fast as it ripened, would prepare the way for a still more perfect and glorious State, which also I have imagined, but not yet anywhere seen.

## The Compromise of 1850

### Henry Clay

Calvin Colton, ed. *The Life, Correspondence and Speeches of Henry Clay*, vol. 3 (1855; reprint, New York: G. P. Putnam's Sons, 1904), pp. 301–302

### "On the Compromise of 1850" (1850)

January 29, 1850

#### Resolutions Introduced in the Senate of the United States by Mr. Clay

Preamble.—It being desirable for the peace, concord, and harmony of the Union of these States, to settle and adjust amicably all questions of controversy between them arising out of the institution of Slavery, upon a fair equality and just basis, therefore—

1st. *Resolved*, That California, with suitable boundaries, ought, upon her application, to be admitted as one of the States of this Union, without the imposition by Congress of any restriction to the exclusion or introduction of slavery within those boundaries.

2d. *Resolved*, That as slavery does not exist by law, and is not likely to be introduced into any of the territory acquired by the United States from the Republic of Mexico, it is inexpedient for Congress to provide, by law, either for its introduction into, or its exclusion from, any part of the said territory; and that appropriate territorial Governments ought to be established by Congress, in all of the said territory not assigned as the boundaries of the proposed State of California, without the addition of any restriction or condition on the subject of slavery.

3d. *Resolved*, That the western boundary of the State of Texas ought to be fixed on the Rio del Norte, commencing one marine league from its mouth, and running up that river to the southern line of New Mexico, thence with that line eastwardly, and continuing in the same direction, to the line as established between the United States and Spain, excluding any portion of New Mexico, whether lying on the east or west of that river.

4th. *Resolved*, That it be proposed to the State of Texas that the United States will provide for the payment

of all that portion of all the legitimate and bona fide public debts of that State, contracted prior to its annexation to the United States, and for which the duties on foreign imports were pledged by the said States to its creditors, not exceeding the sum of—dollars, in consideration of the duties, as pledged, having been no longer applicable to that object after the said annexation, but having thenceforward become payable to the United States, and upon the condition also that the said State shall, by some solemn and authentic act of her Legislature, or of a convention, relinquish to the United States any claim which it has to any part of New Mexico.

5th. *Resolved*, That it is inexpedient to abolish slavery in the District of Columbia, while that institution continues to exist in the State of Maryland, without the consent of that State, without the consent of the people of the District, and without just compensation to the owners of slaves within the District.

6th. *Resolved*, That it is expedient to prohibit within the District the trade in slaves brought into it from States or places beyond the limits of the District, either to be sold therein, as merchandise, or to be transported to other markets without the District of Columbia.

7th. *Resolved*, That more effectual provision ought to be made by law according to the requirements of the Constitution, for the restitution and delivery of persons bound to service or labor, in any State, who may escape into any other State or Territory of this Union.

8th. *Resolved*, That Congress has no power to prohibit or obstruct the trade in slaves between the slaveholding States, and that the admission or exclusion of slaves brought from one into another of them, depends exclusively upon their own particular law.

### Texas and New Mexico Act (1850)

*U.S. Statutes at Large* 9 (1845–51), pp. 446–452

*An Act Proposing to the State of Texas the Establishment of her Northern and Western Boundaries, the Relinquishment by the said State of all Territory claimed by her exterior to said Boundaries, and of all her Claims upon the United States, and to establish a territorial Government for New Mexico.*

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the following propositions shall be, and the same hereby are, offered to the State of Texas, which, when agreed to by the said State, in an act passed by the general assembly, shall be binding and obligatory upon the United States, and upon the said State of Texas: *Provided*, The said agreement by the said general assembly shall be given on or before the first day of December, eighteen hundred and fifty:

First. The State of Texas will agree that her boundary on the north shall commence at the point at which that meridian of one hundred degrees west from Greenwich is intersected by the parallel of thirty-six degrees thirty minutes north latitude, and shall run from said point due west to the meridian of one hundred and three degrees west from Greenwich; thence her boundary shall run due south to the thirty-second degree of north latitude; thence on the said parallel of thirty-two degrees of north latitude to the Rio Bravo del Norte, and thence with the channel of said river to the Gulf of Mexico.

Second. The State of Texas cedes to the United States all her claim to territory exterior to the limits and boundaries which she agrees to establish by the first article of this agreement.

Third. The State of Texas relinquishes all claim upon the United States for liability of the debts of Texas, and for compensation or indemnity for the surrender to the United States of her ships, forts, arsenals, custom-houses, custom-house revenue, arms and munitions of war and public buildings with their sites, which became the property of the United States at the time of the annexation.

Fourth. The United States, in consideration of said establishment of boundaries, cession of claim to territory, and relinquishment of claims, will pay to the State of Texas the sum of ten millions of dollars in a stock bearing five per cent, interest, and redeemable at the end of fourteen years, the interest payable half-yearly at the treasury of the United States...

Sec. 2. *And be it further enacted*, That all that portion of the Territory of the United States bounded as follows: Beginning at a point in the Colorado River where the boundary line with the republic of Mexico crosses the same; thence eastwardly with the said boundary line to the Rio Grande; thence following the main channel of said river to the parallel of the thirty-second degree of north latitude; thence east with said degree to its intersection with the one hundred and third degree of longitude west of Greenwich; thence north with said degree of longitude to the parallel of thirty-eight degree of north latitude; thence west with said parallel to the summit of the Sierra Madre; thence south with the crest of said mountains to the thirty-seventh parallel of north latitude; thence west with said parallel to its intersection with the boundary line of the State of California; thence with said boundary line to the place of beginning—be, and the same is hereby, erected into a temporary government, by the name of the Territory of New Mexico: *Provided*, That nothing in this act contained shall be construed to inhibit the government of the United States from dividing said Territory into two or more Territories, in such manner and at such times as Congress shall deem convenient and proper, or from attaching any portion thereof to any other Territory

or State: *And provided, further*, That, when admitted as a State, the said Territory, or any portion of the same, shall be received into the Union, with or without slavery, as their constitution may prescribe at the time of their admission.

#### **Utah Act (1850)**

*U.S. Statutes at Large* 9 (1845–51), pp. 453–458

#### **An Act to establish a Territorial Government for Utah.**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all part of the territory of the United States included within the following limits, to wit: bounded on the west by the State of California, on the north by the Territory of Oregon, and on the east by the summit of the Rocky Mountains, and on the south by the thirty-seventh parallel of north latitude, be, and the same is hereby, created into a temporary government, by the name of the Territory of Utah; and, when admitted as a State, the said Territory, or any portion of the same, shall be received into the Union, with or without slavery, as their constitution may prescribe at the time of their admission: *Provided*, That nothing in this act contained shall be construed to inhibit the government of the united States from dividing said Territory into two or more Territories, in such manner and at such times as Congress shall deem convenient and proper, or from attaching any portion of said Territory to any other State or Territory of the United States . . .

#### **Fugitive Slave Act (1850)**

*U.S. Statutes at Large* 9 (1845–51), pp. 462–463

September 18, 1850

#### **An Act**

*To amend, and supplementary to, the Act entitled “An Act respecting Fugitives from Justice, and Persons escaping from the Service of their Masters,” approved February twelfth, one thousand seven hundred and ninety-three.*

. . . Sec. 5. *And be it further enacted*, That it shall be the duty of all marshals and deputy marshals to obey and execute all warrants and precepts issued under the provisions of this act, when to them directed; and should any marshal or deputy marshal refuse to receive such warrant, or other process, when tendered, or to use all proper means diligently to execute the same, he shall, on conviction thereof, be fined in the sum of one thousand dollars, to the use of such claimant, on the motion of such claimant, by the Circuit or District Court for the district of such marshal; and after arrest of such fugitive, be such marshal or his deputy, or whilst at any time in his custody under the provisions of this act,

should such fugitive escape, whether with or without the assent of such marshal or his deputy, such marshal shall be liable, on his official bond, to be prosecuted for the benefit of such claimant, for the full value of the service or labor of said fugitive in the State, Territory, or District whence he escaped: and the better to enable the said commissioners, when thus appointed, to execute their duties faithfully and efficiently, in conformity with the requirements of the Constitution of the United States and of this act, they are hereby authorized and empowered, within their counties respectively, to appoint, in writing under their hands, any one or more suitable persons, from time to time, to execute all such warrants and other process as may be issued by them in the lawful performance of their respective duties; with authority to such commissioners, or the persons to be appointed by them, to execute process as aforesaid, to summon and call to their aid the bystanders, or *posse comitatus* of the proper county, when necessary to ensure a faithful observance of the clause of the Constitution referred to, in conformity with the provisions of this act; and all good citizens are hereby commanded to aid and assist in the prompt and efficient execution of this law, whenever their services may be required, as aforesaid, for that purpose; and said warrants shall run, and be executed by said officers, any where in the State within which they are issued.

Sec. 6. *And be it further enacted*, That when a person held to service or labor in any State or Territory of the United States, has heretofore or shall hereafter escape into another State or Territory of the United States, the person or persons to whom such service or labor may be due, or his, her, or their agent or attorney, duly authorized, by power of attorney, in writing, acknowledged and certified under the seal of some legal officer or court of the State or Territory in which the same may be executed, may pursue and reclaim such fugitive person, either by procuring a warrant from some one of the courts, judges, or commissioners aforesaid, of the proper circuit, district, or county, for the apprehension of such fugitive from service or labor, or by seizing and arresting such fugitive, where the same can be done without process, and by taking, or causing such person to be taken, forthwith before such court, judge, or commissioner, whose duty it shall be to hear and determine the case of such claimant in a summary manner; and upon satisfactory proof being made, by deposition or affidavit, in writing, to be taken and certified by such court, judge, or commissioner, or by other satisfactory testimony, duly taken and certified by some court, magistrate, justice of the peace, or other legal officer authorized to administer an oath and take depositions under the laws of the State or Territory from which such person owing service or labor may have escaped, with a certificate of such magistracy or other authority, as aforesaid, with the seal of the proper court or officer thereto attached, which seal shall be sufficient to establish the competency of

the proof, and with proof, also by affidavit, of the identity of the person whose service or labor is claimed to be due as aforesaid, that the person so arrested does in fact owe service or labor to the person or persons claiming him or her, in the State or Territory from which such fugitive may have escaped as aforesaid, and that said person escaped, to make out and deliver to such claimant, his or her agent or attorney, a certificate setting forth the substantial facts as to the service or labor due from such fugitive to the claimant, and of his or her escape from the State or Territory in which such service or labor was due, to the State or Territory in which he or she was arrested, with authority to such claimant, or his or her agent or attorney, to use such reasonable force and restraint as may be necessary, under the circumstances of the case, to take and remove such fugitive person back to the State or Territory whence he or she may have escaped as aforesaid. In no trial or hearing under this act shall the testimony of such alleged fugitive be admitted in evidence; and the certificates in this and the first [fourth] section mentioned, shall be conclusive of the right of the person or persons in whose favor granted to remove such fugitive to the State or Territory from which he escaped, and shall prevent all molestation of such person or persons by any process issued by any court, judge, magistrate, or other person whomsoever.

Sec. 7. *And be it further enacted*, That any person who shall knowingly and willingly obstruct, hinder, or prevent such claimant, his agent or attorney, or any person or persons lawfully assisting him, her, or them, from arresting such a fugitive from service or labor, either with or without process as aforesaid, or shall rescue, or attempt to rescue, such fugitive from service or labor, from the custody of such claimant, his or her agent or attorney, or other person or persons lawfully assisting as aforesaid, when so arrested, pursuant to the authority herein given and declared; or shall aid, abet, or assist such person so owing service or labor as aforesaid, directly or indirectly, to escape from such claimant, his agent or attorney, or other person or persons legally authorized as aforesaid; or shall harbor or conceal such fugitive, so as to prevent the discovery and arrest of such person, after notice or knowledge of the fact that such person was a fugitive from service or labor as aforesaid, shall, for either of said offences, be subject to a fine not exceeding one thousand dollars, and imprisonment not exceeding six months, by indictment and conviction before the District Court of the United States for the district in which such offence may have been committed, or before the proper court of criminal jurisdiction, if committed within any one of the organized Territories of the United States; and shall moreover forfeit and pay, by way of civil damages to the party injured by such illegal conduct, the sum of one thousand dollars, for each fugitive so lost as aforesaid, to be recovered by action of debt, in any of the

District or Territorial Courts aforesaid, within whose jurisdiction the said offence may have been committed. . .

Sec. 9. *And be it further enacted*, That, upon affidavit made by the claimant of such fugitive, his agent or attorney, after such certificate has been issued, that he has reason to apprehend that such fugitive will be rescued by force from his or their possession before he can be taken beyond the limits of the State in which the arrest is made, it shall be the duty of the officer making the arrest to retain such fugitive in his custody, and to remove him to the State whence he fled, and there to deliver him to said claimant, his agent, or attorney. And to this end, the officer aforesaid is hereby authorized and required to employ so many persons as he may deem necessary to overcome such force, and to retain them in his service so long as circumstances may require. The said officer and his assistants, while so employed, to receive the same compensation, and to be allowed the same expenses, as are now allowed by law for transportation of criminals, to be certified by the judge of the district within which the arrest is made, and paid out of the treasury of the United States.

Sec. 10. *And be it further enacted*, That when any person held to service or labor in any State or Territory, or in the District of Columbia, shall escape therefrom, the party to whom such service or labor shall be due, his, her, or their agent or attorney, may apply to any court of record therein, or judge thereof in vacation, and make satisfactory proof to such court, or judge in vacation, of the escape aforesaid, and that the person escaping owed service or labor to such party. Whereupon the court shall cause a record to be made of the matters so proved, and also a general description of the person so escaping, with such convenient certainty as may be; and a transcript of such record, authenticated by the attestation of the clerk and of the seal of the said court, being produced in any other State, Territory, or district in which the person so escaping may be found, and being exhibited to any judge, commissioner, or other officer authorized by the law of the United States to cause persons escaping from service or labor to be delivered up, shall be held and taken to be full and conclusive evidence of the fact of escape, and that the service or labor of the person escaping is due to the party in such record mentioned. And upon the production by the said party of other and further evidence if necessary, either oral or by affidavit, in addition to what is contained in the said record of the identity of the person escaping, he or she shall be delivered up to the claimant. And the said court, commissioner, judge, or other

person authorized by this act to grant certificates to claimants of fugitives, shall, upon the production of the record and other evidences aforesaid, grant to such claimant a certificate of his right to take any such person identified and proved to be owing service or labor as aforesaid, which certificate shall authorize such claimant to seize or arrest and transport such person to the State or Territory from which he escaped: *Provided*, That nothing herein contained shall be construed as requiring the production of a transcript of such record as evidence as aforesaid. But in its absence the claim shall be heard and determined upon other satisfactory proofs, competent in law.

Approved, September 18, 1850.

### ***Act Abolishing the Slave Trade in the District of Columbia (1850)***

*U.S. Statutes at Large* 9 (1845–51), pp. 467–468

September 20, 1850

#### **An Act to Suppress the Slave Trade in the District of Columbia.**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That from and after the first day of January, eighteen hundred and fifty-one, it shall not be lawful to bring into the District of Columbia any slave whatever, for the purpose of being sold, or for the purpose of being placed in depot, to be subsequently transferred to any other State or place to be sold as merchandize. And if any slave shall be brought into the said District by its owner, or by the authority or consent of its owner, contrary to the provisions of this act, such slave shall thereupon become liberated and free.

Sec. 2. *And be it further enacted*, That it shall and may be lawful for each of the corporations of the cities of Washington and Georgetown, from time to time, and as often as may be necessary, to abate, break up, and abolish any depot or place of confinement of slaves brought into the said District as merchandize, contrary to the provisions of this act, by such appropriate means as may appear to either of the said corporations expedient and proper. And the same power is hereby vested in the Levy Court of Washington county, if any attempt shall be made, within its jurisdictional limits, to establish a depot or place of confinement for slaves brought into the said District as merchandize for sale contrary to this act.

Approved, September 20, 1850.

# About the Editors

**General Editor: Gary B. Nash** received a Ph.D from Princeton University. He is director of the National Center for History in the Schools at the University of California, Los Angeles, where he teaches American history of the colonial and Revolutionary era. He is a published author of college and precollegiate history texts. Among his best-selling works are the coauthored *American People: Creating a Nation and Society* (Longman, 1998), now in its seventh edition; *American Odyssey: The U.S. in the Twentieth Century* (McGraw-Hill/Glencoe, 1999), now in its fourth edition; and *The Atlas of American History*, coauthored with Carter Smith (Facts On File, 2006).

Nash is an elected member of the Society of American Historians, the American Academy of Arts and Sciences, the American Antiquarian Society, and the American Philosophical Society. He has served as past president of the Organization of American Historians in 1994–95 and was a founding member of the National Council for History Education. His latest books include *First City: Philadel-*

*phia and the Forging of Historical Memory* (University of Pennsylvania Press, 2002), *The Unknown American Revolution: The Unruly Birth of Democracy and the Struggle to Create America* (Viking, 2005), and *The Forgotten Fifth: African Americans in the Era of Revolution* (Harvard University Press, 2006).

**Volume Editor: Joan Waugh** is a professor of history at the University of California, Los Angeles, where she specializes in the Civil War and Reconstruction periods. She is the author of *Unsentimental Reformer: The Life of Josephine Shaw Lowell* (Harvard University Press, 1998) and the forthcoming *Ulysses S. Grant, American Hero, American Myth* (University of North Carolina Press, 2009). Recently published books include (with Alice Fahs) *The Memory of the Civil War in American Culture* (University of North Carolina Press, 2004) and (with Gary W. Gallagher) *Wars within a War: Controversy and Conflict over the American Civil War* (University of North Carolina Press, 2009).

# Foreword

The Encyclopedia of American History series is designed as a handy reference to the most important individuals, events, and topics in U.S. history. In 10 volumes, the encyclopedia covers the period from the 15th century, when European explorers first made their way across the Atlantic Ocean to the Americas, to the present day. The encyclopedia is written for precollegiate as well as college students, for parents of young learners in the schools, and for the general public. The volume editors are distinguished historians of American history. In writing individual entries, each editor has drawn upon the expertise of scores of specialists. This ensures the scholarly quality of the entire series. Articles contributed by the various volume editors are uncredited.

This 11-volume encyclopedia of “American history” is broadly conceived to include the historical experience of the various peoples of North America. Thus, in the first volume, many essays treat the history of a great range of indigenous people before contact with Europeans. In the same vein, readers will find essays in the first several volumes that sketch Spanish, Dutch, and French explorers and colonizers who opened up territories for European settlement that later would become part of the United States. The venues and cast of characters in the American historical drama are thus widened beyond traditional encyclopedias.

In creating the eras of American history that define the chronological limits of each volume, and in addressing major topics in each era, the encyclopedia follows the architecture of *The National Standards for United States History, Revised Edition* (Los Angeles: National Center for History in the Schools, 1996). Mandated by the U.S. Congress, the national standards for U.S. history have been widely used by states and school districts in organizing curricular frameworks and have been followed by many other curriculum-building efforts.

Entries are cross-referenced, when appropriate, with *See also* citations at the end of articles. At the end of most entries, a listing of articles and books allows readers to turn to specialized sources and historical accounts. In each volume, an array of maps provide geographical context, while numerous illustrations help vivify the material covered in the text. A time line is included to provide students with a chronological reference to major events occurring in the given era. The selection of historical documents in the back of each volume gives students experience with the raw documents that historians use when researching history. A comprehensive index to each volume also facilitates the reader’s access to particular information.

In each volume, long entries are provided for major categories of American historical experience. These categories may include: African Americans, agriculture, art and architecture, business, economy, education, family life, foreign policy, immigration, labor, Native Americans, politics, population, religion, urbanization, and women. By following these essays from volume to volume, the reader can access what might be called a mini-history of each broad topic, for example, family life, immigration, or religion.

# Foreword to the Revised Edition

“History has to be rewritten in every generation because, although the past does not change, the present does,” writes Lord Christopher Hill, one of Great Britain’s most eminent historians. “Each generation asks new questions of the past, and finds new areas of sympathy as it re-lives different aspects of the experiences of its predecessors.” It is this understanding, that the pursuit of historical knowledge requires new research and new reflections on the past, that undergirds a revised and extended edition of the *Encyclopedia of American History*.

The individual volume editors of this revised edition have made important additions and revisions to the original edition published in 2003. Most important, they have added many new entries—several hundred for the entire 11-volume set. This puts more meat on the bone of what was already a comprehensive encyclopedia that presented four centuries of American history in all its diversity and complexity. For the 10th volume, covering the period from 1969 to the present, new entries cover momentous events and important figures of the last six years. For the other volumes, new entries increase the diversity of Americans covered by biographical accounts as well as events that new scholarship shows have had greater importance than recognized heretofore.

In addition, careful attention has been given to correcting occasional errors in the massive number of entries in the first edition. Also, many entries have been revised to add further details while making adjustments, based on new scholarship, to the interpretation of key events and movements. Consonant with that effort to make the encyclopedia as fresh and usable as possible, the volume editors have added many new recently published books to the “Further Reading” notes at the ends of the entries, and new full-color historical maps help put history in its geographical context.

—Gary B. Nash

# Introduction

---

★

*Civil War and Reconstruction* (1856 to 1869) offers a compelling overview of one of the central events in U.S. history: the “War of the Rebellion.” The issues at stake in this era—sovereignty and freedom—reached from the highest levels of the constitutional and political arenas into the lives of ordinary people—rich and poor, black and white, men and women, Northern and Southern. *Civil War and Reconstruction* provides the eager student of the period, roughly covering the last half of the 19th century, with an understanding of the dramatic political and military conflict and an appreciation of the sheer tragedy of the American Civil War. Additionally, Volume V of the Encyclopedia of American History tells the story of the war itself within a framework for analyzing the larger social and economic processes that transformed the United States. Thus, students consulting the entries in *Civil War and Reconstruction* will be able to formulate answers to the three major questions that have fascinated people since the end of the conflict: What were the causes of the war? Why did the North win? Was Reconstruction a success or failure?

The entries in *Civil War and Reconstruction* reflect the wide diversity and richness of the scholarship on the war and its aftermath. No student of the period can be considered well educated without a solid understanding of, for example, Bleeding Kansas, the rise of the Republican Party, the presidency of Abraham Lincoln, the secession of the Southern states, the establishment of the Confederate States of America, the Battle of Gettysburg, the significance of the so-called Reconstruction Amendments, and the impeachment trial of Andrew Johnson. In short, Volume V covers the constitutional, military, political, and economic aspects of the Civil War, with an extensive entry list of people, places, laws, battles, and social movements. Similarly, the student of the 21st century must be aware of the cultural, racial, and gender issues that have cast a new light on traditional assumptions. The experiences of the common soldiers, changing women’s roles, the revolutionary nature of enrolling African-American men to fight as Union soldiers, the breakdown of slavery, and bringing the reality of emancipation to bear upon an embittered white Southern population are all important parts of the time that are well covered in *Civil War and Reconstruction*.

The poet and writer Robert Penn Warren once famously assessed the Civil War as the most important event in our history. “It may,” he claimed, “in fact, be said to *be* American history.” The legacy of the Civil War and Reconstruction continues to shape the current United States in profoundly important ways.

## **xx Introduction**

This volume should be considered both a departure point for those who wish to begin their exploration of the era, as well as for those who want to acquire more knowledge about particular aspects of the United States during a crucial turning point in its history. It is truly a saga of epic proportions.

## A TO Z

## abolition

Abolition refers to the immediate and unconditional end to **SLAVERY**. In the United States, abolition movements offered varied plans of reform, with conservative, moderate, and radical approaches. Many abolitionists, although not all, believed in racial equality; many also cooperated with international efforts to halt slavery.

Opposition to African slavery in North America dates to the 17th century, when some Protestant denominations, particularly Methodists and the **SOCIETY OF FRIENDS** (Quakers), condemned the practice. Until the Revolutionary War, abolitionist views were not widespread among Britain's North American colonists. However, calls for liberty and consent provoked some colonists to take abolition arguments more seriously. During the 1780s, antislavery sentiment influenced the wording of the Northwest Ordinance of 1787, which banned carrying slaves into the future states of Ohio, Indiana, Michigan, Illinois, Wisconsin, and Minnesota. By 1800, Pennsylvania and all states north of it had begun to abolish slavery, though largely by gradual rather than immediate **EMANCIPATION**.

From Maryland south, slavery was far more important to existing economic interests than in the North. The abolition argument did not find a large audience in the tobacco-growing states on Chesapeake Bay (Virginia, Maryland, and Delaware) and in the Carolinas and Georgia, where rice and indigo cultivation flourished.

A few Southern planters did in fact seek to end slavery in the South. Thomas Jefferson, for instance, argued that slave ownership bred habits of arrogance and arbitrary power ill-suited to the needs of a republic based on shared power and popular consent. Jefferson also believed that African-American slaves posed serious threats to all white people: a threat of revolt if kept in servitude, particularly worrisome in wartime, and a threat of resentful hostility of a landless underclass if set free. Slavery was wrong, Jefferson wrote, but slavery could not end without expelling former slaves from North America. "We have the wolf by

the ears," Jefferson wrote, "we can neither hold him nor safely let him go."

Jefferson, Madison, and others, both North and South, hoped that slavery would end gradually. While the Constitution granted Congress no power to abolish slavery, it did permit Congress to prohibit the importation of slaves beginning in 1808. Without slaves from Africa and the West Indies, prices for slaves would increase. Two important consequences would occur: the ending of the Southern plantation system and the return to Africa of masses of former slaves. Jefferson's conviction that expulsion from North America would be best for white and black people alike was shared by Henry Clay and other prominent sponsors of the American Colonization Society.

Colonization faced serious opposition, however. As early as the 1790s, there were voices raised against both gradual emancipation and colonization schemes. Philadelphia African Americans such as Richard Allen and Absalom Jones joined Benjamin Franklin and others in the Philadelphia Society for the Abolition of Slavery. In 1790 the organization petitioned Congress under Franklin's name to abolish slavery throughout the country. Ominously, the petition earned a stern rebuke from Southerners, whose views on slavery were less compromising than Jefferson's. Thomas Tucker, a South Carolina representative, declared that such a petition would "never be submitted to by the Southern States without a civil war."

Despite Tucker's warning, calls for immediate abolition became more urgent during the 1820s. A number of factors contributed to the growing unwillingness of some antislavery activists to compromise. The first was the obvious failure of gradual emancipation in the South. With the introduction of Eli Whitney's cotton gin in 1793, slavery profitably expanded well beyond the plantations of the Atlantic coast and into what would soon come to be called the Southern "cotton belt."

As slavery expanded further, fewer Southern planters shared Jefferson's doubts about slavery and more embraced

A group of abolitionists known as the Oberlin Rescuers outside the Cuyahoga County Jail, Ohio, from which they had rescued a fugitive slave named John Price (Hulton/Archive)

a strong defense of the South's "peculiar institution." The debates over slave-state Missouri's admittance to the Union in 1819–20, though they ended in compromise, demonstrated Southern resolve on the issue while revealing deep divisions within the North. Southern views hardened further in the aftermath of a Virginia slave revolt led by Nat Turner in 1832.

Abolition activists were also deeply influenced by the "Second Great Awakening," a period of evangelical revivalism that peaked between 1810 and 1840. Those who opposed slavery on religious grounds condemned the practice as nothing less than an abomination. These more militant attitudes crystallized in the late 1820s and early 1830s, informing the work of such abolitionists as David Walker (1785–1830), Lydia Maria Child (1802–80), and WILLIAM LLOYD GARRISON (1805–79). Unlike Benjamin Franklin, these activists would not plea or petition for emancipation; rather, they would demand it.

Walker, an African American, was born free in North Carolina. Loathing the South's poisonous atmosphere of slavery and oppression, he left for Massachusetts, establishing a small business there while taking an active role in the city's free black community. In 1829, Walker published a pamphlet entitled "An Appeal to the Colored Citizens of the World." Targeting Thomas Jefferson's remarks in *Notes on the State of Virginia*, Walker declared that white Americans had proven themselves "unjust, jealous, unmerciful, avaricious, and bloodthirsty . . . always seek-

ing after power and authority." Only abolition of slavery would free white Americans from their own degradation; "what a happy country this will be if whites will listen."

Lydia Maria Child, a self-educated New Englander, came to public attention with *An Appeal in Favor of that Class of Americans Called Africans* (1833). Like Walker, Child's rhetoric burned. The races, she declared, were equal to one another in every way. White people had enslaved black people only because the white people had acted with "treachery, fraud, and violence." Child's commitment to racial equality and her willingness to enter a public arena generally closed to women outraged many Americans, including some who were committed to the antislavery movement.

William Lloyd Garrison was as uncompromising as Walker or Child. Introducing *The Liberator*, his influential abolitionist newspaper, Garrison famously declared, "I am in earnest, I will not equivocate, I will not excuse, I will not retreat a single inch, AND I WILL BE HEARD." For Garrison, not even the Constitution was sacred. Because the Constitution implicitly protected slavery, Garrison thundered, the document was immoral. On July 4, 1852, in a well-publicized demonstration, Garrison publicly burned a copy of the Constitution, while shouting "so perish all compromises with tyranny!"

Abolitionists like Walker, Child, and Garrison asserted that the Constitution and majority opinion both ranked well below a "higher law," God's law. Though the Constitution

itself prohibited any state from harboring an escaped slave, abolitionists successfully urged several Northern states to enact “personal liberty” laws that forbade state officials from assisting in the recapture of escapees. Personal liberty laws enraged Southerners, but they were based on the same STATES’ RIGHTS argument Southerners themselves embraced in other circumstances.

By the 1830s, Southern planters and their Northern sympathizers came to see abolitionism as a grave threat to their lives and property. Proslave apologists condemned abolitionists as treasonous and violent extremists who sought nothing less than a slave revolt, the murder of white people, and the destruction of the white race. Such fears convinced President Andrew Jackson to forbid the distribution of abolitionist literature through the mails. Congress was persuaded to forbid the reading and debate of all antislavery petitions brought to its attention. This happened despite a First Amendment guarantee of the right to petition for redress of grievances. In the North, mobs often pelted abolitionist speakers with everything from rotten food to rocks, burned abolitionist presses, and vandalized meeting halls. While Garrison was rescued from a violent Boston mob, abolitionist Elijah Lovejoy was not so lucky, and he was murdered by another mob in Alton, Illinois, on November 7, 1837. African-American abolitionist David Walker inspired particular hatred: \$1,000 was offered for his dead body.

Though abolitionists did not always face such violence, they remained a distinct minority within the North well into the CIVIL WAR. Most white Northerners simply accepted as a matter of course that black people were an inferior race; many concurred with Southerners that slavery was essential both to protect African Americans from their own passions and to protect white people from black people. Many Northerners also feared that if slavery were ended, free African Americans would compete for jobs, forcing white workers to accept lower wages and worse conditions. For these workers, African-American freedom would mean white slavery.

Abolitionists were also divided among themselves. While black and white abolitionists worked side by side in Garrison’s American Anti-Slavery Society, differences of emphasis and organization ensured that African Americans supported their own distinct institutions. Though Garrison’s *Liberator* remained the preeminent abolitionist journal among white Americans, FREDERICK DOUGLASS’S *North Star* was widely read among free African Americans. Black church and community groups independently organized support for escaped slaves; under activists such as HARRIET TUBMAN, these groups became the foundation for the network of escape routes, “conductors,” and safe-houses called the UNDERGROUND RAILROAD.

Abolitionists also differed over strategy. In 1840 abolitionist Lewis Tappan split with Garrison’s American Anti-

slavery Society and established a rival organization, the American and Foreign Antislavery Society. Tappan and others in the new group were dismayed at Garrison’s alleged opposition to RELIGION, support for women’s equality, and reliance on “moral suasion” rather than direct political action to end slavery.

Gender also divided abolitionists. Like Lydia Child, abolitionists such as Lucretia Mott, Susan B. Anthony, and ELIZABETH CADY STANTON found a cool and sometimes hostile reception from the men who led abolitionist organizations. To fight against slavery, they concluded, they had to emancipate women as well. Though some male abolitionists voiced contempt for feminism, others, such as Frederick Douglass, provided active support.

Despite these divisions, abolitionism grew stronger, particularly after the Mexican-American War of 1846–48. The conquest of Mexican territory reopened an angry debate over the expansion of slavery last heard during the debates leading to the Missouri Compromise of 1820. In the wake of U.S. victories, Congressman David Wilmot introduced his WILMOT PROVISION to prohibit slavery in any lands seized as a result of the war. Though ultimately defeated, Wilmot’s bill spread antislavery sentiment.

Most Americans who opposed slavery in the territories were not abolitionists but Free Soilers. Free Soilers did not oppose slavery in the South but believed that if slavery were permitted in the West, wealthy Southern planters would buy up the best farmland. Northern farmers of more modest means would have nothing. Free Soilers shared with abolitionists a deep disdain for what they both characterized as the South’s “slaveocracy.”

Abolitionists were divided on the wisdom of working with Free-Soil Democrats and Whigs. William Lloyd Garrison refused to work with anyone who sought less than full and immediate emancipation. Tappan and other abolitionists disagreed. Abolitionists had already experimented with electoral politics in the form of the Liberty Party, whose support had grown from 7,000 presidential votes in 1840 to 60,000 in 1844. In 1848, many abolitionists joined the Free-Soil Party, which garnered more than a quarter million votes for presidential candidate Martin Van Buren. When the KANSAS-NEBRASKA ACT shattered the Whig Party in 1854, most Northern Whigs joined Free Soilers and abolitionists to establish the REPUBLICAN PARTY. Though the Republican Party officially embraced only Free-Soil ideas, abolitionists now had a strong voice in a mainstream political movement.

Even so, Garrisonian “moral suasion” remained vital to the abolitionist cause. HARRIET BEECHER STOWE’S popular 1852 novel *Uncle Tom’s Cabin* condemned the abuses of slavery in vivid prose. As many as one-third of literate Northerners read Stowe’s book. African Americans who had escaped slavery now found large and enthusiastic audiences for their speeches and books.

## 4 African-American regiments

However, moral suasion was clearly not going to end slavery by itself. During the 1850s, the debate over slavery provoked increasing violence. From Preston Brooks's assault on Senator CHARLES SUMNER in the Senate chambers to BLEEDING KANSAS, and from JOHN BROWN's attack on the federal armory at HARPERS FERRY to Southern calls for SECESSION, slavery had become the most divisive national issue. In 1860, hoping to allay the fears of white Northerners, the Republican Party passed over WILLIAM H. SEWARD, an abolitionist sympathizer, and instead nominated ABRAHAM LINCOLN, a Free Soiler who had condemned John Brown's raid and promised to protect slavery where it already existed.

At the beginning of the Civil War, most white Northerners—and certainly most Union soldiers—still opposed abolition of slavery. Lincoln himself entertained the idea that the United States might gradually end slavery and that former slaves might be returned to Africa. Yet Garrison, Douglass, and other abolitionists urged Lincoln to reject gradualism, reject colonization, and reject anything short of full citizenship. Throughout the Civil War, abolitionists struggled to ensure that African Americans could serve as combat soldiers in the UNION ARMY and that those soldiers would earn the same pay as white soldiers. Abolitionists also lobbied for other causes: that Union commanders end slavery in Southern territories they occupied, that the U.S. government grant captured plantation lands to former slaves, and that Congress declare and protect the civil rights of African Americans.

The THIRTEENTH AMENDMENT brought the end of slavery in 1865, and abolition's mission had been fulfilled. Some former abolitionists, their life's work accomplished, retreated from politics. Others remained active within the Republican Party. Still others joined moral crusades modeled after abolitionism and seeking reform of other elements of American life. However, veteran abolitionists found themselves divided in their approaches to RECONSTRUCTION and an industrializing ECONOMY. As a political movement, abolition was finished. Even so, fundamental issues arising out of race were never fully resolved by the Civil War. In many ways, they remain as vital to American society today as they did when abolitionists first raised them.

## African-American regiments

President ABRAHAM LINCOLN initially opposed the inclusion of African Americans in the Union forces, fearing alienation of the border states, Northern prejudice and public opinion, the possibility of slave rebellion, and even the quality of fight he might get from black soldiers. By the summer of 1862, as the resilience of the Confederacy became more evident, he began to change his mind. He looked the other way as Senator James H. Lane of Kansas, a veteran of clashes with proslavery Missourians during the 1850s, formed black regiments in August. Lincoln determined that one way to weaken the South might be to undermine SLAVERY. The EMANCIPATION PROCLAMATION of January 1, 1863, included a carefully measured endorsement of the armament of African Americans. These forces became known as United States Colored Troops.

The Union's recruitment of black soldiers began in earnest March 1863 and ultimately resulted in raising nearly 180,000 troops, about 7,000 of whom served as noncommissioned officers. Unlike the celebrated Irish Brigade or the many proud German units, regiments comprising only African Americans were not so much the result of choice but of segregation. They were denied promotions and paid on a lower pay scale. They also were most often given white leadership; it was generally believed that white soldiers would never obey African-American officers. Commissions were given to only 110 African Americans, and more than 70 of them resigned due to the persistent harassment. Further, African-American members of the UNION ARMY fought knowing that if the Confederates captured them, they would be considered rebel slaves and might be tortured or executed. Some Confederate generals refused to take African-American prisoners.

White Union officers were offered incentives to raise and command African-American units and had to pass rigorous examinations, so black regiments most often had experienced and able leadership. Because of the great increase in promotions, white military personnel generally began to accept the inclusion of African Americans as a necessary measure of war. When finally allowed to fight, African Americans served with distinction. They led three charges without white support at Port Hudson, Louisiana. At the BATTLE OF MILLIKEN'S BEND, they participated in some of the war's most brutal hand-to-hand combat. Robert Gould Shaw led the 54TH MASSACHUSETTS REGIMENT on a Union version of Pickett's charge at Fort Wagner. In all, African-American regiments participated in 41 major battles and about 450 smaller actions. By the end of the war, African Americans accounted for 12 percent of the Union army and about two-thirds of the forces in the Mississippi Valley. An additional 20,000 served in the UNION NAVY. Approximately 37,000 African Americans died in service, representing a 35 percent greater loss, proportion-

ately, than Union white troops. Sixteen were awarded the congressional MEDAL OF HONOR.

## African Methodist Episcopal Church

Founded in 1816, the African Methodist Episcopal (AME) Church became one of the leading social, cultural, and religious institutions in African-American life.

The AME Church grew out of tensions within the biracial Methodist Church following the American Revolution. Methodist churches opposed SLAVERY and encouraged the participation of free African Americans in the church, both as congregants and as preachers. At the same time, the white leaders of the Methodist movement believed that African-American styles of worship threatened the church's practices. Increasingly, they advocated the subordination and segregation of African-American congregants.

Over time, naturally, tension between black and white Methodists grew. During the early 1800s, antislavery attitudes in the Methodist organization weakened, as did the willingness of the Methodist leadership to ordain African Americans as ministers or include them in denominational decision making.

In response, a number of African Methodist congregations meeting in Philadelphia in April 1816 organized the African Methodist Episcopal Church, naming Richard Allen its first bishop. Spreading swiftly throughout the North and West before the CIVIL WAR, the church also established a strong presence in the South despite prohibitions against its presence.

Before the Civil War, the AME Church emphasized EDUCATION, ABOLITION, and community self-help. AME churches, including Philadelphia's "Mother Bethel," served as havens for men and women escaping slavery on the UNDERGROUND RAILROAD. Churches offered classes for congregants, stressing literacy, mathematics, and familiarity with the Bible. Church members also founded Ohio's Wilberforce University in 1856, the first college for African Americans in the United States.

By the mid-19th century the AME Church had become one of the most prolific publishers of African-American writing. The church's earliest works included hymnals and other religious literature. In 1841 the church began publishing the *AME Church Magazine* (later the *Christian Recorder*), one of the first African-American

newspapers published in North America. Between 1858 and 1864, the church published African-American essays, poetry, and short stories in its *Repository of Religion and Literature*, an effort it revived in 1884 with the *A.M.E. Church Review*.

Politically, the AME was a strong advocate of EMANCIPATION during the Civil War and voting rights for African Americans after the war. As segregation and discrimination hardened in the years after RECONSTRUCTION, AME churches remained centers of African-American cultural and spiritual life, sustaining black communities into the 20th century.

## agriculture

Agriculture was the mainstay of the American ECONOMY both before and after the CIVIL WAR. The majority of the population of the United States, North and South, was rural, and nearly three-fourths of the nation's exports were agricultural in 1860. The actual type of agriculture and methods of farming varied enormously within the vast country, however. This was a reflection of a number of variables: the topography and quality of the soil, land policy, access to markets, availability of labor to tend crops, and the use of farm technology.

The South was the most agrarian section of the United States. Southern agricultural exports accounted for three-quarters of the total U.S. agricultural exports before the Civil War. The South's staple crop was cotton, and everyone from large planters to yeoman farmers grew the crop. Cotton required a large amount of labor due to the many steps involved in its production, from the sowing of cottonseeds to months of picking, ginning, hauling, and baling the finished product. Planters relied on slave labor as much as possible, according to their financial ability. At one extreme, wealthy planters used gangs of slaves while at the other, yeoman farmers tended to rely on family labor. For this reason, planters could generally focus on growing only cotton, while smaller farmers diversified and also grew the food needed for family sustenance.

Cotton was profitable because owners of England's textile mills provided a market for American cotton. As a result of the soaring demand for the crop, planters grew cotton year after year instead of diversifying their crop. When the soil inevitably became depleted, they often secured new land farther west and started the process over

## 6 agriculture

again. The boom in the cotton economy came in Alabama and Mississippi in the 1830s and expanded westward across Louisiana to Texas.

Similar patterns characterized the growing of the second-most-important commercial Southern crop, tobacco. As in cotton production, large slaveholding growers monopolized the land and trade. Commercial tobacco growing depleted the land almost as much as growing cotton, and like cotton growers, tobacco planters would often migrate westward. The old tobacco states of Maryland and Virginia eventually gave way to Kentucky, Tennessee, and North Carolina.

The Civil War largely destroyed all forms of Southern agriculture. The Northern blockade uprooted the critical cotton trade. Further, invading armies destroyed the Southern TRANSPORTATION system, along with most of the crops and supplies of food in their path. Southern troops also harmed farmers. They confiscated meat, grain, and other produce for their food. At the close of the war, the production of Southern farmers was a fraction of prewar levels.

In the years after the Civil War, agriculture gradually reemerged in the South, with cotton remaining the primary crop. In fact, Southern farmers became even more dependent on a one-crop economy. Large PLANTATIONS continued to dominate agriculture, but now Northern capitalists replaced some of the Southern planters. For the ex-slaves who received neither land nor money, a new system of dependence emerged in the form of SHARECROPPING. Sharecroppers obtained food, farming tools, and a plot of land from merchant planters on credit. In return, sharecroppers agreed to turn over their crop to the merchant to pay their debts with interest. Under the conditions established by the merchants, the sharecroppers never were able to get out of debt from year to year, and they remained permanently tied to their land.

Like the South, the North was a primarily agrarian region. In the North, however, farming more clearly reflected the influence of urbanization and manufacturing, both increasingly important over the course of the 19th century. The price of land increased near cities, while at the same time city dwellers created a demand for agricultural produce. In order to afford the land they needed, farmers specialized in products that were sold to the cities. Many New England and mid-Atlantic farmers turned to the production of butter, milk, cheese, eggs, or vegetables. Other farmers gave up their eastern farms and headed west, where land was cheaper.

The prairie states of Illinois, Indiana, Missouri, Wisconsin, and Iowa became the breadbasket of the nation by the time of the Civil War. Farming on the prairies was very challenging—tall grasses stretching out for miles were supported by a dense, dank root system that defied traditional plows and bred mosquitoes and disease. The lack of timber

for housing and fences along with poor access to transportation added to farmers' problems.

The Civil War accelerated trends in the North and Midwest that were already underway. The needs of the army increased demand for farm goods and raised prices. At the same time, enlistments drained farm hands from rural areas and caused a rapid increase in mechanization. Given the high costs of mechanical equipment, farmers were drawn away from subsistence agriculture into the commercial economy, with its complicated relationships to creditors, middlemen, and food processors. Farmers were becoming businessmen. Meanwhile, Northern farming interests shifted increasingly westward, as the states of New England and the Atlantic coast became more and more urbanized.

During the war, several pieces of legislation served to widen farmers' horizons. The Department of Agriculture was established as part of the national government, furnishing farmers with information on crop conditions, weather reports, scientific advances, and agricultural business trends. Land-grant college legislation was passed, establishing new universities geared toward scientific agriculture. A third piece of legislation, the HOMESTEAD ACT of 1862, had a more ambiguous impact. It established a procedure for settlers to acquire 160 acres of free land. While this would seem to be a boon for farmers, by the 1860s the principal tracts of land available were only good for livestock or other types of large-scale agriculture that required more land than 160 acres.

In the postwar years, agricultural settlement of the plains and the West proceeded at a furious pace. In the plains states, family farmers found life difficult economically and socially. Wealthy wheat ranchers with vast acres and expensive machinery were the ones who most prospered. In California and the southwestern states, the ongoing transition from Mexican to American jurisdiction revolutionized land policy and farming techniques. Mexicans in California and New Mexico had been accustomed to raising livestock in a partly subsistence and partly commercial agricultural economy. American farmers brought dramatic changes geared toward commercial agriculture. Some farmers were able to buy up huge chunks of land as they worked to find profitable cash crops that could be transported and sold to distant markets in the East and abroad. Their main successes were in the grain industry and, after the 1870s, in the orchard industry.

After the Civil War, the increased settlement of the plains and the West, along with the reemergence of Southern agriculture, turned the United States into the world's foremost producer of agricultural goods. Despite this, the predominant theme of the postwar era was the rise of manufacturing and big business. Increasing numbers of Americans abandoned farming for jobs in the

cities. Those farmers who remained were increasingly forced to mechanize and to involve themselves directly in the national economy. Farmers found themselves subject to economic and human factors beyond their control, often to their great detriment. Ultimately, this would give rise to increasing political militancy among farmers in the 1870s and 1880s. The era of Thomas Jefferson's independent, yeoman farmer ended during the Civil War years.

### **Alabama, CSS**

The Confederate ship *Alabama* was the most successful merchant raider of the CIVIL WAR. Shortly after his arrival in England, Confederate naval agent JAMES D. BULLOCH contracted with the Liverpool firm of Laird & Sons to construct a fast and capable bark-rigged sloop intended for raiding. The resulting vessel, officially known as “290,” was launched and christened *Enrica* on May 15, 1862, and it slipped away to sea on July 30, before U.S. diplomats in London could prevent it from sailing. *Enrica* dropped anchor off the Portuguese island of Terceira, in the Azores, where it was armed and on August 24, 1862, commissioned CSS *Alabama* under Captain RAPHAEL SEMMES.

The *Alabama* was 220 feet long, measured 31 feet at the beam, and displaced 1,050 tons, making it one of the sleekest warships in its class. It was fitted with a battery of six 32-pounder cannons in broadside and carried a 110-pound rifled Blakely cannon and a 68-pounder smoothbore on pivot mounts amidships. The *Alabama* was manned by a crew of 120 sailors and 24 officers and was specially outfitted for long-distance cruising. The vessel could reach 14 knots with its 300-horsepower steam engine, but it more routinely sailed at 10 knots under a generous spread of canvas. In sum, the *Alabama* was well suited for fast raids against slower Union merchant vessels and could usually outpace the slower, heavier warships sent to intercept it.

Semmes sailed from the Azores in August 1862 and began accosting Union merchant ships in their local waters and off Newfoundland. He went on to the Caribbean for additional prizes, then entered the Gulf of Mexico. There, on January 11, 1863, the *Alabama* sank the smaller Union warship *Hatteras* in a 15-minute engagement. As the U.S. Navy stepped up its efforts to stop the hard-hitting Confed-

erate raider, Semmes shifted his operations to the coast of South America before crossing the Atlantic to the coast of South Africa and the Indian Ocean. By this time merchant ships owned by Northerners were becoming harder to find, because sea captains, having been warned of his presence, remained in neutral ports.

After less than two years of service at sea, the raider had traveled 75,000 miles and captured 66 prizes whose value totaled \$6.5 million. Semmes decided that the *Alabama* was overdue for repairs, and in June 1864 he sailed to Cherbourg, France, to commission the work; however, French authorities, mindful of their commitment to neutrality, refused him access to the local shipyard. Semmes was further discomfited when the USS *Kearsarge* stationed itself off the harbor. On June 11, 1864, with his vessel in less than fighting condition and his gunpowder weakened by continuous exposure to salt air, Semmes sortied to meet the Union warship. The *Kearsarge*, expertly commanded by Captain John Winslow, riddled the *Alabama* in a contest of circling turns, and it sank with a loss of nine killed and 24 wounded. Semmes and several other officers eluded capture thanks to a rescue by the English yacht *Greyhound*, but the career of the South's most successful warship had ended.

### **Alexander, Edward P.** (1835–1910) *author, Confederate general*

Confederate general and author Edward Porter Alexander was born on May 26, 1835, on the Fairfield plantation in Wilkes County, Georgia. His wealthy parents, Adam and Sarah Alexander, demanded academic excellence from their 10 children and were disappointed that Alexander decided to become a soldier. Graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1857, he stood third in his class and accepted a coveted commission in the engineer corps. He married Virginian Bettie Mason shortly thereafter.

Following Georgia's SECESSION in 1861, Alexander left the U.S. Army and put his considerable engineering and organizational skills to work for the Confederacy. Commissioned as an artillery captain, he joined Gen. P. G. T.

## 8 American Missionary Association

BEAUREGARD's staff before the FIRST BATTLE OF BULL RUN and quickly became chief of ordinance and artillery. Appointed colonel of artillery in Gen. JAMES LONGSTREET's First Corps in 1862, Alexander saw significant action at the BATTLES OF FREDERICKSBURG, CHANCELLORSVILLE, and GETTYSBURG. During the latter, he directed the artillery bombardment that preceded Pickett's Charge. Promoted to brigadier general in 1864, he spent the remainder of the war as Longstreet's chief of artillery. After recovering from a minor wound suffered at Petersburg in June 1864, Alexander rejoined the army for its final retreat and surrender in 1865.

During the 1870s and 1880s, Alexander built a postwar career as a railroad executive, managing several Georgia lines while mostly steering clear of the railroad industry financial scandals that in 1892 forced his retirement. In 1897 President Grover Cleveland appointed Alexander to a lucrative post as the American engineer responsible for settling a border dispute between Costa Rica and Nicaragua.

Alexander published *Military Memoirs of a Confederate* in 1907. Years earlier he had contributed narratives based on his personal experiences to the *Southern Historical Society Papers* and *Century Magazine's* "Battles and Leaders of the Civil War" series. In his later memoirs, Alexander evaluated the campaigns he had witnessed in strictly military terms, adopting a scholarly approach that former compatriots mistook for arrogance. His harsh analysis of the Gettysburg campaign condemned Gen. ROBERT E. LEE's decision to invade Pennsylvania, criticized Lee's use of offensive battle tactics, and acquitted Longstreet of blame for the Confederate loss.

Alexander died on April 27, 1910, in Savannah, Georgia.

### American Missionary Association

The American Missionary Association (AMA) was a nondenominational Christian organization dedicated to achieving full political and social equality for African Americans. The AMA's members were motivated by their belief that the teachings of Jesus Christ promoted racial harmony.

The AMA was incorporated in 1846 by Lewis Tappan, one of the founders of the American Anti-Slavery Society, and Simeon Jocelyn. Tappan and Jocelyn, along with most of the other early members of the AMA, had been active in the Amistad slave case that had secured the freedom of a number of illegally imported slaves. At first, the AMA focused on establishing overseas missions for freed slaves. By the 1850s, however, the AMA had turned primarily to ABOLITION. For the next decade, AMA members supported a number of abolitionist causes, most prominently the UNDERGROUND RAILROAD.

During the CIVIL WAR, the AMA began working to educate former slaves. Over 500 schools were founded during the Civil War and in the decades thereafter. Most were elementary schools, but a number of institutions of higher learning were also established, including Atlanta University, Fisk University, Hampton Institute, Howard University, Huston-Tillotson College, and Talladega College. The AMA remains in operation to the present day and has continued to focus on EDUCATION and other assistance for the underprivileged, including African Americans, NATIVE AMERICANS, Mexican Americans, Chinese immigrants, and Appalachian people.

### amnesty, acts of

Amnesty refers to a formal procedure by which a group of people is forgiven for past misdeeds, while a pardon is official forgiveness for a single individual. During the CIVIL WAR and RECONSTRUCTION period, Presidents ABRAHAM LINCOLN and ANDREW JOHNSON, along with the U.S. Congress, issued several proclamations of amnesty and pardon. These proclamations must be placed in the context of the unfolding policy of Reconstruction during and after the war. Two questions dominated: What would be the best way to bring the rebellious states and people back into the Union? and Who should control the process, the president or Congress?

Even as war was being waged on the battlefields, large portions of the South had come under Union military occupation. President Lincoln desired that loyal Southerners regain control of their states as soon as possible. He also sought to demonstrate to the South that returning to the United States could be relatively easy, in hopes of convincing the Confederacy to abandon its rebellion. On December 8, 1863, Lincoln issued the first "Proclamation of Amnesty and Reconstruction," in which he used his constitutional war

powers to seize control of the reconciliation process for the executive branch. Known in history as Lincoln's Ten Percent Plan, it offered a full pardon to all "insurgents," or people who had engaged in the rebellion against the United States.

Of course, there were conditions and exemptions. Several classes of Southerners, including high Confederate officials and military officers, were not to be granted amnesty under Lincoln's act. Eligible applicants, a category that included the majority of Southerners, had to take an oath pledging their loyalty to the U.S. Constitution, including all acts and laws passed regarding the ex-slaves. As soon as 10 percent of the voters of 1860 had taken the oath, their rights and privileges as citizens were restored fully. They could then re-form their state governments and hold ELECTIONS for national offices. If these steps were followed, the U.S. government would accept Southern states back into the Union, as well as their national representatives back into the House of Representatives and the Senate.

Lincoln's proclamation, which was put into action in Louisiana, stirred protest by a group of men who would shortly be called the RADICAL REPUBLICANS. Led by Senators CHARLES SUMNER of Massachusetts and BENJAMIN WADE of Ohio, they put forward a different and far harsher plan for Reconstruction that emphasized punishment for Southern white "traitors." Many wanted to reward the newly freed and loyal African Americans with the vote, making them the focus of a reconstructed South. Most importantly, they wanted Congress and not the president to control Reconstruction. The issue was put on the back burner for most of 1864 and into 1865 as the presidential elections, the end of the war, and the ASSASSINATION OF ABRAHAM LINCOLN commanded the attention of the country.

With Lincoln's death, Andrew Johnson was left in control of Reconstruction. Acting on the authority given in Article II, Section 2 of the Constitution, which states that the president "shall have power to grant reprieves and pardons for offenses against the United States," Johnson issued the next "Proclamation of Amnesty" on May 29, 1865. Like Lincoln's proclamation, Johnson's offered amnesty to all insurgents who took the oath. Since the war was over, Johnson dispensed with the 10 percent plan and instead appointed provisional GOVERNORS who would preside over the reestablishment of loyal governments. Johnson's plan expanded the list of people who were exempted from amnesty, including those whose taxable income was worth more than \$20,000. These individuals could apply to the president for a personal pardon. Despite the many bureaucratic obstacles to obtaining the pardons, Johnson granted thousands of them over the summer of 1865. Johnson would go on to issue two more Proclamations of Amnesty on July 4, 1868, and on December 25, 1868, that clarified the details and enlarged the scope of the earlier ones.

Johnson's proclamations formed the basis of a generous Reconstruction for the South. So generous was it, in fact, that congressional Republicans revived the struggle over control of the timing and nature of reconciliation. From 1866 to 1868, Congress and the president presented competing versions of Reconstruction to the nation during a period of rising Southern white violence against African Americans. Northern voters in the 1866 fall elections rejected decisively Johnson's lenient Reconstruction policy. Congressional Republicans, powerful and united by their desire to remake the South more like Northern society, put the entire defeated region under control of the military with a series of RECONSTRUCTION ACTS. Many citizens in the South were thrown into confusion as Johnson's proclamations of amnesty were rendered null and void. Instead, Congress declared that the more exclusionary FOURTEENTH AMENDMENT was the guideline for citizenship.

As the popular support for a harsh Reconstruction declined, so too did congressional resistance to leniency toward former rebels. In 1872 Congress passed another Amnesty Act that removed office-holding disabilities for everyone except a few of the highest-ranking officials and officers of the former Confederacy. In 1898 Congress issued a universal amnesty for all those who had not been granted it in earlier acts. In the long and bumpy road toward sectional peace, the North in the end had decided on a sectional reconciliation that emphasized harmony and forgiveness over the rights of freedmen.

Harris, *With Charity for All: Lincoln and the Restoration of the Union* (Lexington: University Press of Kentucky, 1997).

**Anderson, Robert** (1805–1871) *commander at Fort Sumter*

Born in Kentucky, Robert Anderson became a career army officer, veteran of four wars and, in his defense of FORT SUMTER, SOUTH CAROLINA, the first hero of the CIVIL WAR.

Graduating in 1825 at the middle of his West Point class, Anderson joined the army as a second lieutenant. Through service in the Black Hawk War (1832), the Seminole War (1837–38), and the Mexican-American War (1846–48), Anderson rose to the rank of major (1857). In 1845 he married Elizabeth Bayard Clinch from Georgia, with whom he would have four children.

In November 1860, Anderson was appointed commander of Fort Moultrie, an obsolete island post in South Carolina that was easily accessible from the mainland and

## 10 Andersonville Prison, Georgia

vulnerable to capture from its rear. One mile away, at the entrance to Charleston Harbor, workers were completing FORT SUMTER, a man-made granite island with brick walls 40 feet high and 8 feet thick. Sumter was designed in such a way that with a full force of 650 soldiers manning 146 large guns, it could halt any craft entering or leaving the harbor.

When South Carolina seceded in December 1860, Anderson was placed in a precarious position. Although a Kentuckian and a slaveholder, he remained loyal to the Union and worked to keep Forts Sumter and Moultrie in Northern hands. He knew that any misstep on his part could lead to war, as Charleston militiamen stood prepared to attack the Federal force. Anderson requested guidance and received ambiguous orders from Washington that he interpreted as allowing him to move from Moultrie to Sumter if he thought it necessary to deter an attack. He did so under the cover of darkness on the evening of December 26. The people of the North were elated, those of the South indignant.

At Sumter, Anderson faced a severe shortage of supplies. Fort Sumter's symbolic value was high, but Anderson could not hope to resist if the North could not resupply him. He made an urgent request for food and other necessities that President ABRAHAM LINCOLN ultimately decided to grant. When Confederate Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD learned of this, he began shelling Fort Sumter. The shelling began before 5 A.M. on April 12 and continued until April 14, when Anderson and his men (127 total, including civilian employees) were forced to surrender.

Anderson's struggle to keep Fort Sumter for the Union made him the North's first war hero. He was rewarded with a promotion to brigadier general and assigned to the Department of the Cumberland. Soon, however, he was forced to give up his command to WILLIAM T. SHERMAN because of ill health. He retired in 1863 but returned to Charleston at the end of the war to replace the American flag that had been torn down in 1861. After the war Anderson and his family relocated to France. He died in Charleston on October 26, 1871.

### Andersonville Prison, Georgia

Officially named Camp Sumter, the notorious Andersonville Prison was one of the largest prison camps during the American CIVIL WAR.

In the latter part of 1863, Union forces began penetrating deeper into the Southern states. As a result, Confederates captured prisoners of war in greater numbers than ever before. This influx quickly showed that the detention facilities used during the prior two years of war—mainly old forts, warehouses, and jails—were insufficient. The Southern captors feared that the prominent presence of Yankee prisoners would increase the possibility of overrunning the northernmost facilities just as they had threatened RICHMOND, the Confederate capital, in 1862.

In order to rectify the problem, Confederate officials were sent to Georgia in November 1863 to scout a potential prison site in Sumter County near the town of Andersonville. They determined that the area in south-central Georgia was an ideal location for the facility because it was, at the time, far from the reach of the Union forces. Other reasons for selecting the area included the availability of potable water from a nearby creek, the close proximity of the Georgia Southwestern Railway, and the plentiful timber supply. In addition, because the town of Andersonville itself had a population of only about 20 people, little political resistance to the facility developed. Finally, local slaves could be impressed by the army to build the prison.

Andersonville's construction began in December 1863. On February 24, 1864, 600 prisoners from Libby Prison in Richmond, Virginia, arrived. One entire wall of the stockade was still under construction. Confederate artillery pieces were positioned by the opening to deter any attempts to escape until the work was finished. Once completed, the walls of the prison formed a rectangle of rough-hewn pine standing 15–20 feet in height and built on a 16½-acre tract intended to house no more than 10,000 Union prisoners of war.

During the first few months, conditions at Andersonville were fair. But by July the facility was jammed with over 32,000 soldiers, almost all enlisted men. This increase occurred because of renewed Union aggression and the decision of Northern officials to stop the exchange of prisoners. They believed that keeping Southern soldiers in Northern PRISONS would deprive the South of desperately needed manpower and thus hasten the end of the war.

The Northern leadership's decision was a hard blow for Union soldiers in prisons like Andersonville. The open-air stockade was expanded to 26 acres but remained horribly overcrowded, and conditions became more and more intolerable. Nevertheless, thousands of soldiers continued to be shipped to the prison. Running through the middle of the camp was a stagnant stream, sarcastically referred to as "Sweet Water Branch," which served as a sewer as well as a source of water for bathing and drinking. There were no barracks; prisoners were forbidden to construct shelters. Some did erect tents, but most were left fully exposed to the elements. No clothing was distributed to the captives,

so most wore ragged remnants of their uniform or sometimes nothing at all. Medical treatment and supplies were virtually nonexistent.

With the South barely able to provide for its own men, the prisoners starved. Their daily diet might consist of only rancid grain and a few tablespoons of beans or peas. The poor food and sanitation, the lack of shelter and health care, the crowding, and the hot Georgia sun took their toll in the form of dysentery, scurvy, and malaria. Capt. Henry Wirz, who assumed command of Andersonville in June 1864, wrote the Confederacy's War Department to ask for additional supplies to sustain the prisoners but received no assistance. Attempts to improve the situation were futile, given the limited supplies available. Beyond that, many embittered Confederates were unwilling to do anything to make conditions better because they believed that all Union soldiers should die.

During the summer months, more than 100 prisoners died of disease on a daily basis. Others fell victim to thieves and marauders among their fellow captives. The desperate situation led a Confederate medical commission to recommend relocating those prisoners who were not too ill to move, and in September 1864, as WILLIAM T. SHERMAN's army approached, most of Andersonville's able-bodied inmates were sent to other camps.

Remaining in operation until the war's conclusion, Andersonville held more captured Union soldiers than any other Confederate camp, a total of over 45,000. Nearly 30 percent of these died in captivity. The North had learned of the camp's appalling conditions well before the emaciated survivors were released in April 1865, and outraged citizens urged retribution on Southern prisoners of war. Of course, the Union had wretched prison camps of its own. Death rates were high in some of these as well, even though the North was far better equipped to cope with captured soldiers. Mismanagement and severe shortages were more to blame for the terrors of Andersonville than any deliberate attempt to mistreat prisoners. Nevertheless, many Northerners insisted that the abuse was deliberate and demanded vengeance. Consequently, after being tried by a U.S. military court and convicted of war crimes, Henry Wirz was hanged. Meanwhile, government workers led by CLARA BARTON compiled a list of 12,912 prisoners who had died at the camp. Andersonville's mass graves were replaced by a national cemetery, which is today still used as a burial ground for American VETERANS.

### Andrews's Raid (April 12, 1862)

In the spring of 1862, one of the western UNION ARMY's most trusted spies, James J. Andrews, was given the task of launching a secret commando raid deep into the South. Also known as "The Great Locomotive Chase," Andrews's Raid is a perennial favorite among those who enjoy colorful war tales and has been the subject of paintings, songs, and at least two movies. Andrews had no trouble recruiting 22 volunteers for the daring adventure. Their aim was to cut the rail line that served as the supply link between Marietta, Georgia, and Chattanooga, Tennessee. The plan developed by Andrews was simple. His men would divide up into small groups, out of uniform, and go to Marietta where they would board a northbound train headed for Big Shanty, Georgia (now Kennesaw Mountain). The tiny crossroads town was a meal stop on the railroad, and when the other passengers were eating their breakfast, Andrews and his men would steal a locomotive and race unhindered toward Chattanooga, stopping only to cut TELEGRAPH lines, burn bridges, and render unusable a critical part of the Confederacy's railroad lifeline.

The execution of the plan, however, did not go as planned. One major setback arose when the weather turned very wet, making the roads impassable and bridges unburnable. Another unforeseen complication was that the Confederates had established a military camp at Big Shanty. Now, instead of few or no rebel soldiers, there were hundreds in the area. Nevertheless, Andrews and his men started their raid on the night of April 12 with high hopes. They did manage to capture a locomotive, called "The General," along with three boxcars, and then took off in a hurry. Their deed immediately discovered, the Confederates grabbed another engine and went in hot pursuit. The wild chase continued for almost 90 miles, until "The General" ran out of fuel near Grayville, about 18 miles south of Chattanooga. At that point, Andrews and his men jumped off the train and hid in the woods, where all were captured.

As the raiders were out of uniform when arrested, they were treated as spies. Two months later, Andrews and seven Union soldiers were court-martialed and executed. Eight other raiders escaped, and the rest were paroled in an exchange organized by Secretary of War EDWIN M. STANTON. Later, the survivors of Andrews's Raid became the first recipients of the MEDAL OF HONOR, the nation's highest award for bravery.

## 12 Antietam/Sharpsburg, Battle of

### **Antietam/Sharpsburg, Battle of** (September 17, 1862)

Antietam was a campaign and battle fought in the eastern theater of operations between Union Maj. Gen. GEORGE B. MCCLELLAN's Army of the Potomac and Confederate general ROBERT E. LEE's Army of Northern Virginia. The failure of Lee's invasion of Maryland ensured enough of a Northern victory to allow President ABRAHAM LINCOLN to issue the preliminary EMANCIPATION PROCLAMATION. Thus, Antietam marked a turning point in the war for the North, as the goal changed from union to union and freedom.

Following his success on the Virginia Peninsula (March–June 1862) and at the SECOND BATTLE OF BULL RUN (August 1862), Lee capitalized on apparent Union demoralization by invading the North. Besides hoping to maintain the strategic initiative by attacking, he sought to achieve a dramatic victory on Union soil that might win the Confederacy diplomatic recognition from England and France. Crossing the Potomac River during the first

week of September, he encamped his approximately 40,000 soldiers near Frederick, Maryland, on September 9. Disregarding the UNION ARMY, he divided his forces, sending one corps commanded by THOMAS J. (STONEWALL) JACKSON to capture HARPERS FERRY and the other under JAMES LONGSTREET toward Hagerstown. Together, these two operations would stop east-west Union rail traffic. Ultimately, he intended to unite his army near Hagerstown or Boonsboro.

Union general McClellan, a master of military organization and recently appointed to command all forces near WASHINGTON, D.C., soon had roughly 75,000 soldiers searching for the Confederate troops. His numerical superiority notwithstanding, McClellan behaved as he always did, with excessive caution, and pursued the enemy slowly. By September 12 he was in the vicinity of Lee's former campground near Frederick, where his soldiers found a copy of the Confederate operations order. Special Order No. 191 revealed to McClellan the scattered nature of Lee's deployment, which left him vulnerable to defeat in

Battle of Antietam/Sharpsburg, September 17, 1862 (Library of Congress)

piecemeal. Within 48 hours, the Union troops had crossed Catoctin Mountain and were threatening to break through the passes at South Mountain.

Meanwhile, the II Corps under Gen. Jackson had surrounded Harpers Ferry and commenced a heavy bombardment on September 14. Jackson was under strict orders to capture this strategic post no later than the 15th and then march directly back to reinforce the main body concentrating at Sharpsburg. That very morning heavy Confederate shelling of the Federal positions forced the Union commander to surrender. The garrison surrendered 10,000 men, 13,000 small arms, and 73 cannons. Jackson secured his prisoners and booty, then he hurriedly rejoined Lee's army to occupy its left flank. The division of Gen. AMBROSE P. HILL remained behind at Harpers Ferry and was expected to rendezvous with them later in the afternoon.

Realizing that the enemy was about to split his army, Lee ordered a concentration near the western Maryland town of Sharpsburg. To buy him the time he needed, he directed Maj. Gens. Daniel H. Hill and J. E. B. STUART to hold the passes on South Mountain. They resisted the Union advance at Crampton, Fox, and Turner's Gaps, but by noon on September 15 they were withdrawing back to Sharpsburg. With Lee's army pinned against the Potomac, and much of it still on the road from Harpers Ferry, McClellan failed to capitalize on Confederate disorganization and weakness by attacking immediately. Instead, he wasted the entire next day leisurely deploying his troops in sight of Lee's rapidly improving command.

Nonetheless, McClellan had conceived an excellent plan: heavily striking both of Lee's flanks while keeping two complete corps in reserve to either exploit a breakthrough or crush his center if Lee shifted troops to other sectors. The Union attack progressed from north to south. At 6 A.M. McClellan opened with the I Corps (JOSEPH HOOKER) attacking due south on the Hagerstown-Sharpsburg Turnpike. A little over an hour later his XII Corps (Joseph Mansfield) joined the fight. The heaviest fighting took place in sight of a small white building called Dunkard Church in a recently harvested cornfield. Fighting was intense as brigades from Jackson's, JOHN BELL HOOD's and RICHARD S. EWELL's divisions launched fierce counterattacks throughout the morning. By 9 A.M., Maj. Gen. John Sedgwick's division of II Corps, with the corps commander Edwin V. Sumner in the lead, joined the fight in the cornfield. In response, Lee moved John Walker's division from the southern portion of the line. Then his and Lafayette McLaws's divisions struck Sedgwick's troops, driving them back in disarray. By noon, fighting was all but over on the northern portion of the battlefield, as the Confederates, bloodied but unbowed, had stood their ground.

Sumner's other two divisions followed the first without guidance or a clear objective. As they crossed Antietam

Creek they diverged from the rest of the corps and drifted south. Wandering over a small rise, they ran into the Confederate commands of Daniel H. Hill and Richard Anderson along a small sunken farm road. The bloody and intense struggle continued as Gen. William French's division took the brunt of the Southern defenses. A little after noon, Gen. Israel Richardson's trailing division penetrated the rebel positions, inflicting a withering fire on the retreating defenders. The way was open to Sharpsburg, and McClellan still had Fitz John Porter's V Corps in reserve. However, he did not take advantage of his opportunity, ignoring pleas from subordinates to commit additional troops.

Gen. AMBROSE E. BURNSIDE began IX Corps's attack on the southern portion of the battle line around 10 A.M. The greatly outnumbered Confederate force, occupying the high ground on the far bank, dominated the Antietam Creek and its stone bridge. Not until 1 P.M. was Samuel Sturgis's division able to cross the creek. Two hours later, Burnside had two divisions (Orlando Wilcox's and Isaac Rodman's) on their way to Sharpsburg. Lee had no more troops at hand, and McClellan appeared to be on the verge of a decisive victory. Burnside, however, failed to secure the rise on his left flank. Just as he was about to enter the town, Maj. Gen. A. P. HILL's small division, returning from the Harpers Ferry operation, arrived on the ridge. Arrayed on the ridge line, the Confederate troops appeared to confirm McClellan's worst fears about being outnumbered. The Union attack stalled and then withdrew back toward Antietam Creek.

The battle reflected badly on Union leadership: McClellan had Lee's army within his grasp but failed, despite superior resources, to move forward decisively and crush him. Lee remained defiant on September 18, and the Union commander did not use his several fresh corps to finish him off. On the next day, the Southerners withdrew across the Potomac, at the only ford available, without an effective Union pursuit. President Abraham Lincoln, disgusted by McClellan's inability to destroy the Army of Northern Virginia, relieved him of command in November.

This battle was the bloodiest single day in the CIVIL WAR with more than 12,000 Union and almost 14,000 Confederate soldiers killed and wounded. It was one of the first photographed battlefields, and its horrific pictures created shock and dismay among civilians. Nonetheless, the battle granted Lincoln the military pretext he sought to announce his Emancipation Proclamation. This changed the focus of the war from preserving the Union to expanding human freedom and thus discouraged Europeans from entering the conflict.

### Appomattox campaign (March–April 1865)

In early 1865 military action around RICHMOND and Petersburg, Virginia, was at a strategic impasse. Since June 1864 the Army of Northern Virginia under Gen. ROBERT E. LEE and the Army of the Potomac commanded by Gen. ULYSSES S. GRANT had settled into siege operations, erecting an elaborate system of trenches that stretched 35 miles along the periphery of both cities. Over time, Grant had inched his way westward, forcing the Confederates gradually to overextend themselves. Realizing that his exhausted, outnumbered force would not survive the siege indefinitely, Lee ordered an attack on Union lines at Fort Stedman on March 25, 1865. His goal was to buy time for a gradual evacuation of Richmond and avoid encirclement, but the attack was soundly defeated.

Grant then pressed his advantage. He ordered a counterattack on Confederate lines with the full force of his army, commencing with a flanking movement by the cavalry corps under Gen. PHILIP H. SHERIDAN. Sheridan conducted three hard-fought encounters on March 29–31, 1865, at Lewis's Farm, White Oak Road, and Dinwiddie Court House, Virginia. These failed to achieve any major gains; however, on April 1–2 his Army of the Shenandoah smashed Confederate defenses at Five Forks, seizing 4,500 prisoners and a vital crossroads. This success finally positioned Union forces to cut off Lee's retreat completely.

In response, Lee ordered the immediate evacuation of Richmond and Petersburg on April 2. He also advised the Confederate government to relocate as quickly as possible. That night the Confederates under Gen. RICHARD STODDERT EWELL hastily filed out of the Confederate capital amid riots and large-scale fires. As they withdrew, Grant ordered attacks across the entire front. Union forces seized the vital Southside Railroad and ruptured Lee's remaining supply line.

Lee moved his troops southwest near Amelia Court House. His original intent was to resupply his starving men there and then march speedily into North Carolina to unite with the remnants of Gen. JOSEPH E. JOHNSTON's Army of Tennessee. But the promised rations failed to appear. After

24 hours, with Union forces skirmishing hard at Namozine Church, on April 3, 1865, Lee elected to withdraw farther west to Lynchburg, where more food was promised. Sheridan's cavalry nipped at his heels. Then on April 6 disaster struck: As the Army of Northern Virginia was spread out in marching formation, superior Union forces set upon them at Saylor's Creek, inflicting a heavy defeat and taking 7,700 prisoners. Undeterred, Lee cobbled together his survivors. While a rear guard under Gen. Fitzhugh Lee bought valuable time by holding off the Union II Corps at the Battle of High Bridge, Lee marched on to Farmville. That evening he received a communiqué from Grant urging him to surrender, but he refused.

As Lee continued his westward march, the Union pursuit was relentless. On April 8 Gen. GEORGE A. CUSTER of Sheridan's command captured Lee's food stocks at Appomattox Station and then assumed blocking positions directly in his path. On the morning of April 9 Lee and his generals determined to attack Sheridan's force and brush him aside. As this maneuver was progressing, however, the Army of the James under General Edward O. C. Ord arrived and reinforced Union positions. With additional Federal troops approaching him on three sides at APPOMATTOX COURT HOUSE, VIRGINIA, Lee made the painful decision to send out a flag and request surrender terms from Grant. Though the bedraggled Confederates had performed well under harrowing conditions, the masterful, dogged pursuit by Grant and Sheridan's veterans finally broke the back of Southern resistance.

### Appomattox Court House, Virginia (April 9, 1865)

Appomattox Court House was the site of the historic surrender of Confederate forces to Lt. Gen. ULYSSES S. GRANT on April 9, 1865. A note from General Grant sums up the feeling of the moment. It was addressed to "General R. E. LEE, Commanding General of the CONFEDERATE STATES OF AMERICA" and was dated April 7, 1865. "Dear General," wrote Grant, "The result of the last week must convince you of the hopelessness of further resistance on the part of the Army of Northern Va. in this struggle. I feel that it is so and regard it as my duty to shift from myself, the responsibility of any further effusion of blood, by ask-

This painting depicts the surrender of Robert E. Lee and his army at Appomattox Court House, Virginia, to General Ulysses S. Grant (*Library of Congress*)

ing of you the surrender of that portion of the C.S. Army known as the Army of Northern Va.”

Grant’s words show that the story of the APPOMATTOX CAMPAIGN of March 25–April 9, 1865, was a grim one for the Confederates. The BATTLE OF FIVE FORKS on April 1, 1865, destroyed the last supply line for the Army of Northern Virginia. Lee’s subsequent evacuation from RICHMOND and Petersburg left his fast-dwindling army hungry and weak. His goal was to escape somehow the clutches of the Federals by going southwest to meet up with Gen. JOSEPH E. JOHNSTON’s force in North Carolina. There, the combined Confederate armies could take on Union forces at a spot of their own choosing.

Grant’s cavalry and infantry moved quickly to cut off all escape routes. The Confederates were dealt a heavy blow on April 6, when 80,000 Yankee troops chased after 35,000 of Lee’s men and stopped them from turning south at Saylor’s Creek, near Farmville, where Union forces had captured 7,000 Southern soldiers. The next day, Grant’s note went out to Lee asking him to surrender. Lee refused. Worse was yet to come for the Confederates. On April 8, Gen. PHILIP H. SHERIDAN’s cavalry troops captured two trainloads of rations meant for Lee’s starving troops.

April 9 was Palm Sunday, and early morning found Lee and the remnants of his army in desperate flight across the Appomattox River, headed for the safe har-

bor of Lynchburg, Virginia. A quick look at the massed Federal army blocking the way revealed the hopelessness of the Confederate position, already hobbled by hunger and desertion. Lee said: “There is nothing left for me to do but to go and see General Grant, and I would rather die a thousand deaths.” Grant was nursing a migraine when Lee’s request for an immediate interview to discuss terms of surrender was delivered. Grant wrote later: “I was still suffering with the sick headache; but the instant I saw the contents of the note I was cured.” It was agreed that the two generals would meet in Appomattox Court House, a small community deep in the countryside of Virginia, about 20 miles southeast of Lynchburg. Accompanied only by his aide, Col. Charles Marshall, Lee departed the Confederate camp around noon and began the fateful ride to Appomattox. They were met on the Union picket lines by Gen. GEORGE A. CUSTER, who received their flag and arranged an escort.

A little after 1:30 P.M., Grant and his staff rode into the village and stopped their horses at the two-story brick farmhouse of Wilmer McLean. In the parlor of McLean’s residence sat Robert E. Lee with Col. Marshall, waiting for them. Gen. Lee was dressed in his best uniform, with a beautiful sword by his side, looking every inch the Southern gentleman he was. The commanding general of the Northern armies was much less formal. His dress uniform

## 16 Arlington National Cemetery

not available, Grant was in his preferred casual field uniform complete with mud splatters from his journey. The two men exchanged some pleasantries. Grant observed his counterpart's emotionless face closely during the conversation and remarked, "What General Lee's feelings were I do not know. As he was a man of much dignity with an impassible face it was impossible to say whether he felt inwardly glad that the end had finally come. . . ."

ELY S. PARKER, Grant's military secretary, brought over a table for him to begin writing out the terms of surrender. "I only knew what was in my mind," reflected Grant. Characteristically direct and simple, Grant's terms were also magnanimous and reflected his and President ABRAHAM LINCOLN's great desire that the beaten Confederates neither be humiliated nor punished. Total defeat was enough. The rebels were to "lay down arms," return home as paroled prisoners, and promise to obey the laws of the United States. Grant would not require Lee to hand over his sword, and Southern officers would be able to keep their side arms. Both officers and enlisted men could bring their horses and mules back with them. "This will have the best possible effect upon the men," Lee said. "It will be very gratifying, and will do much toward conciliating our people." Copies of the surrender were then made, and Lee wrote out a letter accepting the terms. Lee's request for rations for his men was approved, and at 4:00 P.M. the two men shook hands. Lee then mounted his horse, Traveller, and slowly moved down the road to the Confederate camp. Before leaving, Lee turned to Col. Parker, who was a full-blooded Seneca Indian, and remarked, "I'm glad to see one real American here." Parker shot back, "Now we are all Americans."

One of the great ironies of Appomattox is that the owner of the house, McLean, had previously owned a home at Bull Run, Virginia, that had served as the headquarters of Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD in 1861 and subsequently as a Confederate hospital. Hoping to spare his family from further exposure to combat, McLean had relocated to Appomattox in 1863. His experience highlights how the war inescapably touched many lives. In a final indignity, McLean lost his table. The table upon which the surrender documents were signed was confiscated by Gen. Sheridan and given to Gen. Custer as a gift for his wife.

News of the surrender spread quickly through the Union camps, and soon thousands of soldiers were cheering and throwing their hats into the air. A 100-gun salute was begun, but Grant immediately stopped it, saying, "The war is over. The Rebels are our countrymen again." Perhaps the most common emotion for the weary soldiers of both sides was a great relief that the war, and the killing, was finally over. The great problems of reconstructing the Union and easing the bitterness between North and South lay ahead.

Shortly after Lee's departure, Grant telegraphed EDWIN M. STANTON, the secretary of war: "General Lee surrendered the Army of Northern Virginia this afternoon on terms proposed by myself." WASHINGTON, D.C., went wild with happiness. Back at Appomattox, on April 12, the formal ceremony of the laying down of arms occurred in an atmosphere of respectful conciliation. As the weather-beaten Confederates sullenly filed past the victorious Union troops lining the road, Gen. JOSHUA L. CHAMBERLAIN ordered the Federals to present arms as a token of respect. Gen. JOHN B. GORDON, commanding the Southerners, was taken aback at such chivalrous behavior but ordered his own men to do the same, "honor answering honor." There was no sense of gloating on behalf of the victors, only a pervasive sense of relief from both sides that their terrible and mutual ordeal had finally ended. Although several more Confederate armies would surrender in the months to come, the meeting between Grant and Lee at Appomattox Court House is considered the end of the American CIVIL WAR. In 1954 the 1,774-acre site was declared a national historic park by the U.S. Department of the Interior. It has been fully restored to its Civil War appearance.

### Arlington National Cemetery

The military burial ground and shrine of the United States, Arlington National Cemetery lies on the south bank of the Potomac River, directly opposite WASHINGTON, D.C. The land originally belonged to Martha Washington, wife of President George Washington, and passed down through her grandson George Washington Parke Custis to his daughter, Mary Anne Custis. In 1831 Mary Anne married army officer ROBERT E. LEE, who became strongly attached to the Arlington estate. After Lee sided with the Confederacy in 1861, however, the Union government began a policy of confiscating Southern property to subsidize the war effort, and it seized the estate. (When the Custis family sued for their rights to the land in 1882, the Supreme Court sided with them, and they received \$150,000 in compensation.)

Battles fought near the capital necessitated nearby burial sites, and early in the CIVIL WAR several hundred dead were interred at Arlington in makeshift graves. In 1864

Quartermaster General Montgomery C. Meigs, who was responsible for the burial of military dead, suggested that the government turn the 200-acre facility into a national military cemetery. He did so less out of altruism than anger against Lee and the Confederacy. Secretary EDWIN M. STANTON concurred with the decision, and by 1865 16,000 Union dead had been interred at Arlington, including several thousand unknown soldiers and a handful of Confederates. Among the dead was Meigs's own son, John Rodgers Meigs, who had been killed by Confederate guerrillas. On the first Decoration Day (Memorial Day) in 1868, a vengeful Meigs specifically denied entry to all Southern women who had come to honor Confederate dead.

Animosities subsided slowly. It was not until 1898 that President William McKinley, addressing a new generation of Americans, was able to thank former Confederate veterans for valuable service in the Spanish-American War. Two years later Congress authorized the addition of a Confederate section within Arlington, and in 1906 the UNITED DAUGHTERS OF THE CONFEDERACY were allowed to erect a monument to Southern war dead.

The cemetery landscape has continued to develop since the first monument, the Tomb of the Unknown Dead of the Civil War, was dedicated in 1866. Subsequent additions to Arlington include the Memorial Amphitheater, whose cornerstone was laid by President Woodrow Wilson in 1913, and the mast of the battleship *Maine*, sunk just prior to the Spanish-American War in 1898. In 1921 President Warren G. Harding dedicated the Tomb of the Unknown Soldier as a memorial to all American combatants who fell in World War I; since 1937 the Tomb of the Unknown Soldier has been further distinguished by being constantly guarded by a uniformed military sentry. In 1958 President Dwight D. Eisenhower officiated over ceremonies in which a pair of unknown soldiers, one from World War II and one from the Korean War, were also interred in the structure, now renamed the Tomb of the Unknowns. In 1963 President John F. Kennedy was buried with military honors at Arlington, and his grave was supplied with an eternal flame.

Among the national military luminaries, buried on the site is one of the Civil War's leading heroes—PHILIP H. SHERIDAN—along with more modern figures such as John Pershing, William F. Halsey, Omar Bradley, and Hyman G. Rickover. Gen. Lee, whose land was confiscated to create the cemetery, is also honored by having an avenue named after him. The facility now covers 420 acres of land and entombs 290,000 servicemen and -women of all services, each marked by an individual marble headstone. Arlington is thus one of the nation's largest cemeteries, second only to the Calverton National Cemetery on Long Island, New York, in terms of headstones present. Arlington is also a popular tourist attraction, drawing millions of visitors yearly.

**Armistead, Lewis A.** (1817–1863) *Confederate army general*

Confederate general Lewis Addison Armistead was born on February 18, 1817, in New Bern, North Carolina. His parents were army engineer Walker Keith Armistead and Elizabeth Stanly. Raised on his family's farm near Upper-ville, Virginia, Armistead entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1834 but was expelled in 1836 for rowdy behavior. Through his father's connections, he joined the Sixth U.S. Infantry as a second lieutenant in 1839, serving in Florida and the West. He fought in the Mexican-American War and was promoted for his bravery at the Battle of Churubusco in 1847. After the war, Armistead was assigned to frontier duty.

Armistead's personal life was marked by tragedy. In 1844 he married fellow Virginian Cecelia Lee Love, who bore him a son and a daughter. The daughter and Cecelia both died in 1850. In 1853 Armistead married a Virginia widow, Cornelia Lee Taliaferro Jamison. An infant son died in 1854, and Cornelia succumbed to cholera in 1855. Armistead's surviving son, Walker Keith Armistead, served as his aide-de-camp during the CIVIL WAR.

Stationed in the Far West in 1861, Armistead resigned from the army and returned to Virginia to fight for the Confederacy. Appointed as colonel of the 57th Virginia Infantry in 1861, Armistead was quickly promoted to brigadier general. He saw significant action in the Battles of Seven Pines and Malvern Hill and was wounded at the BATTLE OF ANTIETAM.

Armistead's heroism at the BATTLE OF GETTYSBURG, where his brigade fought in Pickett's division, became legendary. Leading his brigade on foot during JAMES LONG-STREET's assault on July 3, 1863, Armistead held his hat aloft on his sword for his men to follow. As the remnants of Pickett's division reached the Federal position on Cemetery Ridge, Armistead shouted, "Come on boys, give them the cold steel. Who will follow me?" Mortally wounded, his final words were addressed to his close friend, Gen. WINFIELD SCOTT HANCOCK: "Say to General Hancock for me

that I have done him and you all a grievous injury for which I shall always regret.”

## art

All forms of art, from genre painting to landscape tableaux to portraiture, evolved over the course of the 19th century. There was a blending of European artistic styles with uniquely American themes.

One popular art form was genre painting, which depicted scenes of groups of people interacting in everyday life. The scenes were often comical and sometimes moral and sentimental, featuring portrayals of American stereotypes based on region, race, and gender, such as the crafty Yankee peddler or the hayseed Kentuckian. Artists associated with genre painting included Richard Caton Woodville, George Caleb Bingham, William Sidney Mount, and Lilly Martin Spencer. This art form flourished before the CIVIL WAR but died out after the war when the homey stereotypes no longer rang true. After the Civil War came more-entrenched class, racial, and ethnic divisions. They ceased being comical, and Americans craved more universal images.

Landscape painting also changed over time. Before the Civil War, artists associated with the Hudson River school painted romantic pictures of nature that were rich in shadow and drama. In the landscapes, in the distance, there might be a tiny and solitary person or two overwhelmed in scale by the rendering of the landscape. The paintings

Engraving of flatboat revelers by T. Doney, after the painting by G. C. Bingham (ca. 1847) (*Library of Congress*)

were emotive, inspiring awe and a view of God's presence in nature. Landscape paintings tended to reflect some major themes about Americans' attitudes toward nature and about the relationship of the individual to God. The landscapes of vast territories also resonated with the ideology of Manifest Destiny. A major artist associated with the first generation of the Hudson River school was Thomas Cole (1801–48).

The second generation of the Hudson River school artists took landscape painting in different directions. Around the time of the Civil War, in a style that is now labeled Luminism, landscape artists tried to present a direct, unmediated portrayal of nature. Some scholars have suggested that Luminism was related to the philosophy of Transcendentalism. Painted on small canvases with shiny surfaces, Luminism emphasized light, horizontal planes and could look almost surreal. Martin Johnson Heade's (1819–1904) work falls in this category.

Other landscape artists painted in a more naturalistic fashion. For example, Frederic Edwin Church (1826–1900) attempted to combine scientific truth with a dramatic portrayal of nature. On another front, landscapes of the American West satisfied transatlantic fascination with the land, NATIVE AMERICANS, cowboys, and the like. Albert Bierstadt (1830–1902) painted monumental grand landscapes, from the minutest detail to grandeur. George Caitlin (1796–1872) concentrated on Native Americans. Frederic Remington (1861–1909) became known for his epic cowboy paintings.

In portraiture, an artist was usually commissioned to paint an individual or a family. The patron might have wanted a portrait to reinforce his or her social standing or to portray a memory. Before the advent of PHOTOGRAPHY, many artists painted portraits. Painters who often traveled from town to town proliferated as part of a growing material culture in the first half of the 19th century. In the second half of the century, portraits tended to become more restricted to upper-class clients. Thomas Sully (1783–1872) was Philadelphia's leading portrait painter in the first half of the century, painting more than 2,000 portraits.

Few individual painters are more worthy of note than Thomas Eakins (1844–1916). He realistically portrayed people either in repose or engaged in an activity. Interested in the scientific study of the human form in motion, Eakins emphasized the use of nude models and took anatomy classes. His paintings were intense revelations of character. Not a painter of high society, Eakins rarely received commissions and was not distinguished in his own time, although now he is considered one of America's great portrait painters.

Perhaps the most famous artist of the 19th century was Winslow Homer (1836–1910), known for his freshness of observation and unsophisticated style. Starting with his early paintings—bucolic scenes of rural life and recreation—he

rose to prominence as an illustrator and a painter of Civil War soldiers and Union camp life. Beginning in the 1880s, Homer grew progressively more serious in outlook and somber in color. His dramatic and heroic paintings portrayed a Darwinian contest of man against nature, most often in the form of a stormy sea. His view of nature as a source of elemental danger differed from the attitudes of early landscapists, for whom nature evoked reverence and awe.

As the influence of modernization began to be reflected in the paintings of Winslow Homer and others, so too was the influence of European artistic currents. Throughout the 19th century, many artists made trips abroad to study the old masterpieces and learn contemporary styles. When the Metropolitan Museum of Art and the Philadelphia Museum of Art both opened in 1870, a large portion of the work exhibited was European. Some American artists, such as Mary Cassatt and James McNeill Whistler, worked entirely within a European framework, and John Singer Sargent's work reflected international inclinations.

—Jaclyn Greenberg

**assassination of Abraham Lincoln** (April 14, 1865) “Sic semper tyrannis!” These words, which translate as “thus always to tyrants,” were spoken by Brutus as he assassinated Julius Caesar in the play by William Shakespeare. When the famous actor JOHN WILKES BOOTH shouted the phrase after leaping to the stage during a Ford's Theatre performance of *Our American Cousin* on April 14, 1865, most of the audience assumed he was part of the cast. It was not until he had disappeared into the wings that it became clear that he had just shot President ABRAHAM LINCOLN.

The notion of Booth as an assassin was shocking to those in the audience that night, many of whom had seen him perform on that very stage. Indeed, the idea might even have been shocking to Booth himself in the early years of the CIVIL WAR. A Marylander, Booth was pro-Southern from the outset, describing SLAVERY as “a blessing.” In the early years of the war, however, he was not especially devoted in his commitment to the Confederacy. In deference to his mother's wishes, he did not enlist in the army, and his actions on behalf of the cause were largely limited to occasional smuggling of medical supplies from the North to the South.

Over time, Booth's militancy grew, as did his desire to do something dramatic to help the sagging fortunes of the Confederacy. Finally, in the summer of 1864, Booth came up with a plan. During the summer months, WASHINGTON, D.C., was hot, humid, and filled with mosquitoes. To escape the miserable climate, President Lincoln was in the habit of spending his nights at the Soldiers' Home on the outskirts of the city. Booth hoped to capture Lincoln during one of these trips and take him hostage. In addition to creating chaos in the North, Booth's hope was that he could exchange Lincoln for Confederate prisoners of war, who were no longer being exchanged for Union prisoners as a result of an April 1864 order by Gen. ULYSSES S. GRANT.

Booth knew he needed accomplices, so he recruited two childhood friends, Samuel Arnold and Michael O'Laughlin. They readily agreed, and Booth began his scheming in earnest. He also began to scout out escape routes through southern Maryland. In December 1864 he met John Surratt, who would prove to be a valuable ally. Surratt, like Booth, was engaged in smuggling on behalf of the Confederacy, and he was intimately familiar with the terrain between Washington, D.C., and Virginia. He was also in contact with a network of pro-Southern sympathizers, including David E. Herold and George Atzerodt, both of whom quickly agreed to join the conspiracy. The number of participants grew to seven in March 1865, when Booth enlisted escaped prisoner of war Lewis Powell, who preferred to use the alias Lewis Paine. Booth even went so far as to arrange to have his \$15,000 theatrical wardrobe transported to the South, making the assumption that he would resume his acting career after the kidnapping.

After more than six months of effort, Booth had made all the necessary arrangements for the kidnapping plot, and he had all the men he needed. By this time, however, summer was long over, and the president no longer traveled back and forth to the Soldiers' Home. Other attempts to catch the president while he was vulnerable came to nothing. And so, toward the end of March 1865, Booth gathered his coconspirators and proposed a new plan, wherein the president would be kidnapped while watching a play at Ford's Theatre in Washington. The idea was not well-received because the odds of all seven men escaping successfully were very low. Booth was unwilling to budge, and Samuel Arnold, Michael O'Laughlin, and John Surratt left the group.

Without enough men to pull off a kidnapping, Booth began to get desperate. On April 3, 1865, the Confederate government fled RICHMOND, which meant that there was nowhere to hold Lincoln hostage even if he were kidnapped. On April 9, the Army of Northern Virginia surrendered, and Booth knew that time was quickly running out for him to put a stop to Lincoln's “lawless tyranny.” On the morning of April 14 he heard that the president would

Engraving showing the assassination of Abraham Lincoln by John Wilkes Booth at Ford's Theatre (Hulton/Archive)

be at the THEATER that evening. It was Good Friday. Booth concluded that this was his last chance and that, since he lacked the resources for a kidnapping, he would have to resort to murder.

Booth still had three coconspirators left, and he found roles for them to play on the evening of April 14, although he did not tell them until 8:00 P.M. that evening, two hours before they were supposed to carry out their assignments. Atzerodt was instructed to kill Vice President ANDREW JOHNSON, while Paine was supposed to take the life of Secretary of State WILLIAM H. SEWARD. Herold, meanwhile, was responsible for helping the mentally retarded Paine find his way out of Washington. In the end, neither Paine nor Atzerodt was successful. Paine inflicted several serious stab wounds on Seward but failed to kill him, while Atzerodt lost his nerve and never made an attempt to kill Johnson.

After giving Atzerodt, Paine, and Herold their assignments, Booth headed over to Ford's Theatre. He had no difficulty gaining access to the president's box, aided by his celebrity as an actor as well as lax security. Though Lincoln had received many threats on his life, there were few precautions taken to ensure his safety. In part, this

was because an earlier attempt to protect the president's life—by sneaking him into Washington before his inauguration—had caused a great deal of political embarrassment. And in part it was because Lincoln felt that such protection was impractical.

Lincoln did have a personal bodyguard, Ward Hill Lamon, but at Lincoln's request Lamon traveled to Richmond on the night of April 14. MARY TODD LINCOLN selected a temporary replacement from the ranks of the Washington, D.C., police department, John H. Parker. Parker had a poor record and had a reputation for laziness. Shortly after the play started, he abandoned his post to watch the performance. Booth proceeded without challenge to the president's box.

Observing Lincoln through a hole he had drilled in the door of the president's box earlier in the day, Booth waited for the big laugh coming at the beginning of the third act that would cover the sound of the gunshot. When the moment came, Booth entered the box and shot Lincoln in the back of the head with a single-shot Derringer pistol. He scuffled briefly with Maj. Henry Reed Rathbone, who had joined the president's party at the last minute when General and Mrs. Grant had decided not to attend the play.

Having slashed Rathbone with a hunting knife, Booth then leapt the 12 feet to the stage, breaking his leg in the process, and made his exit.

After being shot, Lincoln was carried across the street to the Peterson house. Dr. Charles Leale, who had been in attendance at the play, attended Lincoln initially and was eventually joined by several other surgeons, including Lincoln's personal physician. They all realized there was nothing that could be done. The president faded quickly and died early on the morning of April 15 without regaining consciousness. "Now he belongs to the ages," said Secretary of War EDWIN M. STANTON.

Booth fled Washington, trying to work his way South, where he felt he would be hailed as a hero. He was badly mistaken. Slowed by his broken leg, Booth was eventually trapped in a Virginia farmhouse. After refusing to surrender, he was shot and killed, never to answer for his crime. A military tribunal tried eight of Booth's alleged coconspirators. The hastily conducted trial resulted in death sentences for Herold, Paine, Atzerodt, and Mary Surratt. Four others were sentenced to prison terms. Many people thought the assassination a Confederate plot, funded and supported by JEFFERSON DAVIS's administration. In the years after the trial, some have argued this point of view, with others suggesting that there was a conspiracy within the Union itself. However, no compelling evidence exists linking any person or group to the assassination besides Booth and his three accomplices. Conspiratorial notions nonetheless persist into modern times, as witnessed by the great number of publications on the topic.

The entire nation was shocked by Lincoln's death, and it triggered an intense period of mourning and solemnity. On April 18, 1865, his body lay in state in the East Room of the White House, and his funeral took place the following day. Thousands of mourners paid their respects there and in the rotunda of the Capitol on April 20. On April 21 the president's remains were placed on a special funeral train and began the 1,700-mile journey home to Illinois. Scheduled stops in PHILADELPHIA, NEW YORK CITY, Buffalo, Cleveland, and Chicago were all heavily attended by a grieving public. Lincoln was laid to rest at Oak Ridge Cemetery in Springfield, Illinois, the first chief executive to die at the hands of an assassin.

The assassination held dramatic ramifications throughout the postwar period. Without the president's experienced hand, national reconciliation proved difficult. The work of reconstructing the shattered nation was left to Vice President Johnson, who was sworn in as president by Chief Justice SALMON P. CHASE several hours after the assassination. Johnson proved to be ill-equipped for the task that Lincoln left behind. His mishandling of the situation led to his impeachment and allowed the RADICAL REPUBLICANS

to gain control of RECONSTRUCTION policy. The result was a difficult time in the political life of the nation that might have unfolded in a very different fashion if Lincoln had lived. Nearly a century elapsed before the Civil Rights Act of 1964 finally granted African Americans political rights and freedoms that had proved impossible to secure in the wake of Lincoln's passing.

### Atlanta campaign (May–September 1864)

During the spring and summer of 1864, Union forces under the command of WILLIAM T. SHERMAN battled to take control of Atlanta, Georgia. On September 2, 1864, the mayor of Atlanta surrendered the city to the Union general. "Atlanta is ours, and fairly won," exulted Sherman in a TELEGRAPH to his commander in chief. Sherman's triumph secured the election of 1864 for Lincoln and the REPUBLICAN PARTY.

Plans for the capture of Atlanta, the Confederacy's largest railroad hub, as well as the destruction of JOSEPH E. JOHNSTON's Army of Tennessee, were first formulated in February and March 1864. ULYSSES S. GRANT hoped that the Atlanta campaign, in tandem with Union offensives in Virginia, would ultimately destroy the Confederacy. In Atlanta, the Union planned to tear up Southern railroad lines and cut off all supplies to Confederate troops. Grant left the specifics of each campaign up to the commander assigned to it.

In April, Sherman revealed his plan. He proposed to push Johnston and his soldiers back to Atlanta, cut off all railroad lines, and then force a Confederate retreat and surrender of the city. To achieve these goals, Sherman had by May 1864 assembled a "grand army" of 110,000 men composed of infantry, cavalry, and artillerymen from the Union's Army of the Cumberland, Army of Tennessee, and

## 22 Atlanta campaign

Army of the Ohio. Sherman held another 93,500 soldiers ready for duty at Union posts in Tennessee, Kentucky, Alabama, and Mississippi. Sherman's "grand army" would outnumber Johnston's nearly two to one. Confident in his numerical advantage, Sherman assured Grant of his army's ability to defeat the Southern troops.

The fight for Atlanta, which would be contested across much of northern Georgia, got underway near Dalton on May 5, when Union skirmishers engaged Confederate pickets. Although some Southern troops successfully held their positions, others had trouble. Johnston's use of reinforcements ultimately forced the enemy to withdraw temporarily, but the Union troops were not to be deterred. By May 9, Northern forces threatened Johnston from two sides—Resaca and Dalton. Johnston took his forces south to Resaca on May 12 to meet the enemy.

From May 13 to May 15, the two sides engaged each other in the Battle of Resaca. Neither side gained an advantage during the first day of fighting, but on the second day, the Confederates managed to drive the enemy back. However, after hearing reports of Union successes in gaining position, Johnston scrapped his plan of a morning attack on May 15 and instead evacuated his forces to Calhoun and then Adairsville. Casualties at Resaca numbered 5,100 Confederates and 6,500 Federals.

Ruins of a train depot, blown up on William T. Sherman's departure from Atlanta, Georgia (Library of Congress)

After his retreat, Johnston planned to ambush the Federals on the Cassville road. He positioned his troops by early morning May 19, but after Union forces flanked JOHN BELL HOOD's corps, the entire army retreated to wait for a Union attack. When Johnston's commanders disagreed over the army's position, the Army of Tennessee evacuated on May 20 to Allatoona, near the Etowah River. Union and Confederate armies met again on May 24 at the Battle of New Hope Church near Allatoona and, on May 28, the Battle of Dallas. The Confederates' strong defensive position allowed them to drive back five Union attacks and stop Union advances.

By June 4, Johnston and his troops held a strong position in the hills between the Etowah River and Atlanta. They ultimately withdrew about two miles to Kennesaw Mountain, from where they could survey the surrounding countryside and protect themselves from the enemy. Sherman, not deterred by the strength of the Confederate position, launched a full-scale attack on the Confederate lines on June 27. The resulting Battle of Kennesaw Mountain ended in 3,000 Federal and 552 Confederate casualties.

Sherman continued to force Confederate retreats throughout July—to Smyrna on July 3, the Chattahoochee River on July 6, and south of the river on July 9. The retreats would ultimately lead to the dismissal of Johnston as a commander. Throughout the campaign, Confederate president JEFFERSON DAVIS and military advisor BRAXTON BRAGG had expressed their lack of confidence in Johnston. In mid-July, frustrated with Confederate retreats and fearful that Atlanta would fall, Davis removed Johnston from his post, giving John Bell Hood command of the Army of Tennessee on July 18.

Hood pursued an aggressive strategy. On July 20, Southern troops launched an unsuccessful attack on Sherman at Peachtree Creek. The unorganized Confederates suffered a high number of casualties during the offensive. Hood launched a second assault, the Battle of Atlanta, on July 22. Again, Southern forces suffered defeat at the hands of their enemies. Hood led yet another unsuccessful attack on the Union troops at the Battle of Ezra Church on July 28. In his short tenure as commander, Hood had lost 17,500 men. He saw no option but retreat into Atlanta, where he and his troops waited for Sherman's next move.

Union troops laid siege to Atlanta, continually bombarding the city for the next 40 days. The danger scared the city's inhabitants, many of whom fled. The siege also ended municipal government in Atlanta, with the mayor Thomas Calhoun and the city council meeting for the last time on July 18.

Sherman moved his troops to the south side of Atlanta at the end of August, hoping to cut the last rail line and then lure Confederate troops out of the city. Once Sherman and his men had taken their positions, they ceased

firing and waited for the Confederate response. Hood ordered an attack at Jonesboro on August 31, but again Union forces easily defeated the Southern offensive. This was Hood's fourth and last attempt to protect and hold Atlanta. The series of defeats had resulted in a loss of 25 percent of Hood's army. The commander evacuated his troops from Atlanta on September 1, 1864.

As they evacuated, Southern troops destroyed any ammunition and military stores that they could not take with them. The next morning, Atlanta's mayor and a group of citizens officially surrendered the city to Sherman. By noon, Sherman and his troops occupied and controlled

the city. The Union occupied Atlanta until November 15, 1864, when they torched the city before embarking on SHERMAN'S MARCH THROUGH GEORGIA.

### Balloon Corps

Lighter-than-air balloons were first developed in France in the 1780s by brothers Joseph and Jacques de Montgolfier. Not long thereafter, French officials started using balloons on a limited basis for military purposes. Despite this precedent, as well as the obvious value of being able to see enemy positions from above, American military leaders were hesitant to use the technology in the years before the CIVIL WAR. In part, this was due to the unpredictability of balloons, whose flight could be difficult to control once they were in the air. The reluctance to use balloons also stemmed from a general unwillingness to try new and different approaches to warfare. Opposition to ballooning finally began to break down during the Civil War, when leaders on both sides experimented with the technology.

Over the course of the 1840s and 1850s, a number of Americans made names for themselves as balloon pilots, or aeronauts. These included John Wise, James Allen, John LaMountain, and Professor Thaddeus Lowe. When the Civil War broke out, several of these men made their way to WASHINGTON, D.C., to suggest the use of balloons to military and political officials. Lowe had the best political connections, and after staging several balloon demonstrations he was able to arrange a meeting with President ABRAHAM LINCOLN on June 11, 1861. Lincoln was impressed with what he heard and was even more impressed a week later, when Lowe sent him a telegram from a balloon using a wire that stretched from the ground into the air. Lowe continued to stage demonstrations, during which he took a number of important military leaders up into the air, including Irwin McDowell, Fitz-John Porter, and GEORGE B. MCCLELLAN. Finally, on August 2, 1861, Lincoln summoned Lowe for a meeting with Union general in chief Winfield Scott, and he was hired to build and pilot balloons for the U.S. military.

Lowe immediately got to work, determined to prove how valuable he and his balloons could be. On September 24, 1861, he used a TELEGRAPH line and signal flags to

direct Union artillery fire at Confederate positions around Falls Church. Emboldened by his success, Lowe went to McClellan, commander of the Army of the Potomac. Lowe suggested that an official Balloon Corps be formed, and McClellan agreed. The general named Lowe as chief aeronaut of the Army of the Potomac and instructed him to recruit more pilots and to build six balloons and the 12 generators needed to fill the balloons with hydrogen. A total of 10 men served at one time or another as pilots in the United States Balloon Corps.

Lowe's corps had a number of successes in 1862. He and his staff modified a coal barge, the *George Washington Parke Custis*, so that it could transport balloons and fuel them with hydrogen. The *George Washington Parke Custis* thus became the world's first aircraft carrier. The U.S. Balloon Corps also conducted hundreds of flights that provided valuable intelligence during McClellan's PENINSULAR CAMPAIGN. For example, one of McClellan's adjutants wrote that "it may safely be claimed that the UNION ARMY was saved from destruction at the Battle of Fair Oaks . . . by the frequent and accurate reports of Professor Lowe."

The removal of George B. McClellan from command after the BATTLE OF ANTIETAM began the downfall of Lowe and his corps. McClellan's successor, Gen. JOSEPH HOOKER, insisted on exercising a great deal of oversight over Lowe's operations. The egotistical Lowe was used to operating with virtual autonomy, and his pride was hurt. After several months of bickering, he resigned in May 1862, and the Balloon Corps was dissolved. The generals that followed Hooker saw little value in the technology and did not pursue it. Lowe continued to give demonstrations for naval leaders as late as 1864, but they were also uninterested.

The Confederacy also experimented with balloons, although on a more limited basis. Union soldiers reported sighting a Confederate balloon as early as June 14, 1861. Although these reports were never verified, Confederates certainly had balloons in use during the Peninsular

## 26 Baltimore, Maryland, riots

campaign of 1862. EDWARD P. ALEXANDER, who would eventually become commander of artillery in the Army of Northern Virginia, was the Confederacy's most successful aeronaut. In particular, he helped coordinate troop movements from a balloon during the Seven Days' Battle.

Although they never formally organized a ballooning unit, the Confederates continued to use balloons through the rest of the year, particularly in connection with the defense of Charleston. As was the case with the Union, however, Confederate experiments in ballooning largely ended after 1862. The Confederacy lacked the resources to make balloons or to construct the hydrogen generators necessary to fill them. Beyond that, the Confederacy had less use for the intelligence provided by balloons because their superior cavalry was generally able to accurately and quickly discern troop locations and strength.

Ultimately, the Civil War represented a small step toward the era of large-scale aerial warfare. A precedent had been set, and balloons would play a much larger role in the United States's next major conflict, the Spanish-American War of 1898. By the time of World War I, planes would begin to replace balloons, and war in the air would become as important as war on land or at sea.

### Baltimore, Maryland, riots (April 19, 1861)

The Baltimore riots of April 19, 1861, saw some of the first casualties of the CIVIL WAR. For several days after the riots, Northerners worried that Maryland had joined the Confederacy.

Maryland was part of the upper South, a tier of states extending from Delaware to Missouri. The SECESSION issue deeply divided these states, for while they permitted SLAVERY, all had deep commercial links to the North. In addition, all had fewer slaves than their Confederate sisters, and in some ways their societies reflected Northern values. For the Union, Maryland's strategic significance was enormous: If the state seceded, the Confederacy would surround the Union capital of WASHINGTON, D.C.

Any Northern troops bound for Washington, D.C., had to pass through Baltimore. On April 19, 1861, the Sixth Massachusetts Infantry arrived, the first Northern unit to enter the city. Because no direct rail line ran all the way through Baltimore, the soldiers disembarked at the President Street Station and prepared to make their way across

town to the Calvert Street Station. To avoid confrontation, troops did not march but instead remained in railway cars, pulled by horses down a connecting line between the two stations.

Fearing that the UNION ARMY would occupy Maryland before the state could even consider joining the Confederacy, angry secessionists attacked the rail cars, injuring a few soldiers. Members of the Sixth Massachusetts opened fire. At the end of the day, four soldiers and 12 civilians had been killed. Soon after, Confederate sympathizers began destroying bridges and TELEGRAPH lines linking Washington to the rest of the country.

Following behind the Sixth Massachusetts with the Eighth Massachusetts, Gen. BENJAMIN F. BUTLER learned of the riots and found an alternative route through Annapolis, reaching Washington on April 25, to ABRAHAM LINCOLN's profound relief. Butler then turned back into Maryland, restored the state's rail lines, and occupied Baltimore.

On May 8, continuing concern over Baltimore's loyalties prompted a declaration of martial law. Over the next several months, the Union army arrested Baltimore's mayor, police marshal, and a number of other leading citizens for their alleged role in the riot or support of secession. In a controversial decision, Lincoln suspended the right of HABEAS CORPUS in these cases. With the leading supporters of secession imprisoned and the Union army in control of the state, Unionists won Maryland's November 1861 election, effectively ensuring Maryland's political loyalty.

### banking and currency

In the years before the CIVIL WAR, the relationship between banks and currency was generally quite simple. The federal government, some state governments, and many private banks issued currency that was backed by either silver or gold held in the vaults of the issuing institution. The currency could be redeemed for the metal that backed it; for example, a \$20 note issued by the federal government could be taken to a government depository and exchanged for \$20 worth of gold. During the Civil War, the demands of a wartime ECONOMY necessitated the creation of a more complex financial system than the one the nation had known in the antebellum era, with profound effects in both the North and the South.

At the outset of the war, the Confederacy enjoyed one important economic advantage over the Union. Despite

its vastly larger economy, the North had a fairly primitive banking system. Northern banks were largely independent of one another, and coordinated action between them was generally difficult. Even simple tasks, such as the transfer of funds, could only be accomplished through a labyrinthine system of informal agreements and personal alliances. The Southern banking system, on the other hand, was structured in a fashion that was decidedly more modern. Most Southern banks had a central office chartered by the government of the state in which it was located. This central office, in turn, was empowered to establish branches in the various townships of the state. Branch banking is a much more efficient way to move money around as it is needed and to transmit information about local financial conditions.

Whatever advantages could be derived from the South's strong banking system, however, were soon outweighed by the weakness of Confederate currency. There are two things upon which a currency is generally based. The first is precious metals such as gold and silver, also known as specie. Specie provided the basis for the vast majority of currency in the antebellum era. The second is the backing of a stable and responsible government. Money of this sort is called fiat currency and is the basis of most modern economies. The South began the war with very little specie in its possession. As such, Confederate treasury Secretary Christopher Memminger had no choice but to utilize fiat currency, with the promise that notes printed by the government would be redeemable in specie two years after the war ended. This arrangement would prove to be disastrous for the financial system of the South.

To start, the South had great difficulty printing the currency it required. Skilled engravers were needed to make the plates to print paper money, and the entire South had only three men who were qualified. The special paper that was needed was also in short supply. The Confederates had even more problems making coins. The government had seized several U.S. mints, but it lacked the materials or expertise to use the equipment. A die for a 50-cent coin was struck, but it broke after only four coins had been minted. No further attempts were made, and so the Confederacy had no coins in circulation during the war.

Once the Confederate government had finally managed to print some paper money, it ran into the much greater problem of keeping its "bluebacks" stable. The government had difficulty raising enough money through taxes and bond issues, so it was compelled to print increasing quantities of fiat currency. State and local governments were forced to do the same. With far too much money in circulation, inflation became rampant. The situation was made worse by the fact that Confederate currency was not designated by the Congress as legal tender. What this meant was that people and businesses were not required by

Confederate currency (Private collection)

law to accept Confederate money as payment for goods and services. In part, the withholding of legal status for Confederate currency reflected Southern distrust of a strong central government. In addition, it was meant to inspire confidence in Confederate currency by making a statement that Confederate money was so strong that people would not have to be forced to accept it. In the end, however, the plan backfired. Southerners declined Confederate currency whenever possible, since they were legally able to do so, preferring to utilize specie or barter or even Union currency for their transactions. This tendency contributed to the rapid devaluation of Confederate money. At the end of 1861, the Confederate dollar was worth approximately 80 cents worth of gold. By 1865 a Confederate dollar had fallen to about 1.5 cents worth of gold.

The banking system might have been able to mitigate some of these difficulties, but the Confederate government demanded too much of the banks. In April 1861, the Congress passed a law requiring banks to purchase government bonds in amounts proportional to the banks' resources. This compulsory loan drained the banks of their specie and the currency they had printed, both of which were vastly more stable than the bonds they were receiving in return. Over the next several years, the government made the situation worse through excessive TAXATION on banks, additional forced loans, and its inability to control inflation. The ongoing war also took its toll. Slaves and land comprised a large portion of Southern banks' assets, and as Union armies conquered territory and freed slaves, these assets were lost. The banks also suffered from manpower shortages, as men were compelled to leave their jobs to take up arms. In the face of all these difficulties, the South's banking system had essentially collapsed by the end of the war.

On the Union side, the situation was far less bleak. Despite the North's poorly organized banking system, the strong Northern economy and an abundance of specie kept the economy fairly stable for nearly two years, allowing the government to finance the war effort with relative ease. Eventually, the mounting costs of the war required action on the part of the Union government, and between 1862

and 1864 a series of banking and currency acts were passed by the Congress. In 1862 the Legal Tender Act provided for the printing of \$150 million in fiat currency and specified that these GREENBACKS, as they came to be called, would be legal tender for all transactions except the payment of interest on bonds. In 1863 the National Banking Act was passed, which allowed for the charter of national banks that could print currency backed by government bonds. This system, devised largely by Secretary of the Treasury SALMON P. CHASE, had several benefits. First, it greatly strengthened the bonds issued by the U.S. government by creating demand for them. National banks would be required to purchase the bonds, and other investors would be attracted by the payments of interest in specie. Strong bonds made it much easier for the government to raise money to finance the war.

Chase's system also helped stabilize the fiat currency that the government had begun printing in 1862. In part, this was because the currency was now backed by strong bonds issued by a stable government. The Union also benefited by learning from the mistakes of the Confederacy. In choosing to make greenbacks legal tender, the Union government compelled its citizens to utilize its paper money. In 1864 the Congress passed an act establishing a 10 percent tax for currency printed by state banks. This effectively took state banks out of the money-printing business, thus allowing the federal government to maintain tight control of the amount of money in circulation. By giving its currency a strong backing, requiring the use of greenbacks as a medium of exchange, and keeping a lid on the amount of dollars in print, the Union essentially managed to avoid the inflation that crippled the Confederacy. Over the course of the war, inflation was only about 80 percent in the Union, compared with 9,000 percent in the Confederacy.

The changes in America's financial systems during the Civil War had a variety of implications in the postwar era. Although the North emerged from the war with a robust economy, the nation's financial systems ultimately took a step backward in the years after the war ended. The Union and Confederacy had utilized some of the hallmarks of modern finance, such as fiat currency and branch banks, but after the war these were largely abandoned by Northern bankers and government authorities. Instead, the North was left with a banking system that was not well suited to the conservative economic climate of the postbellum years nor to the rapid expansion of the industrial era.

The negative impact of the Civil War on banks and finance was felt even more keenly in the South. Many Southerners lost most or all of their money when the FOURTEENTH AMENDMENT forbade repayment of bonds issued by the Confederate government. Even more devastating was the situation created by the near total absence of banks in the South. Without the credit offered by banks,

poor white people and freedmen had virtually no hope of acquiring the land and materials necessary to be independent farmers. Many of the South's poorest citizens, especially the freedmen, were forced into informal borrowing or into SHARECROPPING. The borrower in these situations had few legal protections in terms of how much interest could be charged or how disputes could be resolved. The end result was the creation of a class of permanently indebted citizens. Undoubtedly, the failures of RECONSTRUCTION can be traced in part to the disastrous state of the financial system of the South after the Civil War.

**Banks, Nathaniel P.** (1816–1894) *politician, Union general*

Nathaniel Prentiss Banks was a politician who held national office under three different political parties and a Union general. Born in Waltham, Massachusetts, on January 16, 1816, Banks was the son of a textile factory foreman. He initially worked in the mills, but, disliking physical labor, he studied law and was admitted to the state bar in 1839. He then persistently sought public office.

Banks was elected to the Massachusetts state legislature in 1849, and two years later he became its speaker. In 1852 he was elected to the U.S. House of Representatives as a Democrat. Disillusioned with the DEMOCRATIC PARTY's stance on SLAVERY, he aligned himself with the American Party (or Know-Nothing Party) in 1854, the same year he became Speaker of the House, and joined the newly formed REPUBLICAN PARTY in 1856. In 1857 he was elected to the first of three consecutive terms as governor of Massachusetts.

When President ABRAHAM LINCOLN called for volunteers in April 1861, Banks gained appointment as major general of volunteers to shore up New England's support. Like most other political generals, he lacked experience in the art of war, and his performance in the field was commensurately poor. Immediately after the Union debacle at BULL RUN on July 21, 1861, Banks was appointed commander of Federal troops in the strategic SHENANDOAH VALLEY. The following spring, on May 25, 1862, he was soundly defeated by Gen. THOMAS J. (STONEWALL) JACK-

SON at Winchester. On August 9, 1862, he was roughly handled by Gen. AMBROSE P. HILL at Cedar Mountain, Virginia, where the Confederates captured so many Union supplies at the time that Banks was derisively labeled "Commissary Banks."

Although complaints about his lackluster leadership mounted, Lincoln sent him to New Orleans, Louisiana, in November 1862 to replace another controversial political general, BENJAMIN FRANKLIN BUTLER. In spring 1863 Banks returned to the field to reduce the fortified enclave at Port Hudson, Louisiana. He botched the effort and was bloodily repulsed in three major attacks on May 27, June 11, and June 14. His RADICAL REPUBLICAN allies in Congress kept him well protected, however, and in spring 1864 he received his most important military assignment: mounting an expedition up the Red River. Banks campaigned indifferently and on April 8 was badly beaten at Sabine Cross Roads by Confederates under Gen. Richard Taylor. He never again held a field command and resigned his commission in August 1865.

After the war Banks resumed his political activities with considerable success, returning to Congress repeatedly: He served as representative from Massachusetts in 1865–73, 1875–79, and 1889–91. In this capacity he changed his party affiliation twice more, from Republican to Democrat and back again. He died in Waltham, on September 1, 1894.

**Barton, Clara** (1821–1912) *social activist, health reformer*

CIVIL WAR nurse Clara Barton was the founder of the American Association of the Red Cross and served as its president for 23 years. She was born on Christmas Day in 1821 and spent her youth in North Oxford, Massachusetts. A shy but determined child, she was educated informally at home by her older sisters and brothers and attended local schools. In turn, she taught in neighboring schools when she was 18. After a year of advanced study at the Liberal Institute of Clinton, New York, Barton returned to teaching. She successfully founded the first public school in Bordentown, New Jersey, in 1852. Moving to WASHINGTON, D.C., she was appointed a clerk in the United States Patent

Office by a Republican senator. When the administration changed hands in 1857 with a Democratic victory, she lost her post and returned to her hometown.

The needs of soldiers during the Civil War engaged Barton, launching a new direction in her life's work. Her outstanding contribution to the war effort was to gather supplies and provisions for the soldiers, who were in short supply of bandages, medicine, and food. Witnessing the absence of any medical facilities at the FIRST BATTLE OF BULL RUN, she took it upon herself to advertise for supplies in a Massachusetts newspaper and gather the provisions. In 1862 she and a few friends began to distribute the supplies to military hospitals and to the men at the battlefield. Traveling by mule team, they traversed Virginia and Maryland, heading to the battlefields. Barton was amazingly resourceful at giving aid during and immediately after a battle. She provided candles for a doctor treating wounded soldiers at night, for example, and prepared soup and coffee for thousands of men in the midst of the fighting. Barton became less active at the battlefield as the war progressed and the Union established commissions to provide for and nurse the sick.

After the war Barton undertook the daunting task of tracing the identity of the war dead. With President ABRAHAM LINCOLN's approval, she established an office where she and a few assistants published the names of the missing in newspapers, soliciting information from returned soldiers and ex-prisoners of war. She organized the information she received and wrote to the soldiers' families. In addition, with the help of an ex-prisoner, she identified those who died in the infamous ANDERSONVILLE PRISON in Georgia and marked their graves. Between identifying the missing and lecturing around the country about her war experiences, she suffered a nervous collapse and retreated to Europe in 1869.

It was in Switzerland that Barton found a new way to broaden her mission of providing for people in need. At the Geneva Convention, organized to bring humane assistance to war zones throughout the world, the International Committee of the Red Cross was established as a neutral body offering aid to wounded soldiers and medical personnel. Belligerent countries were to yield to the emblem of a red cross on a white background. Barton worked for the International Red Cross during the Franco-Prussian War of 1870–71.

Back in the United States, after convalescing from another breakdown, Barton campaigned tirelessly for the United States to ratify the Geneva Treaty. Finally, in 1882, Barton's campaign succeeded. President Arthur signed the Geneva Treaty. Two weeks later the Senate ratified it.

At the same time, Barton had launched a crusade for the establishment of an American Red Cross. She educated the public about the Red Cross through lectures and

Clara Barton (National Archives)

a pamphlet she wrote. Barton's conception of an American Red Cross included offering relief in times of natural disasters such as floods, railway accidents, and droughts as well as in battle. In 1881 Barton and prominent associates organized the American Association of the Red Cross. Barton was chosen president, a post she held, with just one short interruption, until 1904. During her tenure the organization provided relief in 21 disasters, including a heavy flood in Johnstown, Pennsylvania, the Russian famine of 1892, and a yellow fever epidemic in Florida.

Barton had specific ideas about the way the American Red Cross should be run. She opposed government subsidies, preferring to appeal to the public in time of crisis. Keeping a tight rein on the organization, she alone judged when the need for relief was genuine. She managed all the finances and went into the field to do the work of relief herself. At the age of 77 she traveled by mule cart in Cuba to provide aid during the Spanish-American War. Barton also broadened the focus of relief to encompass rehabilitation. Assistance included material for building houses and agricultural tools where needed. In the Galveston hurricane disaster, for example, the Red Cross provided strawberry plants to enable farmers to resume AGRICULTURE.

Barton's rigid control of the management of the Red Cross provoked some criticism. One problem was that the relationship between the national Red Cross and local auxiliaries was undefined. Critics felt that Barton should be in the national office administering the organization, not in the field. Further, Barton could not delegate authority. She took offense at anyone questioning her handling of finances. Although Barton had provided an unswerving commitment to the Red Cross, her management was becoming outmoded in the new era at the turn of the century. In 1900 Congress provided a federal charter to bring about reorganization. Under pressure, Barton reluctantly resigned in 1904.

In her final years she pursued various interests and supported the women's rights movement. She died at 91 in her home near Washington, D.C., on April 12, 1912.

### **Bates, Edward** (1793–1869) *lawyer, statesman*

U.S. attorney general Edward Bates is remembered as the most ineffectual member of President ABRAHAM LINCOLN's cabinet. Bates was born in Goochland County, Virginia, on September 4, 1793, a son of Quaker parents. He relocated to St. Louis, Missouri, in 1814 and studied law, joining the bar in 1816. Bates proved adept as an attorney. He also developed an interest in Whig politics, and in 1826 he successfully stood for a seat in the U.S. Congress. Once there, however, he alienated his party by opposing the occupation of Oregon. (The United States and United Kingdom had jointly occupied the territory since 1818, and in 1828 Congress was considering indefinite renewal of the status quo.) He consequently failed in his bid for reelection, as well as in his run for an open U.S. Senate seat against Jesse Hart Benton, so he resumed practicing law.

In 1847 Bates polished his Whig credentials by addressing the Harbor Commission convention in Chicago, Illinois, where he called for internal improvements to assist the western states. In 1856 he acted as president of the final Whig convention. He at first distanced himself from the newly emerging REPUBLICAN PARTY on account of its strong abolitionist tendencies; however, Bates strongly opposed the extension of SLAVERY into the territories, and in 1860 he vied for the nomination of president of the United States as a Republican. After the first ballot he withdrew his name and supported Lincoln, who went on to

win the general election. In return for his support, Lincoln invited Bates to join his new cabinet as attorney general.

Much was expected from Bates, especially as he represented the essential border state of Missouri, but his performance was uneven, and erratic. He initially endorsed Lincoln's suspension of HABEAS CORPUS, along with the removal of Gen. John C. Frémont as commander of Missouri, and even convinced the president to enlarge the Federal military presence along the MISSISSIPPI RIVER. Then, increasingly he equivocated, changing his stance on the detention of Confederate envoys seized in the *Trent* affair of 1861 and insisting upon their release. A conservative, he opposed Lincoln's plan to allow African Americans to serve in the military and also protested West Virginia's admission into the Union. His unpredictable positions led to constant quarreling with other cabinet members. In ill health, Bates resigned on November 30, 1864. Returning to Missouri, he battled RADICAL REPUBLICAN opposition but failed to regain public office. He remained a contentious figure on the political landscape until his death in St. Louis on March 25, 1869.

## battle flags

During the CIVIL WAR, battle flags were symbols of bravery, pride, and patriotism. They were also practical markers, identifying the location of battle units during military engagements. The size, shape, and colors of each regimental flag varied greatly and depended on whether the soldiers were part of an infantry, cavalry, or artillery regiment.

In the North, Union regulations required that infantry regiments carry at least two flags. The first was the national flag. Better known as the “Stars and Stripes” of 1861, this flag contained the stars of 34 states. Regiments were also required to carry a flag bearing the arms of the United States and the name of the specific regiment. This flag was blue with the national eagle emblazoned in the center. Additionally, many regiments carried “colors” that identified their state and listed the battles in which they had fought.

Union cavalry regiments were issued a blue flag with the national coat of arms and, just below, a scroll painted with the regimental name and number. Artillery units in the North carried both national and regimental colors. The flags of the artillery, however, were yellow with a crossed cannon in the center.

Flag of the Confederate 11th Tennessee Regiment  
(Hulton/Archive)

Shortly after the first seven Southern states seceded, the Confederate states adopted an official flag, better known as the “Stars and Bars.” This flag contained three horizontal stripes—red, white, red—with a blue section in the upper left with seven white stars. Because it was hard to distinguish the Stars and Bars from the Stars and Stripes during battle, the flag was replaced in May 1863 by the “stainless banner,” a rectangular white flag with a red section displaying a white-bordered blue cross studded with 13 white stars.

The Confederate armies also carried what became known as the “Southern Cross,” or the Southern battle flag. This was a square flag that consisted of a red field with a blue cross, bordered in white, with the necessary number of stars aligned on the bars of the cross. The only difference between the flags of the infantry, artillery, and cavalry units was size; infantry regiments carried a larger flag than artillery batteries and cavalry units. The Southern battle flag is the one most commonly identified with the Confederacy.

For both the North and South, a color bearer carried the flag into battle. The battle flag created a focal point for the regiment to rally around and to use as a guide in the midst of the fighting. However, they also provided the enemy with a large, visible target. As a result, the mortality rate of color bearers was very high. The fact that a large number of men were willing to step forward and bear the colors demonstrates how each flag not only represented a particular state and region, but also the pride of its unit's soldiers.

### **Beauregard, Pierre Gustave Toutant** (1818–1893)

*Confederate general*

The controversial Confederate general P. G. T. Beauregard was born in Louisiana on May 28, 1818, to parents of French descent. Beauregard commanded Confederate armies at many important battles in both the eastern and western theaters of war. He also designed the famous Confederate BATTLE FLAG.

At age 16, Beauregard entered the UNITED STATES MILITARY ACADEMY AT WEST POINT. Four years later, he graduated second in his class. Early in his career, Beauregard distinguished himself both in building coastal fortifications along the Gulf coast and by his service in the Mexican-American War (1846–48). In 1861, Beauregard returned to West Point to serve as superintendent. His term lasted only five days, however, because President ABRAHAM LINCOLN fired him for his secessionist sympathies.

Upon the SECESSION of Louisiana in January 1861, Beauregard resigned from the Federal army. Soon after this, JEFFERSON DAVIS awarded him a commission as a brigadier general in the CONFEDERATE ARMY. Beauregard assumed command of the forces facing down the Union garrison at FORT SUMTER. The surrender of the Union garrison on April 15, 1861, made Beauregard a hero throughout the Confederacy.

Beauregard commanded the Confederate forces in their early victory at the FIRST BATTLE OF BULL RUN. As the Confederate army chased the UNION ARMY from the field, Beauregard argued unsuccessfully that the Confederates should pursue the enemy all the way back to WASHINGTON, D.C. Beauregard lost his popularity when he chastised President Davis in public for not endorsing his plan.

In 1862, Beauregard became second in command of the Army of the West under Gen. ALBERT SIDNEY JOHNSTON. After Johnston's death during the first day of fighting at the BATTLE OF SHILOH, Beauregard took command of the army and nearly secured a victory. After the battle, Beauregard turned command of the western army over to BRAXTON BRAGG and returned to Charleston in hopes of recovering from chronic throat pain. Soon after, Jefferson Davis entrusted Beauregard with the defense of Charleston. Thanks to his able preparations, Beauregard and his men were able to repulse a massive Union siege launched against the city in 1863. In the last year of the CIVIL WAR, Beauregard worked under the direction of Gen. ROBERT E. LEE to protect RICHMOND, the Confederate capital, from invasion.

Immediately after the Civil War, Beauregard became superintendent of the New Orleans, Jackson, and Great Northern Railroad. From 1879 to 1888, he commanded the Louisiana state militia, after which he served as commissioner of public works in New Orleans. In his later years, Beauregard engaged in frequent and bitter disputes about the Civil War, especially with JOSEPH E. JOHNSTON and Jefferson Davis. He died in New Orleans on February 20, 1893.

### **Bell, John** (1797–1869) *secretary of war, senator, representative*

The moderate Tennessee politician John Bell was born on February 18, 1797, near Nashville, Tennessee. A quick study, Bell graduated from Cumberland College at the age of 16 and gained admission to the state bar in 1816. By 1822 he was a successful attorney practicing in Nashville.

In 1827 Bell was elected as a Democrat to the first of five consecutive terms in the U.S. House of Representatives. Though he broke with the party over President Andrew Jackson's "bank war" in the early 1830s, he managed to defeat rival James K. Polk for the House speakership in 1834. He was deposed the following year. In 1836 Bell backed Whig candidate Hugh Lawson White for the presidency over Jackson's anointed successor, Martin Van Buren. In 1840 Bell campaigned for Whig candidate William Henry Harrison, who won and awarded Bell the post of secretary of war. After just one month in office, President Harrison died. His successor, John Tyler, opposed the Whig economic program. When Tyler vetoed a Whig-sponsored bill to create a federal bank of the United States, Bell convinced nearly the entire presidential cabinet to resign in protest.

In 1847 Bell was appointed to represent his native state in the U.S. Senate. A voice of moderation in the increasingly strident debate over SLAVERY in the territories, he reluctantly voted for the Compromise of 1850 but increasingly feared disunion. In 1854 he opposed the KANSAS-NEBRASKA ACT, which theoretically opened up the western territories to slavery based on popular sovereignty (the preference of resident voters).

Bell's political career climaxed in 1860 when he ran at the head of the Constitutional Union Party as an alternative to either ABRAHAM LINCOLN or JOHN C. BRECKINRIDGE. He had staked out a moderate position on slavery and blamed extremists in both parties for the mounting

sectional crisis. Lincoln won the contest easily, and Bell rendered a useful service by convincing his fellow Tennesseans that Northerners posed no threat to the South. Consequently, they voted down calls for a secession convention in February 1861. However, after FORT SUMTER and Lincoln's call for volunteers to crush the rebellion, Bell failed to convince Tennesseans to remain in the Union. Bell spent the war years living in near obscurity, believing to the end that compromise over the issue of slavery had been possible. He died in Stewart County, Tennessee, on September 10, 1869, an earnest and over-looked moderate.

**Benjamin, Judah P.** (1811–1884) *Confederate government official*

Born in St. Croix in the West Indies in 1811, Judah Philip Benjamin became a prominent New Orleans attorney, the only Jewish cabinet member in the Confederate government, and a distinguished member of the British bar. Benjamin's parents were Philip Benjamin, a small-scale merchant, and Rebecca de Mendes. Leaving St. Croix while Judah was very young, the Benjamins relocated to Charleston, South Carolina. Benjamin grew up there before going to Connecticut to attend Yale University in 1825. After two years, Benjamin left Yale and relocated to New Orleans, where he held various positions to support his study of law. Admitted to the bar in 1833, Benjamin married Marie St. Martin, a Catholic. Judah and Marie had one daughter, but their marriage was not a success. Marie moved to Paris in 1845, and Benjamin saw her rarely thereafter.

While a New Orleans attorney, Benjamin argued two Supreme Court cases, and copublished a learned legal treatise. Benjamin was fairly successful in New Orleans, but he never earned enough money to enable him to live as a rich man. Instead, the law provided him an opportunity to enter into politics. First winning a state representative seat in 1842, Benjamin went on to be elected to the U.S. Senate in 1852 and reelected in 1859. Initially a Whig, Benjamin became a Democrat in the 1850s.

When Louisiana seceded from the Union, Benjamin resigned his Senate seat and returned to the South. Although his relationship with JEFFERSON DAVIS had not been cordial in WASHINGTON, D.C., the new president of the Confederacy asked Benjamin to assume the attorney generalship of the Confederacy. Over time, Benjamin and Davis built a strong working and personal relationship, overcoming their previous differences. As attorney general,

Benjamin founded the Confederate Justice Department, which was responsible for a variety of legal affairs.

When the secretary of war resigned in 1861, Benjamin's efficiency as attorney general led Davis to appoint Benjamin to the vacant post. He ultimately proved to be unsuited to the job. He clashed with Confederate generals, who disdained his lack of military experience. The greatest failure of his tenure was the loss of Roanoke Island in early 1862, for which he was widely blamed. With Benjamin's popularity plummeting and constant conflict between commanders in the field and the War Department, a change was necessary. Davis appointed Benjamin secretary of state, which was a job much better suited both to Benjamin's talents and to his relationship with Davis. The State Department allowed Benjamin to apply his interest in efficiency and organization to a variety of civil issues, including foreign relations. Although Benjamin was not able to convince France or England to recognize the Confederacy, he did arrange the Erlanger loan in 1863. The loan, which was coordinated by a Parisian bank, provided nearly \$10 million for the Confederate war effort.

By 1865 Benjamin was searching for ideas to help avert disaster for the Confederacy. He proposed that Davis offer EMANCIPATION of slaves in exchange for recognition from France and England, but that proposal failed. Recognizing the seriously depleted state of Confederate military units, he pursued Emancipationist policies. This outraged many Confederate politicians, who tried to remove him from office. In the end, Benjamin evacuated RICHMOND with Davis in April 1865. Separated from Davis near Savannah, Georgia, Benjamin narrowly missed capture by Union troops. Instead, he was able to leave the country through Florida and the Caribbean, eventually settling in England.

Benjamin remained in England until his death, working as a barrister. He earned a distinguished reputation in English legal circles and was appointed Queen's Counsel in 1870. Between 1880 and 1882, Benjamin suffered several blows to his health which led to his death in Paris in 1884.

Although Benjamin was not a FIRE-EATER, his commitment to the Confederacy led him to make enormous commitments of time and energy to its cause. Nevertheless, a variety of factors, including anti-Semitism, led to almost constant criticism of his actions by Confederate leaders and newspapers. He was simultaneously one of the Confederacy's best assets and one of its least appreciated ones.

**Bentonville, Battle of** (March 19–21, 1865)

The Battle of Bentonville, fought from March 19 to March 21, 1865, was the last significant confrontation between two major armies in the CIVIL WAR. Confederate forces under Gen. JOSEPH E. JOHNSTON attacked Union forces under Maj. Gen. WILLIAM T. SHERMAN near the small town of Bentonville, North Carolina, about 20 miles west of Goldsboro. The Union XIV and XX Corps, commanded by Maj. Gen. Henry W. Slocum, were in the advance column, and Johnston wanted to attack before Sherman and the rest of his troops could arrive. The UNION ARMY was marching northeast on the Goldsboro Road, while the CONFEDERATE ARMY was positioned on both sides of the road, south of Bentonville.

In the morning on the first day of the battle, March 19, the Confederates under Lt. Gens. Alexander P. Stewart and William J. Hardee and Maj. Gens. Robert F. Hoke and D. H. Hill broke the Union left wing and drove it back about a mile south of the Goldsboro Road. The Confederates then attacked the exposed Union right, but Brig. Gen. William Cogswell of the XX Corps reinforced the beleaguered Union forces under Brigadier General James D. Morgan's division of the XIV Corps. This movement upon the Union right is considered the turning point of the battle, with the Union offensive gaining the advantage. Succeeding Confederate demonstrations against the Union left flank failed, and the fighting came to a stalemate.

On the morning of the second day, March 20, Johnston strengthened his line north of the Goldsboro Road to protect Mill Creek Bridge, the only escape route for the Confederate army. After the arrival of Sherman and the rest of the Union army, the blue troops outnumbered the gray by about 60,000 to 21,000. Sherman deployed the newly arrived troops on his right flank, though the only activity that day was some heavy skirmishing.

On the third day, March 21, Union major general Joseph A. Mower initiated an attack on the Confederate left. While Hardee's troops managed to stall this offensive, Johnston and his army nonetheless withdrew on the night of the 21st across Mill Creek Bridge and toward Smithfield. Sherman's forces pursued Johnston on the 22nd, with little effect.

**Bickerdyke, Mary Ann (Mother)** (1817–1901) *Civil War nurse, philanthropist*

Mary Ann “Mother” Bickerdyke was a beloved nurse and fundraiser during the CIVIL WAR. She grew up in Ohio as

Mary Ann Ball, moving between a number of relatives after her mother died. Married in 1847 to Robert Bickerdyke, Mary Ann migrated with her husband to Illinois a decade later. Widowed in 1859, Bickerdyke supported herself and her three children by nursing.

During a church service in 1861, Bickerdyke learned about the harsh conditions of young volunteer soldiers suffering from typhoid and dysentery. Church members proceeded to organize a relief fund, and Bickerdyke volunteered to deliver it. This mission convinced Bickerdyke to commit herself to caring for Union soldiers for the rest of the war. She threw herself into relief work on her own initiative, doing whatever needed to be done. Ignoring protocol and defying male authority, she cleaned, nursed, and fed thousands of sick and wounded men, both at hospital camps and at the front lines of battle.

Bickerdyke acquired her name of “Mother Bickerdyke” from the wounded soldiers at the BATTLE OF SHILOH in April 1862. She soon became an agent of the UNITED STATES SANITARY COMMISSION, and she gained a measure of fame when the country learned of her extraordinary dedication to the wounded at many battlefields and hospitals.

Along with her nursing duties on the front lines with Grant's and Sherman's armies, Bickerdyke also embarked on speaking tours in the Midwest to raise money and obtain food. Bickerdyke was with Sherman's army in North Carolina when the war was finally won, and she joined in the North's victory parade in 1865 in WASHINGTON, D.C.

After the war, Bickerdyke worked on various benevolent causes. She died in 1901 in Kansas after spending her final years on her son's farm.

**Black Codes**

Black Codes were laws enacted by Southern state legislatures in late 1865 and in 1866 to restrict the economic activities and control the social behavior of freedmen and freedwomen. In effect for only a short time, the Black Codes reflected Southern unwillingness to accept EMANCIPATION and its consequences after the CIVIL WAR. The laws contributed to the end of Presidential RECONSTRUCTION and to the imposition of a much greater federal role during congressional, or Radical, Reconstruction.

Black Codes had their origins before the end of the Civil War. It was clear that the Southern ECONOMY, based predominantly on AGRICULTURE, would need revitalization. Union generals sometimes pressured ex-slaves to

return to PLANTATIONS, hoping that labor contracts would protect the workers from mistreatment by their former masters. This did not prove to be the case. During the summer of 1865, planters organized county associations to set wage scales and prevent competition for black labor. Communities tried to reestablish white control over former slaves through local ordinances that made vagrancy a crime and prohibited African Americans from holding certain jobs and owning real property.

It was only a matter of time until such controls began to be established at the state level. Mississippi was the first state to enact a Black Code in November 1865. Every African-American worker was required to have a written EMPLOYMENT contract during the first ten days of January that covered the remainder of the year. Any worker who violated the terms of the contract lost wages earned under the contract and was subject to arrest. Penalties were imposed on any employer who tried to hire a black worker already under contract. Other restrictions were included that defined the limits of work. African Americans were forbidden to rent land in urban areas and were limited to doing agricultural labor. To ensure that they did indeed work, the Mississippi Black Code included criminal penalties for vagrancy. Insulting gestures or language were also made into criminal offenses.

Many Southern states quickly enacted their own Black Codes. South Carolina, for example, taxed African Americans from \$10 to \$100 for business activities other than farming or being a servant. In addition to required annual labor contracts, a worker could not leave the plantation without the employer's permission. In Louisiana, a worker who did not comply with his labor contract could be arrested and forced to work on public work projects without pay until willing to return to his contract employer.

The Black Codes were drafted by conservative, respectable judges, lawyers, and law professors, many of whom had not been advocates of SECESSION. The Black Codes reflected a Southern ideology that assumed that African Americans would not work voluntarily and were naturally self-indulgent, unskilled, and illiterate. White Southerners believed that African Americans needed protection from these inclinations. Fearful of insurrections, white Southerners also wanted the protection they believed that the Black Codes could provide.

Southern leaders knew that the rest of the country was watching to see how white Southerners treated the newly emancipated slaves in their reestablished political and legal systems. As such, the Black Codes did grant certain rights to the former slaves, including the right to make contracts, the right to sue and be sued, the right to marry other African Americans, and the right to buy, own, and transfer property. Ultimately, this was not enough to convince Northern leaders that Southerners had changed their ways.

Black Codes proved a good source of propaganda for RADICAL REPUBLICANS. Although few Northerners believed in the inherent equality of black and white people, most did advocate equal access to the legal system, equal application of criminal laws, and equal rights to sell one's labor in a free market. Even Republican moderates were offended that the former Confederate states, so soon after rejoining the Union, rejected the free labor system that existed throughout the rest of the United States.

The perception that white Southerners were unreformed created a hostile climate in Congress. In December 1865, congressional leaders responded by refusing to seat delegations elected to represent the former Confederate states. In early 1866, Congress extended the life of the FREEDMEN'S BUREAU beyond its initial one year and added new powers, including the oversight of labor agreements. Eventually, Congress put the South under military control and tried to impose equality on the South. The Black Codes were forcibly repealed by legislative action or by federal officials overseeing the Reconstruction governments, and virtually none of them remained on the books after 1867.

The disappearance of the Black Codes was a short-lived victory for African Americans. Eventually, Northerners lost interest in the status of the freedmen, and by 1876 Reconstruction had come to an end. SHARECROPPING, the legalization of segregation, and a number of other factors allowed white Southerners to create the racial order they desired. African Americans in the South would remain in a subordinate position for at least another century.

**Blair, Francis Preston, Jr.** (1821–1875) *Union general, politician*

As a Missouri legislator, a member of the House of Representatives (1857–62), a general, a vice presidential candidate (1868), and a U.S. senator (1871–73), Francis P. Blair, Jr., was a key political figure of the 1860s and 1870s and an important opponent of Radical RECONSTRUCTION.

Born in Lexington, Kentucky, in 1821, Frank Blair grew up in a family immersed in politics. Blair's grandfather had been among Kentucky's earliest political leaders, building a social and political network that the family maintained for the next 80 years. In the late 1820s, Blair's father became an ally of Andrew Jackson, following Jackson to WASHINGTON, D.C., in 1829. There, Blair's father established the

*Washington Globe*, the era's leading DEMOCRATIC PARTY newspaper.

After being educated in Washington, D.C., private schools, Frank Blair went on to college at Princeton and then to legal studies at Kentucky's Transylvania College. After completing his EDUCATION, Blair relocated to Missouri, established a legal practice, and served in the Mexican-American War. After the war, Blair's father successfully lobbied to make him attorney general of the New Mexico Territory. Returning to Missouri, Blair won a seat in the state legislature, where he served for four years. While Frank Blair was building his political career, his father, Francis Blair, was reconsidering his Democratic Party allegiance. The elder Blair was no ABOLITIONIST, but he vehemently opposed expansion of SLAVERY into the new territories, believing that the nation should reserve them for white settlers. After a brief flirtation with the Free-Soil Party, Francis Blair broke decisively with the Democrats over the KANSAS-NEBRASKA ACT and joined the new REPUBLICAN PARTY.

Frank and his brother Montgomery followed their father into the Republican Party. During the CIVIL WAR, Montgomery joined ABRAHAM LINCOLN's cabinet as postmaster general while Frank served in Congress and in the UNION ARMY. Lincoln's relationship with the Blairs reflected the president's anxiety about Missouri, Kentucky, and the other border states. Though these slave states had remained within the Union, Confederate sympathies ran high in all of them. If the Union lost any of these states, Lincoln believed the North might well lose the entire war. Lincoln carefully cultivated his friends in these states, reaching out to former Democrats like the Blairs.

Frank Blair did a great deal to ensure that Missouri remained in the Union during the tense months following FORT SUMTER. He joined the Federal army in April 1861 as a colonel and was soon promoted to brigadier general and then again to major general. These promotions were given by Lincoln to reward Blair's loyalty to the administration. In contrast to most political generals, Blair performed credibly as a military commander. ULYSSES S. GRANT and WILLIAM T. SHERMAN both spoke favorably about his abilities as a general, and he distinguished himself with his service during the VICKSBURG CAMPAIGN, the BATTLE OF CHATTANOOGA, the ATLANTA CAMPAIGN, and SHERMAN'S MARCH THROUGH GEORGIA.

Frank Blair and his family recognized that the EMANCIPATION PROCLAMATION rang the death knell of slavery throughout the South. However, they expected that former slaves would remain subservient to white men. Once the war ended, Frank Blair, like his father, vigorously opposed the RADICAL REPUBLICANS, who sought full civil rights for African Americans. As former Democrats, the Blairs were natural allies of the new president, Tennessee Demo-

crat ANDREW JOHNSON. While many Republicans counseled Johnson to work with Radicals in the party, the Blairs advised him to build his majority around Democrats in the South, border state Unionists, and conservative Republicans. Johnson's increasingly heated attacks on Republican radicals contributed to Republican gains in the 1866 congressional ELECTIONS, and the poisoned relationship between the president and Congress led to Johnson's impeachment and trial. Most of Lincoln's men turned on Johnson, but the Blairs joined WILLIAM H. SEWARD and a few others to support the president. None of them were again welcome in the Republican Party. Having stood with Johnson, Frank Blair now returned to the Democratic Party after a 10-year absence.

In 1868 Democrats nominated New York governor Horatio Seymour for the presidency and chose Blair as his running mate. Bitter over Johnson's failure to control Reconstruction, Blair used his campaign appearances to revisit the Democratic Party's prewar boast that it was the "white man's party." Blair denounced Southern Reconstruction governments as controlled by "a semi-barbarous race of blacks who are worshippers of fetishes and polygamists" and who "subject the white women to their unbridled lust." Blair's incendiary outbursts alienated many Northerners and made Blair himself a campaign issue. "Seymour was opposed to the late war," said Republican wags, and "Blair is in favor of the next one." Seymour and Blair were soundly defeated in the election by Republican Ulysses S. Grant.

Though the country chose Grant, Missouri stuck by Frank Blair, making him a U.S. senator. Until his death in 1875, Blair energetically but unsuccessfully opposed any concession designed to help African Americans achieve economic or political equality. Blair's vision of a "white man's republic" soon prevailed throughout the South as Americans retreated from Reconstruction-era commitments.

### Bleeding Kansas (1854–1865)

"Bleeding Kansas" is the name given to the conflict between Free-Soil supporters and SLAVERY supporters in the Kansas and Nebraska Territories, both before and during the CIVIL WAR. Tensions between proslavery settlers, often called "BUSHWHACKERS," and antislavery settlers, often labeled "JAYHAWKERS," became so strong that newspapers of the day called the pitched battles a "civil war" long before shots had been fired on FORT SUMTER.

The troubles of Bleeding Kansas were rooted in the Missouri Compromise of 1820, which had drawn a line across the unorganized territories west of the Appalachians, dividing them into slave and free territories. For three decades after the adoption of the Missouri Compromise, the South blocked attempts to organize the Kansas Territory into states because it fell on the free-labor side of the Missouri Compromise line. Congress, seeking to defuse tensions between North and South over slavery's expansion into the territories, eventually passed the KANSAS-NEBRASKA ACT in 1854. The act, supported by Illinois senator STEPHEN A. DOUGLAS, divided the Kansas Territory into two areas, Kansas and Nebraska, and left the territories' disposition as to slavery to the settlers of the respective territories under the new doctrine of popular sovereignty, which dictated that the decision on whether or not to allow slavery within an organizing territory would be left up to a vote of the territory's settlers. The Missouri Compromise was effectively repealed by the popular sovereignty of the Kansas-Nebraska Act, since voters in territories north of the Missouri Compromise line could now decide to adopt slavery where it had once been forbidden. The Kansas-Nebraska Act infuriated Northern free-labor advocates and abolitionists.

In preparation for the election to decide Kansas's legal stand on slavery, both proslavery and antislavery settlers poured into the newly formed territory. In the North, the New England Emigrant Aid Company collected funds in an effort to help promote settlement of Free-Soil, antislavery people in Kansas. Despite the press that the organization garnered, they were generally unsuccessful in their efforts, raising little money and sending few settlers to the territory. Southerners also rallied to support settlement in Kansas. Missouri governor David Rice Atchison claimed that a victory for antislavery forces in Kansas would lead to the end of slavery in the entire nation, advising his fellow Southerners that the "game must be played boldly." The South did play boldly, with Atchison leading the way. Groups of what were termed "border ruffians" were organized to cross from Missouri to Kansas to vote in the territorial ELECTIONS and strike whatever other blows were deemed necessary to guarantee Kansas would be a slave state.

Kansas truly began to bleed in May 1856, with the sack of the antislavery town of Lawrence by a mob of proslavery supporters. The mob burned buildings and destroyed the local Free-Soil press. Lawrence did not go quietly, however. JOHN BROWN, failed businessman and passionate abolitionist, led a retaliatory raid against the proslavery settlement at Pottawatomie Creek, killing five men and boys by hacking them to death with broadswords.

It was not in Kansas alone that tempers flared. In WASHINGTON, D.C., Senator CHARLES SUMNER of Massachusetts denounced the violence in Kansas and claimed

it was caused entirely by slave-supporting forces. In his widely publicized "Crime against Kansas" speech, Sumner declared that Kansas had been "raped" and forced into the "hateful embrace of slavery." Sumner called the proslavery forces in Kansas "thugs" and "robbers" and accused Southern politicians of "cavorting" with the "harlot, Slavery." Sumner's speech named several Southern politicians whom he saw as particularly guilty, including Senator Andrew P. Butler of South Carolina. Butler's cousin, Preston Brooks, serving then as a representative from South Carolina, attacked Sumner with a cane in the Senate chamber shortly thereafter, beating him senseless. Throughout the South, Brooks was applauded, while throughout the North his actions were decried as barbaric.

By 1857 Kansas was a pitched battlefield, with Bushwhackers and Jayhawkers arming themselves with whatever weapons they could manage. By that time, the majority of legitimate Kansas settlers were opposed to slavery. However, President FRANKLIN PIERCE, a Northerner who sympathized with Southern interests, chose to

recognize the proslavery provisional legislature elected through fraudulent votes cast by thousands of “border ruffians” from Missouri. The provisional legislature proceeded to pass proslavery and antiabolitionist legislation for the territory. President JAMES BUCHANAN succeeded Pierce, and he continued to provide presidential support for the proslavery government by putting his weight behind the Lecompton Constitution, which was ostensibly meant to be the state constitution for Kansas. However, because the Lecompton Constitution had been written by the provisional legislature, it naturally included strong protection for slavery. The citizens of Kansas were supposed to vote whether to accept the Lecompton Constitution or not, but the election was fraudulent and was boycotted by antislavery settlers. A second election was called by Congress, but that was boycotted by proslavery forces. Ultimately, Buchanan’s support for the Lecompton Constitution proved moot, and Kansas did not enter the Union until after the Civil War was under way.

Meanwhile, through all the political fighting, the armed conflicts between bushwhackers and jayhawkers went on unabated, and Kansas continued to “bleed.” The attacks on property and people seemed to prove that the North and South were on radically different paths. The “little civil war,” as abhorrent and unimaginable to Americans as it was, proved to be only the tip of the iceberg of animosity and hostility that the regions had in store for each other.

**Booth, John Wilkes** (1838–1865) *actor, presidential assassin*

ABRAHAM LINCOLN’s assassin, John Wilkes Booth, was born in Maryland in 1838, the son of famous actor Junius Brutus Booth and his mistress Mary Ann Holmes. Junius, known as “the mad tragedian,” was often away on tour, and even when he was home he was often incapacitated by alcoholism and mental disease. Young John was largely raised by his mother. He received some formal EDUCATION, mostly at St. Timothy’s Episcopal Military Academy, where he became an Episcopalian and learned how to shoot and ride a horse.

Junius died in 1851, and shortly thereafter John decided to follow his famous brother Edwin into the family business, making his stage debut in Baltimore in August 1855. John was known less for his acting skill and more

for his boisterous style and penchant for gymnastic leaps around the stage. Nonetheless, he was very well-received, and by the time he turned 25 he had played the lead in nine different Shakespearean plays and was receiving more than 100 pieces of fan mail every week.

Booth toured the North and the South, enjoying success in both regions of the increasingly divided nation. However, he regarded himself as a primarily Southern actor, and he preferred performing in front of Southern audiences. He also became very outspoken when it came to politics. Junius had disliked SLAVERY, but John defended the institution and denounced Northern abolitionists. After JOHN BROWN’s failed insurrection attempt at HARPERS FERRY, Booth temporarily suspended his acting career in order to join a militia unit called the Richmond Grays. In that capacity, he witnessed Brown’s hanging on December 2, 1859. While in Richmond, Booth also joined the Knights of the Golden Circle, a secret society dedicated to promoting the expansion of slavery and SECESSION.

In early 1860, Booth returned to his stage career. When war finally broke out in April 1861, he declined to take up arms, in deference to his mother’s wishes. He continued to speak out against Lincoln and the Union war effort, even though he was still appearing regularly in Northern cities, in front of increasingly hostile audiences. He was even arrested in St. Louis in 1862 for saying that he wished “the whole damn government would go to hell,” but he was released shortly thereafter. Booth continued crisscrossing the North and South, and evidence suggests he regularly took advantage of the opportunity to smuggle medicine to the South.

By the fall of 1864 Booth had grown tired of being an armchair rebel. He was despondent over the sagging fortunes of the Confederacy and wanted to do something dramatic to help out the cause. He organized a group of conspirators with the intention of kidnapping Abraham Lincoln. Booth felt this action would end the war or at the very least would allow the Confederacy to negotiate for all of its prisoners of war being held in Union PRISONS. Booth and his coconspirators made several attempts to abduct the president while he was vulnerable, but each time they were foiled by bad luck or bad timing, and eventually several of Booth’s accomplices abandoned him.

By April 1865 the Confederacy was collapsing, and Booth was growing increasingly desperate. He was present at Lincoln’s second inaugural address, and he found the president’s references to limited black suffrage to be intolerable. Booth no longer had the time or the manpower for a kidnapping, and so he settled upon murder. When an announcement was made on the morning of April 14 that the president would be attending a performance at Ford’s Theater that evening, Booth decided to strike. He had no

John Wilkes Booth (Hulton/Archive)

difficulty gaining access to the president when he arrived at the THEATER, since security was lax and he was well known to the stagehands. Booth loitered in the hallway behind the president, waiting for a big laugh to cover the sound of the gunshot. When the moment came, he entered the president's box and quickly fired his single-shot Derringer into the back of the Lincoln's head. After briefly scuffling with Lincoln's companion, Maj. Henry Reed Rathbone, Booth leaped to the stage 12 feet below, breaking his leg in the process. With a shout of "sic semper tyrannis!" ("thus always to tyrants") to the confused audience, Booth escaped into the night.

Booth felt he would be hailed as a hero in the South, but he was largely in error. Most individuals on both sides of the conflict cursed this assassin. After meeting up with David Herold, one of his coconspirators, and pausing to get his broken leg set by Dr. Samuel Mudd, Booth fled through Maryland into Virginia. He and Herold were sheltered for six days by Samuel Cox and then relocated to the farm of Richard H. Garrett. On April 26, while sleeping in Garrett's barn, Herold and Booth were surrounded by Union cavalry. Herold surrendered, but

Booth refused to be taken alive. The barn was set on fire in hopes of smoking Booth out. Booth made a desperate charge and was shot by Sgt. Boston Corbett, who ignored explicit orders to keep Booth alive. After lingering for several hours, Booth died shortly after dawn on April 27, 1865.

### bounty system

The bounty system was an important part of the raising of a VOLUNTEER ARMY in the CIVIL WAR, particularly in the North. In the first year of the conflict, states, counties, private organizations, and the federal government all offered modest bounties to recruit soldiers. For example, on July 22, 1861, the U.S. Congress passed a law authorizing each volunteer to receive \$100 for volunteering, in addition to the monthly soldier's pay. In this way, patriotism was rewarded with more than parades and cheers. Bounties were also used in the CONFEDERATE STATES OF AMERICA early in the war, but the system was discontinued due to lack of funds.

As the war progressed, mounting Northern casualties dampened the enthusiasm for voluntary military service. In July 1862, President ABRAHAM LINCOLN called for 300,000 more soldiers to be added to the UNION ARMY. When the states could not meet the quotas set for them by the government, bounties were raised, which increased the number of men in the ranks. Still, even more men were desperately needed to replenish the ranks of the Union armies, especially after the losses suffered at Fredericksburg, Virginia, in December 1862. To encourage volunteering, the federal government passed the Conscription Act of 1863.

CONSCRIPTION, also known as "the draft," was never seriously considered as the primary method to provide troops for the Union. Only 6 percent of men in both Union and Confederate armies were raised through the draft. The Conscription Act was intended only as a stimulus for volunteering. Every state was assigned a quota that it had to meet by a given time. If the state did not meet that quota through volunteers, then it had to raise the required number through a draft. Since the draft was unpopular in the North, it was in the interest of states, townships, counties, and cities to encourage volunteer enlistment to meet their quotas, and avoid the draft entirely. They did this by awarding ever-larger

bounties. As in 1861, all units of government—local, state, and national—contributed money for bounties. The local government of Cook County, Illinois, spent more than \$3 million on bounties. By 1864 some volunteers were receiving \$1,000 for their enlistment.

The bounty system played an integral role in mobilizing Northern men for duty from 1863 onward. There were, however, negative repercussions to the late-war bounties. Some men took advantage of the system by enlisting, receiving their bounty, then deserting the army at the first opportunity. Many of these so-called bounty-jumpers not only got away with their crime but also reenlisted several times. Sometimes they were caught and punished, sometimes not. Another issue was that men who enlisted just for the money were often terrible soldiers and were resented by their battle-tested comrades. These negatives were balanced out, however, by the benefits of the bounty system. Most importantly, the bounty system encouraged three-year VETERANS to reenlist in the critical winter, spring, and summer months of 1864, when the Union army needed every experienced soldier it could muster.

**Boyd, Belle** (1844–1900) *Confederate spy*

Born May 9, 1844, in Martinsburg, Virginia (now West Virginia), Belle Boyd became one of the Confederacy's most active and well-known female spies. Boyd's success as a spy resulted, in part, from her ability to use her femininity to escape detection and punishment. Called "La Belle Rebelle" by the French press and "That Secesh Cleopatra" by unfriendly Northern reporters, Boyd was bold, brash, and beautiful.

Boyd's parents, Mary Rebecca Glenn and Reed Boyd, both came from prominent Virginia families. She received her EDUCATION at Mount Washington Female College of Baltimore, Maryland, returning home at the outbreak of the CIVIL WAR to serve as a nurse and to raise money for the Confederacy. She also organized groups of women to visit Southern troops. When a Northern soldier broke into her house and insulted her mother in 1861, Boyd shot and killed him. She escaped punishment because the shooting was seen as self-defense. Approximately a week later, Boyd began her career as a Confederate spy. To gather information, she engaged Federal soldiers in flirtatious conversations. Boyd passed on to Confederate officials any information that they revealed concerning Union movements and plans.

Generals P. G. T. BEAUREGARD and THOMAS J. (STONEWALL) JACKSON used Boyd as a courier in late 1861. She successfully carried information, supplies, and weapons across enemy lines. Her role became vital in the spring of 1862, when Boyd delivered information to Jackson as he launched an offensive in the Shenandoah Valley. For her part in the Confederate successes in this campaign, Union forces arrested Boyd on July 29, 1862, on the order of Secretary of War EDWIN M. STANTON. For the next month, they held her in WASHINGTON, D.C.'s Old Capitol Prison. In June 1863 she was again arrested, this time in her hometown of Martinsburg, and imprisoned in Washington's Carroll Prison. After contracting typhoid, Boyd was released in December 1863 and banished to the South.

Boyd did not wait long to resume her spying activities. In early 1864 she boarded a ship for England, presumably for her health, but in reality, she was on her way to deliver Confederate dispatches. Before the mission could be carried out, however, Union forces captured Boyd's ship, placed her under arrest, and brought her ship back to the United States. Boyd escaped from Federal custody in Boston and fled to Canada and then to England. Union officials held responsible Ens. Samuel Wylde Hardinge Jr., the officer in command of the captured ship. They court-martialed and imprisoned him. Before his case could be heard, Hardinge followed Boyd to England, where they married in 1864 and had a daughter. He died soon after. From England, Boyd published her memoirs, *Belle Boyd in Camp and Prison* (1865), to recruit support for the Confederacy.

After the war, Boyd pursued a stage career, first in Europe and then in the United States. She married two more times and had four more children. In the 1880s, Boyd lectured throughout the United States about her wartime activities. At the end of each speech, she stressed the importance of national unity and reunion. Boyd's speeches proved particularly popular with Union VETERANS.

Belle Boyd died of a heart attack on June 11, 1900, while in Kilbourne, Wisconsin.

**Brady, Mathew B.** (1823–1896) *photographer*

Photographer and businessman Mathew Brady's magnificent pictorial record of the CIVIL WAR has provided generations of Americans with an enduring legacy of that conflict. Born in 1823 in upstate New York, Brady began his studies with portrait artist William Page. In 1839 Page took Brady

to NEW YORK CITY to study with Samuel F. B. Morse. Recently returned from Paris, where he had met Louis Daguerre, Morse's enthusiasm for the new "daguerreotype" process of PHOTOGRAPHY inspired Brady to learn the craft. Fascinated, Brady absorbed what he could from Morse, and soon he opened his own studio in 1844. Using aesthetic enhancements, such as makeup, lighting, costuming, and camera positions, Brady's innovations refined the medium, and he quickly gained renown as a portrait artist. Working in a lavishly appointed gallery, Brady appealed to the rich and prominent citizens of New York, who lined up to have Brady take their likenesses.

A tireless self-promoter and entrepreneur, in 1845 Brady launched his "Illustrious Americans" project, photographing 24 of the most prominent American citizens of his day. Published in 1850, the book created a sensation in England, where Brady was awarded a medal for his artistic excellence. His prestige and success attracted other photographers to work at Brady's studio. Among them was Alexander Gardner, who introduced Brady to the new "wet plate" process. This method took photography beyond daguerreotype's single-use copper plate and allowed for the production of an unlimited number of positive prints from a fixed negative image on a glass plate, expanding the potential of the craft.

By 1860 Brady had reached the height of his artistic and commercial fame. During a campaign stopover in New York City that year, presidential candidate ABRAHAM LINCOLN visited Brady's gallery. Brady produced a flattering photograph that Lincoln claimed helped him win the election. Lincoln would sit for Brady several more times.

When the Civil War began, Brady set out to document the war with photographs. He was convinced that he would reap large profits from such a venture and, at the same time, contribute to history. Brady put all his money into the business, purchasing expensive equipment and hiring many assistants. Brady himself photographed the FIRST BATTLE OF BULL RUN, saying "A spirit in my feet said 'go' and I went." Brady pioneered the idea of a professional force of field photographers going out into the battlefield and into the camps, recording the war in all of its many features. Mathew Brady's haunting series of pictures of the Gettysburg battlefield and town are among his finest efforts.

Brady's primary role, however, was not in the field but consisted of managing the huge project from his WASHINGTON, D.C., studio. Even so, many photographs attributed to Brady were actually those of his most talented assistants, such as Gardner or Timothy H. O'Sullivan. Brady's willingness to take credit for other photographers' work brought him harsh criticism, and many of his assistants abandoned him before the war was over. Overextended financially, Brady was broke by war's end and tried to sell his collection of work to the government. After much pleading for a

Mathew B. Brady (Library of Congress)

better price, he agreed to sell his negatives for \$2,840. This sum was a fraction of what it cost Brady to produce the 6,176 photographs of the war. In 1875 the government paid Brady another \$25,000 and gained exclusive title to his collection. Despite the infusion of funds, Brady, an alcoholic and nearly blind, was ruined. He died alone in a New York charity hospital in 1896.

**Bragg, Braxton** (1817–1876) *Confederate general*

Braxton Bragg was one of the Confederacy's most prominent generals. Born in Warrenton, North Carolina, on March 22, 1817, Bragg graduated fifth in the UNITED STATES MILITARY ACADEMY AT WEST POINT class of 1837. He served in the Seminole War and the Mexican-American War and became a national hero for his action at the Battle of Buena Vista. He remained in the army until 1856, when he resigned and used his wife's considerable wealth to build a sugar plantation in Louisiana. In March 1861, he was appointed brigadier general in the CONFEDERATE ARMY and assigned to command the defense of the Gulf Coast between Pensacola, Florida, and Mobile, Alabama. At the BATTLE OF SHILOH, Bragg commanded the Second Corps and in June 1862 took command of the Army of the Mississippi (later known as the Army of Tennessee).

While fiercely devoted to the Confederacy and an accomplished administrator, Bragg had a difficult personality. Many of his problems stemmed from a series of illnesses, including migraine headaches, dyspepsia, boils, and rheumatism. Often manifest during active campaigns, Bragg's ailments frequently left him "sick, befuddled, and beleaguered" at moments of crisis. In addition, he failed to build cohesion among his officer corps, and he constantly quarreled with his high-ranking subordinates. These fights were especially problematic during the winter and spring following the BATTLE OF MURFREESBORO and during the siege of Chattanooga. At least one historian claims Bragg's obsession with internal conflicts led to the disaster at Missionary Ridge on November 25, 1863. He was relieved of command December 1, 1863.

In February 1864 JEFFERSON DAVIS appointed Bragg military adviser to the president. He held that position until October, when he was assigned to command the Confederate defenses at the critical port city of Wilmington, North Carolina. After the city fell in February 1865, Bragg helped organize troops to resist Sherman's advance. He was captured May 10, 1865, at Concord, Georgia. After the war, Bragg held a variety of positions in the railroad, utility, and insurance industries. He died in Galveston, Texas, on September 27, 1876.

**Breckinridge, John C.** (1821–1875) *U.S. vice president, U.S. senator, Confederate general, Confederate secretary of war*

John Cabell Breckinridge was a U.S. vice president and a Confederate general. Breckinridge was born near Lexington, Kentucky, on January 16, 1821, into one of that state's most prominent political families. Carefully groomed to continue the family tradition of public service, he obtained a major's commission in the 3rd Kentucky Regiment and briefly served in the Mexican-American War of 1846–48. Back home, Breckinridge's drive, intellect, and family connections catapulted him into the political arena with a seat in Kentucky's legislature, and in 1851 he won election to the U.S. House of Representatives.

In 1856, much to his surprise, the promising young politician was nominated as Democrat JAMES BUCHANAN's vice presidential candidate. He became, at age 35, the youngest man to occupy that office. Breckinridge was largely ignored by the Buchanan administration, which was increasingly preoccupied by mounting sectional tensions over SLAVERY and SECESSION. Though a slaveowner himself, Breckinridge felt that the institution was doomed, and he worked tirelessly to discourage secessionism among Southern "FIRE-EATERS." When the DEMOCRATIC PARTY split along regional lines in 1860, he was nominated as the candidate of the Southern Democrats. They lost. Breckinridge then left the White House, and in January 1861 the Kentucky state legislature appointed him to serve in the U.S. Senate.

Five months after the CIVIL WAR commenced in April 1861, a federal court in Kentucky ordered Breckinridge arrested for treason. He then fled to the Confederacy. He received a brigadier general's commission the following November and set about organizing the famous "Orphan Brigade" for Kentucky expatriates like himself. In this capacity, Breckinridge performed well under Gen. ALBERT S. JOHNSTON at the BATTLE OF SHILOH of April 6–7, 1862, and he rose to major general in June 1862. In 1864 he replaced Gen. JOHN H. MORGAN as head of the Department of Southwest Virginia, becoming responsible for the defense of the fertile Shenandoah Valley. On May 15, 1864, Breckinridge defeated a larger Union force under Gen. Franz Siegel at New Market. In February 1865 President JEFFERSON DAVIS appointed Breckinridge as his final secretary of war, where his most significant contribution was to convince the president not to tarnish the Confederacy by resorting to guerrilla warfare.

After the fall of Richmond in April 1865, Breckinridge fled to Cuba and England, returning to Kentucky under a general amnesty in 1868. Thereafter he served as a spokesman for national reconciliation and formally denounced the infamous KU KLUX KLAN for violence against African

Americans. Breckinridge died of physical exhaustion in Lexington on May 17, 1875, at the age of 54.

—John C. Fredriksen

### brothers' war

The CIVIL WAR is frequently portrayed in familial terms, thus a “brother’s war,” a term used at the time. Often, a group of relatives would enlist together, and some units had so many kinsmen in them that they were known as “cousinwealths.” In other instances, families were torn apart as some members decided their loyalties were with the Union while others swore allegiance to the Confederacy.

It was particularly common in the South for military service to be a family affair. Because of manpower shortages, the CONFEDERATE ARMY enlisted virtually its entire white male population. If a family had several sons of military age, most or all of them would join the ranks. For example, the Bledsoe family of Mississippi enrolled 10 sons and five sons-in-law in the Confederate army. Mrs. Enoch Hooper Cook of Alabama saw her husband, 10 sons, and two grandsons go off to join the fight. Eighteen members of the Bell family of Tennessee enlisted in the Confederate army, and only seven returned. There were also Northern families who contributed multiple sons to the Union war effort, although rarely in such large numbers as in the South.

As common as it was for relatives to fight side-by-side in the Civil War, the most oft-repeated stories of the brothers' war have to do with families that were divided by the conflict. This was particularly common in the border states of Missouri, Kentucky, Virginia, and Tennessee. President ABRAHAM LINCOLN was originally from Kentucky, and three of his brothers-in-law served as officers in the Confederate army. Indeed, throughout the war Mrs. Lincoln was hurt by rumors that she was working for the enemy, although there was not a shred of evidence that this was the case. Other high-ranking Northern officials also saw family members join the Confederacy. Two of Union commodore William David Porter's sons enlisted in the Confederate artillery. Kentucky senator John J. Crittenden's son George became a major general in the Confederate army, while his son Thomas was a major general in the UNION ARMY.

Prominent families provide the most famous examples of those split in two by the Civil War. However, there were also thousands of common families who were divided by the conflict. For example, Franklin Buchanan commanded the Confederate ironclad CSS *Virginia* when it sank the USS

*Congress*. Among those who were killed when the *Congress* sank was Franklin's brother McKean. At the BATTLE OF GETTYSBURG, hometown boy Wesley Culp returned as a member of the Confederate Stonewall Brigade. He was killed on Culp's Hill, a portion of the family farm named after one of Wesley's relatives, and buried in the basement of the family farmhouse. Perhaps the most well-known monument to the brothers' war is the grave of James Terrill, a brigadier general in the Confederate army, and William Terrill, a brigadier general in the Union army. Both were killed during the war and were buried by their father under a single headstone bearing the inscription “Here lie my two sons. Only God knows which was right.”

### Brown, John (1800–1859) militant abolitionist

John Brown was a Northern ABOLITIONIST who dedicated himself to doing battle against SLAVERY in the United States. He was born on May 9, 1800, the third child of Owen and Ruth Mills Brown, in Torrington, Connecticut, but was raised in Ohio. Young John, brought up in a devoutly Christian household, was taught that slavery was evil. That upbringing formed Brown into a powerfully persuasive abolitionist. Unlike many abolitionists at the time, he supported the use of violence to end slavery. His battles in Kansas and his raid on HARPERS FERRY significantly hastened the coming of the CIVIL WAR.

In 1820 Brown married Dainthe Lusk. Their union produced seven children. When Dainthe died in 1831, Brown married 16-year-old Mary Ann Day, with whom he had 13 more children. The family moved from Ohio to Pennsylvania, where Brown opened a tannery. Brown's tannery, like the rest of his numerous business ventures, was a failure. Brown tried his luck at farming, raising cattle and sheep. He even invested others' hard-earned money in canals, usually profitably. The panic of 1837 foiled his plans to become wealthy once again. By 1856 Brown had amassed a record of 20 failed businesses and a bankruptcy.

But while he was unfit for business, Brown thrived in the antislavery movement. A riveting speaker who used rich biblical imagery to make his points, John Brown impressed the small audiences who heard his antislavery lectures and sermons. Soon he developed a base of support from the movement, including FREDERICK DOUGLASS. In 1837, at an abolitionist meeting in an Ohio church, Brown

stood and proclaimed: "Here before God, in the presence of these witnesses, I consecrate my life to the destruction of slavery."

Like Brown, many abolitionists had backgrounds of religiously based antislavery, and many had similarly pledged in their own way to see the "destruction of slavery." Brown, however, was a different breed of abolitionist. He felt his call was directly from a wrathful God and that he personally was an instrument of the Lord's will. Brown often dreamed of inciting violent slave uprisings that would bring a bloody, and just, end to the evil of slavery. Brown's favorite scripture, Hebrew 9:22, attests to this: "Without shedding of blood there is no remission of sin."

While advocating radical means, Brown's methods continued to be practical and useful. Brown helped to found and sustain a free black farming community in North Elba, New York, where he also worked as a conductor in the UNDERGROUND RAILROAD. One of the few white abolitionists who lived and worked with African Ameri-

cans, Brown enjoyed a rare respect among his fellow black reformers.

John Brown burst on the national scene when his crusade against slavery moved from New York to the Kansas Territory, where five of his adult sons established farms. Brown did not go to Kansas as an ordinary settler; he came to fight for free soil and abolition. In 1856 Brown joined his sons in the Pottawatomie Rifles, a militia dedicated to the defense of the antislavery headquarters town of Lawrence. The Rifles arrived too late to protect Lawrence from a proslavery mob, so Brown collected a small band of men and exacted his own retribution. He and his group, including his sons, used broadswords to hack five proslavery men to death at Pottawatomie Creek late in May 1856. This attack inflamed tensions between the North and South and was the beginning of a violent summer in Kansas.

Brown, filled with anger over what he considered the growing power of slaveholders over the national government, expanded his efforts against slavery. He organized the Kansas Regulars, a Free-Soil militia group whose aim was to fight "border ruffians" from Missouri. In October 1856, Brown began a series of trips between the Kansas Territory and the East Coast, where he raised funds for a free Kansas from the abolitionist lecture circuit.

As Brown traveled across the East, he developed a secret plan to liberate millions of slaves. He would recruit and train a group of committed men in Kansas. With himself in command, Brown would make a raid into Southern territory, thus precipitating a slave uprising. He and his men would then lead the slaves into the North and freedom. Needing money and support for his scheme, he gained the confidence of six prominent and wealthy men, the "Secret Six." Although the backers remained willfully ignorant of the details and violent intent of Brown's mission, they agreed to finance it. In the late 1850s, Brown carried out the first part of his plan, and chose his target, Harpers Ferry, Virginia, a prosperous industrial town and the site of a major federal armory.

At Harpers Ferry, Brown planned to seize the armory and distribute arms to local slaves who would then, in turn, incite many others to join the exodus. Clearly, Brown's scheme was unworkable, something his friend Frederick Douglass pointed out to him in their last meeting prior to the attack. Brown did not listen, and many have claimed that at this point he was simply crazy.

In any event, the plan was set in motion on October 17, 1859. Brown and 21 men, including several of his sons, marched into Harpers Ferry and killed five citizens of the town. They captured the armory and then waited for the slave insurrection to begin. It never did, and a group of U.S. Marines under the command of Col. ROBERT E. LEE

Issued in the North during the Civil War, this melodramatic portrayal of John Brown meeting a slave mother and her child on his way to execution was symbolic and used for propaganda purposes. (*Library of Congress*)

easily captured Brown and most of his followers, among them several African Americans.

In November 1859 Brown was convicted by a Virginia court of treason, murder, and insurrection. One month later, on December 2, he was hanged for his crimes. Brown's final message, written shortly before his execution, said, "I, John Brown, am now quite certain that the crimes of this guilty land will never be purged away but with Blood."

John Brown's raid at Harpers Ferry caused a sensation in the country. Although most Northerners condemned his actions, others considered him a martyr to the cause of freedom. Ralph Waldo Emerson called him an "angel of light," and church bells across the North tolled upon his execution. For the slaveholding South, however, he was evil incarnate and proof of a Northern conspiracy to destroy the Southern way of life.

A controversial and disturbing figure, Brown's violent attack at Harpers Ferry widened the gap between North and South and must be counted as one of immediate causes of the Civil War that followed in 1861. Ironically, John Brown finally enjoyed the success in death that had eluded him in life.

### **Brown, Joseph Emerson** (1821–1894)

*businessperson, politician*

Businessman, four-term governor of Georgia (1857–65), chief justice of the Georgia Supreme Court (1868–70), and U.S. senator (1880–91), Joseph Brown was born April 15, 1821, in Long Creek, South Carolina, to Mackey and Sally Rice Brown. When Joseph was in his early youth, the family moved to Union County in the north Georgia mountains. He attended Calhoun Academy in South Carolina and upon graduation became a teacher and undertook a private study of the law. In 1845 he gained admission to the Georgia bar, and in 1846 he graduated from Yale Law School.

Brown practiced law in Canton, Georgia, throughout the 1840s and early 1850s. During this time he also began a career in politics, serving as a Georgia state senator and

as a judge of the Blue Ridge Circuit. In 1858 Georgia's DEMOCRATIC PARTY, hopelessly deadlocked after more than a dozen ballots, nominated Brown as a compromise candidate for governor. Although unknown outside of the north Georgia mountains, his folksy image appealed to a broad segment of the population, and he won election by 10,000 votes.

He quickly established a reputation as a stern, resourceful leader with impressive managerial skills. A strong STATES' RIGHTS advocate, Brown became ardently SECESSIONIST upon the election of ABRAHAM LINCOLN. He appealed to nonslaveholders by arguing that the end of SLAVERY would place black people and poor white yeomen in direct competition. Brown argued that black people, desperate to make a living outside the boundaries of slavery, would sell their labor more cheaply than white people. As a result, he claimed, white workers would be reduced to the level of dependent tenants of the wealthy landowning class.

Brown worked hard to prepare Georgia for war by ordering munitions, seizing federal facilities within the state, and using funds borrowed from banks to establish coastal defenses, purchase gun-making supplies, and erect factories for making shoes, clothing, and blankets. His devotion to the state led to early and regular conflicts with the central Confederate government in RICHMOND, Virginia. The conflicts emerged over a variety of issues such as troop recruitment, the election of officers, conscription, the suspension of habeas corpus, taxes, and confiscation of private property without compensation. By 1863 he went so far as to call for the resignation of Confederate president JEFFERSON DAVIS.

After the war, Brown remained an important figure in Georgia politics by adapting to the realities presented by Union victory. He became a Republican, supported both presidential and congressional RECONSTRUCTION, and urged Georgians to accept the FOURTEENTH AMENDMENT. Just as importantly, Brown worked hard to bring Northern businesses—mining and railroad companies—to Georgia to help repair his state's ravaged ECONOMY. In the process, he became wealthy himself. When Republican rule ended, Brown reentered the Democratic Party. He emerged as one of the state's most influential leaders, forming an alliance with John B. Gordon and Alfred Colquitt known as the "Bourbon Triumvirate." The three dominated Georgia politics during the 1880s and 1890s, allowing Brown to be elected to the U.S. Senate in 1890. He died on November 30, 1894, in Atlanta, Georgia.

—James Daryl Black

**Brown, William Wells** (1814–1884) *activist, author, doctor*

Born into SLAVERY, William Wells Brown became a conductor of the UNDERGROUND RAILROAD, an antislavery lecturer in the United States and Britain, an author, and a doctor. His work for temperance and for African-American people was a lifelong commitment to which he devoted himself without reservation.

William was born near Lexington, Kentucky, to Elizabeth, a slave on the plantation of John Young. William's father was probably one of Young's cousins, George Higgins. William left Kentucky in 1816, when Young relocated to Missouri. Once in St. Louis, William became the slave of three different men in succession, serving in a variety of capacities, including as a house-servant and later a servant in a bar, an errand runner on a steamboat, an assistant to a physician, and a helper to a printing operation. This widely varied experience served him well later, when William drew on his own history to illustrate the evils of both slavery and alcohol.

William escaped bondage on January 1, 1834. Making his way North, he met a Quaker named Wells Brown, whose friendship inspired him to adopt a new name: William Wells Brown. Stopping in Cleveland, Brown met and married Elizabeth Schooner, with whom he had three children, two of whom survived into adulthood. Brown supported himself and his family by working on steamboats, mostly on Lake Erie. Because of his ability to travel freely, he helped numerous slaves reach freedom in Canada via Detroit and Buffalo. His work on the Underground Railroad freed at least 69 slaves in 1842 alone.

Brown also became a familiar face in Buffalo's temperance societies. He spoke publicly about temperance, gaining skills which he put to use in 1843, when he began to lecture for the New York Anti-Slavery Society. Brown remained one of the society's most popular speakers until 1847, when he and Elizabeth separated, and he assumed custody of their two daughters. Brown left New York for Boston, where the Massachusetts Anti-Slavery Society had invited him to begin a lecture tour through New England. In Boston, Brown found a home that would suit him for the rest of his life.

In 1849 the American Peace Society sent Brown to Paris, where he represented their interests at the International Peace Conference, seeking British support for anti-slavery activism. In Paris, conferees such as Victor Hugo, Alexis de Tocqueville, and Richard Cobden welcomed Brown warmly. On the last day of the conference, Brown spoke to the attendees about the evils of American slavery. His success led Brown to begin a speaking tour of England. Unfortunately, his time there was prolonged by forces outside his control.

Because of the passage of the Fugitive Slave Act in 1850, Brown became concerned that if he returned to the United

States he would be reenslaved. Brown had never been "officially" freed, and the issue remained unresolved until 1854. Finally, a group of Brown's English friends collected enough money to buy his freedom, which allowed Brown to return to his work in Boston, where he was active throughout the CIVIL WAR. In 1863 Brown worked with FREDERICK DOUGLASS and others to recruit African-American volunteers for the 54TH MASSACHUSETTS REGIMENT.

In 1860 Brown married Annie Elizabeth Gray (1835–1920) of Cambridgeport, Massachusetts. In addition to Brown's two daughters by his first wife, Annie gave him two more children, neither of whom survived to adulthood. When the war ended, Brown faced the necessity of earning a living that would support his new family. Having been an assistant to a physician while still a slave, and having studied medicine in his leisure time, Brown reinvented himself as a doctor. Still devoted to the numerous causes that had interested him for so long, he remained active in temperance, writing, speaking, and promoting the movement for the rest of his life. In 1880 Brown published *My Southern Home; or the South and Its People*, which encouraged African Americans to work hard and strive for self-improvement.

In 1884 Brown was stricken with bladder cancer. On November 6, 1884, he died in his home in Chelsea, Massachusetts.

—Fiona Galvin

**Bruce, Blanche Kelso** (1841–1898) *educator, politician*

U.S. senator, party leader, and educator, Blanche K. Bruce was born into SLAVERY on March 1, 1841, in Farmville, Virginia. A mulatto, Bruce never knew who his father was. Bruce had a relatively privileged childhood as a household slave. As a playmate of his master's only son, he learned to read and write. During the CIVIL WAR, Bruce moved to Hannibal, Missouri, and established the state's first school for African Americans.

After a short stint at Ohio's Oberlin College, he settled in the Delta region in postwar Mississippi. Bruce won the favor of white planters in Bolivar County with his intelligence, eloquence, and moderate politics. He held the offices of sheriff, tax collector, and superintendent of EDUCATION simultaneously. However, as an educated mulatto from out

of state, Bruce had little in common with the black masses of the Delta. In 1874 he purchased a 1,000-acre plantation. Regardless, his black constituents were loyal supporters because of his symbolic status as a black political leader and because he turned the school system in Bolivar County into one of the strongest in the state. Bruce's star rose in the REPUBLICAN PARTY as well. With the support of Governor Adelbert Ames, Bruce was selected senator from the state of Mississippi in 1875, the first African American to serve a full term in the U.S. Senate.

As a senator, he strongly defended civil rights for African Americans and demanded that the federal government stop violence against black voters. Bruce was a consistent supporter of federal aid for RAILROADS and an advocate for MISSISSIPPI RIVER improvements. He chaired the committee that investigated the failure of the FREEDMAN'S SAVINGS BANK.

After his career in Congress, he worked with John R. Lynch and James Hill, two other African-American Republicans, to control the state Republican Party. The "Triumvirate's" main interest was patronage. Bruce served as register of the treasury in 1881–85 and again in 1897–98. He was appointed recorder of deeds for the District of Columbia from 1891 to 1893.

Blanche K. Bruce died of diabetes on March 17, 1898.

### **Buchanan, James** (1791–1868) 15th president of the United States

James Buchanan, who served as president of the United States (1856–60), was born on April 23, 1791, in Stony Battery, Pennsylvania. Although most well-known for his four years as president, Buchanan had a distinguished career in public service long before he entered the White House, serving in the U.S. Senate, as secretary of state, and as minister to Great Britain. Indeed, public service was the sole focus of Buchanan's life; although engaged once as a young man, he never married.

A lawyer by occupation, Buchanan began his political career with two terms in the Pennsylvania State Assembly beginning in 1814. From 1820 to 1830 he served as a congressman for Pennsylvania, first as a Federalist, and then as a Democrat. Buchanan traveled overseas as the appointed minister to Russia, a duty he performed from

1832 to 1833. Upon his return to Pennsylvania, Buchanan was elected U.S. senator from 1834 to 1845. During his third term, he resigned his seat to accept the post of secretary of state under President James K. Polk. Increasingly, Buchanan aspired to the presidency, but the 1852 nomination went to FRANKLIN PIERCE. President Pierce appointed Buchanan as minister to England, and for the next four years, Buchanan represented American interests overseas.

While in England, Buchanan became embroiled in controversy over the 1854 OSTEND MANIFESTO. Issued by Buchanan, along with the U.S. ministers to France and Spain, the manifesto argued that the United States should purchase the island of Cuba from Spain. If Spain refused, they recommended taking it by force. An unstated assumption of the Ostend Manifesto was that Cuba would join the Union as a slave state. While the manifesto came to nothing, it created an uproar. Spain naturally took offense and began preparations for war. Many antislavery Northerners mobilized against it, and support for the fledgling REPUBLICAN PARTY grew.

A good diplomat, Buchanan kept his job as minister. When he returned to the United States, he found himself a hero among Southern Democrats, who applauded his

James Buchanan, 15th president of the United States (Library of Congress)

pro-Southern and proslavery sympathies so evident in his support of the manifesto. Buchanan was also acceptable to Northern Democrats and secured his party's nomination easily in 1856. He ran on a platform that promoted the end of further agitation over SLAVERY and supported popular sovereignty in the territories. Buchanan defeated Republican John C. Frémont by a comfortable margin.

Buchanan took office in March 1857, and within days he was embroiled in sectional tensions. On March 6, 1857, the Supreme Court announced its decision in the *DRED SCOTT* case. Behind the scenes, Buchanan had exercised his influence to see to it that the decision was favorable to the South. He wanted desperately for the Supreme Court to settle the slavery question. It did not, and the Court's ruling nationalizing slavery outraged Northerners.

Sectional tensions worsened further with Buchanan's implementation of a pro-Southern policy in Kansas. The president felt that he had to mollify his Southern base of support, and so he accepted the fraudulent ELECTIONS that led to a proslavery legislature in the Kansas Territory. Northern Democrats, led by STEPHEN A. DOUGLAS, protested in vain. Buchanan unwisely made support for the Kansas Lecompton Constitution, which legalized slavery, a test of party loyalty. This act destroyed the fragile unity of the Democrats. The beleaguered 67-year-old president recommended the admission of Kansas as a slave state, writing in his message to Congress that Kansas "is at this moment as much a slave state as Georgia and South Carolina."

The growing strength of the Republican Party owed much to the ineptitude of Buchanan's presidency, and in 1860 their candidate, ABRAHAM LINCOLN, captured the White House. An embittered Buchanan blamed the Republicans for the SECESSION of the seven southern states during the days and weeks following Lincoln's election. Nevertheless, he deplored the South's actions, stating that the Union was more than a "mere voluntary association of states." Indeed, Buchanan argued, the United States was a sovereign nation "not to be annulled at the pleasure of any one of the contracting parties." However, his strong defense of unionism was not followed by action during the remainder of his tenure.

In March 1861 Buchanan left WASHINGTON, D.C., and spent his remaining years defending his administration, most prominently in *Mr. Buchanan's Administration on the Eve of the Rebellion*, first published in 1866.

Buchanan died on June 1, 1868, in Lancaster, Pennsylvania.

### **Buell, Don C.** (1818–1898) *Union general*

Don Carlos Buell was a Union general whose performance in the CIVIL WAR did not live up to expectations. Buell was born near Marietta, Ohio, on March 23, 1818, the son of a businessman. He graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1841 with a lieutenant's commission in the 3rd U.S. Infantry. Buell fought in the closing stages of Florida's Second Seminole War and subsequently transferred to Gen. Zachary Taylor's Army of Texas to fight in the Mexican-American War of 1846–48. He distinguished himself in combat at Monterrey, Contreras, and Churubusco, winning two brevet promotions.

In 1859 Buell was briefly attached to the secretary of war's office and then returned west just as the Civil War seemed imminent. Recalled to WASHINGTON, D.C., he became a brigadier general on May 17, 1861. After organizing the city's defenses, he received a division in Gen. GEORGE B. MCCLELLAN's Army of the Potomac. With his well-deserved reputation for efficiency, administration, and strategy, he was considered one of the UNION ARMY's most promising officers.

In November 1861 Buell replaced Gen. WILLIAM T. SHERMAN as head of the Department of the Ohio. On the evening of April 6, 1862, his army reached Shiloh (Pittsburg Landing), Tennessee, after the first day of costly fighting. The following morning Buell attacked and drove off the Confederates under Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD. The turning point in Buell's fortunes occurred in August 1862, when CONFEDERATE ARMIES under Generals BRAXTON BRAGG and Edmund Kirby-Smith invaded Kentucky. With his base at Louisville now threatened, Buell hastily marched north to secure it while Bragg lingered at Frankfort, installing a Confederate government.

Reinforced and resupplied, Buell now prepared for a military showdown with Bragg. Meanwhile the War Department, having wearied of his lethargic movements, nearly replaced him with Gen. GEORGE H. THOMAS. On October 8, 1862, Buell encountered Bragg at Perryville, Kentucky, and a bloody battle raged. Buell enjoyed a numerical superiority of 55,000 to 15,000—roughly four to one—but Bragg managed nearly to drive the Federals from the field before finally retreating. Buell then failed to pursue the defeated Southerners as they leisurely withdrew through the Cumberland Gap and back into Tennessee. For this failure he

was relieved of command by the War Department on October 24, 1862, replaced by Gen. WILLIAM S. ROSECRANS. Buell's anti-EMANCIPATION views had also diminished his reputation in President ABRAHAM LINCOLN's estimation.

On June 1, 1864, Buell angrily resigned his regular army commission and left the service altogether. He then retired to Louisville, where he worked as president of the Green River Iron Works until his death on November 19, 1898. Buell was a talented disciplinarian and administrator, but military historians have judged him an uninspired and plodding general.

—John C. Fredriksen

**Bulloch, James D.** (1823–1901) *Confederate foreign agent in Europe*

James Dunwody Bulloch was a highly successful Confederate naval agent. Born near Savannah, Georgia, on June 25, 1823, Bulloch entered the U.S. Navy as a midshipman in 1839 and served capably over the next 14 years. He resigned in 1853, with the rank of lieutenant, to join the merchant marines. He eventually found work with a northern shipping firm, carrying mail between New York and Savannah. Bulloch was functioning in this capacity when the Civil War commenced in 1861. Although intending to join the Confederacy, he returned his vessel to its rightful owners before venturing south.

Confederate secretary of the navy STEPHEN R. MALORY was sufficiently impressed by Bulloch's experience to appoint him the South's naval agent in Great Britain, with the rank of commander. Bulloch was instructed to acquire ships, naval supplies, and munitions for the Confederacy. He settled at the port of Liverpool and began his clandestine work, which involved a diplomatic cat-and-mouse game with Thomas Haines Dudley, the U.S. minister in Liverpool. Bulloch succeeded in contracting Laird & Co. to construct two sleek cruisers, which passed into Confederate hands as the CSS *Florida* and *ALABAMA* in 1862. Bulloch himself commanded the steamer *Fingal* that year, skillfully ran the Union blockade, and delivered a large cargo of arms and supplies to Savannah.

In 1863 Bulloch contracted and funded construction of two heavily armed ironclad warships intended to break the Union blockade. Cognizant of the threat, U.S. minister to London Charles Francis Adams warned that if either of them ended up in Southern hands, the result would be war with the United States. The British government seized the

completed vessels, and a crisis was averted. This and Dudley's diplomatic maneuvering eventually forced Bulloch to relocate the bulk of his operations to France. In 1864 Bulloch prevailed on the French government to allow large ironclads to be constructed in French shipyards. But their release was persistently blocked by Emperor Napoleon III, and only one such vessel, the CSS *Stonewall*, ever made it to sea.

Rarely does a nation put so much military responsibility in the hands of a single man, but Bulloch's results bore out the confidence that the Confederate government had placed in him. He achieved impressive success, inflicting great damage upon Union commercial interests and helping to prolong the war. Bulloch's notoriety was such that President ANDREW JOHNSON specifically excluded him from a general amnesty in 1868. Fearing prosecution, he never returned home but remained in Liverpool, where he engaged in the mercantile cotton trade. After completing his memoirs, Bulloch died there on January 7, 1901. That same year his nephew Theodore Roosevelt was sworn in as president of the United States.

**Bull Run/Manassas, First and Second Battles of**

(July 21, 1861, and August 29–30, 1862)

The First Battle of Bull Run, also called First Manassas, was the first major engagement of the CIVIL WAR. The battle took place on July 21, 1861. Southern troops inflicted a humiliating defeat on Northern forces. The Second Battle of Bull Run, or Second Manassas, was fought on August 29 and 30, 1862, with Confederate forces once again defeating the Union troops. Northerners named the battles after Bull Run Creek, while Southerners referred to it by the name of the nearby town of Manassas.

Following the Confederate capture of FORT SUMTER in April 1861, both sides spent the next three months preparing their troops for action in the eastern theater. Men from the North and South responded to the call to arms, and the ranks of both armies swelled with thousands of new and untrained recruits. Northern soldiers enlisted for 90 days, and by July, those enlistments were nearly done. President ABRAHAM LINCOLN pushed his commanders to fight the Confederates before the UNION ARMY lost its recruits. Although Union general Irvin McDowell, head of the eastern Union army, was not sure that his men were truly ready for combat, he complied with Lincoln's wishes.

On July 21, McDowell set out with about 28,000 troops to capture the Confederate capital of RICHMOND,

First Battle of Bull Run, July 21, 1861 (*Library of Congress*)

VIRGINIA. Only 2,000 of his men were experienced soldiers, while the remainder had volunteered at the outbreak of hostilities. A good indication of his army's raw condition is that it required two and a half days to cover 22 miles to get as far as Centreville, while another two days elapsed bringing up the requisite supplies. In concert with this movement, Gen. Robert Patterson's 18,000 men were ordered to tie down Confederate forces in the nearby Shenandoah Valley and prevent them from sending reinforcements. McDowell expected to encounter about 20,000 Confederate soldiers under the command of Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD. McDowell did not know that 12,000 additional Southern troops had reinforced Beauregard's troops. Gen. JOSEPH E. JOHNSTON, who commanded these troops, had cleverly duped Union forces at Shenandoah with a cavalry screen and shipped nearly his entire force by rail to join Beauregard. Johnston outranked Beauregard but as a military courtesy allowed the latter to maintain tactical control of the engagement. Word reached WASHINGTON, D.C., that the two sides would meet near the town of Manassas, about 25 miles southwest of the Union capital. A number of Washington residents traveled out to watch what most Yankees expected would be a rout of the Confederate troops.

McDowell, a competent staff officer with many years of experience, had formulated an excellent battle plan for turning the Confederate left flank using numerous feints. It might have succeeded in the hands of veteran troops, but it proved too complicated for inexperienced men and officers to carry out. Ironically, Beauregard himself also intended to turn his opponent's left flank, but his marching orders were garbled or misinterpreted so that the bulk of Confederate forces remained stationary. Had both sides succeeded in their strategy, numerous onlookers would have watched two armies simultaneously turn each other's flank and

reverse positions. The contest commenced at 5:00 A.M. on the morning of July 21, as Union troops moved out against the stone bridge spanning Bull Run Creek.

McDowell's men launched several attacks, pushing back the Confederate forces. Then Confederate resistance stiffened, led by Gen. THOMAS J. (STONEWALL) JACKSON. One Confederate commander told his men, "Look, there is Jackson standing like a stone wall," giving the general his famous nickname. After halting the Union advance, Beauregard ordered a counterattack. The inexperienced Federal troops broke under the pressure and fled the battlefield in a panic that became derisively known as the "Great Skedaddle." The observers from Washington also ran back toward the capital, amazed that the Confederates had defeated the Union forces. Toward the end of the fighting, President JEFFERSON DAVIS arrived on the field and encouraged Beauregard and Johnston to pursue McDowell, but both generals realized that their own army was as disorganized as the enemy's. The victorious rebels had suffered 1,982 casualties: 387 killed, 1,582 wounded, and 13 missing. Northern losses were greater: 460 killed, 1,124 wounded, and 1,312 missing, for a total of 2,896. President Lincoln responded to the embarrassment by removing McDowell and replacing him with Gen. GEORGE B. MCCLELLAN. The battle also revealed that defeating the South would be much more difficult than many in the North had expected.

By the Second Battle of Bull Run, fought in August 1862, both armies were battle-tested. Gen. ROBERT E. LEE was now in command of Confederate forces. Having driven a huge Union army from the gates of Richmond, during the PENINSULAR CAMPAIGN, he sought to defeat a Union army under the command of Gen. John Pope. Lee knew that two separate Union forces threatened his troops in Virginia. Pope commanded about 55,000 men in central Virginia, while George B. McClellan had about 100,000 men near Washington. President Lincoln had ordered the two Union forces to unify under McClellan's command, a fact known to the Confederates. Realizing that his forces would be outnumbered three to one if the Union plan succeeded, Lee determined to give battle at once to destroy Pope's army before it could join with McClellan's.

Lee sent Stonewall Jackson to observe the Federals, and Jackson won a battle on August 9 at the BATTLE OF CEDAR MOUNTAIN. The Confederate victory did not provoke an immediate Union response, so Jackson led a raid that resulted in the destruction of Pope's supply depot at Manassas on August 27. His hard-marching and celebrated "foot cavalry" covered more than 50 miles in two days, completing one of the war's most impressive forced marches. The next day Jackson ambushed the brigade of Gen. John Gibbon at Groveton, but with far less success:

Gibbon's famous "Iron Brigade" fought the Confederates to a bloody standoff in which Gen. RICHARD STODDERT EWELL lost a leg and Gen. William Taliaferro was also seriously injured. Meanwhile, Pope, angered at the loss of supplies, moved against Jackson's positions and launched his 55,000 troops against Jackson's 12,000 on August 29. The Southerners held out against Pope's poorly coordinated attacks while Lee and Gen. JAMES LONGSTREET, commanding the remainder of Lee's 50,000 men, hurried to join forces with Jackson. Pope refused to believe reports that Longstreet had arrived with reinforcements and launched a new attack against Jackson's troops on the morning of August 30. The V Corps under Gen. Fitz John Porter, which had detected Longstreet's approach, disobeyed the order to attack and hung in reserve. This inaction cost Porter his military career but probably saved the Union army from destruction. Longstreet's men raked the advancing Northerners with artillery fire, breaking the attack. Lee then ordered Longstreet to attack and outflank the Union forces. The Confederate troops turned the Union left flank and forced them to retreat. Complete disaster was averted when the divisions of Generals George Sykes and John Reynolds conducted a determined rearguard action that allowed the bulk of Pope's army to withdraw safely to Centreville. Unlike the First Battle of Bull Run, Northern troops retreated in good order and remained intact. During the campaign, the South recorded 9,200 dead, wounded, or missing in action, while Union casualties numbered 16,000. The Confederate victory dashed Northern hopes for conquering Virginia quickly. The scope of the defeat had immediate consequences for Pope, whom President Lincoln relieved from duty and exiled to a quiet post in Minnesota. It also signaled the return of Gen. McClellan to command of the demoralized Army of the Potomac, which he quickly and efficiently reorganized. Meanwhile, Lee and his army, coming off a string of victories in the summer and fall of 1862, decided to take the war North and invaded Maryland in September.

**Burnside, Ambrose E.** (1824–1881) *Union army general*

Inventor of the Burnside carbine, a Union general, and three-time governor of Rhode Island, Ambrose Everett Burnside was the commander of the Army of the Potomac between November 1862 and January 1863.

Burnside was born in Liberty, Indiana, in 1824. Originally from South Carolina, his father had freed the family's slaves and moved north shortly before Ambrose's birth. Burnside entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1843. Graduating 18th in the class of 1847, he saw action in the Mexican-American War. Remaining in the regular army after the war, he was wounded by Apache warriors while guarding the Southwestern border area.

In 1853 Burnside resigned his army position and moved to Rhode Island. There he started a manufacturing company that produced a breech-loading rifle he himself had designed. When Burnside failed to secure a crucial government contract, his creditors took ownership of his patents. Thousands of Burnside carbines would be produced for the army during the CIVIL WAR.

In the late 1850s Burnside moved from one job and state to another. He worked for GEORGE B. MCCLELLAN, a fellow West Pointer and future commander, on the Illinois Central Railroad, and for the Rhode Island Militia. At the beginning of the Civil War, Burnside rejoined the army and was appointed colonel in the First Rhode Island

Ambrose E. Burnside (National Archives)

Volunteers. He fought at the FIRST BATTLE OF BULL RUN and shortly thereafter was elevated to brigadier general by President Lincoln. Burnside's successful campaigns in North Carolina led to the capture of Roanoke Island, New Bern, Beaufort, and Fort Macon.

Promoted to major general in 1862, Burnside commanded the IX Corps in the Army of the Potomac, which he led during the BATTLE OF ANTIETAM in September 1862. On the day of the battle, September 17, Burnside's orders from Gen. George B. McClellan were to move against Lee's right side, which had been seriously weakened during the terrible fighting. Seized with indecision, Burnside delayed moving his corps over a stone bridge (now known as "Burnside's Bridge") that crossed Antietam Creek. That delay allowed Confederate reinforcements to strengthen the lines, and one of the great opportunities for a smashing Union victory was lost forever.

Burnside's boss, George B. McClellan, lost his command a month later, and Lincoln appointed a reluctant Burnside in his place. Burnside had declined Lincoln twice before, not only out of loyalty to his friend but because of an accurate assessment of his lowly generalship capabilities. Predictably, Burnside's command of the Army of the Potomac was a disaster. First, he lost a costly battle in December 1862 at FREDERICKSBURG, Virginia, against Lee's vastly outnumbered army. Then, in a vain attempt to redeem his reputation and uplift his demoralized army, Burnside decided to go "on to Richmond" in the middle of the winter. His troops were dry when they started their march out of the WASHINGTON, D.C., camps on January 19, but soon the rains came, and "Burnside's Mud March" became the laughingstock of the nation.

In January 1863 Lincoln removed Burnside from command of the Army of the Potomac and replaced him with Gen. JOSEPH HOOKER. By March he had been given command of the Department of the Ohio. Away from the battlefield, Burnside proved more successful. He arrested and tried Democratic congressman CLEMENT L. VALLANDIGHAM, a notorious COPPERHEAD. He also managed to direct the capture of Confederate JOHN HUNT MORGAN, whose cavalymen were threatening southern Ohio. Toward the end of the year, Burnside ably defended Knoxville against Confederate forces, saving the city for the Union.

Burnside joined the 1864 spring campaigns under Gen. ULYSSES S. GRANT. He was placed in charge of his old IX Corps and saw fighting at the WILDERNESS, SPOTSYLVANIA, and North Anna. During the siege of Petersburg, Burnside devised a bold plan that went wrong in the Battle of the Crater, causing the senseless loss of many lives. This time he was gone for good. Burnside resigned from the army on April 15, 1865.

Burnside's postwar years were very successful. He became a prosperous businessman and achieved a solid

record in Rhode Island's political history. He was elected three times to the governorship, and in 1874 he was elected to the U.S. Senate, where he served until his death on September 13, 1881, in Bristol, Rhode Island. He is buried in Providence.

## bushwhackers

During the CIVIL WAR, the term *bushwhacker* was applied to Southerners or Confederate supporters who carried on guerrilla warfare. While the targets of bushwhackers were usually Union soldiers, property, and interests, the name also implied a tendency to plunder private citizens and property.

The violence that plagued Kansas and Missouri in the 1850s spilled over into the 1860s and gave rise to some of the most notorious bushwhackers. One example is WILLIAM CLARKE QUANTRILL, an Ohio native who led a band of bushwhackers into Kansas and sacked the town of Aubry in March 1862. A year and a half later the band raided and burned the city of Lawrence, killing about 150 civilians.

Quantrill attracted men such as Coleman and Robert Younger, Jesse and Frank James, Dave Poole, Arch Clements, "Bloody Bill" Anderson, and George Todd. Anderson and Todd later formed their own bushwhacker bands. Anderson led a bloody attack at Centralia, Missouri, in 1864 in which his guerrillas robbed a train, murdered a number of unarmed Union soldiers, and then scalped and mutilated Union militia casualties in an ensuing fight.

Some Confederate bushwhackers carried on more legitimate warfare, such as JOHN SINGLETON MOSBY, who led guerrilla operations in Union-held northern Virginia. He was commissioned a captain by the Confederate government and organized his small band of guerrillas into the 43rd Virginia Partisan Ranger Battalion. Mosby led many successful guerrilla attacks against Union RAILROADS, supply and communication lines, and bridges. Brig. Gen. JOHN HUNT MORGAN carried on similar operations behind Union lines in Kentucky and Ohio.

Bushwhackers forced the Union to increase troop numbers in vulnerable rear areas and caused several minor logistical problems. In many areas their brutality and disregard for accepted methods of warfare led to bitterness that extended well beyond the end of the Civil War.

**Butler, Benjamin Franklin** (1818–1893) *Union general, politician*

Lawyer, Democratic politician, and businessman, Union general Benjamin Butler was born in New Hampshire but lived most of his life in Massachusetts. Educated at Waterville College in Maine, Butler joined the Massachusetts bar in 1840. Although he practiced criminal law, Butler's real passion was politics, and in 1853 he won a seat in the Massachusetts State House. By 1859 he had worked his way up to the state senate as a Democrat. To support himself, Butler also operated a mill in Lowell, Massachusetts, producing wool cloth.

Although Butler was a Northerner, he hoped a moderate Southern president could avoid sectional strife. Disappointed when war erupted, he stoutly declared himself 100 percent behind the Union. Butler was appointed brigadier general in the Massachusetts Volunteers. For his service in helping to stop the BALTIMORE, MARYLAND, RIOTS in the spring of 1861, he was promoted to major general. Overall, Butler was valued far more for his political skills than his military talents. In command and in battle, Butler proved to be one of the worst of the so-called political generals, those men whose high army appointments were owed entirely to their ability to marshal support and votes for the government.

Stationed at Fortress Monroe, Virginia, Butler first came to the nation's attention when he declared fleeing slaves "CONTRABAND of war." This circumvented federal authority and antagonized slaveholders in both rebel states and border states like Maryland. Butler's unpopularity with Southern civilians grew during his administration of Louisiana as military governor in 1862. During this time, Butler issued his infamous order that forced Confederate women to treat Union soldiers with respect or to suffer severe penalties.

Although Butler's supporters considered his administration able, he was accused of corruption and even theft

by locals, who said that "Spoons" Butler had stolen silverware from the confiscated home in which he lived. Many generals were dismissed or demoted for displaying such breathtaking incompetence. Butler, however, was a wily and popular figure from an important state. Lincoln could not afford to offend him, especially since Butler switched his allegiance to the REPUBLICAN PARTY in 1862.

Butler emerged as a champion of the use of African-American soldiers and, while in New Orleans, raised the Louisiana Native Guard, one of the first two black units to fight in the UNION ARMY. Removed from the Crescent City in early 1863, Butler was placed in charge of the Department of Virginia and North Carolina. In 1864 he led the newly formed Army of the James in the campaign to take RICHMOND, where his battlefield fiascos led to his retirement, courtesy of Gen. ULYSSES S. GRANT. Butler resigned his commission on November 30, 1865.

During RECONSTRUCTION, Congressman Butler joined the RADICAL REPUBLICANS and worked for the impeachment of President ANDREW JOHNSON. He also worked to guarantee the political rights and personal safety of African Americans, including lending his strong support to the CIVIL RIGHTS ACT OF 1875.

Butler served as Massachusetts governor from 1882 until 1884. Always a champion of the working masses, he was nominated for president by the People's Party on an antimonopoly platform. However, Butler's personal and political tactics remained controversial, and he was widely despised for his documented corrupt practices. Nevertheless, in spite of his incompetence on the battlefield and his vain and arrogant demeanor, he was a devoted public servant. He helped to secure a number of important reforms, including many of the progressive race laws of Reconstruction. Benjamin Butler died on January 11, 1893, in WASHINGTON, D.C.

**Calhoun, John C.** See VOLUME IV.

**Carney, William Harvey** (1840–1908) *Civil War veteran*

William H. Carney was the first African American to receive the Congressional MEDAL OF HONOR during the CIVIL WAR. He was born in 1840 in Norfolk, Virginia, to a slave father who escaped to the North via the UNDERGROUND RAILROAD. The family settled in New Bedford, Massachusetts, one of the major stops for fugitive slaves, and briefly the home of abolitionist FREDERICK DOUGLASS. Carney was working as a laborer when the war broke out. In February 1863, the Massachusetts governor John A. Andrew organized the first all-black regiment and called for volunteers. Carney and 39 other African Americans from New Bedford joined the 54TH MASSACHUSETTS REGIMENT. The New Bedford men were part of the 54th's famed Company C.

Carney was selected to be a sergeant, one of the non-commissioned officers of the unit. After training near Boston, the 54th was sent to Hilton Head, South Carolina, to participate in the Union campaign to reduce the forts and batteries that protected Charleston. On the night of July 18, 1863, the Massachusetts Regiment led an assault on Fort Wagner, the main fortification that protected Charleston Harbor. Commanded by Col. Robert Gould Shaw, the 54th displayed great courage in battle. William H. Carney was one of the few to make it to the top of the fort, where he rescued the regimental flag from the dead color bearer. Injured three times, Carney survived the battle, and upon entering the field hospital for wounded men he told his comrades: "Boys, the old flag never touched the ground."

The regiment saw further action in South Carolina and Florida before disbanding. Carney was officially discharged on June 30, 1864. He returned to New Bedford and worked as a mail carrier and later as an elevator operator in the Massachusetts State House. After the war, Wil-

liam H. Carney gave many speeches recounting his role in the battle of Fort Wagner. He became a symbol of African-American manliness and courage, and he was memorialized in paintings and sculpture. Carney's Medal of Honor was awarded to him in May 1900, nearly 37 years after the attack on Fort Wagner. Carney died on December 9, 1908, in Boston, Massachusetts.

**carpetbaggers**

Carpetbaggers were Northerners who either moved to the South or remained in the South after the CIVIL WAR. They were one segment of the Southern Republican coalition that also included SCALAWAGS and African Americans. The carpetbaggers comprised only 16 percent of this coalition, but they dominated Republican politics in the region. They bore primary responsibility for dealing with the practical problems of reconstructing the South. Republican leaders also hoped that carpetbaggers could help to build a permanent presence for the REPUBLICAN PARTY in Southern politics.

The motivations of the carpetbaggers were diverse. Some had humanitarian motives and wanted to help the former slaves make the transition to freedom. This was certainly the case with Republican Adelbert Ames from Maine. A distinguished Union officer, Ames was the RECONSTRUCTION governor and U.S. senator from Mississippi who struggled mightily to help the freedpeople of his adopted state. Other carpetbaggers wanted to help bind the nation's wounds and to facilitate political and economic cooperation between North and South. Still others sensed

Cartoon showing Carl Schurz, a German-born editor, soldier, and politician. Despite the characterization of Schurz as a carpetbagger, he actually opposed the Radical Reconstruction policies. (*Library of Congress*)

that the postwar South offered excellent political and economic opportunities.

The carpetbaggers and their Republican allies faced a number of significant obstacles in achieving their goals, however. First, the Republican governments lacked the power to make permanent changes in Southern life. Their hold on office was tenuous at best, and even in the best of circumstances it is difficult for governments to render significant social, economic, and political change in a short period of time. An even greater issue was that the Republican coalition depended on black votes and military rule. White Southerners hated the carpetbaggers for this. Indeed, it was white Southerners who created the term *carpetbagger*, based on a stereotype of carpetbaggers as individuals who had carried their belongings South in the same cheap, carpet suitcases used by salesmen. White Southerners also maintained that carpetbaggers were corrupt and were only interested in their own personal financial and political gains.

The Southern depiction of the carpetbaggers as unscrupulous schemers has found its way into many history books. Certainly, there was some truth to this characterization. There were a number of carpetbaggers who were corrupt and who cared little about the needs of their constituents or their party. These individuals were an exception to the rule, however. Most carpetbaggers did what they could under difficult circumstances, and they achieved a few successes.

Under the carpetbagger-led governments, a public EDUCATION system was set up in every state. This was a major achievement because, before the war, North Carolina was the only Southern state with a public education system. By 1900 African-American literacy had climbed above 50 percent. In addition, civil rights protection was legislated and discrimination was outlawed. The federal CIVIL RIGHTS ACT OF 1866 required that states treat African Americans equally under the law; this was followed by antidiscrimination policies passed by Republican state governments.

As important as the successes of the carpetbagger-led governments were, they must be balanced against their failures. Carpetbaggers focused heavily on building internal improvements, particularly RAILROADS. They thought that the spread of railroads would usher in the "New South," with a modern, industrialized ECONOMY. When it came time to build, however, the railroads were often poorly planned or poorly executed. Contracts were granted to corrupt corporations, sometimes in violation of state law. By the time Reconstruction ended, only 7,000 miles of new railroad track had been laid in the South.

In addition to their belief in the value of railroads, carpetbaggers also came south looking to redistribute Southern land. This was another area in which the Republicans largely failed. With the exception of creating the South Carolina land commission in 1868, nothing was ever done to grant land to the freedmen. Virtually all African Americans were forced to work as laborers during Reconstruction. Eventually, this evolved into SHARECROPPING, which trapped African Americans in poverty.

Ultimately, then, the carpetbaggers had a mixed record. They were able to expand educational opportunities for freedmen and also to help secure the passage of important civil rights legislation on the state level. Meanwhile, they made little progress in building internal improvements and in providing land for the freedmen. The carpetbaggers also failed in their larger goal of establishing a unified, politically viable Republican coalition in the South. The era of Reconstruction left most white Southerners with a deep and abiding resentment of the Republicans, which laid the groundwork for the "REDEMPTION" of the South by white Democratic politicians. With the demise of the carpetbaggers and scalawags and the curtailing of African Americans' voting rights, the Republican Party would not again have a meaningful presence in the South for nearly a century.

## cartography

Cartography is the art of making maps and charts. Throughout the first part of the 19th century, the U.S. government spent a great deal of time and money on expeditions to map the land that the country had acquired, especially the vast Louisiana Purchase. Meanwhile, the older and more heavily settled areas of the country received very little attention from government cartographers. These areas eventually became the battlegrounds for much of the CIVIL WAR, and so the oversight created a major logistical problem for commanders on both sides, necessitating the creation of thousands of new maps.

The Union was better prepared to make the maps that were needed, since it had several experienced mapmaking units already in place, including the U.S. Coastal Survey and the Navy's Hydrographic Office. The most important was the UNION ARMY's Engineering Corps, which included a group of specialists in cartography known as the Topographical Bureau. The bureau had been created in 1816 and by the time of the Civil War had grown to 45 men under the command of Col. William E. Merrill. Only seven of the 45 cartographers resigned their commissions to join the Confederacy when the war broke out, and only two of the seven were senior members of the bureau. In addition to retaining the majority of the nation's experienced military cartographers, the Union also had better technology for duplicating maps. The North's prosperity allowed for the purchase of lithographic presses, which had only been recently developed. Although very heavy, these presses could travel with an army, and they allowed for high-quality reproductions of maps at a rapid pace.

The only real advantage that the Confederacy enjoyed in the creation of maps was that the war was largely fought in their home territory. This made it easier to make accurate maps, since local residents of an area that was being mapped could generally be counted on for assistance. However, this benefit was largely negated by other obstacles confronting Confederate mapmakers. For the first year of the war, the Confederacy had no entity responsible for coordinating mapmaking operations. Not until ROBERT E. LEE took command of the Army of Northern Virginia in June 1862 was a topographical department established, under the command of Capt. Albert H. Campbell.

Campbell's staff was small, and the materials needed for mapmaking were in short supply in the South, so it was

impossible for the Confederate mapmakers to produce anywhere near as many maps as their Union counterparts. Even the Confederate capital of RICHMOND was not completely mapped until early 1863, when the war was nearly half over. Campbell also did not have modern technology for duplicating maps, and so the maps given to Confederate field commanders tended to be much cruder than the maps used by the Union field commanders.

Despite the Union's cartographic advantages over the Confederacy, the first months of the war were largely fought without good maps on either side. During the PENINSULAR CAMPAIGN of 1862, for example, leaders on both sides of the conflict were hampered by their poor understanding of local geography. Confederate general Richard Taylor wrote that "Confederate Commanders knew no more about the topography of the country than they did about Central Africa." Union general GEORGE B. MCCLELLAN concurred, noting that "good maps were not to be found." As the war progressed, however, such complaints were less frequent. Indeed, Northern mapmakers in particular became an industry unto themselves. In 1864, the final full year of the war, the Union's various mapmaking bureaucracies produced 43,000 maps and 44,000 nautical charts. By the end of the year, virtually the entire Confederacy had been mapped.

Confederate mapmakers could not approach the level of production achieved by their Union counterparts, although they did have some notable successes. The Confederacy's finest mapmaker was Jedediah Hotchkiss, a self-taught cartographer who was on the staff of Gen. THOMAS J. (STONEWALL) JACKSON. Shortly after joining the CONFEDERATE ARMY in March 1862, Hotchkiss was instructed to make the maps needed for Jackson's SHENANDOAH VALLEY CAMPAIGN. He responded by producing what are arguably the finest maps created by any cartographer on either side of the war. Jackson went on to defeat a numerically superior Union force, and undoubtedly Hotchkiss's maps played an important role in the victory.

Of course, the Union's cartographers had a few successes of their own. Perhaps the most significant occurred in 1864, when a group of mapmakers was ordered to help make the preparations for SHERMAN'S MARCH THROUGH GEORGIA. Under the direct supervision of Colonel Merrill, they completed their "Map of Northern Georgia" on May 2, 1864. The map's level of accuracy was an impressive achievement, given that it was created by men working in enemy territory. And even when it was inaccurate, the map enabled Union commanders to coordinate their actions, since they were all working off of the same map.

Cartographers on both sides played an important role as the Civil War unfolded. By the middle of 1862, mapmakers were providing invaluable intelligence, often at a dizzying pace. Despite their valuable service, however,

they received little credit during or after the war. Indeed, they continue to remain largely obscure; their maps are not often reproduced, and mention of their work is rarely incorporated into discussions of TACTICS AND STRATEGY.

**Cary, Mary Ann Shadd** (1823–1893) *activist, author, educator, journalist*

Mary Ann Shadd Cary was a free-born African-American teacher, author, activist, and journalist. Compelled by a deeply rooted commitment to activism, she spoke out on behalf of fugitive slaves and against both SLAVERY and racism, most famously in the newspaper the *Provincial Freeman*.

Born to free African Americans on October 9, 1823, Mary Ann Shadd was the first of 13 children. She spent her earliest years in Delaware and Pennsylvania. Educated by Quakers and raised Roman Catholic, Shadd distrusted organized mainstream RELIGION because of its role in supporting slavery. In religion, as in everything else, she believed that African Americans should not assimilate but, rather, should develop their own culture while taking full measure of the opportunities of the nation as a whole.

Shadd worked as a teacher in several Northern cities before she moved with her brother to Canada West in 1850. A region roughly surrounding the Canadian side of the Great Lakes, Canada West was a common destination for escaped slaves. Initially, Shadd taught in Canada West, a part of her salary supplied by the AMERICAN MISSIONARY ASSOCIATION, a relationship she later regretted. In 1852 she published a 44-page pamphlet, *Notes on Canada West* (1852), intended to help fugitive slaves reach Canada and prosper. The pamphlet informed prospective black immigrants of local crop yields, terrain, soil, and climate conditions.

In 1853 Shadd began a career as a writer and editor. Samuel Ringgold Ward offered her a position with the *Provincial Freeman*, a journal written for the men and women of Canada West who had escaped to freedom. Shadd soon became editor of the paper, and her writing and activism made her a spokesperson for fugitive slaves as a whole.

She participated in antislavery politics with zest and vigor, wading right into the often messy fights among different factions. Expressing strong opinions, Shadd clashed with fellow writers and social workers who viewed African Americans less as citizens than as victims and REFUGEES. She also denounced the Refugee Home Society, claiming that it offered no great advantages over the refugee resettlement programs of the Canadian government. Her strident editorials alienated many supporters, and the paper failed in 1859.

In 1856 Shadd met and married Thomas G. F. Cary, with whom she had a daughter and a son. Thomas Cary died in November 1860. In 1863 Cary, now widowed, returned to the United States to assist in the CIVIL WAR. She served as a recruiting agent for the UNION ARMY in Indiana, Ohio, and Michigan, and helped organize an AFRICAN-AMERICAN REGIMENT. After the war she resettled in WASHINGTON, D.C., and from 1870 to 1874 she served as principal at a public school for black children.

Around this time Cary began to engage in the movement for women's rights. She joined the NATIONAL WOMAN SUFFRAGE ASSOCIATION, addressing that body in 1878. In 1880 she founded the Colored Woman's Progressive Franchise Association, and she returned to Canada in 1881 to organize a suffrage event. Not content with her considerable accomplishments, Cary also joined the student body of Howard University, taking evening classes in pursuit of a degree in law. It was granted in 1883, when Cary was 60 years old. She testified before the House of Representatives' Judiciary Committee to press for her right to vote, and she became one of the few women allowed to vote in elections during RECONSTRUCTION.

To the very end Mary Ann Shadd Cary denounced begging and charity as a solution for African Americans and advocated vigorous self-improvement and self-reliance. She died of cancer on June 5, 1893, leaving a powerful legacy as a journalist, teacher, and social reformer.

**Catto, Octavius V.** (1839–1871) *activist, minister*

Minister, activist, and reformer, Octavius Catto was born and raised in PHILADELPHIA, PENNSYLVANIA, and educated at the Institute for Colored Youth, a Quaker-run school for African Americans. Catto had a great deal of skill

as an orator, and after graduation he followed his father William into the ministry. He quickly became a prominent leader of Philadelphia's African-American community and an ardent civil rights activist.

Philadelphia was known in the antebellum era for its hostility toward people of color. After a visit to the city, FREDERICK DOUGLASS wrote, "There is not perhaps anywhere to be found a city in which prejudice against color is more rampant than in Philadelphia." Catto was not deterred, however. He was particularly concerned with voting rights, which had been extended to Pennsylvania's African Americans by the state constitution of 1790 and then revoked by an act of the state legislature in 1838. In hopes of regaining the vote, Catto led petition drives, attended state and national meetings of African-American leaders, gave countless speeches, and organized election day protests. The only tangible result of Catto's efforts was increased violence against Philadelphia's African-American population, including an 1849 riot that received national attention.

During the CIVIL WAR, Catto lobbied for the enlistment of African-American troops, believing that men who had taken up arms for the United States could not possibly be denied their rights as citizens. When the word came in 1863 that government would begin to accept black regiments, Catto organized a group of 100 volunteers. They traveled to Harrisburg and, after some reluctance on the part of Governor Andrew Curtin, were mustered into the UNION ARMY as part of the Sixth U.S. Colored Infantry.

After the war, Catto continued his work, and he was deeply gratified by the passage of the FIFTEENTH AMENDMENT in 1870. In October 1871, Philadelphia's first ELECTIONS after the amendment's passage, Catto traveled around town exhorting all African Americans to vote. As in 1849, there was a riot, and this time Catto was killed. His funeral was attended by thousands of people, and according to one eyewitness, "Not since the funeral cortege of ABRAHAM LINCOLN has there been one as large or as imposing in Philadelphia." Catto's murder was an early indication of what was to become a recurring theme of the RECONSTRUCTION era—legal equality for African Americans did not necessarily translate into actual equality.

## Cedar Mountain, Battle of (August 9, 1862)

At the Battle of Cedar Mountain, Confederate forces under THOMAS J. (STONEWALL) JACKSON managed to snatch victory from the jaws of defeat. The battle thus became an important step in turning back the Union offensives launched in the summer of 1862, a task that was completed 19 days later at the SECOND BATTLE OF BULL RUN.

By July 1862 GEORGE B. MCCLELLAN'S PENINSULAR CAMPAIGN had essentially failed, and he had ordered the withdrawal of Union troops from the area around RICHMOND. To the south, however, Union general John Pope was enjoying a fair amount of success. A portion of Pope's Federal forces, led by Gen. Nathaniel Banks, captured the town of Culpeper and made plans to move further south.

To neutralize the threat, 14,000 troops under Stonewall Jackson were sent to halt the Union's advance. Jackson was not himself aware that Union troops held the town of Culpeper, and so when the Confederates arrived there on the afternoon of August 9, they essentially stumbled into an ambush. Union artillery pounded the Southerners as Gen. JUBAL A. EARLY attempted to organize a line of artillery and infantry with which to fight back. The artillery battle lasted for three hours and claimed the lives of many Confederates.

At 5:00 that afternoon, Banks ordered a pair of infantry attacks against the poorly organized Confederate line. The attacks broke through and trapped many of Jackson's troops on the narrow, winding road leading to Culpeper. In the confusion, a substantial number of Southern soldiers were killed, while others threw down their guns and fled. Jackson arrived on the scene in the midst of this panicked retreat, and he responded swiftly. Jackson drew his sword, the only time this is known to have happened during the war, and he himself led the Confederate countercharge. At the same time, fresh troops under Gen. AMBROSE P. HILL arrived. This gave the Confederates a two-to-one advantage, and the exhausted Union troops were forced to fall back. What would have been a decisive defeat for the Confederates instead became a hard-won victory. The Federal forces suffered 2,381 casualties, the Confederates 1,276. So many men were wounded so quickly that some soldiers called the battle "Slaughter Mountain" in their LETTERS home.

On the next day, August 10, Union leadership decided not to continue the battle and requested permission under a flag of truce to gather their wounded and bury their dead. Jackson and his troops withdrew that evening. Less than a month later, the same armies would meet again at the Second Battle of Bull Run. Victory would be Jackson's on that occasion as well. Pope was forced to join McClellan in withdrawing from Virginia, giving the initiative to ROBERT E. LEE and allowing him to launch an offensive into Maryland in September 1862. It would be two years before

Union forces would once again penetrate so deeply into Virginia.

**Chamberlain, Joshua L.** (1828–1914) *educator, politician, Union general*

College professor, Union officer, and governor of Maine, Joshua Lawrence Chamberlain was born in Brewer, Maine, on September 28, 1828, to Joshua Chamberlain, Jr., and Sarah Dupee Brastow. Graduating from Bowdoin College in 1852 and Bangor Theological Seminary in 1855, he took a teaching position at Bowdoin and married Frances (Fannie) Caroline Adams.

In 1862, Chamberlain, age 33 and the father of two, took a leave of absence from Bowdoin and accepted a commission as lieutenant colonel of the 20th Maine Volunteer Infantry. Promoted to colonel after the BATTLE OF FREDERICKSBURG, Chamberlain ordered a bayonet charge at Gettysburg on July 2, 1863, that probably saved the Federal position on Little Round Top from being turned by the Confederates. Following a bout with malaria in 1863, he rejoined his regiment at Spotsylvania in May 1864 and was soon given command of a brigade. Chamberlain was officially promoted to brigadier general after he was badly wounded during the PETERSBURG CAMPAIGN. He returned to the army before the BATTLE OF FIVE FORKS, where he was brevetted major general for bravery. Gen. ULYSSES S. GRANT further honored Chamberlain by choosing him to receive the Confederate surrender at APPOMATTOX COURT HOUSE in 1865.

Chamberlain returned to Maine a hero. Uninterested in resuming his professorship, he secured the Republican nomination for governor of Maine and won election in 1866. After a tumultuous four years as governor, he became president of Bowdoin College and set about reforming the curriculum, with mixed results. An attempt to institute military training at the all-male college failed when the students refused to drill.

An increasingly conservative Chamberlain grew nostalgic about the war, expressed sympathy toward ex-Confederates, and applauded the end of RECONSTRUCTION. Having resigned the Bowdoin presidency in 1883, Chamberlain spent his retirement trying to recapture his wartime glory. He lectured on the 20th Maine's heroism at Gettysburg and on the surrender of Lee. He wrote magazine articles, gave Memorial Day addresses, and made frequent trips to old battlefields, especially Gettysburg. In 1893 he was awarded the congressional MEDAL OF HONOR for his leadership at Little Round Top. In his 80s, Cham-

berlain wrote a history of the Appomattox campaign (published posthumously in 1915 as *The Passing of the Armies*), that revealed his romantic view of war as the ultimate test of character.

Chamberlain died in Brunswick, Maine, on February 24, 1914, of complications from the Petersburg wound he had received 50 years earlier.

**Chancellorsville, Battle of** (April 27–May 6, 1863)

The Confederate victory at Chancellorsville capped a remarkable 11-month period during which ROBERT E. LEE built the Army of Northern Virginia into a self-confident and formidable weapon. The sheer odds against Confederate success at Chancellorsville elevated it to a special position among Lee's victories. Union general JOSEPH HOOKER had rebuilt the Army of the Potomac after AMBROSE E. BURNSIDE's removal from command in late-January 1863. Previously one of Burnside's most vocal critics, Hooker quickly scrapped his predecessor's bulky "grand division" scheme, recombined all his cavalry into a single corps, and introduced distinguishing corps badges to improve esprit de corps. Hooker entered the Chancellorsville campaign at the head of a force with ample equipment, strong discipline, and high morale. He pronounced it "the finest army on the planet."

During the winter of 1862–63, Lee had dispersed his cavalry to secure sufficient fodder and detached two divisions under JAMES LONGSTREET to southeastern Virginia. These measures left him with approximately 61,000 soldiers to face 133,000 Federals. Hooker thus enjoyed the widest margin of manpower of any Union general who had fought against the Army of Northern Virginia to that point in the conflict. But the imbalance of numbers had a minor effect on events due to Hooker's gross mismanagement. It was the stark disparity in leadership that yielded decisive dividends for the South.

Hooker added an impressive strategic blueprint to his material advantages. He planned marching the bulk

Battle of Chancellorsville, May 1–4, 1863. Lithograph by Currier & Ives (Library of Congress)

of his army up the Rappahannock River in a wide turning movement around Lee's left. At the same time, a sizeable force under John Sedgwick would cross the Rappahannock opposite Lee at Fredericksburg to hold the Confederates in place. As a third element in the plan, Federal cavalry under George Stoneman would swing around Lee's left before striking south toward RICHMOND, VIRGINIA. If all went well, Lee would be caught between Hooker's powerful turning column to the west and Sedgwick's troops in his front. Confederate options, thought Hooker, would be limited to a retreat toward Richmond or desperate assaults against one or both of the major components of the Army of the Potomac. Few in the Union headquarters could have anticipated Lee's audacious response to this threat.

The campaign unfolded rapidly after Hooker began his march up the Rappahannock on April 27, 1863. The Federals crossed the Rappahannock and Rapidan Rivers, and by evening on April 30 the flanking force reached the crossroads of Chancellorsville, 10 miles in Lee's rear. There Hooker's soldiers lay in the midst of the Wilderness

of Spotsylvania, a scrub forest heavily cut over to feed small iron furnaces in the area. Hooker brimmed with confidence on the night of April 30. He stated that "our enemy must either ingloriously fly, or . . . give us battle on our own ground, where certain destruction awaits him."

Lee responded to Hooker's actions with a series of typically bold moves. Assigning roughly 10,000 men under JUBAL A. EARLY to watch Sedgwick at Fredericksburg, Lee and THOMAS J. (STONEWALL) JACKSON hurried the rest of the Army of Northern Virginia westward to stop Hooker. The decisive moment of the campaign occurred on the morning of May 1, when the vanguards of Hooker's and Lee's forces collided near Zoan Church on the road between Chancellorsville and Fredericksburg. The sudden and unexpected appearance of the Confederates to their front convinced many Union commanders that Lee himself had arrived before them in great strength. Hooker lost all offensive spirit, immediately ordering a withdrawal back to Chancellorsville. Like a frightened child bravely announcing there are no ghosts in the dark, Hooker told

a subordinate that he had “Lee just where I want him; he must fight me on my own ground.”

On the night of May 1, Lee and Jackson decided on a bold flanking maneuver of their own, which Jackson executed successfully the next day. This daring expedition required Lee to divide his small force again, only this time in the face of the enemy. A bold opponent could have readily exploited such a dangerous maneuver, but Lee was counting on Hooker’s timidity. Jackson’s attack on May 2 routed the Federal XI Corps on Hooker’s extreme right flank, but the bulk of Hooker’s army remained between the two pieces of Lee’s force at Chancellorsville. With the highly capable Jackson also wounded in action, the command devolved upon Gen. J. E. B. STUART. Hooker failed to exploit this opening, pulling his men into a tighter defensive position in the face of heavy Confederate assaults on May 3. When Lee learned on that day of Sedgwick’s success in breaching Early’s line at Fredericksburg, he divided his army a third time. Leaving 25,000 men under Stuart to keep an eye on Hooker, Lee concentrated the balance of his men several miles west of Fredericksburg at Salem Church, where the Confederates won a fumbling victory against Sedgwick on May 4. Lee then prepared to march back and finish off the main Union body, but Hooker, disregarding the pleas of subordinates, resolved to retreat first. By the morning of May 6, the Army of the Potomac had retreated to the north bank of the Rappahannock, returning the strategic situation to precisely where it had been at the outset of the campaign.

Lee had crafted a victory often termed his “masterpiece” but at a cost of more than 12,500 casualties, including Stonewall Jackson, who was shot by his own men in the confusing aftermath of the famous flank attack on May 2 (he died eight days later). Hooker’s losses totaled roughly 17,250, a much smaller percentage of his army.

Chancellorsville spread optimism throughout the Confederacy and cemented a bond between Lee and his soldiers unrivaled in any other army during the CIVIL WAR. Lee believed his men could accomplish the apparently impossible—a circumstance that would influence his actions two months later at Gettysburg. On the Union side, many officers and soldiers in the Army of the Potomac, disgusted with Hooker’s decision to withdraw on May 1, believed they had not been given a chance to win the battle. On the HOMEFRONT, ABRAHAM LINCOLN realized on May 6 that Hooker had failed. A newspaperman recorded the anguished president’s reaction: “My God! My God! What will the country say?”

**Chase, Salmon P.** (1808–1873) *U.S. senator, secretary of the Treasury, Supreme Court justice*

Salmon Portland Chase was born on January 13, 1808, in Cornish, New Hampshire. He was educated at Dartmouth and, following a very brief career as a teacher in WASHINGTON, D.C., studied for and passed the bar in 1829. Chase then set up his own practice in Cincinnati, where he soon established a notable reputation and connections to local abolitionists through his work on several cases arguing against the Fugitive Slave Act. Living in a city that bordered the slave state of Kentucky, the young lawyer gained recognition in 1837 when he took on the case of an alleged fugitive. Although he lost this first case, Chase continued to formulate his arguments against the act in particular and against SLAVERY in general, and in 1841 he acquired even more fame for a victorious decision in a case that paralleled his earlier defeat.

These legal battles not only supported his practice but also fueled his political ambitions. Initially a convert of the Liberty Party in Ohio, he later promoted the Free-Soil Party and entered the U.S. Senate in 1848 on the shoulders of a coalition encompassing the Free Soilers and the Democrats. While in the Senate he vacillated between the two parties but remained steadfast in his views against slavery and its extension, which meant that he voted against all the measures of the Compromise of 1850. Although he served only one term, his political career continued to flourish, and he subsequently affiliated himself with the new party that had risen to challenge the Democrats. In 1856 he was elected governor of Ohio and thus became the first Republican governor of a major state in the Union.

After serving two terms as governor, Chase returned to the U.S. Senate in 1860. Following the presidential election and numerous political maneuverings, Chase abdicated his position when Lincoln selected him to head the Treasury Department despite Chase’s lack of a finance background. Over the next several years, the former senator worked hard to support the astronomical costs of the war. His joint efforts with the Philadelphia banker JAY COOKE

gained the support of both the banking community and the Northern public for government bonds that enabled the UNION ARMY to remain provisioned with the necessities to continue in the field. Although forever devoted to hard specie, Chase acted based on necessity when he decided to issue GREENBACKS as legal tender in 1862, as the costs of the war continued to put pressure on a somewhat unstable Northern ECONOMY. His tireless efforts to create a system of federally chartered banks also came to fruition in the National Banking Act that became law early in 1864.

Yet for all of his financial responsibilities, Chase never abandoned his political interests and ambitions. He actively advised the president on military affairs in and out of cabinet meetings, and he favored EMANCIPATION long before Lincoln's proclamation became legislation. But the looming election of 1864 and the possibility of a presidential nomination also remained on his mind. This very ambition led to his ill-fated involvement with various schemes with congressional Republicans to promote his position. Chase's constant political maneuverings had often led him into conflict with Lincoln, and in June 1864 he lost his post when Lincoln accepted his impulsive resignation following one of their disputes.

Only six months later Chase returned to the law when Lincoln named him to replace Chief Justice Roger Brooke Taney on the Supreme Court. In the years that followed, Chase encouraged both universal suffrage and universal amnesty in a moderate RECONSTRUCTION of the South. As chief justice, he presided over the IMPEACHMENT OF ANDREW JOHNSON, and although opposed to Johnson's policies, he was largely responsible for imposing a judicial—as opposed to a partisan legislative—structure on the proceedings. Yet Chase still aspired to the presidency and later in 1868 appeared to compromise many of his principles on equal rights for African Americans in his attempt to gain the Democratic nomination. Once again his reputation suffered and his political aspirations fell short of the mark. Over the next five years, Chase maintained his position as chief justice, striving for universal suffrage and struggling with an ever-deteriorating physical condition.

Salmon Chase died in NEW YORK CITY on May 7, 1873.

## Chattanooga, Battle of (November 23–25, 1863)

The battle for control of Chattanooga, Tennessee, took place on November 23–25, 1863. The ultimate victory of the UNION ARMY, commanded by Maj. Gen. ULYSSES S. GRANT, placed the strategically important city of Chattanooga, Tennessee, in Union hands for the remainder of the war.

After the BATTLE OF CHICKAMAUGA, fought September 19–20 in northwestern Georgia, the Union army under Maj. Gen. WILLIAM S. ROSECRANS retreated to Chattanooga, while the victorious CONFEDERATE ARMY occupied and fortified the heights of Missionary Ridge and Lookout Mountain to the south and west of the city. President ABRAHAM LINCOLN ordered Maj. Gens. JOSEPH HOOKER and WILLIAM T. SHERMAN with their corps to Chattanooga, bringing the total Union force to about 70,000. Lincoln also ordered Gen. Grant to Chattanooga. The president had just promoted Grant to commander of all western Union forces. Grant immediately replaced the incompetent Rosecrans with Maj. Gen. GEORGE HENRY THOMAS, the “Rock of Chickamauga.”

Confederate president JEFFERSON DAVIS sent Lt. Gen. JAMES LONGSTREET and his three divisions from Chattanooga to Knoxville, Tennessee, leaving Bragg with about 40,000 men. Three brigades commanded by Maj. Gen. Carter L. Stevenson were positioned on Lookout Mountain. On November 24, 1863, in what has been romanticized as the “Battle above the Clouds,” Hooker's men swept up the northern slope of the steep mountain, causing Stevenson's outnumbered troops to break and retreat to the southern tip of Missionary Ridge.

The day before, Thomas's corps had gained Orchard Knob, a small promontory facing the center of Missionary Ridge. As Hooker moved toward the south of the ridge and Thomas faced the center, Sherman's troops prepared to attack the northern tip, called Tunnel Hill, in what was intended to be the main thrust of the Union army.

The Confederates were positioned with their right flank at Tunnel Hill, protected by the division under Maj. Gen. PATRICK R. CLEBURNE. Stevenson's division held the left flank, at the southern end of Missionary Ridge, while Maj. Gen. John C. Breckinridge's corps held the center. Around 10 A.M. on November 25, Sherman's corps attacked Cleburne's division, which managed to stave off the Federal flank attack.

Thomas's Army of the Cumberland was instructed to take the rifle pits along the base of the ridge in a movement to prevent Bragg from reinforcing his flanks. The Union soldiers, about 20,000 strong, advanced from Orchard Knob and easily overtook the Confederate rifle pits. However, many Federals, unexpectedly and without orders, began moving up the side of the ridge in a charge that is called the “Miracle of Missionary Ridge.” The

Confederates at the top were overwhelmed and scattered down the eastern side. Only Cleburne's division remained intact enough to complete a successful rearguard action, and soon the entire Confederate Army of Tennessee retreated to Dalton, Georgia. Total casualties numbered 5,824 for the Union and 6,667 for the Confederacy.

Jefferson Davis accepted Bragg's resignation and gave command of the Confederate Army to Gen. JOSEPH E. JOHNSTON. Grant secured Chattanooga for the Union army, and the city served as the supply base for Sherman's army as it advanced toward Atlanta. Almost all of Tennessee was now in Union hands, as well as the vital rail connections that ran from Nashville to Chattanooga.

**Chesnut, Mary B.** (1823–1886) *Confederate diarist*  
Born March 31, 1823, in Statesboro, South Carolina, diarist and author Mary Boykin Chesnut is best known for her extensive accounts of the CIVIL WAR. The daughter of Mary Boykin and Stephen Decatur Miller, a U.S. congressman and senator, as well as governor of South Carolina, her mother's life was shaped by Southern politics. Her father, elected governor as a supporter of nullification, returned to the U.S. Senate after his gubernatorial term and continued to support Southern rights.

Mary received an extensive EDUCATION, first at home and in local schools and then at a French boarding school in Charleston. Two years after her father died, Mary married James Chesnut, Jr., in 1840. The two moved to WASHINGTON, D.C., in 1858 after James's election to U.S. Senate. There Mary played hostess to many powerful people, including the future leaders of the Confederacy. After ABRAHAM LINCOLN's election, the Chesnuts returned to South Carolina, where James helped draft the state's December 1860 ordinance of SECESSION.

With the outbreak of war, Mary began keeping an extensive journal to record the historic events occurring around her. As the wife of a Confederate dignitary (James served as a member of the Provisional Congress of the CONFEDERATE STATES OF AMERICA as well as an aide to Gen. P. G. T. BEAUREGARD and President JEFFERSON DAVIS), Mary entertained many Southern leaders. In her diaries, Chesnut commented on meetings and parties with the Confederate elite, including President Davis and his

wife Varina. Chesnut also recorded her views on SLAVERY, war, and Southern society in general. The diaries reveal a woman confident in her intelligence and beauty.

After the Civil War, Chesnut attempted to use the information in her wartime diaries to write a Civil War novel. Ultimately, however, she devoted years to the revision of her diaries for publication. Through these heavy edits, Chesnut elaborated on specific topics and eliminated comments that revealed personal flaws. Her diary, first published in 1905 as *A Diary from Dixie, as Written by Mary Boykin Chesnut*, reflected these revisions as well as those by the editors of the volume. The diary reemerged in 1949 as *A Diary from Dixie by Mary Boykin Chesnut*. In 1981 a new edition of the diaries, *Mary Chesnut's Civil War*, proposed to present a fuller picture of Chesnut's edits and original journals. Mary Boykin Chesnut died in 1886 before the publication of her diaries.

### **Chickamauga, Battle of** (September 19–20, 1863)

Chickamauga was a campaign and battle fought in the western theater of operations between Union major general WILLIAM S. ROSECRANS's Army of the Cumberland and Confederate Gen. BRAXTON BRAGG's Army of Tennessee.

Following Rosecrans's successful Tullahoma campaign in June and July of 1863, Bragg's 44,000 soldiers withdrew across the Tennessee River and concentrated near Chattanooga, Tennessee, while the Union's 59,000 forces refitted on the western side of the Cumberland Plateau. Rosecrans advanced on August 16, intending to seize the major TRANSPORTATION center at Chattanooga and force the CONFEDERATE ARMY back toward Atlanta.

Rosecrans crossed the Tennessee River south of Chattanooga at the beginning of September, advancing his army across the rugged terrain and into Georgia with three corps spread across a 40-mile-wide front. Bragg responded by concentrating his forces in a central position around Lafayette. Simultaneously, Confederate reinforcements from Knoxville, Mississippi, and Virginia raised his combat strength to more than 60,000 soldiers, thereby outnumbering Rosecrans's command. Bragg's aborted ambush of Maj. Gen. GEORGE HENRY THOMAS's corps at McLemore's Cove on September 10 alerted Rosecrans to the danger

facing his widely scattered army. For the next week both armies raced north to Chattanooga. On September 18, the two armies clashed along Chickamauga Creek as Bragg's forces began attempting to outflank the UNION ARMY.

The fighting on September 19 was essentially a meeting engagement west of Chickamauga Creek. In spite of fierce fighting, neither side gained advantage over the other. By nightfall, Rosecrans had succeeded in concentrating his forces in a strong position along the Lafayette-Chattanooga Road.

During the evening, both sides modified their command structure. George Henry Thomas informally assumed command of four to five divisions in a salient east of Kelly Field on the north of the battle line, while Rosecrans directed the remaining Union forces in the south. Bragg attempted a more formal reorganization into two wings, assigning Lt. Gen. Leonidas Polk to the right and Lt. Gen. JAMES LONGSTREET, who arrived during the night, to the left. From the perspective of subordinate commanders, however, the day began with command arrangements in both armies somewhat confused.

In the north, Polk's attack on September 20 began several hours late. Thomas's troops, massed behind breastworks, slaughtered rebel infantry at close range. Timely Union reinforcements drove back potentially damaging enemy attempts to flank this line from the north. In the center, a dispute between Rosecrans and one of his division commanders around 11 A.M. resulted in a break in the Union line. By coincidence, Longstreet launched three divisions and more than 10,000 men into that gap almost as soon as it appeared. Union forces on the left scattered, and Rosecrans and his staff retreated from the battlefield. Thomas ultimately rallied about half the army on Snodgrass Hill and defeated poorly coordinated Confederate attacks for the remainder of the day. At nightfall, he withdrew all Union forces back to Chattanooga.

Confederate forces lost 18,000, and the Union 16,000 killed, wounded, and missing. While this largest and bloodiest battle in the western theater resulted in a Confederate tactical victory, only two months later the Union had taken Chattanooga, the gateway to the South.

### Christiana, Pennsylvania, riot (1851)

The Christiana riot was the first well-publicized resistance to the second fugitive slave law, which was passed by Congress as part of the Compromise of 1850. The Fugitive

Slave Law was widely hated in the North because it required not only state officials but also ordinary citizens to help recapture runaway slaves.

The chain of events leading to the riot began when four slaves belonging to Edward Gorsuch of Maryland escaped to Christiana, a Quaker village in southeastern Pennsylvania and the home of a number of sympathetic white abolitionists who were part of the UNDERGROUND RAILROAD network. Gorsuch, accompanied by a group of supporters and a U.S. marshal, approached the house of William Parker with warrants for the escaped slaves. William Parker was known in the community as the leader of an African-American self-defense organization, dedicated to helping fugitives liberate themselves.

Gorsuch and the marshal entered the two-story stone house and demanded that Parker turn over the slaves. Outside, Gorsuch's supporters waited with guns loaded; inside, William Parker refused to give up the fugitives. Members of his organization, hiding upstairs, were also armed and ready to resist. A violent clash ensued in which Gorsuch was killed and his son injured. Parker and five others escaped to Canada. In the aftermath, 36 black people and four white people were arrested and charged with treason against the United States. None were convicted, but the trial became the occasion for a full-fledged debate over SLAVERY. One local newspaper described the disturbance as "Civil War, First Blow Struck."

Christiana was one of many such examples of black and white peoples' resistance to the Fugitive Slave Law and the system of slavery in the 1850s. Along with such notable events as the Anthony Burns trial in Boston, Massachusetts, in 1854, the Christiana riot brought what FREDERICK DOUGLASS called "the battle for liberty" to the forefront of the political agenda.

### cities and urban life

Life in American cities changed rapidly between 1856 and 1868. The industrializing country was in a time of transition, as advancements in TRANSPORTATION, manufacturing, and the ECONOMY altered city landscapes dramatically. Factories attracted a growing number of immigrants, swelling the population of cities. Industrialization proceeded at a rapid rate, particularly following the CIVIL WAR, laying the foundation for America's rise to

international prominence and making cities such as NEW YORK CITY, Boston, PHILADELPHIA, and Chicago some of the most important urban centers in the world.

Improvements in transportation during the Industrial Revolution provided the engine of urban expansion. The ability to move goods cheaply pushed manufacturing to increase its output. In the years leading up to the Civil War, canals and RAILROADS progressively linked more cities together, creating larger markets for products. Most of these new transportation routes linked cities in the North and West, while the more agricultural South lagged behind in terms of economic development. The new connections between northern and western cities brought a more unified economic and political outlook to these regions, leaving the South isolated and aggravating the growing rift between North and South.

Cities expanded in land area. Before 1840 nearly all residents of a city lived within two miles of their place

of work. New inventions, including a large horse-drawn carriage known as an omnibus, and expanding rail lines allowed people to move away from the center city and into suburbs. The new advances in public transportation were important because the population of American cities grew to dangerously high levels.

The first great wave of IMMIGRATION from Europe to the United States began in the 1840s. Most of these immigrants came from Germany and Ireland, and they settled in cities in hopes of finding jobs in new factories. Throughout this period, an average of 2.4 million people immigrated to the United States per decade. By the 1870s, an increasing number of immigrants arrived from southern and eastern Europe, bringing new groups, such as Italians, Poles, and Russians, into the United States. Immigrants also came from Asia, with more than 300,000 Chinese immigrating to the western states. Many new Americans settled in ethnic neighborhoods, living in unsanitary tenement houses.

Engraving showing underground lodgings for the poor, Greenwich Street, New York City (Library of Congress)

Despite these problems, people flocked to the United States in the hope of finding work in the country's exploding industrial economy.

The Industrial Revolution created new social classes in American cities. The middle-class and wealthy members of society could afford to move into larger houses in the suburbs and escape the growing congestion of the cities. Husbands could support a family by working in management or other professional jobs. Their income allowed their wives to shop for the latest goods well as hire servants to help manage the household. Working-class and immigrant families did not have the same advantages. In many cases, all members of the family had to work. Sometimes husbands, wives, and children worked together in the same factory. In other cases, women took jobs as household servants, seamstresses, or laundresses in order to supplement a family's income.

Disposable income, for those who had it, meant manufacturers could produce and sell an ever-increasing number and variety of consumer goods. The first department stores were built in the late 1840s, and by the late 1860s and 1870s shoppers could go to one store and find a wide assortment of goods at reasonable prices. The continued demand for department-store goods helped fuel the pace of industrialization throughout the 19th century.

As cities became larger, intellectuals and city planners worried that urban residents might lose touch with the natural world. Some cities built large parks in an attempt to preserve some contact with nature as well as to beautify the landscape and give people a place to enjoy outdoor activities. The most famous, New York's Central Park, inspired other American cities to enact their own park-building programs. The creator of Central Park, FREDERICK LAW OLMTED, designed many other parks around the nation, including San Francisco's Golden Gate Park. Some people disliked the rowdy working-class sports that emerged, but the idea of a small bit of nature in the midst of the expanding city remained popular.

U.S. cities had a seamy underside. Civil War-era America saw rising crime rates make cities even more dangerous places to live. Philadelphia, for example, saw murder rates, indictments, and convictions rise steadily from the 1850s to the 1880s, with the exception of the war years (1861–65). The rise of crime rates was accompanied by a rise in gun ownership and alcohol use. Ethnic tensions between new and old immigrant groups and racial tensions between blacks and whites complicated efforts to unionize workers and accounted for an increase in violent confrontations.

Increasingly professionalized police departments helped to counter crimes committed against both individuals and property. As early as the 1830s and 1840s, cities like Boston, Philadelphia and New York were pushing for

efficient and reformed police forces. The London Metropolitan Model was considered a good example for U.S. cities to follow. The London model advocated police to be paid regularly, to be uniformed and organized into a hierarchy, and to be responsible to city officials. From the 1850s onward, the rise in property-based crime generally drove reform in America's urban police departments. Reform was driven by different events, issues, and constituencies in each city across the country. For instance, in Buffalo, New York, the business community began that city's push for a professional police force in 1866 and successfully instituted important changes.

Across urban America, fire departments benefited from the drive to professionalize the police. Indeed, urban businesspeople and concerned property owners were behind many of the drives to professionalize both police and fire services in U.S. cities. Fire fighters changed from volunteer forces to professional forces due largely to two factors: first, consistent pressure from businesspeople, merchants, and insurance companies for stricter protection (including crime prevention, building codes, and fire fighting) of all forms of property interests; and, second, the rise of expensive, steam-powered equipment that demanded fewer personnel to manage but that required more training to operate. Necessarily, the impulse for professionalization of all urban services, including sanitary collection and welfare and hospital institutions, continued to dominate the agenda of urban reformers at this time.

Throughout the Civil War era, economic, political, and social events shaped and were in turn shaped by a remarkable spurt in U.S. urban growth. New immigrant streams, the establishment of shopping centers, the rise of a manufacturing economy, crime and fire prevention, and developments in recreation and transportation all altered the fabric of daily life in American cities.

### citizen-soldier

Citizen-soldier is a concept with deep roots in the nation's history. The COMMON SOLDIERS who made up the volunteer armies of the CIVIL WAR knew that previous wars had called upon white male citizens to drop their ordinary occupations and spring into action in the service of their nation. Taking up arms and defending community and country against foreign invaders or domestic threats was an important part of citizenship in a democracy. Afterward, if all went well, the citizen-soldiers would return to their normal lives, secure in the knowledge that they had done their duty. Reasonably, they could expect the country to be grateful for their sacrifices and reward them. This was the case in the American Revolutionary War and in the Mexican-American War of 1846–48.

Glorying in the democratic traditions of their military endeavors, Americans did not trust professional armies, and for good reasons. Britain's "standing army" was associated with the violation of rights endured by the American colonists beginning in the 1760s. The U.S. Constitution provided the power for Congress "to raise and support armies," but the Second Amendment endowed states with the right to maintain militias. A rough-and-ready system of state militias emerged by the 1790s, manned by volunteers as the necessity arose.

Notoriously inefficient and undisciplined, militias composed of citizen-soldiers nonetheless remained the preferred method of waging war throughout the 19th century. Necessarily, the professional army was tiny and viewed with suspicion. Politicians regularly threatened to close the UNITED STATES MILITARY ACADEMY AT WEST POINT. A professional cadre of officers whose loyalty was to the army, not the people, could pose a threat to democratic institutions. On the other hand, the ideal of the citizen-soldier embodied the traditions of popular will and representative government. Both the Union and Confederate armies raised the majority of their men by calling upon the ideal of the citizen-soldier.

### civil liberties, Confederate (1861–1865)

Wartime expedients imposed during the CIVIL WAR restricted the rights of Confederate citizens. In February

1861 when Confederate president JEFFERSON DAVIS was sworn into office, he vowed to preserve and protect the rights and freedoms of all Southern citizens. He openly contrasted his own position with that of President ABRAHAM LINCOLN, whose behavior he denounced as "tyrannical." Davis was a strict constitutionalist who earnestly tried to uphold the Confederate constitution and STATES' RIGHTS. Article I, Section 9 of the newly written constitution of CONFEDERATE STATES OF AMERICA included the same civil liberties listed in the amended U.S. document. Less well known is the fact that the Confederate constitution also endowed the national government with the identical powers (as in the United States) to protect itself against threats to its existence, including a "necessary and proper clause," and a provision enabling the suspension of HABEAS CORPUS. Within a year the exigencies of war drove Davis and the CONFEDERATE CONGRESS to suppress citizens' civil liberties in order to ensure the survival of the Confederacy. These actions—including press censorship, the imposition of martial law, civilian arrests, CONSCRIPTION, IMPRESSMENT of property, and the suspension of habeas corpus—caused widespread controversy but were supported by the Davis administration, Congress, and the courts as necessary to defeating the enemy.

The Southern press was targeted as early as January 1862, when the Confederate Congress forbade newspapers to print news of military operations, particularly defeats. The ardently pro-Union *Knoxville Whig*, edited by William G. Brownlow, was also summarily shut down by Confederate authorities in Tennessee. Davis, however, was not eager to alienate prominent editors, and few other papers were closed. In 1863 the Confederate Senate entertained a sedition bill that would have clamped down further on freedom of the press, but the measure was roundly condemned, as most politicians openly supported free speech.

In February 1862 Davis next found it expedient to declare martial law, and with the consent of Congress he did so, especially in the Norfolk and Richmond regions of Virginia. Citizens suspected of treasonable behavior could be arrested and held without charge. Those detained were also liable to face military tribunals instead of civil courts. To underscore his determination to suppress dissent, Davis also appointed a military governor of RICHMOND, VIRGINIA. His appointee, Gen. John H. Winder, began rounding up individuals regarded as potentially treasonous. Among them were former congressman John M. Botts, who had advocated neutrality, and Rev. Alden Bosserman, who publicly prayed for Union victory in "this unholy rebellion."

As the tide of military events swung against the South, the Confederate government began imposing greater restrictions upon the very civil liberties it had pledged to uphold, all in the name of national security concerns. By

April 1862 the initial enthusiasm for war had waned, and the Confederate government resorted to the first military conscription law ever imposed in American history. For a government dedicated to the protection of “Southern rights,” such a move appeared antithetical to its founding principles. But Davis felt that the flagging war effort demanded no less. Immediately unpopular, conscription exempted from military service wealthy individuals who purchased substitutes, as well as plantation owners who possessed 20 slaves or more. The resentment generated by such privilege provoked accusations that the Confederate government was waging “a rich man’s war and a poor man’s fight.” Davis was attacked from many quarters over conscription, with his own vice president, ALEXANDER HAMILTON STEPHENS of Georgia, among the most vocal detractors. Despite the law’s undeniable success in raising troops for the army, many dissenters pointed out that conscription, along with martial law and suspension of habeas corpus, was undermining public support for the government and the war effort.

Another wartime contingency was impressment, or government seizure of private property. As early as August 1861 Congress passed laws that required the forced removal of enemy aliens from the Confederacy and government confiscation of their property. Within a year the same principle was applied to the goods of the general population: Cotton, crops, and livestock could be legally appropriated by impressment agents and then sold for profit on the open market. Impressment further alienated Southerners’ sentiments against the war. Many claimed impressment was unconstitutional and, as with other perceived abridgements of rights, cast their opposition as a protest against the violation of civil liberties. The system was susceptible to corruption, and wealthy planters frequently used their political connections to spare their own acreage. Thus the burden of impressed goods fell upon the general population, largely subsistence farmers with little to spare. The preferential treatment accorded slave owners stoked further resentment: Slave owners received \$2,500 apiece for slaves who died under impressment, whereas compensation for pensioned soldiers, widows, and orphans fell short.

In sum, the measures taken by the Confederate government were both unpopular and, according to its critics, marked by class favoritism. Resentment against the government and wealthy planters increased in direct proportion to increases in casualties and confiscation, and some historians have argued that this disaffection inspired desertion that by 1865 joined with battlefield defeats to sink the Confederacy. Others disagree, noting that the controversies over civil rights issues did little to diminish white Southerners’ devotion to their cause.

### civil liberties, Union (1861–1865)

Wartime expedients were imposed during the CIVIL WAR that abridged the rights of U.S. citizens. The United States, a federal republic with closely prescribed civil liberties enshrined in the Bill of Rights, faced an unprecedented challenge to its continued existence when the war erupted in April 1861. The U.S. Constitution contained provisions that enabled the national government to expand temporarily its power to protect the national government’s viability under extreme circumstances. Article I, Section 8, includes a “necessary and proper clause,” and Section 9, paragraph 2, states: “The privilege of the writ of HABEAS CORPUS shall not be suspended, unless when in cases of rebellion or invasion the public safety may require.” President ABRAHAM LINCOLN’s administration soon found it necessary to claim those powers. Compelled by military necessity to keep border states such as Maryland, Kentucky, and Missouri in the Union fold, Lincoln took bold and immediate action to forestall any political drift toward the Confederacy.

The first and most decisive step was the suspension of writs of habeas corpus, a constitutional protection against arbitrary arrest and detention without trial. This was undertaken in the very first weeks of the conflict, as WASHINGTON, D.C., the seat of government, was surrounded by Confederate Virginia to the south and a very unstable, Southern-leaning Maryland to the north. Consequently, several outspoken secessionists, such as Baltimore mayor John Merryman, were detained without warrants until military reinforcements arrived to maintain Union authority in the state. Supreme Court justice Roger Taney opposed Lincoln’s action, ruling in *Ex parte Merryman* that the chief executive lacked any constitutional authority to suspend writs. But Lincoln, backed by military authority as per his constitutional role as commander in chief, simply ignored the ruling and quietly rounded up and detained known and suspected secessionists. The pace of arrests slackened greatly as months went by: The threat of arbitrary detainment, substantiated by the experience of Merryman and others, had curbed Confederate sympathizers in Maryland and other critical areas. In this respect, the suspension of

civil liberties played a vital role in preserving the national government and its ability to wage war.

Outrage over perceived suppression of civil liberties continued, next concerning CONSCRIPTION, which violated deeply held beliefs in the right of male citizens to volunteer, rather than be compelled, to offer their services. Battlefield casualties had diminished enthusiasm for volunteers by the end of summer 1862, and the U.S. government passed the second draft law in American history (the first passed by the Confederates in spring 1862). In both the North and the South, the acts were condemned but never seriously challenged by the courts or Congress. Lincoln's opponents condemned his draft measures as yet another example of tyranny. The president's response was typically swift and decisive: He again suspended writs of habeas corpus. This time, however, he applied the policy across the entire North, not simply in the border states. Moreover, it targeted not just dissenting politicians but also newspaper editors. Federal authorities shut down many publications critical of the administration, such as the *New York World* and *Philadelphia Evening Journal*, in quick succession. Other newspapers, such as the German-language *National Zeitung*, were denied mailing privileges. Thousands of dissenters and agitators throughout the North were likewise arrested, detained, and subject to military tribunals. Physical abuse of detainees was not uncommon, and administration officials certainly knew of it, but Lincoln never issued an executive directive to mitigate mistreatment. The most visible target of Lincoln's political crackdown was former congressman Clement L. Vallandigham, a "Peace Democrat," or "COPPERHEAD," from Ohio who denounced administration tactics in several antiwar speeches. He was arrested by Gen. AMBROSE E. BURNSIDE and deported to Confederate territory. Such actions stirred another chorus of condemnation, but this time it included several of Lincoln's former political allies, such as editor HORACE GREELEY. By 1864 the Lincoln administration pulled back on arrests, although it still used military courts for its purposes. In 1866 the U.S. Supreme Court declared military tribunals unconstitutional in regions where civil law and courts were viable, a significant finding although the tribunals continued operating full tilt during RECONSTRUCTION. The Court further declared that habeas corpus and civil courts were immune from suspension by martial law and that imposition of martial law itself was applicable solely to areas of armed conflict. Prewar civil liberties had thus been reaffirmed at the highest levels.

### Civil Rights Act of 1866 (April 9, 1866)

With the passage of the THIRTEENTH AMENDMENT in 1865, SLAVERY was abolished. At that point, however, it was not altogether clear what freedom would mean for the ex-slaves. White Southerners quickly tried to answer that question, passing a series of discriminatory BLACK CODES that were designed to keep the freedmen in a subordinate position. Northerners were outraged by the South's unwillingness to change and by President ANDREW JOHNSON's failure to do anything about the situation. Congress felt compelled to act, and the result was the Civil Rights Act of 1866. The act was a landmark, the first time in history that the federal government took responsibility for protecting African Americans' civil rights.

The Civil Rights Act of 1866 was written mostly by moderate Republican senator Lyman Trumbull of Illinois. The bill was not specifically addressed to the problems of African Americans but, instead, was meant to provide a definition of citizenship for all Americans. It enumerated the "fundamental rights belonging to every man as a free man," particularly the rights to inherit, purchase, lease, hold, and sell property. The bill also provided for the prosecution of anyone who tried to interfere with these rights.

Although the Civil Rights Act of 1866 was moderate in its terms, it provoked a great deal of criticism. Radicals felt the bill did not go far enough. They hoped to include provisions for land redistribution and even suffrage. They also did not approve of the fact that courts would be responsible for enforcing the act, as opposed to the military. Ultimately, the RADICAL REPUBLICANS came to realize that the bill was better than nothing, and they lent their support. The act was passed in both houses of Congress by a comfortable margin.

Conservative Democrats also opposed the Civil Rights Act of 1866. They felt it went too far in protecting the freedmen and gave too much power to the federal government. Democrats in Congress could do little to stop the passage of the bill, but President Andrew Johnson could. He promptly vetoed the act, labeling it "another step, or rather stride, toward centralization and the concentration of all legislative powers in the National Government." On April 9 Congress overrode Johnson's veto and the Civil Rights Act of 1866 became law. This was the first time in the history of the United States that a president's veto of a major piece of legislation was overridden.

The Civil Rights Act of 1866 ultimately had little impact on the lives of freedmen. Its provisions were generally ignored by white Southerners, and there was confusion about whether state or federal courts were responsible for enforcement. The act did have a dramatic impact on national politics, however. It demonstrated to congressional leaders that drastic action was needed, and within a decade, the Civil Rights Act of 1866 would be followed by a pair of constitutional amendments and three more civil rights bills. In addition, the debate over the bill served to heighten the tension between Andrew Johnson and Congress, ultimately leading to his impeachment.

### Civil Rights Act of 1875 (March 1, 1875)

The Civil Rights Act of 1875 was the last major piece of civil rights legislation passed during the RECONSTRUCTION era, following the FOURTEENTH and FIFTEENTH AMENDMENTS as well as three other civil rights acts. The 1875 act was much broader than its predecessors, in that it aimed to bring an end to all forms of racial discrimination.

The bill that became the Civil Rights Act of 1875 was first submitted to Congress in 1870 by RADICAL REPUBLICAN senator CHARLES SUMNER of Massachusetts. Originally, the bill prohibited discrimination in schools, THEATERS, cemeteries, public TRANSPORTATION, hotels, and churches. The provisions for schools and cemeteries particularly angered Democrats and even caused unease among the more conservative Republicans, and so Sumner's proposal was tabled. The bill languished for several years before Speaker of the House James G. Blaine of Maine and Representative James Garfield proposed a compromise version that eliminated schools and cemeteries. President ULYSSES S. GRANT threw his weight behind the Blaine-Garfield proposal, and it was quickly adopted.

Even with the provisions about schools and cemeteries removed, the Civil Rights Act of 1875 had the potential to be a truly groundbreaking piece of legislation. The previous civil rights acts had dealt with specific issues—citizenship, property holding, and voting. The 1875 act, on the other hand, could be read as empowering the federal govern-

ment to completely remake Southern life. Because the act did not define what constituted discrimination, any issue could be addressed under its terms—politics, economics, law, and so forth.

Unfortunately for African Americans, the impulse for reform was dying out, even among members of the REPUBLICAN PARTY. Hundreds of lawsuits were filed under the terms of the Civil Rights Act of 1875, and most were promptly dismissed. The demise of the act became official in 1883 when the Supreme Court, made up entirely of Republican appointees, ruled eight to one that the act was unconstitutional. The basic spirit of the act would not be revived until nearly a century later, with the passage of the Civil Rights Act of 1964.

### Civil War (1861–1865)

The Civil War marked one of the great defining moments in U.S. history. Long-simmering sectional tensions reached a critical stage in 1860–61 when 11 slaveholding states seceded and formed the CONFEDERATE STATES OF AMERICA. Political disagreement gave way to war in April 1861, as Confederates insisted on their right to leave the Union and the loyal states refused to allow them to go. Nothing in the nation's history had prepared Americans for the scale of military fury and social disruption that ensued. Four years of fighting claimed more than 1 million military casualties (of whom at least 620,000 died), directly affected the lives of hundreds of thousands of civilians, and freed 4 million enslaved African Americans. The social and economic system based on chattel SLAVERY that the seceding states had sought to protect lay in ruins. The Union had been preserved, and the supremacy of the national government over the individual states had been confirmed. In the longer term, the North's victory made possible the American economic and political colossus that figured so prominently in 20th-century history.

Also known as the “War of the Rebellion,” “War Between the States,” “War for Southern Independence,” and “BROTHERS’ WAR,” the conflict continues to fascinate professional historians, novelists, filmmakers, and millions of Americans interested in history. The drama and tragedy

of many Civil War battles have been commemorated in a number of national military parks, such as the ones at Gettysburg, Pennsylvania; Antietam, Maryland; and Vicksburg, Mississippi. Many of the major issues of the era—slavery, states' rights, racial equality, the duties and rights of citizenship, and the limits of national authority—continue to provoke debate and dissension.

Before the sectional disruption, the American republic had survived diplomatic and military crises and internal stresses. It weathered tensions with France in the late 1790s, a second war with Britain in 1812–15, and disputes regarding international boundaries. Political debates over

economic issues such as the TARIFF, a national bank, and government-supported public works provoked dissension but posed no serious threat to the integrity of the Union. Despite divisions along ethnic and class lines, the majority of Americans had much in common. They were white, Christian, spoke English, and celebrated a shared heritage forged in the crucible of the Revolutionary War.

Questions relating to the institution of slavery led to the sectional strife that eventually erupted in war. Most men and women at the time would have agreed with ABRAHAM LINCOLN's assertion in his second inaugural address that slavery "was, somehow, the cause of the war." Earlier,

Map illustrating General Winfield Scott's plan to crush the Confederacy, represented as a snake, economically (1861) (Library of Congress)

ALEXANDER H. STEPHENS, the Confederacy's vice president, had proclaimed that slavery "was the immediate cause of the late rupture and the present revolution" to establish Southern independence. The framers of the U.S. Constitution had compromised regarding slavery, creating a democratic republic that sought to ensure its citizenry's freedoms while also reassuring the South that individual states would have the power to maintain and regulate slavery within their boundaries. The paradox of white liberty that rested in part on a foundation of black slavery was thus embedded in the origins of the United States.

Debates over slavery's expansion into federal territories, which were tied to the South's effort to maintain an equal number of free and slave states, created turmoil in national politics. The Missouri Compromise of 1820, the WILMOT PROVISIO of 1846 (which sought to prohibit slavery in lands acquired as a result of the Mexican-American War), the establishment of the Free-Soil movement in 1848, the Compromise of 1850 (which ended parity in the Senate with California's admission as a free state), the KANSAS-NEBRASKA ACT of 1854 (which helped foster deadly territorial violence), and the Supreme Court's *DRED SCOTT* DECISION in 1857 marked mileposts along the road to sectional disruption. Outside the arena of national politics, the rise of the ABOLITION movement, Nat Turner's bloody slave revolt in Virginia in 1831, publication of HARRIET BEECHER STOWE's antislavery bestseller *Uncle Tom's Cabin* in 1852, and JOHN BROWN's raid on HARPERS FERRY in 1859 fed fears in the South that their slave-based social and economic systems might be in jeopardy.

As sectional divisions deepened, important institutions failed to act as stabilizing forces. Several Protestant denominations, including the Baptists and Methodists, split into Northern and Southern branches. The national political parties, which from the 1830s until the early 1850s had pursued compromise to maintain Northern and Southern wings, fractured along regional lines. The Whig Party collapsed as a national entity after the presidential election of 1852, and many Northern voters came to view the DEMOCRATIC PARTY as pro-Southern. The REPUBLICAN PARTY, which rapidly gained strength in the North following its creation in the mid-1850s, adamantly opposed extension of slavery into the territories and won virtually no support in the South. The Supreme Court, long venerated by citizens across the nation, lost its reputation as an impartial arbiter of legal questions when the *Dred Scott* decision seemed to open all federal territories—and perhaps free states as well—to slavery.

Historians have debated whether the North and South had become markedly different societies by 1860. Some portray the Free-Soil North, with its commercial and industrial interests, as an emerging capitalist giant at odds with an overwhelmingly agrarian South, where most capital

was invested in land and slaves. Others insist that the North and South were far more alike than different. It is clear that by the late 1850s many Americans believed there were fundamental differences between the sections. More ominously, a significant number on each side of the MASON-DIXON LINE had come to distrust those on the other side who disagreed with them about how slavery should figure in the republic's future.

The election of 1860 triggered the SECESSION crisis. Although Lincoln and the victorious Republicans had promised not to interfere with slavery in states where it already existed, they firmly opposed slavery's spread to any federal territories. Between December 1860 and February 1861, the seven Deep South states seceded to avoid what they perceived as a long-term threat to their slaveholding interests. After Confederates fired on FORT SUMTER, SOUTH CAROLINA, in mid-April 1861, Lincoln's call for 75,000 volunteers to suppress the rebellion prompted four slave states of the Upper South, including Virginia, to join their Deep South brethren. Four other slave states, typically called the border states—Kentucky, Missouri, Maryland, and Delaware—remained loyal to the Union.

Both sides mobilized on a scale unprecedented in American history. Drawing on an 1860 population of just more than 1 million military-age white males, the Confederacy placed between 800,000 and 900,000 men in uniform (fragmentary records do not permit a precise count). The North mustered at least 2.1 million men, about half of its 1860 military-age population. More than 180,000 black men served in United States units. Apart from its much larger population, the North held a decided advantage in industrial capacity. In 1860 there were 110,000 Northern manufacturing establishments employing 1,300,000 workers; in the Confederate states, there were just 18,000 establishments employing 110,000 workers.

Yet either side could have prevailed because of the North's more difficult requirements for victory. The Confederacy sought independence and only had to defend itself to prevail. The North sought to compel the seceded states to abandon their hopes to found a new nation. U.S. armies would have to invade the Confederacy, destroy its capacity to wage war, and crush the will of the Southern people to resist. The Confederacy could win by prolonging the war to a point where the Northern people considered the effort too costly in lives and money. Many Confederates appreciated the magnitude of the North's challenge. George Wythe Randolph, who served as Confederate secretary of war, commented in 1861 that Union forces "may overrun our frontier States and plunder our coast but, as for conquering us, the thing is an impossibility."

Union and Confederate leaders adopted very different strategies to achieve victory. Beginning in 1861 with Winfield Scott's so-called Anaconda Plan, the United States pursued a

strategy that included a naval blockade to restrict the flow of goods into Southern ports, a combined army-navy effort to divide the Confederacy by seizing control of the MISSISSIPPI RIVER, and major offensives into the Confederate hinterlands. The Confederacy first tried to defend all of its borders, but the futility of such a strategy soon became apparent. For most of the war, JEFFERSON DAVIS and his advisers followed what often is termed a defensive-offensive strategy. Confederate armies generally stood on the strategic defensive, protecting as much of their territory as possible. When circumstances seemed favorable, the Confederacy launched offensives, the most important of which culminated in the BATTLE OF ANTIETAM and Battle of Perryville in 1862 and the BATTLE OF GETTYSBURG in 1863.

Military fortunes ebbed and flowed for more than three years before U.S. forces gained a decisive advantage. The North wavered more than once in its determination, most notably after ROBERT E. LEE frustrated Union offensives in the spring of 1863 and the spring and early summer of 1864. A string of Union successes in the West—won by ULYSSES S. GRANT at Forts Henry and Donelson, Shiloh, Vicksburg, and Chattanooga in 1862–63 and by WILLIAM T. SHERMAN at Atlanta in 1864—more than counterbalanced Lee’s successes. By the autumn of 1864, with Grant as the Union general in chief, U.S. armies applied pressure in Virginia, Tennessee, and the Carolinas that eventually forced a Confederate surrender at APPOMATTOX COURTHOUSE, VIRGINIA, in the spring of 1865.

Both sides made use of recent technological advances. RAILROADS moved hundreds of thousands of soldiers and vast quantities of supplies, and TELEGRAPHIC communication permitted both governments to coordinate military movements in widely separated areas. The conflict featured numerous applications of recent military technology, among the most important of which were the rifled musket carried by most infantrymen on both sides and IRONCLAD warships that saw action on a broad scale.

The war touched the lives of almost every American. Women assumed larger responsibilities in the workplace. In the North, they labored as NURSES (previously a male occupation), government clerks, factory workers, and in other ways helped the war effort. Southern white women also worked as clerks and nurses and in factories, and thousands took responsibility for running farms. Several hundred women disguised themselves as men and served in the military. Although the war opened opportunities outside the household for women, its end brought a general return of old patterns of EMPLOYMENT.

Slaves in the South shouldered a major part of the labor burden, as they always had, and made it possible for the Confederacy to put nearly 80 percent of its military-age white men in uniform. No group was more directly affected by the outcome of the war than the 4 million black people

who were slaves in 1861. They emerged from the struggle with their freedom (made final by ratification of the THIRTEENTH AMENDMENT to the Constitution in December 1865), though the extent to which they would be accorded equal rights remained unresolved.

The two national governments expanded their powers in an effort to mount sustained war efforts. Ironically, the Confederacy, a republic allegedly devoted to states’ rights, witnessed greater governmental intrusions into its citizens’ lives. Both sides enacted a series of national taxes, tampered with civil liberties in various ways, and resorted to CONSCRIPTION laws. Many of these measures, especially the drafts implemented by the South in 1862 and by the North the following year, provoked heated political debate and overt antiwar activities. The war produced spending on a scale dwarfing that of any earlier period. In 1860 the federal budget was \$63 million; in 1865 U.S. expenditures totaled nearly \$1.3 billion—a 200-fold increase that does not include the roughly \$1 billion the Confederate government spent.

EMANCIPATION was the war’s most revolutionary development. Abolitionists and many RADICAL REPUBLICANS pressed for it from the outset, but the mass of white Northerners considered the conflict a struggle for union rather than for black freedom. As fighting dragged on and casualties mounted, Lincoln presented emancipation as a tool that would undermine the Confederacy. Although many Democrats remained bitter opponents, most white Northerners eventually accepted emancipation as necessary to victory. Hundreds of thousands of slaves in the South did not wait for U.S. politicians to work out their fate, fleeing to Union military lines and thereby applying pressure for governmental action that would transform a struggle for union into a struggle for union and freedom.

The cost of the war was appalling. More Americans were killed than in all other wars combined from the colonial period through the last phase of the Vietnam War. Had American deaths in World War II been proportionately as high, the total would have been 2.6 million rather than the 405,000 actually lost. The war brought wide-scale economic destruction to the Confederate states, which lost two-thirds of their assessed wealth (emancipated slaves accounted for much of this). In contrast, the Northern ECONOMY thrived. Two statistics convey a sense of the relative economic cost: Between 1860 and 1870, Northern wealth increased by 50 percent; during that same decade, Southern wealth decreased by 60 percent.

Human suffering extended beyond the military sphere and continued long after fighting ceased. During the conflict, scores of thousands of black and white Southerners became REFUGEES (far fewer Northern civilians experienced the war so directly). An unknown number of civilians perished at the hands of guerrillas, deserters, and, less frequently, regular soldiers in both armies. After the war,

thousands of VETERANS struggled to cope with lost limbs and other physical and emotional scars. Thousands of families faced difficult financial circumstances due to the loss of husbands and fathers. The U.S. government made available minimal support for widows of soldiers, and Southern states did the same for widows of Confederates.

The Civil War was the central event in the lives of most of the soldiers who served. During the postwar years, many joined veterans' organizations such as the Grand Army of the Republic and the United Confederate Veterans. They revisited the sites of their battles, raised MONUMENTS to commemorate their service, and, in significant numbers, wrote reminiscences. For black Union soldiers, the war provided the strongest possible claim for full citizenship. They had risked their lives alongside white comrades, and they justly claimed the right to vote and otherwise live as full members of American society.

Americans remembered the war in different ways. For most white Northerners, it was preeminently a crusade that saved the Union. Black Americans placed freedom at the center of their memories of the conflict. Many ex-Confederates celebrated their failed effort to carve out a distinct destiny. Their arguments, which included an attempt to minimize the importance of slavery as a factor during the secession crisis and the war, became part of the remarkably durable LOST CAUSE school of interpretation. By the end of the 19th century, a reconciliationist movement united many white Northerners and Southerners in a shared public memory of the war. Reconciliationists rarely spoke of emancipation or black participation and deliberately avoided discussion of the bitter animosities that had divided North and South. They applauded the pluck of white soldiers North and South, often glossed over the question of which side was right, and presented the war as a grand demonstration of American valor and virtue. The reconciliationist vision, with its emphasis on shared courage and its aversion to acrimonious topics, continues to wield a powerful influence on the popular understanding of the Civil War.

**Cleburne, Patrick R.** (1828–1864) *Confederate general*

Confederate officer Patrick Ronayne Cleburne was born at Ovens, County Cork, Ireland, on March 16, 1828, to Dr.

Joseph and Mary Anne Ronayne Cleburne. Both parents died before Patrick was 15. He attempted to become a physician but was denied admission to Trinity College in February 1846. Later that year he joined the 41st Regiment of Foot of the British Army as a private. After three years service, he bought his discharge and moved with his older brother and two sisters to the United States. Cleburne settled in Helena, Arkansas, and established himself as a druggist. In 1856 he began to practice law and by 1860 had become senior partner in the firm of Cleburne, Scaife, and Mangum.

At the beginning of the CIVIL WAR, he joined the Yell Rifles, a local Rebel infantry company, as a private and was soon elected captain of the company. Upon the organization of the First Arkansas Infantry Regiment, he was elected colonel. In March 1862 he was elevated to brigade command under William J. Hardee, serving in that capacity at the BATTLE OF SHILOH, throughout the Kentucky campaign (where he was shot through the mouth at the Battle of Richmond, Kentucky, on August 30, 1862), and during the BATTLE OF MURFREESBORO.

In early 1863 he was promoted to the rank of major general and given command of an infantry division. He directed the division during the Tullahoma campaign and the BATTLE OF CHICKAMAUGA. His defense of the north end of Missionary Ridge on November 25, 1863, and his rearguard action at Ringgold, Georgia, on November 27 confirmed his reputation as one of the Confederacy's best fighting generals. Cleburne came to be called the "Stonewall Jackson of the West," but his 1864 suggestion to offer freedom to slaves who would join the CONFEDERATE ARMY prevented his elevation to higher command. He led his division with distinction during the ATLANTA CAMPAIGN of 1864 and died leading his men against the Federal earthworks at Franklin, Tennessee, on November 30, 1864.

**Cobb, Howell** (1815–1868) *politician, Confederate general*

Howell Cobb was a politician who held office in both the United States and the CONFEDERATE STATES OF AMERICA, and also a Confederate general. Cobb was born in Jefferson County, Georgia, on September 7, 1815. After graduating from law school at the University of Georgia, Athens, he

began a successful law practice in 1836 and developed an interest in politics as a Democrat. In 1842 he was elected to the House of Representatives, where he gained a reputation as a moderate on sectional issues. Elected Georgia's GOVERNOR in 1851, Cobb returned to the House in 1855 after failing to win a Senate seat. The following year he campaigned on behalf of JAMES BUCHANAN. In return, President Buchanan appointed Cobb as secretary of the U.S. Treasury in 1857.

In 1860 Cobb unsuccessfully ran to be the DEMOCRATIC PARTY's presidential nominee, later campaigning for JOHN C. BRECKINRIDGE, who likewise failed to win the Democratic nomination. Following the victory of Republican ABRAHAM LINCOLN, Cobb urged Georgia to secede from the Union, thereby abandoning his former moderate Unionism. He resigned from Buchanan's cabinet in December 1860 and returned home, and in February 1861 he was elected president of the provisional CONFEDERATE CONGRESS. He served in this capacity for several months as a partisan supporter of Confederate president JEFFERSON DAVIS before being commissioned a colonel of the newly raised 16th Georgia Infantry. He then alternated between conducting his duties in the Confederate Congress and accompanying his regiment in the field until February 1862, when he finally resigned from politics to fight full-time as a Confederate brigadier general.

Cobb initially served in Gen. John Magruder's division and was active in the Seven Days' campaign of June–July 1862. After intermittent bouts of illness, he transferred to Gen. LAFAYETTE MCLAWS's division in August 1862 and was heavily engaged at the Battle of South Mountain that September. Disagreements with McLaws led to his transfer to Florida. In fall 1863 Cobb became a major general and was posted at Savannah, Georgia. In this capacity he trained and recruited troops of the Georgia Guard. After their enlistments expired in February 1864, he began assembling and preparing a new force, the Georgia Reserve. Here Cobb clashed regularly with Governor JOSEPH EMERSON BROWN over manpower policies but still found time to repulse a Federal cavalry raid under Gen. George Stoneman on July 30, 1864.

Cobb continued performing useful service for the Confederacy until Union general WILLIAM T. SHERMAN succeeded in capturing Savannah in December 1864, as part of his ATLANTA CAMPAIGN. Badly outnumbered, Cobb redeployed his command to Macon and surrendered to Gen. James H. Wilson there on April 17, 1865. His record in Confederate service had been solid, if unspectacular. He was briefly detained by U.S. authorities for his role in the Confederate Congress, but President ANDREW JOHNSON paroled him. Cobb then resumed his legal career in Georgia. Though he never again sought political office, he campaigned openly against the policies of RECONSTRUCTION.

While on a trip to NEW YORK CITY, Howell Cobb died suddenly on October 9, 1868.

### Cold Harbor, Battle of (June 1–6, 1864)

Cold Harbor, Virginia, was the bloodiest in a series of battles that formed the OVERLAND CAMPAIGN, which was undertaken by the UNION ARMY in early May 1864. Besides the carnage, the Battle of Cold Harbor was notable as a turning point when defensive fortifications, siege warfare, and relentless daily fighting characterized the war in the eastern theater.

Gen. ULYSSES S. GRANT's Army of the Potomac marched south into Virginia with hopes of putting an end to the conflict. Northern moral was high, yet ROBERT E. LEE and the Army of Northern Virginia blocked Grant's relentless westward movements toward RICHMOND, inflicting heavy casualties on their opponents. After the Battle of North Anna during May 23–26, Grant moved west again and crossed the Pamunkey River. By month's end, the left wing of the Federal force had reached a tiny crossroads called Cold Harbor, named after a tavern.

Cold Harbor had a road that led into the Chickahominy River and then continued on to Richmond. Grant's plan was to bring his army through Cold Harbor, turn on Lee's right, and pin the Confederates in a vulnerable spot against the river. Unfortunately, the Union forces delayed, and the attack, set for 4 A.M. on June 2, had to be postponed until the same time on the next day. The Confederates, meanwhile, used the extra time to build and extend their fortifications.

By predawn of June 3, 59,000 well-entrenched rebels faced 108,000 Federals across a seven-mile front. Grant's massive frontal assault on Confederate lines failed miserably. That terrible day saw some 7,000 Federal casualties (compared with less than 1,500 for the rebels) that shattered three Union corps. One Northern soldier described some details of the assault: "The time of actual advance was not over eight minutes. . . . In that little period more men fell bleeding as they advanced than in any other like period of time throughout the war." The assault was a disaster, and before the end of the day, Grant stopped the fighting. "I regret this assault more than any one I have ever ordered," he said.

Cold Harbor culminated a month of nonstop campaigning for both armies. The North had experienced

50,000 losses and the South 32,000. In percentages, that represented 41 percent of Grant's forces and 46 percent of Lee's. These losses were a disaster for the South, which could not replenish its armies. Although the Battle of Cold Harbor and the Overland campaign resulted in Northern losses or stalemates on the field, Grant's overall strategy of attrition was working.

### Colored National Labor Union (1869–1872)

Established in 1869, the Colored National Labor Union (CNLU) was the first major attempt on the part of African Americans to organize their labor collectively on a national level. The CNLU, like other labor unions, had as its goal improving the working conditions and quality of life for its members. Unfortunately, in its short life span, the CNLU made precious few inroads for its black constituents.

African Americans had traditionally been excluded from existing labor unions, but when workers sought to capitalize on organizational opportunities created by the CIVIL WAR and formed the NATIONAL LABOR UNION (NLU), black laborers wanted to participate as well. William Sylvis, president of the NLU, made a speech in which he agreed that there should be “no distinction of race or nationality” within the ranks of his organization. In 1869 several black delegates were invited to the annual meeting of the NLU. One of these delegates was a man named Isaac Myers, a prominent organizer of African-American laborers. At the convention, he spoke eloquently for solidarity, saying that white and black workers ought to organize together for higher wages and a comfortable standard of living. But Myers's plea fell on deaf ears. The white unions refused to allow African Americans to enter their ranks. In response to this, Myers met with other African-American laborers to form a national labor organization of their own. In 1869 the Colored National Labor Union was formed, with Myers as its first president.

The CNLU was established to help improve the harsh conditions facing black workers. Exclusionary white unions and uncooperative employers prevented African Americans from getting highly paid, skilled labor jobs in the North. In the South, the EMANCIPATION of the slaves did not result in social or economic equality. Among the goals of the CNLU, which represented African-American laborers in 21 states, were the issuance of farmland to poor Southern African Americans, government aid for EDUCATION, and new nondiscriminatory legislation that would help black workers who struggled to make ends meet.

The CNLU ultimately made few economic gains for African Americans. A hostile and prejudiced business and labor environment prevented the CNLU from making much headway, and in 1872 the union went under. The CNLU did, however, help raise awareness among many people in the labor movement that all workers deserved adequate representation.

### common soldier

The common soldier of the CIVIL WAR mostly enlisted early, in 1861 and 1862, and stayed to the end, if he lived. He was young, between the ages of 18 to 24. He was most likely to have been born in a rural area and to be the son of a farmer, but many were the sons of businessmen, working-class artisans, intellectuals, and the wealthy. He was white, Protestant, and literate. Indeed, Civil War soldiers were some of the best educated in the history of warfare, and their LETTERS home attested to their ability to express themselves.

The common soldier was not only literate, he was politically astute and knew the reasons why he was fighting. The Northern soldier fought for union and, after 1863, for freedom. “I have no heart in this war if the slaves cannot be free,” declared a young Wisconsin private in 1863. The Southern soldier fought to protect his homeland from foreign invaders, for Confederate independence from tyranny, and for STATES' RIGHTS. “We are fighting for the Constitution that our forefathers made,” wrote a Confederate soldier, “and not as old Abe would have it.” All claimed ideological inheritance from the American Revolution, and all agreed, one way or another, with President ABRAHAM LINCOLN when he said that SLAVERY “was somehow the cause of the war.”

Johnny Reb and Billy Yank did not have a lot of money or property but had great ambitions for both. The common soldier was probably not married, although a fair number had already tied the knot. He eagerly accepted the monthly pay, the bonuses, and sometimes even the land that would come to him as part of his service, and rightly so, for these rewards were a part of the rich tradition of the American CITIZEN-SOLDIER. (Although by the second year of the war, the Southern soldier had little expectations of such rewards). He loved the excitement, the martial MUSIC, the parades, and the hoopla that accompanied the earliest calls for men. Often his motives for enlisting were mixed: peer pressure, social expectations, dreams of military glory, and patriotism all played a part in the final decision.

Most of all, the common soldier of the war reflected the deeply held values of individualism, family, community, church, and country in Victorian America. This was not, for the most part, a war fought by the poor for the rich. The families of the Civil War soldiers represented the very heart of the United States as it was in 1861. There were many men, however, who cannot be easily described within the broad depiction of the typical or common soldier. The Irish, German, Italians, and African Americans who served in the war were, in important ways, different from the majority of native-born white volunteers. Draftees, bounty jumpers, and the criminal element that were a part of the armies also departed dramatically from the norm.

Overall, American men shared romantic ideas about being a soldier. The concept of courage was the most important. Men were supposed to be brave in battle and, by doing so, would achieve their manhood, do their duty, and honor their God and their country. Courage was tied to a love of country, a feeling that is commonly called patriotism. The excitement of the early days of the war is reflected in a letter from a Northerner: "The air is full of calls for men who are patriotic to enlist. I really inwardly feel that I want to go do my part as a man." A soldier from Iowa added: "The majority of our Citizens are full of patriotism and express their willingness to stand by the Old Stars and stripes and protect it from dishonor." A Southern counterpart echoed the sentiment: "What is life worth under a government that cannot be enjoyed?"

Shared ideas and feelings created a powerful bond between the volunteer soldier in camp, on the march, and in battlefields and those who stayed back home. Hamlets, towns, and cities followed their "boys" throughout the war. Countless soldiers' newsy letters were printed in hometown newspapers for all to read and comment on. Local and state loyalties were stronger than national, especially in the early days of war.

The Northern and Southern federal governments relied heavily on the common people, the middling classes, to support the war effort through men, supplies, and money. This was not a modern war with a well-oiled CONSCRIPTION system (the draft accounted for very few soldiers) or a huge propaganda machine. Both the initial enthusiasm and the later dissent for the war came from a grassroots perspective.

In one sense, the young man who served in the war never left home. He joined a local outfit, a company, and regiment that were made up of other young men that he knew well. It was common for brothers, cousins, even fathers and sons to enlist together. In the beginning, soldiers' mothers, wives, sisters, and sweethearts provided UNIFORMS, food, and supplies and sewed the regimental flags. The enlisted men elected the company and regimental officers. The officers themselves, as untrained and inno-

cent in the ways of war as the raw recruits, were only slightly older and better off than the men they were charged with training. When the war became hard and violent, the community suffered the losses together. Replacements would have to come from the same locality. Recruiting became much more difficult everywhere as the losses rose dramatically through the four years of war.

The reality of war hit the common soldier hard. After the initial excitement wore off, the untested farm boys, city clerks, students, and mechanics had to learn how to be soldiers. At first, the typical volunteer had a difficult time accepting the fact that soldiering was a job that required steady discipline, constant drill, and the mastery of skills like the quick loading and firing of a musket. A recruit in the 93rd Illinois summed up his frustrations when he wrote his parents about camp life in 1862: "They keep us very strict here, it is the most like a prison of any place I ever saw. . . . It comes rather hard at first to be deprived of liberty." A rebel from Louisiana echoed that complaint when he commented from a camp in Alabama: "A soldier is not his own man. He has given up all claim on himself."

The common soldier and his comrades learned through experience how to march quickly through heat and cold and rain and snow; how to eat the most unpleasant things under the most challenging conditions; how to go for long periods of time without sufficient food or water; and how to build fortifications at a moment's notice. Most of all, he had to learn to kill his enemy and survive the war.

The biggest test was the first battle. Many have described the early Civil War military clashes as fights between two armed mobs. This was courage tested, and many failed at first. The noise, the smoke, and the fear of death were indescribable, and thousands "skedad-dled" from the battlefield. Who could blame them? They were not professional soldiers; they were volunteers who expected the war to be an adventure that would be over in a few months. A soldier from Tennessee recalled his first time in battle: "I was not much surprised when we received the order to fall in. . . . I can never forget my thoughts as I stood there and looked around. . . . It was the first time I had ever been called upon to face death." Courage for these men was just being able to follow orders and stay in line. "Oh how I wish I was a dwarf, just now, instead of a six-footer," moaned a Mississippian who faced his initial combat experience at the bloody BATTLE OF SHILOH. The best officers were the ones who respected these amateur soldiers and understood that most of the scared ones would come back to the camps chastened and ready to do better next time.

The average soldier became seasoned soon enough at Bull Run, Antietam, Chancellorsville, Shiloh, and Vicksburg. The majority of enlisted men and officers learned their jobs well, and some found they actually enjoyed it.

No longer did enthusiasm and a desire to achieve glory in battle drive the soldier. He had seen friends and perhaps a family member or two die horrible deaths in battle. Undoubtedly, he knew many more that died from illnesses like measles and dysentery.

As the war ground on, the soldier bonded with the other men in his company and regiment. He felt estranged from his family back home, and in many ways his fellow soldiers became his family, at least for the duration of the war. Surprisingly, despite the horrors of war, his devotion to his country's cause remained relatively steadfast, although the idealism was replaced with a hard-edged practical side. Often he and his comrades reenlisted late in the war (Rebels by that time had no choice), and when his family protested that he had done enough for the cause, he told them he wanted to see the thing to the end. A young Michigan soldier provided his own common soldiers creed:

The soldier of '61 was full of life and patriotism, his ardor undampened by hardship and adversity. The soldier of '65 hoped less, but fought and accomplished more. The period of romance had changed to a period of system and endurance. . . . The history of these four years of war has its counterpart in our own lives. In our youth, we acted upon impulse regarding loss of consequences, now we think before we act.

Common soldiers became VETERANS after 1865. After the great conflict, some recalled their experiences with bitterness; most spoke of their service with pride. Individually, thousands published memoirs or contributed to printed regimental histories. Northern veterans, white and black, supported the REPUBLICAN PARTY and joined the Grand Army of the Republic; Southern veterans supported the DEMOCRATIC PARTY and joined the United Confederate Veterans. Most veterans, North and South, preferred to sentimentalize the war, and in their declining years emphasized the positive and patriotic aspects of their experiences. For them, Union soldier Oliver Wendell Holmes's famous utterance was apt: "In our youth, our hearts were touched with fire."

## Confederate army

The Confederate army consisted of a regular force, the Army of the CONFEDERATE STATES OF AMERICA, and a volunteer force designated the Provisional Army of the Confederate States. Created by the provisional CONFEDERATE CONGRESS on March 6, 1861, the Confederate regulars imitated the U.S. Army's organizational structure and its operational manual, *Rifle and Infantry Tactics*, written by Col. William J. Hardee, now a Confederate general. Regulations for the Army of the Confederate States were, with two minor revisions, a copy of the U.S. Army Regulation, 1857.

While very few enlisted men from the U.S. Army joined the Confederate cause, as many as one-fourth of the officers took commissions in the rebel regulars. These men exerted significant influence over the operations of volunteer military forces as senior general officers, engineer officers, staff officers, and supply bureau officers. This approach reflected Confederate JEFFERSON DAVIS's belief in reliance on state formations, buttressed by a small steady corps of trained regular soldiers and officers. In numbers, however, the Confederate regular army proved insignificant. Authorized to enlist 15,000 men in eight regiments of infantry, two regiments of cavalry, a corps of artillery, a corps of engineers, and a company of sappers and bombardiers, during the entire 1861–65 period a mere 1,650 men served in the regulars. Of these, half were officers. The principal reason for this endemic lack of manpower was the assigned term of service. State soldiers enlisted for the duration of the conflict and would be discharged at its conclusion, whereas the regulars signed on for a specific time span that was mandatory whether hostilities had ceased or not. Given Southerners' tepid response to such service, the regular army's recruiting stations all closed down within weeks of the war's outbreak. All told, the Confederate regular army died a quiet death, and few outside its minuscule ranks noticed its passing.

Numerically, the volunteer force proved the most significant element of the Confederate military. Created by the Confederate Congress February 28, 1861, the provisional army provided a temporary force to deal specifically with the threat of Northern attempts to stop SECESSION by force. The enabling legislation granted the president the power to accept into Confederate service any units in state service for a period of 12 months. The legislation also allowed a call for 100,000 volunteers and the enrolling of the various state militias into Confederate service. Privately raised and trained companies from various states ensured a ready pool of reasonably proficient soldiers. Moreover, these private companies were available much more quickly

Print of Confederate generals Robert E. Lee, Thomas J. "Stonewall" Jackson, and P. G. T. Beauregard surrounded by the busts of Jefferson Davis and Confederate army officers (ca. 1896) (*Library of Congress*)

and at less expense to the central government than the hastily raised and untrained regular soldiers. In August 1861 Congress authorized a second call for 400,000 volunteers to serve enlistments ranging from one to three years. These troops remained in the service of their respective states until April 1862, when as part of the first CONSCRIPTION act, they became a part of the provisional army. Throughout the war, between 600,000 and 1.5 million men served in the provisional army. Due to the haphazard nature of Confederate military administration, however, the precise number of formations actually fielded is unknown. It is estimated at anywhere between 750 and 1,009 identifiable units.

Recruiting the Confederate military forces took place at various levels. The regular army created recruiting stations at Baton Rouge Barracks, Louisiana; San Antonio Barracks, Texas; Mount Vernon Arsenal, Alabama; Augusta Arsenal, Georgia; Castle Pinckney, South Carolina; Fort Johnston, North Carolina; and Bellona Arsenal, Virginia. At these stations, recruitment officers attempted to obtain men. However, the recruiting of regular army enlisted men

failed miserably, and most of the stations suspended operations by the end of 1861.

More successful during 1861 was the creation of various volunteer military companies throughout the towns and countryside of the Confederate states. Prominent citizens who called on their neighbors to join in creating small military units (e.g., an infantry company, an artillery battery, a company of cavalry, and so on) often organized this local recruiting. These units then consolidated into regiments with others from the same state. During 1861, more volunteers presented themselves than could by law be accepted into Confederate service. The emotional response was so great that, in many cases, hopeful soldiers in units not accepted for field service grew furious at the thought of missing out on the action. They despaired that they would never get a chance to fight, since the war would end after the Yankees got a taste of Southern fighting. Manpower levels fluctuated throughout the war, although individual Southern units, repeatedly replenished by new personnel, remained stronger than their Union counterparts through 1864. Near the end of the conflict, severely depleted units were consolidated to form stronger formations capable of handling battlefield contingencies.

There were three primary branches in the provisional army: infantry, cavalry, and artillery. The largest number of men served in the infantry. Organized into regiments of 10 companies totaling 1,000 men, this branch of the service constituted the main fighting force of the Confederate military. Infantry training proceeded unevenly and depended in many instances on the ability of the local unit commanders to teach themselves (while simultaneously teaching their men) the mysteries of tactics. The work proved difficult and seemed unending to the volunteers. As one Virginian put it, drill "was arduous labor, harder than grubbing, stump-pulling, or cracking rocks on the turnpike." While difficult, it was also necessary because the period's infantry fighting tactics required a complex evolution of movements made by men standing in line elbow to elbow in two ranks. To help facilitate the training of the CITIZEN-SOLDIERS, the Confederate government assigned professional soldiers and, in some cases, the cadets of the state military schools to instruct the recruits. Slowly, the men learned the drills and the officers learned how to control their units. In the two main Confederate armies serving in northern Virginia and Tennessee, drill proficiency reached high levels within a fairly short time. By early 1862, most of the incompetent elected officers had been removed and replaced by more highly skilled tacticians and administrators. In their capable hands, the Confederate volunteers gained a just reputation as among the most capable and effective fighters in military history.

In the secondary branches, artillery and cavalry, the Confederates achieved mixed success in training and tac-

tics. In the artillery, the lack of experienced officers and enlisted men created problems throughout the war. One Rebel gunner remembered after the CIVIL WAR that “whole battalions of artillery went into active service without a single man, whether officer, non-commissioned officer, or private, who knew anything about artillery.” In a service where technical knowledge played a major role, the lack of skilled men resulted in a tactically inferior force. Talented and capable artillery leaders did, however, exist in the Confederate service. The best example was Gen. Edward P. Alexander, whose deft handling of Southern cannon at Fredericksburg transformed that battlefield into a killing ground for Union troops. Southern artillery was also quicker to adapt four-battery battalion formations at the divisional and corps levels, enabling them to neutralize Northern manpower advantages in many early engagements.

In cavalry, the Confederates held an early advantage in leadership and in rank and file. Bold leaders such as J. E. B. STUART, NATHAN BEDFORD FORREST, JOHN SINGLETON MOSBY, and JOHN HUNT MORGAN used their mounted troops aggressively and imaginatively. The skill of many Southern horsemen contributed to the success of the cavalry, which maintained its superiority to Union mounted troops until 1864, when declining supplies of horses limited rebel mobility and the employment of rapid-fire shoulder arms gave Federal cavalry troops firepower advantage.

While many volunteer units struggled to organize and train, the presence of state militias and military schools, such as the Citadel in Charleston and the Virginia Military Institute in Lexington, Virginia, improved the state of military preparedness. Although many Southern militia units were little more than glorified social clubs, some units, such as the Washington Artillery of New Orleans, the Oglethorpe Light Infantry of Savannah, the Kentucky State Guard, and various state militias, provided a small core of trained soldiers. These prewar institutions impacted most strongly the army forming in Virginia, where many of the officers who led the rebel forces had served in some of the South’s best militias. Throughout the war, their experience provided the foundation of a well-led force. In other regions, where the militia influence was less (such as the army forming in Tennessee), the officer corps remained weak and leadership less than ideal.

The task of supplying the vast number of volunteers created major problems for the Confederate government. With no formal military supply apparatus in place and with limited production capabilities, the Confederate War Department faced a seemingly impossible task. Fortunately for them, supply functions were in the capable hands of Col. JOSIAH GORGAS, a former Union officer from Pennsylvania. Gorgas effectively served as Confederate chief of ordnance throughout the war. His farsighted poli-

cies—battlefield recovery, decentralized production facilities, and decentralized administration facilities throughout the South—ameliorated a pressing supply problem so that no Confederate army was ever defeated for want of weapons. Gorgas went so far as to operate his own fleet of transport vessels, charged with smuggling British weapons and munitions into Confederate ports. His contributions to the war effort probably extended the life of the Confederacy. Without them it is doubtful that Confederate armies would have performed as effectively in the field against their well-equipped Northern counterparts.

Arming the volunteers presented the most pressing problem for the secessionist war department. At the war’s outset, Southern arsenals contained roughly 296,000 shoulder weapons of all types. Many of them were old smoothbore muskets, some still using the outdated flintlock ignition system. In all, only about 24,000 modern rifles and rifle muskets were available. Regiments were unable to take the field in many instances because they had no weapons. By 1862, through a combination of domestic production, battlefield captures, and imports from Europe, the supply problem lessened. Throughout the Confederacy, increasing numbers of rebel troops obtained long-range, efficient weapons, thus improving their combat effectiveness. Still, mixed supplies of weapons within regiments and brigades led to problems in the field and limited the overall efficiency of some units. In the artillery service, weapons proved an even greater problem. Unable to produce adequate numbers of cannons and reliable ammunition, the Confederate artillery almost always fought at a tactical disadvantage.

Clothing varied at the war’s outset, from the fine UNIFORMS worn by the former militia companies and provided by friends, to the mismatched civilian clothing worn by many volunteers. However, problems appeared early as the clothes worn by the troops began to wear out. The central government responded by creating a system called “commutation.” In this system, soldiers either bought clothes or were supplied by their home states at the expense of the RICHMOND, VIRGINIA, government. Slowly, the quartermaster department established a series of depots throughout the South where clothing was produced for issue to all troops in Confederate service. This system worked with varying degrees of success through 1862–65.

Food and TRANSPORTATION also presented operational challenges to the emerging armies. Shortages of grain and meat, and the inability to transport these vital supplies, were serious problems. So severe were the shortages that the Confederate government resorted to the practice of IMPRESSMENT to obtain sufficient supplies of flour and meat. While this did little to ease the problem, it underscored the degree of shortage in the Southern armies. Inadequate supplies of horses and vehicles to

## 82 Confederate army

transport ammunition, clothing, and food compounded all of the supply problems. As the number of horses declined, so did the ability of the armies to take offensive actions or even feed themselves.

One area in which Confederate armies had a distinct tactical advantage over the North was organization. While their overall numbers were inferior, they were usually better situated to make use of troops they brought onto the battlefield. Southern units, regardless of branch, were retained in the field longer than Union formations and were continually fleshed out with new recruits. The UNION ARMY practice, by comparison, was to return units that had been severely weakened (through combat, sickness, or desertion) to the states for a refit. As a result, Southern units were usually better prepared to deploy soldiers at a given geographic point than Northern units of comparable size. Although the Confederate army had fewer units, it thus enjoyed considerable manpower advantages on the ground, enabling commanders to concentrate their strength quickly for decisive effect. This operating principle, which held true in the brigade and division level as well, gave the Confederacy a military advantage through 1864.

Operationally, the volunteer force was divided into several organizations known as armies. These forces were generally arrayed to protect the Southern territory. During 1861, the government spread its military forces widely in an attempt to protect as many points as possible. This resulted in troops being scattered along the Gulf Coast, in northern Virginia, and across the northern border of Tennessee. The nature of the Federal invasion of the South in some ways dictated the emerging shape of the two main rebel forces. In Virginia, the front of the Union advance in July 1861, the forces assigned to protecting the Shenandoah Valley consolidated with Southern troops at Manassas. This army successfully defended Richmond in the summer of 1862 and became famous as ROBERT E. LEE's Army of Northern Virginia (so named shortly after Lee took command). As the threat to the Confederate capital increased, more and more troops from the Atlantic coast and western Virginia were funneled to Lee's army. By far the most successful of the Confederate armies, the Army of Northern Virginia fought at the BATTLES OF BULL RUN, the Seven Days' campaign, ANTIETAM, FREDERICKSBURG, CHANCELLORSVILLE, GETTYSBURG, the OVERLAND CAMPAIGN of 1864, and the PETERSBURG CAMPAIGN. Some of the most famous secessionist generals including JOSEPH E. JOHNSTON, THOMAS J. (STONEWALL) JACKSON, J. E. B. Stuart, JAMES LONGSTREET, and GEORGE E. PICKETT served in the Army of Northern Virginia. Indeed, by 1863, General Lee and his army had come to symbolize the heart and soul of the Confederate cause for most of the Southern people.

The second major Confederate force coalesced in northern Mississippi as Union forces advanced along the

Tennessee River and into the Confederate heartland. Several scattered corps under Leonidas Polk and William J. Hardee held the southern part of Kentucky in 1861 and early 1862. These Confederate troops retreated into northern Mississippi following the fall of Fort Donelson in February 1862. Directed by ALBERT SIDNEY JOHNSTON, the forces concentrated at Corinth, Mississippi, in March 1862 and were bolstered by reinforcements under BRAXTON BRAGG from the Gulf Coast. The concentrated army struck back and met the invading force at the BATTLE OF SHILOH in southwestern Tennessee.

Having lost the battle and its commander, Albert Sidney Johnston, the army retreated to northern Mississippi where it worked to perfect its organization under PIERRE GUSTAVE TOUTANT BEAUREGARD and later Bragg. First called the Army of the Mississippi, and later the Army of Tennessee, this force under Braxton Bragg proved much less successful than Lee's army. Under Bragg, the command failed to protect the valuable food- and supply-producing regions of Tennessee and Georgia. With Bragg as commander, the Army of Tennessee fought at the Battles of Perryville, Kentucky; MURFREESBORO, Tennessee; CHICKAMAUGA, Georgia; and CHATTANOOGA, Tennessee. Following the rebel rout at Chattanooga in November 1863, Bragg resigned from active command and was replaced by Joseph E. Johnston. Johnston commanded the army in July 1864 but was fired for his inability to defend Atlanta. JOHN BELL HOOD took command, lost the ATLANTA CAMPAIGN, and destroyed the Army of Tennessee's effective field capabilities by hurling it against the Federal trenches at Franklin, Tennessee, on November 30, 1864. The army essentially dissolved in the face of fierce Federal attacks at Nashville on December 16, 1864.

Other significant armies created by the Confederate government included Earl Van Dorn's Army of the West that was defeated at Pea Ridge, Arkansas, in March 1862; H. H. Sibley's Army of New Mexico that attempted but failed to take and hold Arizona and New Mexico for the Confederacy; John C. Pemberton's Army of Vicksburg that, in July 1863, surrendered to ULYSSES S. GRANT; and Kirby Smith's Army of the Trans-Mississippi that served in the Confederate territory west of the MISSISSIPPI RIVER. In sum, the individual Southern soldier proved himself hardy, resilient, talented, and brave, fighting with a tenacity that belied his nation's overall lack of numbers. But neither the armies of the Confederacy nor their senior leaders were uniformly successful on the battlefield, where the Civil War was decided. The South found itself in a perilous predicament: fighting an enemy with significant manpower and materiel advantages. The situation allowed for little margin of error at either the strategic or the tactical level.

### Confederate navy

Nonexistent in 1860, the Confederate navy played an invaluable role in the Southern war effort during the CIVIL WAR. The navy was created by an act of the Provisional CONFEDERATE CONGRESS on February 20, 1861. At that point it was only a paper navy: It had few boats, and it had no sailors. It fell upon STEPHEN R. MALLORY, appointed Confederate secretary of the navy on February 21, to address these issues. Mallory, a senator from Florida before resigning from the U.S. Congress, had served as chairman of the Senate Naval Affairs Committee. This experience would prove to be vital, as he personally oversaw almost all of the Confederacy's maritime policy and naval strategy during the war.

Mallory's first concern upon assuming office was to build a fleet. At the outset of the war, the Confederate government could claim ownership of roughly a dozen vessels, none of them warships. Mallory was determined to turn this into an advantage. Since he was starting from scratch, he hoped to build a navy that utilized the latest technology—ironclad warships, steam engines, and powerful, new guns. The Confederacy did not have the capacity to build its own ships, so Mallory began by trying to purchase ships from Europe. The Lincoln administration quickly brought diplomatic pressure to bear upon the European powers, and so Mallory was only able to acquire a handful of wooden ships. As such, the Confederacy was largely forced to make do with its own resources. Under Mallory's direction, the

Southern navy was able to develop a limited capacity for producing its own ships. The Confederates were also able to salvage numerous Union warships, converting most of them to IRONCLADS. The Confederacy also innovated, developing ironclad rams, submarines such as the CSS *H. L. Hunley*, and underwater mines called torpedoes. These efforts were fairly successful. Over the course of the war, the Confederate navy managed to put more than 100 ships into service.

Ships required sailors aboard, so while Mallory was working to piece together a fleet, he was also trying to recruit seamen. The officer corps was easier; 250 naval officers, including the talented RAPHAEL SEMMES, Matthew Maury, Franklin Buchanan, and John Mercer Brooke, had resigned from the U.S. Navy to join the Confederate ranks. Filling out the rank and file, however, proved a much more challenging task. The Confederate navy set up recruitment centers in each of the major Southern cities and offered enlistment bonuses of \$50. There were also attempts to force the army to reassign men to the navy. Mallory even agreed to use convicts on Confederate ships, although he refused to allow African Americans into the naval ranks. In the end, the Confederate navy was never really able to raise enough men, and at its height in 1865 it only had a strength of about 4,000 enlisted men and officers.

Due to lack of manpower and ships, the Confederate navy could not hope to compete directly with its Union counterpart. Given the Union's edge in resources and technology, head-to-head confrontations tended to prove disastrous for the Confederates. Over the course of the war, only a half-dozen Union warships were sunk in action by Confederate warships. As such, the Southern navy's efforts were focused on three main activities: defense of rivers and coastal fortifications, blockade running, and commerce raiding.

The Confederates had a fair amount of success in defensive warfare. The navy helped keep the southern MISSISSIPPI RIVER in Confederate hands until mid-1863. Confederate ironclads also protected small rivers, including the Roanoke, the Neuse, the Chattahoochee, and the Red. Most of the Confederacy's major cities were on the seacoast and were dependent on Confederate ships for protection. In particular, the navy played a critical role in defending RICHMOND, Charleston, Savannah, and Mobile.

River and coastal defense may have been the most important task performed by the navy, but blockade running has received a great deal more attention from historians. Blockade runners were usually small, fast boats designed to sneak past the Union warships responsible for preventing any vessels from entering or leaving Southern ports. The blockade runners were critical to the Confederate war effort because they were the only way for the South

to export cotton and to import raw materials and manufactured goods from European countries. Although most blockade runners were privately held and were operated for profit, the Confederate navy also owned and operated several dozen of the ships. Blockade runners were very effective. Over the course of the war an estimated 92 percent of attempts to run the Union blockade were successful. The odds of success were much higher in the early years of the war than in the latter years, however, as the UNION NAVY learned how to patrol the Southern coast more effectively.

Blockade running's counterpart was commerce raiding—the attack and capture of Union merchant ships. The former was undertaken to sustain the Southern ECONOMY, while the latter was meant to disrupt the Northern economy. Commerce raiding was much riskier than blockade running due to the 1856 Treaty of Paris, an international agreement that made the practice illegal. The existence of the treaty meant that the rewards of commerce raiding were minimal, because captured ships and goods could not be easily sold. Meanwhile, penalties were severe: Commerce raiders risked imprisonment or execution as pirates. Private interests invested their money in blockade runners, while commerce raiding became almost exclusively the responsibility of the Confederate navy. There were several successful commerce raiders, most notably the *Shenandoah*, which captured or destroyed 36 ships, and the *Alabama*, which was responsible for the demise of 71 Northern vessels. Roughly 5 percent of Northern merchant ships fell victim to commerce raiders over the course of the war. In addition, it is estimated that for every one ship captured or destroyed, another eight ships had to remain in port due to the threat of commerce raiding. Altogether, 1,616 Northern vessels with a total capacity of 774,000 tons were rendered unavailable during the war, with a consequent negative impact on the Northern economy.

Despite the fact that the Confederate navy began with almost nothing, it played a very important role in the Confederate war effort, with an impact on both military and economic affairs. The Confederate navy was no match for its Union counterpart, but it must nonetheless be judged at least a partial success.

### Confederate States of America (1861–1865)

The Confederate States of America was established under a constitution signed on March 11, 1861. The new republic consisted of the Deep South states of Alabama, Florida, Georgia, Louisiana, Mississippi, South Carolina, and Texas. The number of Confederate states eventually grew to 11 when Arkansas, North Carolina, Tennessee, and Virginia left the Union following ABRAHAM LINCOLN's post-FORT SUMTER call for 75,000 volunteers to suppress the Southern rebellion. Four years of CIVIL WAR failed to secure Confederate independence, and the nation ceased to exist after the surrender of its principal armies in April and May 1865.

Abraham Lincoln's election on the Republican presidential ticket in 1860 caused many white Southerners to fear for the future of their slave-based society and provided the trigger for South Carolina's SECESSION convention. On December 20, 1860, South Carolina's 169 convention delegates voted unanimously to leave the Union. Similar conventions soon met in the other states of the lower South. By February 1, 1861, the first wave of secession was completed.

Delegates from the seceded states met in Montgomery, Alabama, during the first week of February 1861. Moderates controlled the convention and quickly drafted a provisional, or temporary, constitution closely modeled on the U.S. Constitution. JEFFERSON DAVIS of Mississippi, a moderate secessionist, and ALEXANDER H. STEPHENS of Georgia, who had been opposed to secession, were chosen as president and vice president. The delegates in Montgomery, selected by their respective state conventions rather than in popular ELECTIONS, converted themselves into the new nation's unicameral Congress. Together with Davis and Stephens, members of the Congress would serve until national elections could be held in November 1861. Congress also set up executive departments similar to those in the United States, as well as a postal system and other elements of a national government.

The Davis administration soon faced a crisis at FORT SUMTER in Charleston, South Carolina. Under increasing pressure to assert Confederate nationality, Davis ordered Southern forces to bombard and seize the United States's last remaining Southern fort during the second week of April 1861. Lincoln responded to the loss of Sumter by issuing a call for 75,000 volunteers to suppress the rebellion. That threat convinced four more slave states, Virginia, Arkansas, North Carolina, and Tennessee, to secede from the Union. The slave states of Missouri, Kentucky, Maryland, and Delaware remained loyal to the Union, although some of their citizens were active in support of the Confederacy.

The Confederate government operated under a temporary constitution for one month. The permanent constitution, written and approved by the Montgomery delegates, generally followed the U.S. Constitution except for

a few important differences. The Confederate Constitution limited national power and stressed STATES' RIGHTS. Most important, it protected SLAVERY in the states and all territories. The new document's preamble affirmed that each Confederate state acted "in its sovereign and independent character." The first 12 amendments to the U.S. Constitution appeared in the body of the Confederate version. The Confederate constitution created a national executive and bicameral legislature very similar to those of the United States, although it departed from the U.S. model in limiting the president to one six-year term.

The Confederate executive department included President Davis, Vice President Stephens, and the cabinet secretaries of state, war, the navy, and the treasury, a postmaster general, and an attorney general. The brilliant JUDAH P. BENJAMIN served as attorney general, secretary of state, and secretary of war at different times. STEPHEN R. MALLORY worked at the head of the Navy Department, and John H. Reagan was postmaster general. George Wythe Randolph and James A. Seddon stood out as the most important among several men to hold the post of secretary of war, while Christopher G. Memminger directed affairs

at the Treasury Department for more than three years. Cabinet members faced huge problems as they sought to plan and pay for war while also overseeing day-to-day governmental operations.

RICHMOND, VIRGINIA, replaced Montgomery as the capital of the Confederacy in 1861 and became the nation's most visible geographic symbol. The move was made because it was the capital of Virginia, the most populous Confederate state, and also the leading manufacturing center in the South. The first permanent CONFEDERATE CONGRESS convened in Richmond on February 18, 1862. Elected by voting-age white male citizens the preceding November, congressmen and senators had not run on specific political party tickets, like the Democratic or Republican Parties of the North. The Confederacy deliberately sought to avoid partisan politics. Although parties never developed, bitter divisions soon arose between congressional supporters and opponents of Davis and his policies.

The burden of conducting a protracted war against a powerful opponent placed enormous strains on Confederate society. Well before the end of the conflict, the South underwent changes and confronted challenges no one

Confederate president Jefferson Davis with his cabinet and, center, General Robert E. Lee (Hulton/Archive)

could have anticipated in 1861. Moreover, the Davis government passed laws and regulations that conflicted with the states' rights philosophy so often associated with the Confederacy. Still, the Confederacy held some advantages over the North. It sought to win independence and could achieve that by defending itself and persuading the Northern people that the effort to restore the Union would be too expensive in lives and money. The North, in contrast, had to invade the Confederacy, destroy its capacity to make war, and crush the Southern people's will. Many Confederates looked to the American Revolution as proof that a weaker power could defeat a more powerful foe. They expected the great size of the Confederacy and the unity of its people to be crucial factors in bringing Southern victory.

First, the nation needed soldiers. Hundreds of thousands of men volunteered for Confederate service in 1861, after which the rate of enlistment drastically declined. The Conscription Act of 1862 made all white males between the ages of 18 and 35 eligible for service but exempted men in several occupations deemed essential to the war effort (the most controversial exemption allowed one white man on each plantation with twenty slaves or more to avoid service). Later acts extended the age limits to 18 and 45 and then to 17 and 50 and modified the roster of exemptions. Until December 1863, any man drafted could pay a substitute to serve for him. The CONSCRIPTION acts were designed to promote volunteering rather than to draft men directly, and they generally worked well. Severe manpower shortages caused Congress to approve the enrollment of slaves into the CONFEDERATE ARMY very late in the war, but the legislation came too late to have any impact on the war.

Both the Davis and Lincoln governments understood that French aid had tipped the balance in favor of the colonists during the American Revolution. Confederate diplomatic efforts therefore concentrated on achieving recognition from Great Britain or France. Initial hopes rested on the belief that by withholding cotton exports, the Confederacy could produce such economic hardship among British textile manufacturers and their employees that the London government would intervene to assure a steady flow of cotton. Among other things, such intervention likely would bring the Royal Navy into conflict with the United States's naval blockade of the Confederacy. But "King Cotton" diplomacy failed miserably because Britain had a surplus of cotton on hand in 1861, rapidly developed new sources of cotton in India and Egypt, and saw increased production in arms manufacturing and other areas boost EMPLOYMENT when textile production lagged in the summer and fall of 1862.

During the war, the Confederacy suffered immense economic dislocation. Much of the problem was due to the fact that the antebellum Southern ECONOMY was not pre-

pared to wage war. With most capital tied up in land and slaves, the Confederacy struggled to pay for its war effort. The Davis administration relied on three sources of income: taxes that raised about 5 percent of revenues, bonds that raised another 35 percent, and paper treasury notes that raised the remaining 60 percent. This overproduction of paper money helped fuel inflation that eventually reached 9,000 percent. Shortages of goods contributed to inflation, as the Union blockade limited trade with Europe. Union military successes throughout the war also played a role in disrupting industrial and agricultural production and TRANSPORTATION networks.

Richmond adjusted to growing economic problems with a number of measures, such as IMPRESSMENT, which allowed the national government to seize goods—food, supplies, and slaves—for the war effort. Impressment caused considerable dissension but also provided invaluable war-related goods that helped keep the Confederate armies in the field.

The Confederacy registered impressive accomplishments in the area of war industry as well. The government created the largest powder works in North America at Augusta, Georgia, and established arsenals and ironworks in Richmond; Charleston; Selma, Alabama; and elsewhere. During 1863, war-related industries in Selma employed more than 10,000 people. No Confederate army ever lost a battle because it lacked weapons, ammunition, or other materiel.

The demands of fighting a war created serious political tensions in the Confederacy. In the absence of formal parties through which disagreements could be expressed, Confederate political opinion divided into pro- and anti-Jefferson Davis factions. Davis and military figures such as ROBERT E. LEE insisted that winning the war should take precedence over everything else. Other political figures insisted that the central government must protect essential state and individual rights, even if doing so hindered the Confederate war effort. Relations between Davis and the national Congress were tense. Disagreement over conscription, the suspension of HABEAS CORPUS, and policies that promoted economic centralization divided the leadership of the Confederacy. Congressional critics blasted Davis as a dictator and warned that winning independence would be worthless unless the values that made the new nation distinctive were preserved.

Vice President Stephens broke with Davis in 1862 over conscription and other issues, becoming another outspoken critic. GOVERNORS such as JOSEPH E. BROWN of Georgia and Zebulon Vance of North Carolina deliberately withheld supplies from the government and flaunted or circumvented national laws. Despite great opposition, President Davis worked extremely hard, set an example of selfless service, and created and sustained a national

army and government. At the same time, Davis's inability to delegate military responsibilities hurt the war effort. In addition, Davis was not an eloquent public speaker and failed to inspire public faith in the Southern cause. For that, the nation turned to Gen. Lee and the Army of Northern Virginia. Victories over the Union's army of the Potomac helped to maintain the Confederacy after public support of Davis's government died. As the war continued, the Southern government suffered from divisions that prevented the most effective use of limited resources. Many historians argue that the Confederacy's inability to resolve the contradiction of nationalism versus states' rights and individualism caused the ultimate defeat of the South.

Military losses, particularly during and after the summer of 1863, along with inflation, scarcity of goods, and loss of loved ones led to dissent and disaffection behind the lines. DESERTION from Southern armies escalated dramatically during the winter of 1864–65. In early April 1865, Robert E. Lee and the Army of Northern Virginia abandoned Richmond. On April 9, Lee surrendered to ULYSSES S. GRANT at APPOMATTOX COURT HOUSE, VIRGINIA. Appomattox marked the end of the war for most Confederates, though additional surrenders of large forces would take place over the next month. Jefferson Davis, who fled southward with part of his cabinet just before the fall of Richmond, was captured on May 10 near Irwinville, Georgia.

The South paid a high price for its rebellion. Nearly 260,000 Confederate soldiers died from wounds or disease and another 200,000 were wounded in combat. Two-thirds of the region's assessed wealth was destroyed. Approximately 40 percent of all Southern livestock perished. Much of the infrastructure of the region—banks, factories, RAILROADS, bridges, levees, and the like—lay in ruins. One comparative figure is especially revealing: Between 1860 and 1870, Northern wealth increased by 50 percent while Southern wealth decreased by 60 percent.

The Confederate States of America failed because of internal dissent and military defeat. No other white group in U.S. history suffered the kind of catastrophe that was the fate of white Southerners. This regionally distinctive legacy has been, and continues to be, explored in LITERATURE, song, political culture, and symbols, such as the conflict over the Confederate battle flag.

**Confiscation Acts** (August 6, 1861, and July 17, 1862) The Confiscation Acts authorized Union troops to seize private property from individuals supporting the Confederacy during the CIVIL WAR. This provided valuable supplies for the Union war effort while undermining the Southern will to fight. At the same time, the Confiscation Acts played an important role in bringing an end to the institution of SLAVERY.

In the first Confiscation Act, passed on August 6, 1861, Congress authorized the UNION ARMY to seize any property used in “promoting . . . insurrection or resistance to the laws.” On its face, the act might have aroused little controversy in the North, because seizure of such “contraband” occurred in most wars. However, Southern property included slaves. This opened up an important question: If soldiers confiscated slaves, would those slaves be free?

Certain Union commanders, most notably Gens. John C. Frémont and BENJAMIN F. BUTLER, believed that confiscated slaves were indeed free. President ABRAHAM LINCOLN, however, forbade Union officers from freeing slaves on their own authority. Lincoln's 1861 repudiation of Frémont and Butler stemmed from his fear that any action that hinted at the ABOLITION of slavery would enrage the citizens and soldiers of Maryland, Delaware, Kentucky, and Missouri. Though none of these “border states” had joined the Confederacy, all of them still permitted slavery. Any perceived threat to the institution created the possibility that the states would throw their support to the Confederacy. Lincoln also worried that freeing captured slaves would cost him significant political support in Congress.

As the war dragged on through 1862, however, Lincoln's position changed. Southern resistance proved stronger than most Northerners had anticipated. By the spring of that year, both Lincoln and most congressional Republicans had concluded that victory would require a more determined and ruthless policy. In this new mood, Congress passed the second Confiscation Act on July 17, 1862. The act required that Union soldiers free any slaves that came into their hands. The act also authorized Lincoln to “employ as many persons of African descent as he may deem necessary and proper for the suppression of this rebellion . . . and use them in such manner as he may judge best.” Lincoln was now free to arm former slaves to fight against the Confederacy.

The second Confiscation Act was not an abolitionist measure. Instead, it was a military tactic intended to undermine the South's ECONOMY and social institutions. However, it took no great leap of imagination to predict that if Union forces advanced far enough into Confederate territory, slavery might actually collapse.

The second Confiscation Act thus paved the way for Lincoln's EMANCIPATION PROCLAMATION in January 1863.

The Proclamation took the next logical step, declaring that all slaves in rebellious states were free, whether they had been captured by Union soldiers or not. The Emancipation Proclamation, in turn, was superseded after the war by the THIRTEENTH AMENDMENT, ending slavery forever. And so the end of slavery came not in one great stroke, but in steps; the Confiscation Acts were an important part of this process.

### Congress, Confederate (1861–1865)

The Confederate Congress was the national legislature of the CONFEDERATE STATES OF AMERICA, and its responsibilities duplicated that of the UNITED STATES CONGRESS. The initial drive to form a Confederate government began in February 1861, when delegates from seven seceded states arrived at Montgomery, Alabama. Given the urgency of the situation, they spent only a day debating and passing a provisional constitution to legitimize their activities. They then quickly established a provisional Confederate Congress. That April, after the fall of FORT SUMTER, SOUTH CAROLINA, additional delegates arrived from Arkansas, North Carolina, and Virginia, and work continued apace to organize the machinery of government and provide for a permanent constitution and congress.

The provisional constitution closely mirrored its U.S. counterpart in most ways. Important exceptions included the protection of SLAVERY and state sovereignty. The absence of a clause providing for the “common defense” or “common welfare” limited the power of the executive as did explicit barring of TARIFFS (a tax on imported goods) by the government. Thus, the founding document of the Confederacy seemed to enshrine a political philosophy of weak central governance, although historians have noted the Davis administration’s expansion of federal power. JEFFERSON DAVIS of Mississippi was chosen as president, and ALEXANDER H. STEPHENS of Georgia, his vice president, backed by a bureaucracy, postal system, and judiciary. Turning next to the issue of financing and conducting a war for independence, the delegates, composing the provisional Congress, desperate for funding, initiated a 15 percent tariff on imports, issued \$20 million in treasury notes and \$50 million in bonds, and provided for an army of 100,000 one-

year volunteers. The provisional Confederate Congress remained in office until February 17, 1862, when it was replaced by the first standing congress, whose members had been popularly elected in November 1861.

The first Confederate Congress, a bicameral body, convened on February 18, 1862, in an air of mounting military crisis. Union forces had made inroads along the Tennessee frontier, and the bulk of army enlistments were due to expire. President Davis was seeking officially sanctioned CONSCRIPTION to maintain manpower levels and permission to suspend HABEAS CORPUS to squelch dissent. Although both practices ran counter to the philosophy of STATES’ RIGHTS, Congress gave grudging acquiescence. But a long list of exemptions to conscription generally favored the wealthy, slave-owning planters who formed the bulwark of the ECONOMY.

As the war dragged on, Congress was repeatedly forced to address the question of national finance. The body generally approved the plan of Treasury secretary CHRISTOPHER G. MEMMINGER to issue more and more treasury bonds and notes to an unreceptive public. When the Union blockade began strangling imports and reducing tariff income, Congress imposed a Confederacy-wide tax, which, again, violated cherished principles of states’ rights. Revenue nonetheless diminished, proving inadequate to fund the war effort. Davis next sought congressional approval of IMPRESSMENT, or forced requisition of goods, to meet the army’s needs. Again, the Confederate Congress complied as a wartime expedient, but Davis and Congress met increasingly shrill criticism over their perceived dictatorial methods. The ongoing tug of war between the chief executive, the Congress, and individual states was never reconciled, despite the glaring need for strong central controls during wartime.

The second and final session of the Confederate Congress convened in February 1864, in a highly charged atmosphere of anger, acrimony, and war-weariness. Members increasingly criticized Davis for his alleged mishandling of military affairs, his repeated requests for suspension of habeas corpus, and new accusations of “dictatorship.” There were also new fissures in what had been a united political front. The Southern polity had broken up into two main factions: hard-liners who would settle for no less than Southern independence, and moderates, who were now emboldened to broach a negotiated settlement with the North. Over the winter and spring of 1864–65, as the Confederacy was in its death throes, Congress was powerless to effect changes. In a last-ditch effort to sustain Southern independence, Congress named Gen. ROBERT E. LEE general-in-chief of all Confederate forces. In March 1865 it also narrowly approved measures that allowed African-American slaves to serve as soldiers. As the Confederate military and economic situation approached total collapse,

many members of Congress grew so disillusioned that they vacated their seats and went home. In retrospect, the Confederate Congress did as well as it could have been reasonably expected, given limited resources and a political philosophy embracing weak central governance.

### Congress, United States (1861–1865)

The United States Congress remained the national legislature for the United States of America during the CIVIL WAR years. As a legislative body, Congress had wrestled with SLAVERY and sectionalism since 1789 with varying degrees of success. But the expansion of the “peculiar institution” into new territories acquired after the Mexican-American War of 1846–48 escalated the tempo of confrontation between North and South. The election of Republican ABRAHAM LINCOLN to the presidency in fall 1860 set in motion an irrevocable slide toward civil war. Congress made several determined but essentially futile attempts to head off armed confrontation, most notably the Senate’s CRITTENDEN COMPROMISE. But by the time South Carolina seceded that December, the middle ground had vanished. In spring 1861 the secessionist crisis reached critical mass: Seven Southern states departed, and most southern Democrats vacated their seats in Congress. An important exception was Senator ANDREW JOHNSON of Tennessee, but Republicans completely dominated the new session when it reconvened.

During the interim recess, most congressmen returned to their states and districts to attend prowar rallies and foment support for both the Union and an aggressive war policy. On July 4, 1861, President Lincoln summoned a special session of the 37th Congress to secure emergency war measures necessary to confront the new CONFEDERATE STATES OF AMERICA. Both Republicans and Democrats readily complied, passing pro-forma approval of the volunteer recruitment and other measures Lincoln had already implemented in their absence. Short but memorable, the session set a tone of general cordiality, cooperation, and effectiveness that distinguished the Union Congress from its Southern counterpart, the CONFEDERATE CONGRESS.

In this respect, Congress became a full and bona fide partner in the war to preserve the Union.

The regular session of the 37th Congress, gathered in December 1861, approved additional wartime and fiscal measures at Lincoln’s behest, including the first income tax and the issuance of “GREENBACK” currency as legal tender. In addition, Republicans passed several significant acts meant to shore up their political capital. Foremost among these was the HOMESTEAD ACT. Previously tied up by Southern opposition, the act was part of the REPUBLICAN Party’s 1860 election platform. It guaranteed 160 acres to any frontier settler who cultivated a plot for five years. Congress then passed the MORRILL LAND-GRANT ACT to establish land-grant colleges and universities, voted for the PACIFIC RAILROAD ACT to fund the first transcontinental railroad, and established the Department of Agriculture as a nod to the nation’s economic future. These three acts yielded benefits that lasted far beyond the Civil War years and reflected the party’s desire for internal improvement to facilitate national growth. Overall, congressional leaders deliberately ignored the complaints of many state leaders and increased the powers of the federal government at their expense in the interest of successfully prosecuting the war.

The striking initial support of Congress for administration policies broke up as the war ground on and its unpopularity mounted. In particular, the DEMOCRATIC PARTY split into two distinct and increasingly vocal factions. The War Democrats, who supported military victory over the Confederacy, were cool toward Lincoln’s push to emancipate slaves, while the Peace Democrats, branded by the Northern press as “COPPERHEADS,” sought accommodation with the Confederacy, even at the expense of preserving the Union. The Republican majority underwent similar divisions, with moderates more or less in agreement with the president’s political and military objectives. However, the new and rising RADICAL REPUBLICAN faction waxed critical of many of Lincoln’s policies, especially RECONSTRUCTION, which they deemed far too lenient toward the South.

The Radicals condemned Lincoln’s December 1863 general proclamation of amnesty and reconstruction for occupied areas of the Confederacy, which promised to restore civilian authority once 10 percent of the electorate took an oath of allegiance to the United States. They countered with the WADE-DAVIS BILL of July 1864. This measure stipulated that states could not be readmitted until 50 percent of the population submitted to the oath, and it denied both the executive branch and the military any future role in Reconstruction. When Lincoln pocket-vetoed the bill, he was roundly denounced by Radicals. Radical Republicans also dominated the powerful Committee on the Conduct of the War, which was empowered

to investigate and castigate any military figure who failed to produce expected results on the battlefield; authorized to harass or humiliate generals it identified as treasonous, some contend that the committee did the war effort more harm than good. Finally, Radicals did support Lincoln's proposal to provide government assistance for newly freed African Americans, but Congress ultimately approved the FREEDMEN'S BUREAU in March 1865. This marked the first time that the federal government involved itself directly in the social well-being of any segment of its citizens. In general, even as Congress criticized Lincoln's wartime expedients—such as CONSCRIPTION, EMANCIPATION, and the suspension of HABEAS CORPUS—it ultimately signaled its acceptance of the same, however grudgingly.

Lincoln was assassinated in April 1865. When his successor, ANDREW JOHNSON, tendered a blanket amnesty to former Confederates and removed several commanders to mitigate the burden of military governance in the conquered South, he bore the brunt of Radical Republican fury. Johnson, possessing none of Lincoln's political finesse when dealing with Congress, waged a long and losing battle with the Republicans that culminated in his impeachment. Until the election of ULYSSES S. GRANT in 1868, executive power was eclipsed by a resurgent legislative branch, a state of affairs that would have been unthinkable while Lincoln occupied the White House.

In sum, the U.S. Congress during the Civil War, while fractious at times, helped form the policies that ultimately brought about Northern victory. Its relationship with the commander in chief in matters of war and public policy was by no means without tension or strife, but it was still a productive partnership capable of winning the war and planning for the postwar period.

## conscription

Conscription, or “the draft” as it is more generally known, is the practice of compelling citizens to serve in the military. With the CIVIL WAR, the United States began a transition from the limited warfare of the past, in which a relatively small number of men were mobilized as soldiers, toward modern “total war.” A total war mobilizes the entire populace and is fought on a much broader scale. The Civil War was not a modern war in every way, but it certainly was modern in terms of its scale. In the Revolutionary War, roughly 200,000 soldiers took the field for the United States. In the War of 1812, 286,000 soldiers fought, and in the Mexican-American War a mere 79,000 soldiers participated. These numbers were dwarfed during the Civil War, when nearly 4 million men donned the uniform of either the Confederacy or the Union.

Early in the Civil War, there were more than enough volunteers on both sides to fill the ranks. This reflected the populace's excitement over the impending conflict as well as their sense that the war would not last more than a few months. When it became clear that this was not to be the case, the number of volunteers dropped dramatically, and leaders quickly realized that they would have to do something to fulfill their armies' manpower needs.

The Confederacy was the first to act. Most of the CONFEDERATE ARMY's early volunteers signed up for one-year enlistments that expired in spring of 1862. While some of these men extended their enlistments, many others made clear their intentions to return home. In response, on April 16, 1862, the Confederate Congress passed the first of three conscription acts, establishing the first national draft in American history. The first Conscription Act extended the one-year enlistments to three years or until the end of the war. To soften the blow, these VETERANS were to be granted 60-day furloughs before finishing their time. The act also required men between the ages of 18 and 35 who were not already in the ranks to serve for three years, although there was a grace period before the act took effect so that these individuals would have the opportunity to “volunteer.” The second Conscription Act, passed in October 1862, refined the terms of the first, most notably extending the upper end of the eligible age range from 35 to 45. The third Conscription Act, passed in February 1864, went even further, declaring the eligible age range to be 17 to 50 years.

The Union was in the same position as the Confederacy, and the Union leadership responded in a similar fashion. In August 1862, President ABRAHAM LINCOLN used the terms of the Militia Act of 1862 to require states to furnish 300,000 troops, with each state being assigned a quota based on its population. This system proved to be very inefficient, and so in March 1863 Congress passed the Enrollment Act, which was similar to the Conscription Act that

had been adopted by the Confederate government. The act made men between the ages of 20 and 45 liable for up to three years of service. Unlike the Confederate version, however, the Union's Enrollment Act did not automatically draft all eligible men into the army. Instead, it set up quotas for how many soldiers each state was expected to provide. If states could meet their quota with volunteers, then no draft was held. If not, then federal officials would go from district to district within the state and set up a wheel in a public place containing the names of all eligible men in the district. At the appointed time, a draft officer would put on a blindfold and choose the required number of names from the wheel.

The draft was not received well in either the North or the South. One of the most common objections was that a draft was not within the authority of the government. President Lincoln was regularly asked to suspend the draft or to reduce state quotas. The president faced particularly vocal opposition from New York governor Horatio Seymour, who threatened to take the case to the Supreme Court. Lincoln usually managed to deflect these challenges by making minor concessions when he felt it necessary. JEFFERSON DAVIS faced similar objections in the South, where it was felt that the draft was not only unconstitutional but also contrary to the STATES' RIGHTS philosophy of the Confederacy. Among the prominent critics who faced off against Davis were GOVERNORS, including JOSEPH E. BROWN of Georgia and Zebulon Vance of North Carolina. The supreme courts of several states sustained Davis's position.

The biggest objections to the draft laws centered on the exemption clauses contained in both the Northern and Southern acts. Union draftees were allowed to pay a \$300 commutation fee, or to hire a substitute, in acknowledgement of the fact that some men had responsibilities that made military service impossible. In the Confederacy, a draftee could also hire a substitute. In addition, certain classes of men necessary on the HOMEFRONT were exempt from the Confederate draft: government employees, contractors, shoemakers, blacksmiths, millers, and so forth. The most controversial exemption was included in the second Conscription Act: The so-called Twenty-Negro Law added any slaveholder with more than nineteen slaves to the list of exempt classes. Officially, this was because these individuals were needed to keep the ECONOMY running, but many Southerners felt that the clause was included because of the large plantation owners' political connections.

The exemption clauses gave rise to complaints on both sides that the conflict was a "rich man's war, poor man's fight." Scholarly studies have shown that this was not true, but the perception held by some groups was strongly felt. Resentful draftees failed to appear when called, or they deserted shortly after joining the ranks.

Engraving depicting the process of conscription in New York (1865) (*Library of Congress*)

Anti-draft violence was also a common phenomenon in both the North and South. The most well-known uprising was the NEW YORK CITY DRAFT RIOTS in July 1863. A mob made up mostly of poor Irishmen and women went on a two-day rampage. These Irish workers were angry not only about the draft but also about EMANCIPATION, which they opposed due their fears that freedmen would provide unwanted competition for jobs. The rioters inflicted \$1.5 million in damage while killing many African-American men. The situation was finally resolved when NEW YORK CITY's government came up with enough money to purchase exemptions for all of the draft spots the city was expected to fill. Eventually, incidents like the draft riots convinced leaders on both sides to eliminate some of the exemptions. In 1863 the Southern Congress disallowed any further hiring of substitutes. In 1864 President Lincoln and the Northern Congress did away with the \$300 exemption.

If judged by the number of soldiers added to the ranks, the draft was not very successful in either the North or the South. There are no reliable numbers for the South, but the statistical story of the North is probably representative of what happened on both sides. Of the 776,000 men drafted, 161,000 failed to report, and another 391,000 had to be sent home due to disability or because being drafted would be an undue hardship on their families. Of the remaining 207,000 men, 87,000 paid the commutation fee and another 74,000 furnished substitutes. Only 46,000 men, less than 7 percent of the total drafted, actually went into the army. If the substitutes are taken into account, then drafting accounted for the addition of a total of 120,000 men to the UNION ARMY, only about 4 percent of the total number of Yankee soldiers. And since draftees tended to be

poor soldiers, their impact was likely even less substantial than their modest numbers would suggest.

The purpose of the draft was not to force men to fight. Instead, the goal was to motivate able-bodied men to volunteer on their own. At roughly the same time the Conscription and Enrollment Acts were passed, the respective governments set up incentive programs for new volunteers. Men were given cash bounties of as much as \$1,000 or more and granted other concessions designed to ease their service in the army. If a man was drafted, however, all benefits for enlisting were forfeit, and he was forever branded with the stigma of having been forced to fight rather than volunteering. It is impossible to say exactly how many men were motivated to enlist or to reenlist by the combination of negative and positive reinforcement.

Once again, there are no reliable statistics for the Confederacy, but in the Union more than 750,000 men volunteered to join the ranks in the years after the passage of the Enrollment Act. If even a modest percentage of those men joined out of fear of being drafted, then the draft has to be considered at least a qualified success.

## contrabands

*Contrabands* was the term used for fugitive slaves who crossed over UNION ARMY lines during the CIVIL WAR. Before the Union developed a coherent policy on EMANCIPATION, slave REFUGEES were neither in bondage nor free, but somewhere in between, recognized legally as confiscated enemy property.

About a month after the Confederate attack at FORT SUMTER, SOUTH CAROLINA, three slaves crossed the Union picket lines at Fortress Monroe, Virginia, where they offered their services to the Union army and sought protection from their masters. Thus began a spontaneous and grassroots effort by slaves across the South to escape bondage. Within a few months, thousands of slaves poured over Union lines. Wherever the army went, SLAVERY seemed to disintegrate in the immediate vicinity. Because there were so many fugitive slaves in army camps, Union military leaders were forced to confront the future of slavery.

Gen. BENJAMIN FRANKLIN BUTLER, the commander at Fortress Monroe, freed the first three slaves and put them to work as army laborers. Butler learned that Confederates

used slaves to construct fortifications; thus, he declared that fugitive slaves were enemy property—in other words, “contraband of war.” Butler’s actions were some of the first steps toward emancipation. Nevertheless, the Union had not yet formulated a policy toward fugitive slaves. Other military officers, including Butler when he administered captured lands in Louisiana, returned runaways because they did not have a system to care for them.

Congress attempted to clarify the emerging problem of contrabands with the CONFISCATION ACT of August 6, 1861. It stated that slaveholders forfeited their rights to any slave that had been employed by the Confederate military. While the law did not address emancipation, it did recognize the fact that slaves could be used as weapons of war. Consequently, it was in the best interests of the Union military to weaken the institution of slavery.

A preliminary and uncertain federal policy did not deter slaves from seeking their freedom, but Union forces were ill-equipped to deal with thousands of fugitive slaves. Male slaves were put to work, but the army had little to offer slave women and children. Northern benevolent associations rushed in food and clothing for the destitute, and teachers arrived to educate freed families in the contraband camps.

In 1862 Congress continued to refine its policy toward fugitive slaves and to inch ever closer toward emancipation. An article of war was added in March forbidding the army or the navy from returning fugitive slaves to their owners. Slavery was abolished in WASHINGTON, D.C., in April and in the U.S. territories in June. A second Confiscation Act passed on July 17, 1862, freed the slaves of any person who aided the rebellion and authorized the seizure and sale of any other property from disloyal citizens. On the same day, Congress recognized the labors of the contrabands at army camps. According to the Militia Act, any fugitive slave who worked for the military was freed, as was his or her family.

Lincoln and Union military leaders entered the Civil War with the desire to not interfere with the slave system in the South, but the slaves and the lengthening war forced the issue. More than 10,000 contrabands crossed Union lines in Virginia by mid-1863. Along the MISSISSIPPI RIVER, similar large encampments of contrabands stretched the limits of Union supply lines. Crowded into unhealthy camps, thousands died from disease, exposure, and even starvation. In spite of the degradation, most refugees stayed in the camps. If they ventured from the protection of the Union lines, contrabands were subject to marauding guerrilla bands of Confederate soldiers or recapture by their owners.

Facing a humanitarian crisis, Union leaders began to develop a policy of refugee settlement on abandoned lands. Some were hired out to Unionist planters, while oth-

ers were placed on U.S. government-run PLANTATIONS on a wage-labor basis. After 1863, male contrabands were encouraged to enlist in the Union army. At the end of the war, Congress created the FREEDMEN'S BUREAU to formally help ex-slaves make the transition to freedom.

Contrabands played a crucial role in forcing the Union to confront the issue of slavery and emancipation. As the war persisted, the value of fugitive slaves as military laborers and as soldiers helped to convince President Lincoln and Congress to emancipate all of the slaves. Unfortunately, far too many contrabands met an untimely death at disease-ridden camps, demonstrating the uncertainty that accompanied freedom.

### **Cooke, Jay** (1821–1905) *financier*

Known as “the financier of the CIVIL WAR,” Jay Cooke was the most influential investment banker of his day. Born in Sandusky, Ohio, to a prosperous family (his father was a lawyer, a businessman, and a politician), Cooke started his working life as a clerk in a dry goods store at age 14. In 1838 his brother-in-law offered him a similar position in Philadelphia, but after the company's failure and a short stint as a hotel clerk, he moved back to Sandusky.

In 1839 Cooke began his long career in the banking business with a position at E.W. Clark & Company. His skills soon rapidly advanced him up the corporate ranks. By age 21, he was made a full partner in the firm. In 1844 he married Dorothea Elizabeth Allen, sister of the president of Allegheny College in Pennsylvania, where his brother Henry was a student.

Cooke went on to become a successful investment banker with E.W. Clark & Company, which helped to finance the Mexican-American War and a few railroad companies. The firm went bankrupt during the financial PANIC OF 1857, and Cooke retired. The Civil War would soon provide new opportunities for him.

In 1861 as the war broke out, Cooke ended his brief retirement and opened his own firm, called Jay Cooke & Company. Vigorously and shrewdly marketing Civil War bonds, he made a great success of the firm. Using a patriotic advertising campaign, Cooke convinced Americans to invest in their government during the darkest days of the war. The money used to purchase these bonds helped to

keep the war effort alive for the Union, particularly when resources were most desperately needed.

Following the war, Cooke expanded his investments into new ventures. The largest of these was the Northern Pacific Railroad, a new transcontinental railroad that was to run from the Great Lakes to the Pacific Ocean. Cooke needed to raise \$100 million for the railroad, and he sought both American and European investors to back the scheme. Money was not easily forthcoming, and the investment quickly turned bad because there was not enough rail traffic or people along the line for the road to attract new investors. Cooke spent unwisely in order to keep the project alive, and on September 18, 1873, his company went bankrupt.

The failure of Jay Cooke & Company, which was the leading brokerage firm in the country in 1873, played an important role in ushering in the panic of 1873 and the depression that followed. Cooke afterwards spent a few years away from the world of banks and finance, only to return once more as an investor in silver mines and real estate in Minnesota. He proved to be a success a final time, purchasing, among other things, an estate near his adopted city of Philadelphia. He spent the last years of his life living with his daughter and her family after converting his estate into a school for girls.

Cooke's influence extended far beyond his own lifetime. His innovations in investment banking and marketing of war bonds set precedents that resonated well into the next century.

### **Cooper Union speech** (February 27, 1860)

The Cooper Union speech was a significant political address made by presidential candidate ABRAHAM LINCOLN. In October 1859 James S. Briggs of the Young Men's Republican Union invited Lincoln to deliver a speech to the political club at Henry Ward Beecher's noted Plymouth Church in Brooklyn, New York. Lincoln, an Illinois attorney, was an aspirant for the party's presidential nomination, and Union members were in search of a candidate to foil the presidential ambitions of New York senator WILLIAM H. SEWARD. The Union's political board included prominent newspaper editors William Cullen Bryant and HORACE GREELEY, both of whom staunchly opposed Seward's candidacy. Briggs himself was the eastern manager of SALMON

P. CHASE, another Republican presidential aspirant, who also sought to derail Seward's aims. Lincoln gladly accepted the invitation, knowing his speech would attract national attention and help define the Republican position for the coming ELECTION.

The date was set for February 27, 1860, although the venue was changed to Cooper Union, an educational institute for working-class people. Keenly aware of the importance of this platform, Lincoln thoroughly researched his speech by consulting Jonathan Elliott's *Debates . . . on the Federal Constitution* and other sources that would justify and clarify the Republican stance on SLAVERY in the territories. He arrived in NEW YORK CITY by train on February 23, and four days later he strode into Cooper Union wearing a new and ill-fitting suit to lecture to a crowd of 1,500.

Lincoln's oration, known as the Cooper Union speech, was brilliantly delivered and is regarded as a model of an articulate and politically effective oration. He began by attacking the positions of Democrat Stephen A. Douglas and Supreme Court justice Roger Taney. In contrast to their arguments, Lincoln's research demonstrated that 31 of 39 delegates present in the Constitutional Convention of 1787 voted to allow Congress to regulate and thus restrict slavery in the territories. The founding fathers, Lincoln insisted, were opposed to the extension of slavery. After the ratification of the Constitution of the new federal Congress, with many of these same members present, voted to forbid carrying slaves into the new Northwest Territory; they did not, Lincoln underscored, pass the Bill of Rights' Fifth Amendment (which guarantees due process of law) in order to bar CONGRESS from regulating slavery in new states and territories, as Taney had intimated. By making this point, Lincoln sought to assure Southerners that the REPUBLICAN PARTY was conservative and simply wished to maintain the founding fathers' traditional policy.

He also denounced the activities of abolitionist JOHN BROWN, who had carried out a bloody raid on the federal arsenal at HARPERS FERRY, WEST VIRGINIA, to further his cause. Lincoln reassured Southern states of the party's determination to protect slavery where it was clearly sanctioned by the U.S. Constitution. In an eloquent closing, he urged his fellow Republicans to stand together against pressure to abandon their antislavery platform. "Let us have faith," Lincoln exhorted the crowd, "and that right makes might, and in that faith, let us, to the end, dare to do our duty as we understand it." The speech was immediately hailed by Greeley in the *New York Tribune*, among other influential newspapers, and propelled Lincoln to the Republican Party nomination.

## Copperheads

There were a number of groups in the North who opposed the CIVIL WAR. The most prominent of these was the peace wing of the DEMOCRATIC PARTY, derisively called Copperheads by their detractors, likely after the poisonous snake of the same name. The Copperheads came to exercise substantial influence among important segments of the Northern population over the course of the war before finally fading from the political scene in 1864.

In the first months after the firing on FORT SUMTER, Democrats and Republicans were generally united in their desire to crush SECESSION and reunite the country. As the war dragged on, however, a number of Democrats were increasingly critical of President ABRAHAM LINCOLN and the Union war effort. RADICAL REPUBLICANS, firm advocates of the war, wanted to discredit and silence these Democrats. *Cincinnati Gazette* editor Whitelaw Reid began to call them Copperheads in the pages of his newspaper. The term quickly gained wide usage.

The majority of individuals who were called Copperheads were simply political conservatives who opposed the war effort for any one of a number of reasons. Radicals, however, were willing to stretch the truth to maximize the propaganda value of their attacks. Radical newspaper editors and political leaders told Americans that Copperheads not only opposed the war but that they were secretly providing financial and logistical support for the Southern war effort.

Many Northerners, particularly Northern soldiers, were enraged by this propaganda. A captain in the 46th Pennsylvania wrote, "My *first* object is to crush this infernal Rebellion, the *next* to come North and bayonet such fool miscreants as Vallandigham." The Radicals' depiction of the Copperheads has found its way into many history books, but the charges were almost entirely untrue. Copperheads opposed the war, but they were not conspiring with the South.

There were a number of important political leaders who came to be identified as Copperheads. Most prominent was Ohio congressman CLEMENT L. VALLANDIGHAM. Others included Fernando Wood of New York, William A. Richardson of Illinois, Daniel W. Voorhees of Indiana, and George Woodward of Pennsylvania. A number of newspapers also became vocal supporters of antiwar politics, including the *Illinois State Register*, the *Lacrosse Democratic*, and the *Dubuque Herald*.

The Copperheads rallied around a number of issues. They were angered by Lincoln's suspension of the writ of

HABEAS CORPUS, which they felt was unconstitutional. Copperheads became increasingly vocal about this issue as a number of them, including Vallandigham, were jailed for their opposition to the war. In the Midwest, antiwar sentiment was strong because the closure of the MISSISSIPPI RIVER compelled farmers to send their crops via RAILROADS, which were generally controlled by eastern businessmen. Copperheads thus found much support for their argument that the war was being fought to enrich eastern capitalists at the expense of Western farmers. The Copperheads also enjoyed the backing of substantial numbers of German Americans and Irish Americans in the Midwest and in eastern cities. Many members of these ethnic groups opposed administration policies, especially the draft and EMANCIPATION. Indeed, emancipation was the central issue that crystallized opposition to the war. Copperhead leaders strongly opposed any change in the nation's strictly defined racial order. Their supporters shared this attitude and also had an additional, more practical concern. Freed slaves, they feared, would move north and compete for jobs.

These issues generated a great deal of support for the Copperheads. Just as important in determining Copperhead fortunes, however, were Union successes on the battlefield. When the Northern military failed to make progress, antiwar sentiment was high. Northern victories, on the other hand, undermined support for the Copperheads. The so-called high point of Copperheadism occurred in the first months of 1863. Lincoln issued the EMANCIPATION PROCLAMATION in January of that year, and at the same time, the Union armies were struggling on the battlefield. A number of prominent Copperhead leaders, including Clement L. Vallandigham, took advantage of the situation and ran for the governorships of their states. They were heavily favored in these gubernatorial contests until the Union won victories at GETTYSBURG and VICKSBURG. This rallied support for the war among the Northern populace, and when the ELECTIONS came, the Copperheads were all defeated.

The same pattern played itself out in 1864. Early in the year, the Union military was not having a great deal of success. At the Democratic convention, Copperheads were able to secure control of the committee charged with drafting the party platform, and they included a plank calling for an immediate end to the war. Two things ultimately conspired to undermine them. The first was that the convention chose Gen. GEORGE B. MCCLELLAN as its candidate, and he immediately rejected the plank. The second was that Gen. WILLIAM T. SHERMAN captured Atlanta. These reverses ultimately brought an end to the power of the Copperheads.

Although the Copperheads essentially disappeared after 1864, their influence on the Democratic Party lasted a great deal longer. The actions of the Copperheads during the war made it much easier for Republicans in the postwar era to disparage the Democrats as the party of treason.

"Waving the bloody shirt," as this was called, was a common feature of political contests for most of the rest of the 19th century.

### Corinth, Battle of (October 3–4, 1862)

Determined to regain the ground lost during winter and spring 1862, Confederate forces in the west embarked on a late summer offensive designed to regain control of northern Mississippi and Tennessee. Gen. BRAXTON BRAGG's Army of the Mississippi and E. Kirby Smith's troops in east Tennessee constituted the primary offensive force. Together, they launched an invasion of Middle Tennessee and central and eastern Kentucky. Bragg, whose army had protected Mississippi previous to taking the offensive, left behind two small forces of 16,000 men each under Earl Van Dorn and Sterling Price. Strategically, these forces were to support Bragg's invasion by either moving into middle Tennessee, threatening Corinth, Mississippi, (the site of a major railroad junction) and thus preventing Grant from sending troops to counter the main Confederate offensive, or, in the case that Grant diminished his force by sending reinforcements to counter Bragg, attack Corinth.

By early August it was clear that Grant had sent troops toward Nashville, weakening his hold on northern Mississippi. Price called on Van Dorn, who had been operating against Baton Rouge, Louisiana, to move north and unite in an effort to either move into middle Tennessee or capture Corinth. Not until late August did Van Dorn agree to cooperate with Price. Van Dorn moved slowly toward Price's army and by mid-September had not yet joined it. Frustrated by the delays, Price moved alone and captured the town of Iuka on September 14. A column under WILLIAM S. ROSECRANS struck Price on September 19 in a fiercely contested battle. Price abandoned the town on September 20 and with it any hope of moving into Tennessee. On September 28 Price's army arrived at Ripley, where he united with Van Dorn, who assumed command of the united armies. A thrust at Corinth was quickly planned, and the small rebel army of just over 20,000 moved rapidly

to the northwest of the town. Union troops under Rosecrans were prepared for the attack and had created a series of light defensive earthworks designed to maximize the defensive capabilities of his 22,000 men. On the morning of October 3, Van Dorn launched his attack. Although successful in his drive against the Federal pickets, hot weather, rugged terrain, and stubborn fighting on the part of Union troops limited rebel gains. At 9:00 A.M. October 4, the Confederates attacked the Federal line. Described as “irregular” by one Federal officer and containing a gap of nearly 500 yards in its center, the defense seemed to be imperfect. Advancing Confederates, however, were met with converging fire from Northern artillery and infantry. While bravely executed, the Southern attacks (which in some isolated spots broke through into the town itself) were uncoordinated and lacked sufficient weight in any one place to make an effective breakthrough.

Federal victory resulted from a combination of poorly orchestrated rebel attacks, a well-conceived series of defensive works, the steadfastness of the Union infantry, and the terrible effectiveness of the Yankee artillery. The Confederates left on October 5, unable to achieve either their tactical or strategic goals. Losses on the Confederate side included 505 killed, 2,150 wounded, and 2,183 missing. The Federals counted 355 killed, 1,841 wounded, and 324 missing.

### Corps d'Afrique

The story of the Corps d'Afrique, a black regiment, was among the most unusual of any unit in the CIVIL WAR. Originally known as the First Louisiana Native Guards, the Corps began life as part of the CONFEDERATE ARMY on November 23, 1861, and at that time comprised 33 officers and 731 enlisted men, all of them African American. The members of the Corps d'Afrique were from New Orleans and its surrounding areas, and their initial purpose was to defend the city against the UNION ARMY.

During the Civil War and afterward, the fact that black soldiers were willing to fight for the Confederacy was used as evidence that African Americans were happy with their life in the South, so much so that they were willing to take up arms to defend it. However, the men who made up the Corps d'Afrique were not in any way representative of the general African-American population of the South. Most were mulattoes, educated, and financially well off. Some

were even slave owners. As residents of New Orleans, all were afforded rights that were not available to African Americans in the rest of the South, or even in the North.

Even if they had initially been willing to support the Southern cause, the Corps d'Afrique's enthusiasm soon began to wane. Not surprisingly, Confederate authorities did not give them the support or respect that was afforded to white units. Also, it became clear to corps members that their purpose was to serve as propaganda and not to fight. At the same time, a number of escaped slaves joined the ranks. When the Union army captured New Orleans in 1862, the disillusionment of the unit's membership was complete, and most of its members consented to join the Union army as the First Corps d'Afrique.

The First Corps d'Afrique was officially mustered into service on September 27, 1862. As such, it was the first African-American regiment to be formally recognized as part of the Union army, predating the famous 54TH MASSACHUSETTS REGIMENT by eight months. The unit provided valuable service—guarding prisoners, building fortifications, and fighting at Port Hudson, Mansura, and Mobile. Eventually rechristened the 73rd U.S. Colored Infantry, the regiment continued to serve after the war, often being utilized to make certain that the government's RECONSTRUCTION policies were being properly observed. Thus, a unit that had been formed to defend the Old South became an instrument in its destruction.

### Crédit Mobilier

The Crédit Mobilier was a company set up in the 1860s by the principals of the Union Pacific Railroad to contract for the construction of the westward portion of the transcontinental railroad. These construction contracts inflated the price, which ensured a profit for Crédit Mobilier but jeopardized the financial health of the Union Pacific. The Union Pacific passed cash, its own stock, and government subsidies to Crédit Mobilier as payment for the construction. The Crédit Mobilier scandal shocked the nation, and involved many politicians, government officials, and businessmen.

The transcontinental RAILROAD was the most challenging engineering project of its day. Authorized by Congress in the PACIFIC RAILROAD ACT of 1862, the Union Pacific

Railroad was built westward from Omaha, Nebraska, to meet the eastward-building Central Pacific Railroad, which began its line in Sacramento, California. Congress provided for financial incentives to be transferred to the railroads as portions of track were completed, including grants of land along the track, cash reimbursements, and government-guaranteed bonds that the railroads could sell to investors.

In order to limit their financial risk as well as to benefit from the construction phase, major directors and shareholders of the Union Pacific created a “dummy” construction company, a common practice for railroads in the 19th century. When the Union Pacific began construction in 1864, Herbert M. Hoxie, a shady Republican wheeler-dealer from Des Moines, Iowa, was offered a fee plus Union Pacific stock. In exchange, he agreed to sign a construction contract with the Union Pacific for the first 100 miles of track and then assign the contract to Crédit Mobilier. The onsite engineer for the Union Pacific estimated the costs of construction to be between \$20,000 and \$30,000 per mile, but he was ordered by Union Pacific officials to contract with Hoxie at a cost of \$50,000 per mile. Similar arrangements covered the remainder of the Union Pacific line.

Early efforts to sell Crédit Mobilier stock were largely unsuccessful. Investors questioned the ability of any organization to complete this large undertaking, and the risk was increased by the lack of government regulation of capital markets. However, after Crédit Mobilier’s December 1867 distribution to shareholders of assets worth 76 percent of the initial cost of the stock, investors were anxious to hold the stock. One shareholder marketing Crédit Mobilier stock to friends was Massachusetts Republican congressman Oakes Ames. Ames found willing holders in nine representatives and two senators, including the Speaker of the House, two future vice presidents, and future president James Garfield. Many of the politicians received preferential terms for acquiring their stock, and some placed the shares in the names of relatives to hide their relationship to Crédit Mobilier. A lucrative investment, Crédit Mobilier made distributions worth 280 percent of the original investment by the end of 1868.

The good times for the investor were short-lived, however. Evidence in documents and court cases between factions of shareholders supported rumors on Wall Street and in WASHINGTON, D.C., that prominent politicians were involved with Crédit Mobilier and that large profits flowed to its shareholders while the Union Pacific was struggling financially. When newspapers began covering the story in the late 1860s, Crédit Mobilier was criticized for receiving government benefits supported by some of its congressional shareholders and for diverting the profits from the Union Pacific.

The news coverage expanded as the 1872 election neared. Although most of the politicians involved with

Crédit Mobilier were Republicans, the growing scandal did not hinder President ULYSSES S. GRANT’s bid for reelection. A lame-duck Congress reconvened in December 1872, and Speaker of the House James Blaine moved for an investigation to clear the names (including his) mentioned in the extensive press coverage of Crédit Mobilier. Congressman Ames supported his testimony with records of which politicians held interests in Crédit Mobilier and the terms of their investments. Ames’s correspondence indicated that he had offered stock to politicians who could further the corporation’s interests.

However, the other politicians involved distanced themselves from Ames, leaving him and the only Democrat involved, James Brooks, to bear the burden of the scandal. On February 28, 1873, with four days remaining of the 42nd Congress, Ames and Brooks were censured. While acknowledging that the other congressmen had been indiscreet, the investigative committee found they were not guilty of accepting bribes. A separate committee investigating the financial dealings of Crédit Mobilier recommended that the government sue to recover Crédit Mobilier’s illegal profits. Investigative measures began to expand, but attempts to investigate the Central Pacific Railroad (the other half of the transcontinental railroad) were hampered by a fire that destroyed the records of the construction company owned by its major shareholders.

Crédit Mobilier was one of the most publicized examples of the financial and political scandals of the post-CIVIL WAR era. Economic frauds were commonplace as people scrambled to take advantage of the postwar economic boom and the technological advances of the era, and corruption was not uncommon.

### **Crittenden Compromise** (December 1860–January 1861)

The Crittenden Compromise was a congressional attempt to avert SECESSION and civil war. In November 1860 ABRAHAM LINCOLN was elected president of the United States; by December, South Carolina had seceded from the Union, and the country was lurching toward civil war. Attempting to find one last compromise to keep the Union together, the U.S. Senate formed the special “Committee

of Thirteen” led by 73-year-old senator John J. Crittenden of Kentucky.

Crittenden, an ally of Henry Clay with considerable experience crafting sectional compromises (in 1820, 1833, and 1850), advanced what became known as the “Crittenden Compromise.” This was a package of six constitutional amendments intended to offer permanent solutions to the divisive issue of SLAVERY. The first denied the federal government any power to abolish slavery in the slave states. The second insisted that the UNITED STATES CONGRESS relinquish its power to interfere with the transportation of slaves across state or territorial lines. The third required the federal government to compensate any slave owner who lost his “property” due to mob action; the fourth forbade the ABOLITION of slavery in the District of Columbia until Virginia and Maryland did so first. The fifth restored the old 1820 Missouri Compromise line; and the sixth guaranteed that the amendments could not be amended but were to be adopted in perpetuity. Finally, Crittenden urged Congress to pass measures that further affirmed the constitutionality of the 1850 Fugitive Slave Law.

To most Northern eyes, the Crittenden Compromise appeared grossly pro-Southern, but it was briefly supported by a few leading Northern Democrats, such as Senator STEPHEN A. DOUGLAS, and Republicans, such as WILLIAM H. SEWARD. However, it lacked support from president-elect Lincoln, who considered the compromise measures a betrayal of REPUBLICAN PARTY principles. He had campaigned to protect slavery where it existed but to oppose its spread into the western territories. Lincoln’s stance turned fellow Republicans against compromise. On December 22 the committee defeated an omnibus of compromise measures by a vote of seven to six. Undeterred, Crittenden reintroduced it to the Senate floor on January 3, 1861, now seeking a national referendum to secure its passage. Republican opposition, however, just managed to defeat this proposal in a vote of 25 to 23. The death of the Crittenden Compromise ended the most significant attempt to accommodate Southern demands in the political arena.

**Cumming, Kate** (1833–1909) *Confederate nurse*

Born in Edinburgh, Scotland, in 1833, Kate Cumming served as a nurse for the Army of Tennessee during the CIVIL WAR.

As a child, Kate immigrated with her family to Mobile, Alabama, where her father, David Cumming, became a

successful merchant. When her mother and two sisters left for England in the spring of 1861, Kate remained with her father and brother in Mobile. After her brother enlisted in the CONFEDERATE ARMY, Kate volunteered for hospital duty. On April 7, 1862, she departed from Mobile with a group of women volunteers heading to a command post hospital in Corinth, Mississippi. Cumming served as a nurse with the Army of Tennessee at the BATTLE OF SHILOH and continued until the end of the Civil War. Early in her career, Cumming became a hospital matron and, like others in her position, constantly struggled against hostility from men to effectively do her job. Cumming’s assignment as hospital matron arose, in part, from her status as a mature, unmarried woman, which allowed her some freedom from male control and domestic obligations.

In 1866 Cumming became one of the first Southern NURSES to publish her story, *A Journal of Hospital Life in the Confederate Army of Tennessee*. This account of Cumming’s nursing career included her impressions of wartime life in the Confederacy. In her journal, Cumming criticized the inadequate supplies, lack of competency by male nurses and hospital heads, and the chaos of Civil War hospitals. In addition to accounts of her constant frustration with male doctors who refused to value women’s ideas or contributions, Cumming also recorded her exasperation with those Southern women too timid to become nurses. Cumming’s memoir, *Gleanings from the Southland*, published in 1895, retold the story of her diary but incorporated the outcome of the war, events in postwar America, and stressed national reconciliation.

In 1874 Kate and her father moved to Birmingham, Alabama, where she taught school and MUSIC. She also took an active role in the activities of the UNITED DAUGHTERS OF THE CONFEDERACY and the United Confederate Veterans.

Kate Cumming died June 5, 1909, in Birmingham and was buried in Mobile.

**Custer, George A.** (1839–1876) *Union general, cavalry commander*

George Armstrong Custer was a Union general who gained fame in the Civil War and notoriety in the Indian wars that followed. Custer was born in New Rumley, Ohio, on December 5, 1839. In 1857 he entered the UNITED STATES MILITARY ACADEMY AT WEST POINT, where he proved a

sullen, inattentive cadet who was ill disposed toward discipline. In 1861 he graduated at the bottom of his class.

He performed heroically, however, throughout the PENINSULAR CAMPAIGN of 1862 and fought at the Battle of Aldie on June 17, 1863, with such distinction that he was promoted to brevet brigadier general. At just 23 years old, Custer was now the youngest general in the UNION ARMY. His Michigan cavalry brigade, which he dubbed "The Wolverines," became renowned for dash and discipline and for sporting the flashy red necktie of their commander. Custer performed well at GETTYSBURG, and his most noted encounter was at Yellow Tavern on May 11, 1864, where he led the charge that fatally wounded Confederate leader Gen. J. E. B. STUART. That summer he joined Gen. PHILIP H. SHERIDAN's Army of the Shenandoah and struck savagely at Confederate armies in the victories at Winchester, Fisher's Hill, and Cedar Creek with decisive effect. He advanced to brevet major general at the age of 24 and further burnished his name by his equally hard fighting on April 1, 1865, when Federals won a striking victory at Dinwiddie Courthouse and FIVE FORKS. Custer emerged from the war with a high reputation as a dashing and colorful cavalry commander.

Custer remained in the postwar army but, as of March 1866, with his rank reduced to his regular grade of captain. Four months later he became the lieutenant colonel of the 7th Cavalry. Assigned first to RECONSTRUCTION duty, he was transferred to the West, where NATIVE AMERICAN tactics perplexed him. He took an unauthorized leave of absence, for which he was court-martialed and suspended for a year. In 1868 his friend and protector Gen. Sheridan managed to have him reinstated. Later that year, on November 27, Custer committed an atrocity in Indian Territory: He attacked the peaceful encampment of Chief Black Kettle on the Washita River. Despite official disapproval of this ill-advised action, Custer stayed on active duty in Kansas.

Three years later tension between white settlers and the Plains Indians exploded into open warfare. Assigned to an army column under Gen. Alfred H. Terry, Custer ignored warnings of Indian strength and recklessly forged ahead. On June 25, 1876, the 7th Cavalry happened upon a large Native American encampment at LITTLE BIGHORN in Montana. Custer divided his command and attacked but was quickly overwhelmed and killed, along with 261 men of the 7th Cavalry. "Custer's Last Stand" was not the largest defeat suffered at the hands of Native Americans, but it was certainly the most sensationalized. It assured Custer's

Union general George A. Custer (Library of Congress)

larger-than-life persona a prominent place in American frontier mythology, as well as in Civil War history books.

**Dahlgren, John A. B.** (1809–1870) *Union navy officer, naval weaponry expert*

Union naval officer John A. B. Dahlgren is best known for his research in naval TACTICS, his innovation in naval weaponry, and during the CIVIL WAR, his successful prosecution of the blockade against Confederate ports.

Born in Philadelphia, Dahlgren became a sailor, joining the Navy as a midshipman in 1826. In 1834 his mastery of mathematics and survey technique won him a position in the U.S. Coastal Survey. During the 1840s, Dahlgren took an interest in naval weaponry, urging that the navy test, design, and manufacture its own weapons. Dahlgren, now a lieutenant, got his chance in 1847 when the navy made him chief of the Bureau of Ordnance.

Dahlgren tested his weapons designs extensively at his Navy Yard workshop and foundry. For instance, he bored holes in the metal walls of cannon, inserting gauges to measure air pressure as weapons were fired. Dahlgren then redesigned the cannon, thickening the walls where the internal pressure was greatest. This gave the “Dahlgren gun” a distinctive shape (gunners also called it the “soda-water bottle”) but made the weapon particularly reliable. By the Civil War, most naval vessels carried Dahlgren’s guns, including Union IRONCLADS armed with Dahlgren’s 15-inch smoothbores.

In 1861 Lincoln promoted Dahlgren to captain after all but three of the Navy Yard’s officers resigned their commissions to join the Confederacy. In charge of the Washington Navy Yard in the war’s first two years, Dahlgren took command of the South Atlantic Blockading Squadron shortly after his 1863 promotion to rear admiral. Under his leadership, the squadron successfully blockaded Charleston Harbor, which assisted Sherman’s capture of Savannah, Georgia.

With the end of the Civil War, Dahlgren was given command of the South Pacific Squadron. He returned to the Navy Yard in 1868 and died in 1870.

Rear Admiral John A. B. Dahlgren standing by a Dahlgren gun on the deck of the USS Pawnee (Library of Congress)

—Tom Laichas

**Daly, Maria Lydig** (1824–1894) *Union diarist*

Maria Lydig Daly is remembered as a diarist who wrote about the CIVIL WAR and some of its major figures. Born in NEW YORK CITY on September 12, 1824, she was the daughter of Philip Mesier Lydig, a wealthy merchant of Dutch heritage. She matured in a life of affluence and in 1855 shocked her parents by marrying Democrat Charles Patrick Daly, a 39-year-old justice of the Court of Common Pleas, and a second-generation Irish immigrant. Daly began her marriage as the privileged spouse of one of the city's most important jurists. In this capacity she sparkled as a hostess who entertained many important political, legal, and social figures in New York. Gradually embracing her husband's politics, she became increasingly suspicious of the new REPUBLICAN PARTY and its anti-slavery position. These feelings were artfully recorded in her celebrated diary composed between 1861 and 1865, which constitutes one of the most significant contemporary social documents concerning the Civil War in New York City.

Sharp, funny, and gossipy, Daly's diary is unique for recording not only her eyewitness accounts of historic events, such as the NEW YORK CITY DRAFT RIOTS of 1863 and the presidential campaign of 1864, but also her opinionated personal remarks about Republicans, other women, the poor, New Englanders, abolitionists, and African Americans. Daly disparaged President ABRAHAM LINCOLN for his bumpkinlike mannerisms, which she described in unflattering detail, and levied equally harsh judgments on MARY TODD LINCOLN. She was generally more forgiving toward leading Democrats such as Gen. GEORGE B. MCCLELLAN and other ranking military and diplomatic officials. All told, her diary provided a woman's perspective of the Civil War during a momentous time in local history. She died in New York in 1894.

**Dana, Charles A.** (1819–1897) *journalist, government official*

Newspaper owner and journalist, Charles Anderson Dana played a prominent role during the CIVIL WAR as an assistant secretary of war. Born in New Hampshire in 1819, Dana attended Harvard and later joined a group of utopian intellectuals at Brook Farm, Massachusetts. When Brook Farm dissolved in 1845, Dana traveled widely in Europe. Upon his return in 1849, he assumed the position of man-

aging editor of HORACE GREELEY's *New York Tribune*. A passionate ABOLITIONIST, Dana used the *Tribune* as a forum to denounce the policies and positions of the slave-owning South.

In 1862 Dana resigned over differences with Greeley about the newspaper's editorial positions on the Civil War. Shortly thereafter, Secretary of War EDWIN M. STANTON assigned Dana as a frontline investigator with the title of second assistant secretary of war. Serving in the western theater, Dana investigated pay irregularities, fraud, and was unofficially assigned to report on Gen. ULYSSES S. GRANT's conduct. Dana sent many admiring reports to WASHINGTON, D.C., reinforcing the president's confidence in Grant. ABRAHAM LINCOLN lauded Dana for being the "eyes and ears of the government at the front." In 1864 he was promoted to assistant secretary of war.

In 1868 Dana bought the *New York Sun*. He wrote that he wanted to publish news that was "the freshest, most interesting and sprightliest." Under Dana's guidance, the *Sun* gained renown for its young, college-educated reporters, human-interest stories, and varied editorials. The *Sun* opposed President ANDREW JOHNSON's impeachment and supported Grant's run for the presidency in 1868, but it backed the Liberal Republicans in 1872 and their candidate, Dana's former boss and competitor, Horace Greeley. The *New York Sun*, which sold 130,000 papers a day, became a major national newspaper by the late 1870s. In the Gilded Age, Dana and the *Sun* were known for their support of laissez-faire business.

Dana died in 1897. His *Recollections of the Civil War* was published shortly thereafter.

Dana, *Recollections of the Civil War: With the Leaders at Washington and in the Field in the Sixties* (1898; reprint, Lincoln: University of Nebraska Press, 1996); Janet E. Steele, *The Sun Shines for All: Journalism and Ideology in the Life of Charles A. Dana* (Syracuse, N.Y.: Syracuse University Press, 1993).

—Scott L. Stabler

**Davis, Jefferson** (1808–1889) *president of the Confederate States of America*

Confederate president Jefferson Davis was born in Christian (subsequently Todd) County, Kentucky, on June 3, 1808, the 10th and last child of Samuel Emory and Jane Cook Davis. His father, a farmer who owned a few slaves, moved the family more than once, eventually settling near Woodville, Mississippi, when Jefferson was about three years old. In short order the family adopted the manners and mores of the local PLANTATION aristocracy, becoming completely "Southern" in politics and outlook.

Jefferson Davis received a far better than ordinary EDUCATION. Between the ages of eight and 16, he attended St. Thomas College in Springfield, Kentucky, two academies in Mississippi, and, in 1823, Transylvania University in Lexington, Kentucky. After a year at Transylvania, Davis followed the advice of his brother, Joseph Emory Davis, a successful planter in Warren County, Mississippi, and entered the UNITED STATES MILITARY ACADEMY AT WEST POINT. Davis compiled a career at West Point more memorable for the number of rules he violated than for his academic record, graduating 23rd of 33 cadets in the class of 1828.

Davis spent nearly seven years as an army officer. Commissioned a second lieutenant on July 1, 1828, he served on the frontier in Wisconsin and Illinois. Like ABRAHAM LINCOLN, he played a minor role in the Black Hawk War of 1832 and on May 10, 1834, was promoted to first lieutenant in the dragoons. The tedium and relative lack of opportunity in the army frustrated Davis, who resigned his commission on May 12, 1835. Shortly more than a month later, he married Sarah Knox (Knoxie) Taylor, the daughter of Zachary Taylor, under whom Davis had served for a time in Wisconsin. Apparently, the marriage took place over the objections of the general, who did not want his daughter to marry a soldier. Nonetheless, their union proved a happy one.

The young couple moved to Mississippi, where Joseph Davis provided land and advice to assist his brother in establishing himself as a planter. Less than three months into the marriage, "Knoxie" died of a fever, and Jefferson, stricken by the same malady and prostrate with grief, left Mississippi for a few months. Upon his return, he secluded himself at "Brierfield," as he called his property, where he looked to his brother as a mentor in learning the business of running a plantation. Davis also read widely about politics, developing a staunch belief in STATES' RIGHTS and a devotion to the DEMOCRATIC PARTY. His first bid for office ended in failure when he lost a race for the Mississippi state legislature in 1843, but two years later he won election to the U.S. House of Representatives. In this capacity he became known as an ardent and outspoken proponent of SLAVERY and Southern rights, to which he remained committed for the remainder of his life. Several months before his election, on February 25, 1845, he had remarried. VARINA HOWELL DAVIS was a well-born, intelligent, young woman from Natchez. They had four sons and two daughters during the course of a sometimes tumultuous marriage.

Military rather than political glory marked the next phase of Davis's career. Elected colonel of the First Mississippi Volunteers after the outbreak of the Mexican-American War, he fought in northern Mexico under his former father-in-law, Gen. Taylor. He and his regiment distinguished themselves, and Davis was wounded at

Jefferson Davis (National Archives)

the Battle of Buena Vista in February 1847. While Davis had, in fact, conducted himself capably under fire, the experience of war seems to have promoted an infallible belief in his own leadership abilities. Widely praised in the American press, he returned a hero to Mississippi, where the legislature presented him with a sword and, in August 1847, named him to an unexpired term in the U.S. Senate.

Once in WASHINGTON, D.C., Davis quickly gained stature as an important advocate of slaveholders' interests and Southern rights. He supported the expansion of slavery into the federal territories, calling for an extension of the Missouri Compromise line of 1820 to the Pacific Ocean. He also opposed the admission of California to the Union as a free state. Within the Senate, Davis chaired the committee on military affairs and took an active interest in, among other topics, the weaponry of the U.S. Army. Reelected to a full Senate term in 1850, he resigned the next year to run for the governorship of Mississippi, losing a close race to Henry Stuart Foote, a moderate on sectional issues who was much loathed by Mississippi's Democrats.

FRANKLIN PIERCE, elected president on the Democratic ticket in 1852, summoned Davis back to Washington to serve as secretary of war. Davis compiled a solid and innovative record as a cabinet officer. Under his stewardship, the army improved the quality of its arms, purchased camels for use in the arid southwestern territories, adopted revised infantry tactics designed to deal with rifled weaponry, and conducted surveys for transcontinental RAILROAD routes.

Davis returned to the Senate in 1857, immediately assuming a position in the front rank of Southern politicians. Many people considered him the successor in this regard to John C. Calhoun, who before his death in 1850 had been the most prominent Southern statesman. Throughout the late 1850s, Davis strongly advocated the slaveholding position on a cluster of issues. He came to oppose STEPHEN A. DOUGLAS's doctrine of popular sovereignty, most famously expressed in the KANSAS-NEBRASKA ACT of 1854, because it left open the door for a territory to bar slavery. Insisting that slavery benefited slave and master alike, Davis also maintained that states had willingly come together to form the Union and could choose at any time to reclaim their sovereignty by withdrawing from the compact. He saw the emerging REPUBLICAN PARTY, which he identified with abolitionists in the North, as a major threat to the slaveholding South. As the decade drew to a close, he declared that no "abolition president" should be allowed to take office. Life under Republican rule would be intolerable, and he "would rather appeal to the God of Battles at once than attempt to live longer in such a Union."

Lincoln's election in 1860 precipitated a political crisis that prompted Davis, who did not stand among the most ardent secessionists, to eventually support SECESSION. On January 21, 1861, shortly after Mississippi seceded, he delivered a farewell speech to the Senate in which he asserted that the South's constitutional rights were at risk. Davis journeyed from Washington to Brierfield, where, on February 9, he learned that a constitutional convention of delegates from the Deep South states had selected him to be the first president of a new slaveholding republic christened the CONFEDERATE STATES OF AMERICA. Davis accepted the position, though he would have preferred a military command. Widely perceived as a moderate within the context of Deep South slaveholding sentiment, Davis seemed a logical choice for his new position. In retrospect, Davis was probably the most viable candidate available to the Confederacy at the time. From the outset he faced a series of challenges that would have daunted any of his contemporaries. No one, moreover, could question his unflinching commitment to the Confederacy or his determination to ensure its survival. Apart from his political reputation, his presence at the head of the new government would reassure states of

the Upper South that the Confederacy meant to chart a responsible course.

Davis's first major test as president came in April 1861 when he faced a crisis regarding FORT SUMTER, SOUTH CAROLINA. Held by a small garrison of U.S. troops, the fort guarded the approach to Charleston Harbor. After Lincoln made it clear that he intended to resupply and hold Sumter, Davis approved a bombardment that commenced on April 12 and quickly forced the fort to surrender.

Lincoln's subsequent call for volunteers to suppress the rebellion led four states of the Upper South to join the seven Deep South states already in the Confederacy, and events moved rapidly toward a full-scale military conflict. In a message to the Confederate Congress on April 28, Davis left no doubt about the centrality of slavery to the establishment of the Confederacy. Lincoln and the Republicans would exclude slavery from the territories, he remarked, and that in turn would render "property in slaves so insecure as to be comparatively worthless . . . thereby annihilating in effect property worth thousands of millions of dollars."

Davis embarked on his career as Confederate commander in chief in poor health. Suffering from stomach ailments, a virus that repeatedly attacked his left eye, and other physical problems, he would struggle against illness even as he labored hard to manage a war that mushroomed beyond what anyone could have imagined in 1861. He pursued Confederate independence with a single-minded energy and impatience toward those unwilling to sacrifice for the cause. Although a vocal supporter of states' rights in the antebellum years, he understood that Confederate victory would require enormous mobilization of the South's manpower and material resources at the federal level. Together with ROBERT E. LEE, his chief military adviser in early 1862 and later his only successful field commander, Davis called for the subordination of state and local needs to those of the national war effort. This sensible request, an essential wartime expedient, met with varying degrees of compliance and, in the case of Georgia, outright resistance.

Against increasingly passionate opposition from states' rights advocates, including Confederate vice president ALEXANDER H. STEPHENS, Davis pressed for measures that greatly enhanced central power. A national CONSCRIPTION act in the spring of 1862 (the first such legislation in American history), wide-scale IMPRESSMENT of farm products, and an array of national taxes helped keep armies in the field but convinced critics that Davis, who also called for a limited suspension of the writ of HABEAS CORPUS on several occasions, was willing to tolerate a systematic assault on personal liberties. Opponents often attacked Davis personally, as when the influential Georgia politician Robert Toombs referred to him as a "false and hypocriti-

cal . . . wretch.” Davis’s administration eventually shaped a war effort that placed roughly 80 percent of all military-age white males in uniform and witnessed the growth of government-sponsored industries (including munitions and saltworks) that employed thousands of workers.

Davis spent much of his time dealing with generals, strategy, and other military affairs. Although he may have been too loyal to commanders such as BRAXTON BRAGG, he wisely granted considerable latitude to Robert E. Lee, whose Army of Northern Virginia supplied most of the Confederacy’s major victories. Davis felt pressure from all parts of the Confederacy to provide military protection against invading Union forces, but he sought to concentrate manpower in field armies that would act broadly on the defensive while seeking openings to launch counteroffensives. The Confederate movements into Kentucky and Maryland in the late summer and autumn of 1862 provide excellent examples of Southern strategic counterpunches. In the end, only Lee developed as a capable CONFEDERATE ARMY commander, a circumstance that severely limited Davis’s options.

His constant meddling in the War Department, however, was a serious failing that reduced the six secretaries he appointed over a four-year period to little more than pawns. Davis also failed to cultivate working relationships with other senior commanders such as PIERRE GUSTAVE TOUTANT BEAUREGARD and JOSEPH E. JOHNSTON, both of whom he regarded with thinly veiled disdain. Worse, he repeatedly relieved them of high command at inopportune times. Davis’s decision to dismiss Johnston in August 1864, at the height of the Atlanta campaign, and replace him with the overly aggressive Gen. JOHN BELL HOOD must be considered one of the greatest strategic mistakes of the war. Hood proved completely unsuited for defensive warfare, and his blundering virtually assured a Union victory in that decisive theater.

Northern military and industrial power, internal divisions within Confederate society, and escalating material hardship on the HOMEFRONT left scant prospects for Southern success by the autumn of 1864. Davis remained more resolute than most, urging his fellow citizens to fight on and even recommending, along with Lee, that slaves be placed in the Confederate army and freed if they served well (after a bitter national debate, the Confederate Congress approved a watered-down version of what Davis and Lee sought). For Davis, Confederate independence had come to mean everything, overshadowing even the importance of maintaining the institution of slavery as it had existed at the time of secession. After the fall of RICHMOND, VIRGINIA, on April 2, 1865, Davis fled southward, falling into Union hands at Irwinville, Georgia, on May 10.

Davis spent two years as a prisoner at Fort Monroe but was never formally charged with treason or brought to

trial. Released in May 1867, he steadfastly maintained that secession had been a constitutional and logical Southern response to the threat of Northern domination. He presented his version of the momentous events through which he had lived in *The Rise and Fall of the Confederate Government* (1881), two thick volumes that mounted an unapologetic defense of the South and his own actions. Never a success financially after the war, Davis also endured a great deal of personal tragedy. All four of his sons preceded him in death, and his ill health continued. He refused to apply for a governmental pardon, preferring to the bitter end to die an unreconstructed and unrepentant Confederate. Davis died on December 5, 1889, having been, since Lee’s death 19 years earlier, the most visible symbol of the failed Confederate cause.

**Davis, Varina Howell** (1826–1906) *first lady of the Confederate States of America, author, journalist*

Author and wife of Confederate president JEFFERSON DAVIS, Varina Anne Banks Howell was born May 7, 1826, near Natchez, Mississippi. Her parents, Margaret Kempe and William Burr Howell, both came from distinguished Southern families.

As the daughter of a wealthy slaveholding planter, Varina attended an elite girls’ academy in Philadelphia for a few terms. She also received private tutoring at home from Harvard graduate Judge George Winchester. In 1843 she met Jefferson Davis, a rich planter and slaveowner. Despite the 17-year age difference, they married in February 1845.

Soon after the wedding, Jefferson left to fight in the Mexican-American War. He returned in 1847 and was elected to the U.S. Senate. He moved to WASHINGTON, D.C., leaving Varina behind in Mississippi for the next year

and a half. She joined him in 1849 and spent most of the next 12 years in Washington, where they did a lot of entertaining and cultivated friendships with many powerful people. During this period, the couple had four children.

Davis, who often sat in the galleries with other congressional wives, shared many of her husband's views on SLAVERY, Southern rights, and the REPUBLICAN PARTY. Both feared the consequences of CIVIL WAR but embraced their roles as Confederate president and first lady, although Varina's shrewd political sense and outspoken nature provoked criticism. The Davises had two more children while in the Confederate White House.

The Davis family faced many problems in the postwar years. Jefferson Davis spent two years in federal prison on treason charges. After sending the older children to Canada, Varina remained in Georgia with their youngest daughter, Winnie, to be close to Jefferson. Varina helped secure Jefferson's release in May 1867. The family reunited in Canada and moved to England for a few years beginning in late 1868. Although Jefferson tried his hand at several business ventures, the family struggled to make ends meet. In the fall of 1870, the family moved to Memphis, Tennessee, where Jefferson headed an insurance company and Varina worked part time as a seamstress.

After her husband died in 1889, Varina worked on a two-volume biography of his life. The book, published in 1890, did not sell well. She moved to Manhattan in 1892, where she worked as a journalist for the *New York World* and remained loyal to the memory of the Confederate cause.

Varina Davis died on October 16, 1906, in NEW YORK CITY. She was buried beside her husband in RICHMOND, VIRGINIA.

### Davis Bend, Mississippi, freedmen's colony

Located just south of Vicksburg along the MISSISSIPPI RIVER, Davis Bend was the site of one of the first experiments in African-American free labor during the CIVIL WAR. Originally designed as a model for antebellum slave PLANTATIONS, Davis Bend, instead, became a model for how to transform slave labor to a free labor system while still maintaining profitability. In addition, the plantations at Davis Bend attempted to create a com-

munity of cooperation, whereby black farmers and laborers were given more autonomy over production and their daily lives.

Joseph Davis, a successful Mississippi lawyer, founded Davis Bend in 1827. Influenced by utopian thinkers, Davis sought to create a model plantation, whereby slaves were given more freedom and responsibility. Davis provided his slaves with better food and housing. He encouraged the development of skilled labor and rewarded superior work with gifts and other financial incentives. Moreover, a slave jury authorized punishments on the plantation, not the overseer.

Within this environment, Davis encouraged the development of individual slaves, most notably Benjamin Montgomery. Montgomery, a self-educated and skilled engineer, oversaw levee construction and served as a cotton gin mechanic. He quickly distinguished himself as a leader and an entrepreneur by establishing a store on the Davis plantation, selling goods to white people, and even establishing a line of credit with New Orleans wholesalers. With the help of Montgomery, the Davis Bend plantation prospered in the antebellum era.

The Civil War, however, fundamentally transformed Joseph Davis's dream of a community of cooperation. Davis abandoned the Davis Bend plantations ahead of the advancing UNION ARMY. Most of his slaves, though, resisted Davis's entreaties to flee with him and some even looted the plantation's mansions after his departure.

Union military leaders hoped to transform Davis Bend into a black colony that would serve as a model for the transition from slave to free labor and operate as a haven for freedmen. Blessed with rich soil and a preexisting labor force, Davis Bend was a prime location for an experiment that hoped to prove the superiority of a free labor system. There also were political motives for establishing a black colony. JEFFERSON DAVIS, the president of the Confederacy, was Joseph Davis's younger brother and had administered one of the plantations (Brierfield) on Davis Bend before the war.

The FREEDMEN'S BUREAU assumed control of Davis Bend in 1865 and leased land to freedmen who in turn planted cotton. Black lessees turned a profit and benefited from the protection of the Union army. Self-government was reestablished, including a court system, an elected sheriff, and a board of EDUCATION. Overall, the experiment was a success.

Carrying on a revised vision of Joseph Davis's dream, Ben Montgomery believed that in order for Davis Bend to become a utopian community, black people needed to be in control of the plantations. In 1866 Montgomery purchased (under favorable terms) the Davis Bend plantations from Joseph Davis. Although damaging floods and pests plagued the first couple of years, the all-black Davis

Bend plantations thrived during RECONSTRUCTION, producing some of the highest quality cotton in the country. To defuse white opposition, Montgomery emphasized the utopian ideal of Davis Bend and publicly discounted the importance of African-American political activity. Nonetheless, the sizable population of freedmen in Davis Bend attracted Republican politicians who depended on their votes in statewide offices.

The freedmen benefited from fertile land, favorable credit terms, and protection from white intrusion, but by 1875, the Davis Bend community began to decline as Reconstruction came to an end. Jefferson Davis sued and reclaimed the Brierfield plantation. Poor cotton crops in 1875 and 1876 depleted Montgomery's capital reserves, forcing him to turn over to creditors one of the remaining two plantations.

Unlike other experiments with black free labor, such as the PORT ROYAL EXPERIMENT, the Davis Bend freedmen were adept at raising cotton and turning a profit. Their success owed to the unique leadership of Ben Montgomery and his prior experience in plantation management. It was his commitment to an all-black community, however, that enabled him to win the trust of the freedmen and attract the opposition of white Mississippians. The postwar community succeeded because the freedmen were given more autonomy and control over their crops and their persons.

**De Forest, John William** (1826–1906) *author, Union soldier*

Author and soldier John William De Forest was born in Humphreysville, Connecticut, in 1826. As a young adult, De Forest traveled extensively throughout Europe and the Middle East. By the time of the CIVIL WAR, De Forest was a well-known writer of travel books and novels.

Immediately after the outbreak of war, De Forest raised a company in support of the Union. He was sworn into service on January 1, 1862, and served as captain of Company I, 12th Connecticut Volunteer Infantry. During the war De Forest and his regiment saw action in Louisiana at the siege of Port Hudson, as well as in the Virginia countryside in 1864. He was particularly affected by his experience at the Battle of Cedar Creek in October 1864. After the war, De Forest famously wrote that, "I never on any other battlefield saw so much blood as on this of Cedar Creek. The firm limestone soil would not receive it, and there was no pitying summer grass to hide it." He was discharged from the 12th Connecticut on December 2, 1864.

After the war De Forest resumed his writing career, penning his memoirs along with a number of fictional works. In the many short stories and novels that flowed from his pen, De Forest portrayed soldiers' lives with emotion, accuracy, and respect. Determined to faithfully chronicle the war from the ordinary volunteer's point of view, De Forest helped to pioneer the "realistic" genre of combat writing. De Forest's most famous novel, *Miss Ravenel's Conversion from Secession to Loyalty* (1867) combined a realistic view of combat with a romantic story of sectional reconciliation. The theme of reunion became increasingly prominent in De Forest's later works, as the nation came to view the South with an increasing sense of romanticism.

Productive well into his 70s, John William De Forest died in 1906 at the age of 80 in New Haven, Connecticut.

**Delany, Martin Robinson** (1812–1885) *social reformer and soldier*

Born in Charles Town, Virginia (now West Virginia), on May 6, 1812, Martin Robinson Delany became a well-known writer and a leader of the black colonization movement. Delany initially fought for racial equality, but later he concluded that this goal was no longer possible in the United States. Thereafter, he pursued the idea of colonization in territories outside of the country.

Delany's formal EDUCATION began when he attended an African-American high school in Pittsburgh, Pennsylvania. Afterward, he served as a doctor's apprentice, and in 1836 he set up his own medical practice. While in Pittsburgh, Delany founded a temperance society and actively worked with a slave rescue and transport group. In 1843 Delany married Catherine A. Richards, with whom he had seven children. In the years immediately after his marriage, Delany wrote on the condition of African Americans in the United States. From 1843 to 1847, he published a newspaper entitled *The Mystery* (1843–47). For a short time, he also coedited the *Rochester North Star* with FREDERICK DOUGLASS.

Two experiences in the early 1850s made Delany a proponent of African colonization. The first was the passage of the Fugitive Slave Act in 1850. The second was the decision of Delany's classmates to dismiss him and two other African-American students from Harvard Medical School in 1851. These two events vastly increased Delany's frustration with the condition of race relations in the United

Martin Robinson Delany (Hulton/Archive)

States. In 1852, after his expulsion from Harvard, Delany published his first book, entitled *The Condition, Elevation, Emigration, and Destiny of the Colored People of the United States*. In it, Delany said he believed that African Americans could not successfully “elevate” their situation to attain “equality with the white man” if they continued to live within the United States. Delany recommended that black people seek new territory in Central and South America. He would later promote emigration to Africa and would make several trips to Liberia to coordinate emigration efforts.

During the CIVIL WAR, Delany recruited African-American troops in New England. In 1865 he was commissioned, becoming one of the first African-American field officers in the UNION ARMY. Major Delany served as a physician in the Union army for only three months, however, before the war ended. After the war, Delany worked in the FREEDMEN’S BUREAU in South Carolina for three years. Later he became a trial judge in Charleston, South Carolina. Racial extremists ultimately forced Delany to leave this post once RECONSTRUCTION had ended. Despite this setback, Delany continued to publish books and articles until his death on January 24, 1885.

## Democratic Party

The Democratic Party is the nation’s oldest existing political party. Officially founded as the Democratic-Republican Party by Thomas Jefferson and James Madison in 1800, it played a critical role in the political and economic history of the 19th-century United States. Immigrants, the urban working class, subsistence farmers, and Southern plantation owners formed the core groups that supported the Democrats in the CIVIL WAR and RECONSTRUCTION eras.

Democrats generally believed in a narrow construction of the U.S. Constitution, limited powers for the federal government, and economic policies that led to expansion and settlement of the nation’s vast territories for the benefit of ordinary white people. Democrats controlled the political system in the country from 1828 through 1856 by winning six of the eight presidential ELECTIONS and dominated Congress for much of the 1840s and 1850s. The party’s power and prestige greatly diminished when it split into Northern and Southern wings over the SLAVERY issue in 1860. From 1860 to 1928 the Democrats controlled the White House only 4 out of 18 times.

The modern Democratic Party emerged from the presidential election of 1828 under the leadership of President Andrew Jackson of Tennessee and Martin Van Buren of New York. Van Buren, a talented and dedicated professional politician, forged a national network of strong ties between Democratic political leaders that stressed commonalities between the humble farmers and working class of the North and the yeomanry and cotton growers of the South. They were adamantly opposed to the new Whig Party’s strongly pro-manufacturing economic plan and especially to a national banking system. A central bank, Jackson and other Democrats asserted, represented a dangerous and unprecedented concentration of power that threatened STATES’ RIGHTS and the vision of a “small” democracy articulated by Jefferson.

Jackson, an ardent supporter of the political philosophy of Thomas Jefferson, was, like Jefferson, a Southern slaveholder. Despite their undeniable appeal to Northerners and Southerners of more modest means, Democrats soon became identified with a proslavery agenda. In 1828 Congress decided to increase TARIFF rates. Outraged wealthy Southern plantation owners attacked the “Tariff of Abominations.” South Carolina’s John C. Calhoun, then serving

as vice president, published a series of anonymous letters criticizing the tariff.

When an even higher tariff was adopted in 1832, Calhoun resigned his office and reentered the Senate, where he could openly express his opposition. Calhoun argued that South Carolina should “nullify” the tariff, in essence declaring it void in their state. The conflict was ultimately resolved with a compromise tariff, but nullification became an important argument used by the South to derail proposed action against slavery, and a disturbing reminder that Democrats were divided by regional interests.

Throughout the 1840s and 1850s, the identification of the Democratic Party with Southern slavery became even stronger. Democrats worked for the successful annexation of Texas and the unsuccessful annexation of Cuba as slave states. Led by President James Polk, a Tennessee Jacksonian, Democrats supported the Mexican-American War and refused to ban slavery in the territory acquired as a result of the war. Democrats insisted on the inclusion of a stricter Fugitive Slave Act in the Compromise of 1850.

Slavery was responsible for the death of the Democrats’ major opposition party, the Whigs, as well as the birth of its new opposition, the REPUBLICAN PARTY. Slavery was also a deeply divisive issue among Democrats themselves, especially after the Mexican-American War. Senator STEPHEN A. DOUGLAS of Illinois tried very hard to satisfy both wings and ended up destroying the party that he loved. Douglas was the driving force behind the KANSAS-NEBRASKA ACT of 1854, which abolished the traditional slave-versus-free line between North and South and opened up the territories to slavery. Democratic president JAMES BUCHANAN’s administration created a firestorm of protest with his overtly pro-Southern policies in Kansas and elsewhere from 1856 to 1860.

In the election of 1860, the Democratic Party finally split between proslavery secessionists and more moderate Unionists. At the Democratic convention in Charleston, South Carolina, the party failed to nominate a candidate due to disruptions by secessionist Southern delegates. Northern and Southern Democrats then met separately several weeks later, with Northern Democrats choosing Douglas as their presidential candidate, while Southern Democrats nominated JOHN C. BRECKENRIDGE to carry their banner. This split effectively guaranteed victory for Republican candidate ABRAHAM LINCOLN. With Lincoln’s victory, South Carolina seceded from the United States on December 20, 1860, and by February 1, 1861, was followed by six additional states. Delegates from these states met soon after at Montgomery, Alabama, to draft the Constitution of the CONFEDERATE STATES OF AMERICA and elect as president the former U.S. Senator JEFFERSON DAVIS.

During the Civil War, Confederate politics and government led to the development of a single party system,

made up of former Democrats and Whigs, that was highly disorganized and ineffective. In the North, Democrats became the opposition party. The party divided into two wings, “War Democrats” and “Peace Democrats.” The War Democrats were the majority for most of the years between 1861 and 1865. They supported Lincoln and the war and were careful not to bring the dreaded name of “traitor” down upon their organization.

As the war went on, however, more and more Democrats criticized what they thought to be the Lincoln administration’s unconstitutional abuse of power in the prosecution of the conflict. Two issues particularly were successful in mobilizing Democratic voters against Republicans during the war: Lincoln’s unpopular suspension of HABEAS CORPUS and his EMANCIPATION of Southern slaves. Although the Republicans kept a majority in the Congress, there were significant Democratic gains in the House and Senate in the elections of 1862.

Some Democrats went so far as to argue that the war should be brought to an end, even if that meant accepting secession. These Peace Democrats, or COPPERHEADS, felt the war victimized working-class and immigrant families. They also feared that freedmen would compete with white laborers for the same jobs. By 1864 the Copperheads were a powerful faction in the Democratic Party, and they were able to insist that a peace plank be included in the party’s platform for the presidential elections in that year. Renewed Union successes on the battlefield caused Democratic nominee GEORGE B. MCCLELLAN to repudiate the plank, and thereafter the Copperheads waned in importance.

After the war, the Democratic Party remained in the minority and, indeed, reached the lowest point in its history. Republicans regularly, and successfully, attacked Democrats as acting disloyally during the war. “Not every Democrat was a traitor,” crowed Republicans, “but every traitor was a Democrat.” During the first year of Reconstruction, a bitter dispute developed between Democrats and Republicans over the extension of citizenship and the franchise to African Americans. Encouraged by President ANDREW JOHNSON, many Democrats opposed what they called the “Africanization” of the South.

Democrats continued to attack Republican-led Reconstruction. In the years immediately after the Civil War, Democratic Southern state legislatures passed a series of restrictive racial laws known as the BLACK CODES. The primary purpose of the codes was to keep African Americans subordinate by controlling freedmen and keeping them in a state close to slavery. Northern Republicans, particularly a militant faction of the party known as the RADICAL REPUBLICANS, were outraged.

Congressional Radicals were able to impose an especially harsh Reconstruction on the South that effectively kept Southern Democrats out of positions of power. Barred

from participating in the political system through legal means, a great number of Southern Democrats worked to reestablish a system of white supremacy through illegal means, namely terrorism. The KU KLUX KLAN and other groups kept African Americans from voting by harassing and even killing those individuals who presumed to exercise their civil rights.

As the decade of the 1860s closed, support for congressional Reconstruction was waning. ULYSSES S. GRANT won the election of 1868 handily and overcame a serious challenge from anti-Reconstruction Democrats and Republicans to win a second term in 1872. Increasingly, the Democratic cry that Republicans had denied votes to competent white Southern voters while enabling “unfit” African Americans to vote resonated with Northerners. Perhaps the biggest boost for the Democrats, however, was the depression of 1873. Dissatisfied with the Republican handling of the ECONOMY, voters returned Democratic majorities to Congress in 1874. Two years later, a disputed election between Democrat Samuel J. Tilden and Republican Rutherford B. Hayes led to a series of compromises that awarded Hayes the presidency while bringing an end to Reconstruction.

The election of 1876 solidified a status quo that remained in place for the remainder of the 19th century. The Republicans controlled the majority of Northern voters and had a virtual monopoly on the presidency. Every president elected between 1860 and 1912, with the exception of Grover Cleveland, was a Republican. The Democrats, meanwhile, dominated the “Solid South” and were powerful in a number of Northern localities, particularly NEW YORK CITY. African Americans, most of them still living in the South, were largely denied a voice in politics. It would take another depression, beginning in 1929, to transform the Democratic Party from its 19th-century origins as a proslavery and states’ rights political organization into its current liberal incarnation.

## desertion

Desertion is defined as a soldier being “absent without leave” from his post. It can have a devastating impact on

an army’s morale and on an army’s chances for success on the field of battle. Desertion has been a problem for armies throughout history, but CIVIL WAR armies proved especially susceptible because the majority of the soldiers were volunteers. Untrained, untested, and sure that the war would last at most a few months, the reality of camp life and battle drove many young men to “skeeedaddle.”

There were other factors when considering desertion during the Civil War. It was easy to escape both on the march and approaching the battlefield. A deserter could easily blend in with the countryside simply because he spoke the same language as his enemies. Many battles were fought in states with heavily divided loyalties, like Tennessee. Deserters would not find it difficult to locate a friendly refuge.

Beyond that, Civil War combat was extremely violent and bloody, arguably more so than any war before or since. Even the bravest and most loyal of men could easily lose their stomach for battle when faced with the carnage that was inflicted on a regular basis. As 1861 turned into 1862 and 1863, the early volunteers became tested soldiers, and desertion rates dropped. The payment of enlistment bounties, however, later in the war brought another wave of desertion, especially to the Union armies. “Bounty jumpers” would enlist, collect their bonus, and then promptly desert so that they could enlist again for another bounty.

There were a variety of motives for desertion. The most common were lack of success on the battlefield and problems at home. Historian Bell Wiley has combed through the LETTERS written by soldiers and identified poor rations, sickness, incompetent or overbearing officers, failure to receive pay, and boredom as reasons why men deserted. Because of the Confederate government’s poor resources, Southern soldiers were more likely to suffer these kinds of aggravations and so were more likely to desert. This was a major concern for Confederate leadership, for the much smaller CONFEDERATE ARMY, which never exceeded 500,000 men at any one time, could ill afford the defections. ROBERT E. LEE thought that desertion played a prominent role in the Confederate army’s defeats at ANTIETAM and GETTYSBURG.

The Union leadership was also concerned about deserters, and both sides took steps to try to stem the tide of deserters. It was necessary to tread lightly, however. Excessive punishments, such as lashings and executions, deprived the army of a soldier’s services and tended to have a negative impact on morale in the army as a whole. Union and Confederate military and civilian leaders addressed the problem of desertion with a combination of negative and positive reinforcements. When deserters were caught, they were punished. The most severe punishment, death by hanging, was rare, reserved for extreme cases when an example needed to be made.

Meanwhile, at times when desertion was especially likely, both armies took steps to try and stop soldiers from leaving. Some officers would resort to frequent roll calls, as many as three or four an hour. Another common strategy, especially in the Rebel army, was to distribute extra rations. When possible, Northern and Southern leaders would grant their soldiers furloughs, which in most cases guaranteed their return.

At the same time that Union and Confederate leaderships were struggling to combat desertion in their own ranks, they were making every effort to convince enemy soldiers to desert. The Confederacy offered Union deserters sanctuary in the South, jobs, and sometimes land. The Northern government offered even more generous terms. Confederate deserters were given amnesty, payment for any equipment they brought with them, and free TRANSPORTATION back to their homes if it was in an area under Union control. Those who could not return home, or did not wish to do so, were given jobs in the North or allowed to serve in the U.S. Army on the western frontier.

It is difficult to say how many soldiers deserted over the course of the war. The official estimates by the two sides place the number at 200,000 for the North and 104,000 for the South. These numbers, however, are not especially trustworthy. Many men killed in action were classified as deserters because their bodies were never identified. Other men were incorrectly identified as deserters because they were temporarily separated from their units, either deliberately or inadvertently. Also, toward the end of the war, Northern authorities began to classify lesser offenses, such as dereliction of duty, as desertion. After January 1865, so many men were fleeing the Confederate ranks that Southern officials stopped bothering to count them.

Indeed, Southerners in particular became quite nonchalant about deserters by the end of the war. In 1865 Gen. John S. Preston, commissioner of the Confederate Bureau of Conscription, commented that “so common is the crime, it has in popular estimation lost the stigma which justly pertains to it.” To an extent, a relaxed attitude toward desertion has filtered down to the present. Since the Civil War, only one American soldier has been executed for the crime.

**Dickinson, Anna E.** (1842–1932) *abolitionist, orator, feminist*

An abolitionist and feminist, Anna Elizabeth Dickinson was one of the nation’s best-known female speakers of the 19th century. She was born in PHILADELPHIA, PENNSYLVANIA, on October 28, 1842. Her father was a successful merchant, and both parents were Quakers and ardent abolitionists. Dickinson, after passing through numerous Friends educational institutes, determined to carry on her parents’ work.

Dickinson’s public career began in 1856, when at the age of 14 she wrote an articulate essay for WILLIAM LLOYD GARRISON’s abolitionist newspaper *The Liberator*. Four years later she addressed the Pennsylvania Anti-slavery Society Convention, and the following year she delivered a fiery speech at Clarkson Hall, entitled “The Rights and Wrongs of Women,” that gained her considerable renown. A vigorous lecturer, she gained and held audience attention through natural eloquence, acerbic wit, and oftentimes outrageous statements. Her incendiary demeanor on the podium, highly unusual for a woman of this period, earned her the nickname “America’s Joan of Arc.”

Dickinson was in much demand as a public speaker, and she lost her regular job at the U.S. Mint after roundly criticizing Gen. GEORGE B. MCCLELLAN in 1861. Thereafter she became a fixture at most antislavery gatherings, where she was a frequent speaker, along with noted abolitionist FREDERICK DOUGLASS. On December 16, 1864, Dickinson made history by becoming the first woman to address the U.S. House of Representatives. In this historic speech she lauded RADICAL REPUBLICANS and castigated President ABRAHAM LINCOLN for being too conciliatory toward the South.

After the CIVIL WAR Dickinson continued lecturing on women’s rights and civil rights, becoming the nation’s highest-paid female speaker. Her fortunes turned in 1872, however, when she broke with the Republicans to support the candidacy of HORACE GREELEY. She lost a large part of her following and thereafter met with indifferent success as an actress, a dramatist, and a novelist. Declining mental and physical health resulted in her detention at the State Hospital for the Insane in Danville, Pennsylvania. She successfully sued to gain her release. Dickinson spent the rest of her long life with friends in Goshen, New York, where she lived in obscurity and died on October 22, 1932.

## disease and epidemics

During the CIVIL WAR, at least twice as many soldiers died from disease as from combat wounds. This staggering statistic points to both the horrors of living conditions and to medical ignorance. Disease hit soldiers hardest during their first years of fighting. When camped together, thousands of men from various backgrounds caught contagious diseases from each other. Especially affected were men from rural areas, who might not have been exposed to common childhood ailments such as measles that affected a greater proportion of city dwellers. Smallpox also had devastating effects on those who were previously unexposed to an outbreak.

Cramped living conditions and extremely poor sanitation also led to the spread of three diseases that frequently appear during times of war. Dysentery/diarrhea, typhoid, and pneumonia plagued troops who faced bad weather and unclean water supplies. Malaria also raged during the warmer months, especially in the hot, mosquito-laden areas of the South. Socially spread diseases also affected both Union and Confederate troops. Venereal diseases hit both armies hard and were most widely reported by regiments camped near cities.

Another factor compromising the well-being of military personnel was poor diet, brought about by ignorance of proper nutritional requirements and food preparation techniques. A lack of fresh vegetables and a monotonous intake of hardtack, fried greasy meats, and moldy bread led to gastrointestinal disorders within weeks. Though the diarrhea or stomach cramps that usually resulted were not life threatening, they were still debilitating to soldiers. In extreme cases inadequate nutrition gave rise to dangerous maladies such as scurvy, although this condition could be readily cured with citrus fruits such as lemons or oranges—if these were available. In the CONFEDERATE ARMY quartermaster functions remained problematic for most of the war, and the result was widespread malnourishment. In sum, the poor victualing of soldiers on both sides was a major factor in weakening their general health, making them more susceptible to a lengthy list of illnesses.

Medical practices during campaigns also inadvertently led to many deaths. Unclean wounds, for instance, often caused gangrene, which in turn dealt a fatal blow to an otherwise slightly injured soldier. Doctors in field hospitals often administered massive doses of narcotics to patients for every injury and ailment. Such dosing did more to cause shortages for those who really needed morphine, such as an amputee, than it did to cure ailments such as pneumonia. Likewise many of the widespread medical practices of the day, such as bleeding, were demonstrably more dangerous than the conditions they were meant to cure.

Lack of knowledge about bacteria had perhaps the greatest impact on the health of a Civil War soldier. The

regular exposure to microscopic invaders and the lack of any antibiotics caused deaths by the thousands. In fact, at the very time that war raged in America, Europeans such as Louis Pasteur and Joseph Lister led the beginnings of a medical revolution when they drew the first connections between microscopic organisms and disease.

These medical breakthroughs, however, did not reach the United States in time to help Civil War soldiers. The relationship between water and typhoid and between mosquitoes and the blood-borne illnesses yellow fever and malaria remained a mystery. Doctors also did not know the importance of sterilizing medical equipment and routinely operated on more than one soldier with the same dirty instrument. Not until after the war did the American medical profession connect what had happened to soldiers during the 1860s with the European advancements in science made at the same time. In the meantime, three out of five Union deaths were the result of disease rather than battle; in the Confederacy two out of three deaths were due to disease. The estimated death toll attributable to disease amounted to 224,000 Northerners and 164,000 Southerners in the course of four years. It was not until the 20th century that improvements in medicine, microbiology, and sanitation allowed the proportion of soldiers killed by disease to dip below the proportion lost due to combat-related injuries.

Although doctors did not know exactly what caused the diseases they attempted to treat, they did recognize the problem. Along with the doctors themselves, private citizens, the government, and especially women founded groups to tackle the medical challenges and to care for the ill and injured. For example, Elizabeth Blackwell, M.D., led a meeting of 3,000 women to form the Women's Central Association for Relief (WCAR) in New York in 1861. The WCAR later evolved into the government-sponsored UNITED STATES SANITARY COMMISSION. Women, acting as NURSES, played a central part in each of the organizations treating and caring for the ill and wounded. One independent nurse, CLARA BARTON, eventually founded the American branch of the International Red Cross after her experiences during the Civil War. The Confederacy also employed nurses and doctors on a relatively wide scale. Like their Northern counterparts, Southern medical personnel waged a heroic and ceaseless struggle to assist those in need—with identical paltry results. Their efforts were hampered by chronic shortages of drugs, surgical tools, and other requisite supplies, which only grew worse as the Union blockade tightened.

Nursing developed as a profession during the war years, and after the war the profession emerged as a predecessor to women-led reform movements. Many of these movements in the latter 19th century focused on the problems of disease. Targeted especially at densely

populated urban settlements, some groups led crusades promoting better hygiene among the immigrants who lived in crowded tenements. Communicable diseases such as typhoid and tuberculosis often affected these urban dwellers at a greater proportion than the rest of the population. Progressive women reformers lobbied for solutions to such health issues. Although not always successful or even always scientifically correct, reformers raised awareness and concern over the spread of diseases. That attentiveness came directly from experiences during the Civil War and from advancements made because of it.

The understanding of disease made enormous leaps during and after the Civil War. Because of the horrors that soldiers endured, the medical profession strengthened both its social and scientific awareness of contagion.

**Douglas, Stephen A.** (1813–1861) *lawyer, politician*  
Lawyer and U.S. senator, Stephen Arnold Douglas played a key role in the sectional politics that led to the outbreak of the CIVIL WAR. Best known for his famous debates against ABRAHAM LINCOLN in the 1858 Illinois senatorial contest and as Lincoln's opponent in the 1860 presidential race, Douglas was affectionately called the "Little Giant" for his widely admired oratory skills and small stature. Douglas, considered the most talented politician of his generation, saw his ambitions for higher office destroyed in the bitter debates and violent struggle between pro- and antislavery

forces over the Kansas-Nebraska territory. Douglas's failure to gain the support of Southern Democrats in 1860 split the party and led to Republican Abraham Lincoln's victory.

Douglas was born on April 3, 1813, in Brandon, Vermont, the son of a doctor. Douglas enjoyed an excellent EDUCATION at the Canandaigua Academy in upstate New York, where he moved with his family in 1830. There, Douglas trained in the Latin and Greek classics that would give his political speeches sparkle, spirit, and a learned quality. As a youth he was already endowed with the remarkable energy and ambition that led a friend to describe him as a "steam engine in breeches." After training in law, Douglas moved west to Jacksonville, Illinois, in 1833, where he quickly proclaimed: "I have become a *Western* man."

At age 21 he entered state politics, rising to the state supreme court by the age of 27. At court, he earned and kept the nickname "Judge" Douglas. Hard-working and innovative, Douglas is credited with building the ILLINOIS DEMOCRATIC PARTY from the bottom up. His hero was Andrew Jackson, and he supported the principles of Jacksonian democracy that stood for the betterment of the common person. Douglas prospered in the tough world of frontier politics. In 1843 he won the first of three terms in

Stephen A. Douglas (Library of Congress)

the U.S. House. He was elected to the U.S. Senate in 1847, where he served until his death in 1861.

Douglas married a North Carolinian, Martha Martin, in 1847. Martha was the heiress to a large plantation with 100 slaves that Douglas managed. Shortly after bearing two sons, Martha died in 1853. The lonely widower remarried in 1856 to the 21-year-old Adele Cutts. They lived in WASHINGTON, D.C., for most of the year. While in Congress, Douglas was a major proponent of westward expansion and the idea of Manifest Destiny. Leader of the "Young Democrat" movement, he was a tough-minded politician who usually got his way.

After the end of the war with Mexico in 1848, the settlement of the territories acquired from that war became a controversial national issue. Should they be reserved for free or slave labor? Douglas helped push through the various pieces of legislation that made up the Compromise of 1850, including the completion of the Illinois Central Railroad, his pet project. He was absent for the vote on the controversial Fugitive Slave Act but supported its passage. As a Westerner, he promoted westward expansion, negotiating the SLAVERY issue to his constituents' benefit. He was neither strongly proslavery nor antislavery, but his position as chairman of the Senate Committee on Territories put him in the middle of the coming political firestorm.

In 1854 Douglas promoted the idea of popular sovereignty as a democratic method to decide the issue of expansion in the Kansas and Nebraska Territories. Douglas's ultimate goal was the building of a northern route for a transcontinental RAILROAD that would have to cross these territories, but he needed Southern congressional support to fund its construction. This need led to the passage of the KANSAS-NEBRASKA ACT, which abolished the 1820 Missouri Compromise (banning slavery in all territories north of the 36°30' parallel) and allowed the Kansas and Nebraska Territories to decide their status as either free or slave territory via popular mandate.

Upon the passage of the act, both Free-Soil and proslavery proponents flooded Kansas Territory in anticipation of a vote on the territory's status. The influx of a divided population led to the conflict known as "BLEEDING KANSAS," which served as a preview to the Civil War. The 1854 act had many more effects than just local conflict. It destroyed the last remnants of the Whig Party and helped boost the popularity of the newly formed REPUBLICAN PARTY. The act was so divisive and unpopular in the North that Douglas joked that he could go from his home in Washington, D.C., to his home in Illinois by the light of his burning effigies.

Controversy aside, Douglas commanded the loyalties of many Democrats and only narrowly lost the 1856 presidential nomination to JAMES BUCHANAN. Buchanan and Douglas, however, were increasingly at odds over Kansas's proslavery Lecompton Constitution. Their split reduced

Douglas's influence with the Southern Democrats that he hoped to recover in his Senate reelection bid. In 1858 Republican lawyer Abraham Lincoln challenged Douglas for his Senate seat. The famous Lincoln-Douglas debates drew the entire nation's attention. As the candidates "stumped" throughout the state, their debates were followed closely because of the important issues at stake and because Douglas was the leading candidate for the Democratic Party's 1860 presidential nomination.

The debates' focus was on slavery. Southerners were very interested in what Douglas had to say. During his speech in Freeport, Illinois, Douglas articulated his famous "Freeport Doctrine." In it, Douglas sought to reassure Southerners that he would not use federal power to stop slavery, while at the same time pointedly informing Northerners that no court, supreme or otherwise, could impose slavery where it was not wanted. He had a tough position to stake out, because he could not win nationally without the support of the proslavery South, and he could not win a statewide election without free-labor votes. Ultimately, he failed to persuade Southerners that Northern Democrats would protect their property, but he did win the election in Illinois.

Douglas's beloved Democratic Party had split in half by the time the Democratic National Convention met in Charleston, South Carolina, in the spring of 1860. With little agreement between the Northern and Southern wings, many delegates from the slave states stormed out, and the convention adjourned without a candidate. Two months later, a new Democratic Party convention was called in Baltimore, where Douglas won the party's nomination. The convention did not attract delegates from the Deep South; that group nominated JOHN C. BRECKENRIDGE as their Democratic candidate.

Douglas campaigned nonstop during the fall ELECTIONS. Unlike the other candidates, Douglas took his message to the public. He toured New England and the Deep South, where he was greeted with hostility. His message was simple and straightforward: Save the Union. No issue, he argued, even slavery, should break up the country, but it was too late for that message to appeal to the voters. In the election, Douglas won only Missouri outright, but came in second in the popular vote with nearly 30 percent.

When hostilities broke out in April 1861, Douglas stood firmly in support of President Lincoln and decried any attempts at disunion. Just after FORT SUMTER, Douglas made a speech in which he said: "It is with a sad heart—with a grief that I have never before experienced, that I have to contemplate this fearful struggle." Months of tireless campaigning had taken their toll on the "Little Giant," and he died in a hotel room in Chicago on June 3, 1861.

Stephen A. Douglas was an important figure in U.S. political history, and although an intelligent and talented

man, he never grasped fully the power of the forces he unleashed when he signed the Kansas-Nebraska Act into law. On his deathbed, he sent a last message to his two sons: “Tell them to obey the laws and support the Constitution of the United States.”

**Douglass, Frederick** (1817–1895) *orator, journalist, abolitionist, women’s rights activist*

Frederick Douglass was the most important African-American leader of the 19th century. He was born Frederick Bailey on a plantation in Tuckahoe, Maryland, in 1817. Douglass knew his mother only for a short time and assumed that his absent father was his master, a white plantation owner. As a young boy, Douglass was raised by his grandmother after his mother’s death, and at the age of eight he was “hired out” to work as a servant for a family in Baltimore, Maryland. It is there that he learned to read, first under his mistress’s tutelage and then by way of the neighborhood children.

After eight years, Douglass was sent back to the plantation in Tuckahoe. He found rural SLAVERY a sharply unpleasant contrast to his experience as an urban houseboy. More than once, he tried to escape, but he was caught and sent back to Maryland, where, after working in the shipyards as a caulker, he did in fact escape in 1838 with papers borrowed from a sailor.

Settling in New Bedford, Massachusetts, after marrying Anna Murray, a free woman of color, Frederick Bailey chose a new name for his life of freedom, Douglass. Prejudice made EMPLOYMENT as a caulker impossible, so in New Bedford Douglass took any job he could find. In 1841 his oratorical skills made him an object of national attention, and he was invited to attend the Nantucket convention of the Massachusetts Anti-Slavery Society. After being called on to speak, Douglass’s powerful voice, emotive style, and command of the language riveted the audience. He soon became one of the most asked-for speakers on the abolitionist lecture circuit. Douglass lectured on behalf of the society, but he also cultivated his writing skills for WILLIAM LLOYD GARRISON’s newspaper, the *Liberator*.

For the next 10 years, Douglass was associated with the “Garrisonians,” the branch of radical abolitionism, led by William Lloyd Garrison, that advocated immediate EMANCIPATION and full citizenship rights for slaves. They rejected politics and political parties and emphasized “moral suasion” as the method to achieve their goals.

Frederick Douglass (National Archives)

In 1845 Douglass published *Narrative of the Life of Frederick Douglass, an American Slave*. Describing life under SLAVERY in gruesome and bitter detail, Douglass noted the evil effects on white people as well as African Americans from the indignity of slavery. With prefaces written by William Lloyd Garrison and Wendell Phillips, the *Narrative* was well received in antislavery circles in the United States and abroad. Unlike other slave narratives, Douglass’s was written without the aid of a ghostwriter. His story was infused with a remarkable sense of honesty and candor. In 1855 Douglass published another, larger version of his autobiography, *My Bondage and My Freedom*. Douglass’s fame was so great that he feared that he would be recaptured and sent back into slavery, so he went to England for two years.

With the earnings from the *Narrative* and his lecture tours, Douglass resettled in Rochester, New York, where he bought a newspaper in 1847, the *North Star*, which he coedited with the help of MARTIN R. DELANY. The masthead of the paper proclaimed its goals: “Abolish slavery in all its forms and aspects, advocate universal emancipation, exalt the standard of public morality, and promote the moral and intellectual improvement of the colored people, and hasten the day of freedom to the Three Millions of our

enslaved fellow countrymen.” Douglass and the *North Star* also supported women’s rights. Indeed, Douglass spoke at the 1848 Seneca Falls Convention and was one of the official signers of the manifesto of women’s rights.

As Douglass turned increasingly toward political action, he split with William Lloyd Garrison’s group over the latter’s refusal to engage in politics. Personally advocating nonviolence, Douglass, a friend of JOHN BROWN, called him “a noble old hero” after his hanging for his role in the raid at HARPERS FERRY in 1859. By the 1860 presidential election, Douglass had identified himself with the REPUBLICAN PARTY and supported candidate and president-elect ABRAHAM LINCOLN.

Douglass believed that the Union’s primary goal in the war should be to end slavery. Unhappy with Lincoln’s slow moves toward emancipation, he pushed the president and the Republican Party toward progressive policies. Douglass and other abolitionists also pressed hard for the mobilization of African-American soldiers, a dream that came true after January 1, 1863. Douglass gloried in his role of recruiter for colored regiments, especially the 54TH MASSACHUSETTS REGIMENT. Among the first to enlist in that famous all-black regiment were his two sons, Lewis and Charles. Unfortunately, equality in the army could not be assured for African-American troops. Douglass protested gross inequalities of pay and treatment and was able to bring some improvement in the lives of the black soldiers.

The CIVIL WAR brought freedom to 4 million slaves, but it did not bring the equality, justice, and economic opportunities that Douglass had hoped for. The THIRTEENTH, FOURTEENTH, and FIFTEENTH AMENDMENTS were passed, providing for emancipation, citizenship, and suffrage for African Americans, but too often the laws were not enforced. Douglass dedicated himself in the postwar years to fighting to make the dreams of political and economic freedom for African Americans a reality.

He was a firm supporter of the Republican Party and was rewarded by President ULYSSES S. GRANT with an appointment as secretary to the Santo Domingo Commission. He subsequently served in a number of party-appointed positions, such as recorder of deeds for the District of Columbia and as a minister plenipotentiary to Haiti.

Douglass retained his stature as the most important political leader of the African-American community into his old age. He continued his tireless agitation for racial equality through newspaper writing and lecturing. Douglass frequently traveled to Europe with his second wife, Helen. In 1881 the third revision of his autobiography was published, *The Life and Times of Frederick Douglass*.

Douglass died of a heart attack on February 10, 1895, in WASHINGTON, D.C.

### ***Dred Scott* decision** (1857)

Few Supreme Court decisions outweigh *Dred Scott v. John F. A. Sandford* (the name *Sanford* was misspelled in the formal reports) in legal and historical importance. With its decision in *Dred Scott*, the Court denied citizenship to African Americans, denied that Congress had the right to legislate on the issue of SLAVERY in the territories, and ultimately affirmed the place of slavery in America. The decision was a major milestone on the road to the CIVIL WAR.

Dred Scott was born into slavery in Virginia between 1795 and 1809. His owner, Peter Blow, sold Scott to Dr. John Emerson in St. Louis in 1833. Emerson, an army surgeon, took Scott with him on his first assignment at Fort Armstrong, Illinois, and then in 1836 to Emerson’s next posting, Fort Snelling, Wisconsin Territories (present-day Minnesota). In both the free state of Illinois and the Wisconsin Territories (free by the Missouri Compromise), Scott served as Emerson’s slave.

In 1836 or 1837, while still at Fort Snelling, Scott met and legally married Harriet Robinson, who was the slave of Indian Agent Maj. Lawrence Taliaferro. A justice of the peace, Taliaferro conducted the ceremony, and apparently “gave” Robinson to Emerson so that the new couple could remain together.

As Emerson’s career dictated, he moved about the country, sometimes taking Mr. and Mrs. Scott with him (including, for a time, on a posting back to the slave state of Missouri), and sometimes hiring them out to other people while he traveled. On one of his assignments, Emerson married Irene Sanford. Emerson died in 1843 and left his estate, including Dred and Harriet Scott and their two children, Eliza and Lizzie, to Irene Sanford Emerson.

Three years later, in December 1846, Dred Scott filed suit in Missouri against Irene Emerson for his freedom. His case rested on the contention that living in free areas made him a free man. When he lost the case in the Missouri State Court, Scott sued again, this time in the state of New York, which also denied his claim. Irene Emerson’s brother, John F. A. Sanford, who was the manager of her estate, was now the owner of the Scott family. By the time the case arrived at the Supreme Court, Scott’s suit was

against Sanford (spelled incorrectly in the official court records as Sandford).

Chief Justice Roger B. Taney, a Maryland slaveholder and a strong defender of the institution, wrote for the seven-justice majority on the decision. He declared that there were two main questions before the Court: Did the lower courts have jurisdiction to hear the case? Were the decisions of the lower courts correct? In answering the former, Taney found that the lower courts did not have jurisdiction to hear the case because Scott was not a citizen and therefore not entitled to bring suit.

Taney further stated that at the time of the founding of the nation, African Americans were considered “beings of an inferior order” and that, even at the time of the writing of the Declaration of Independence, it was common belief that black people had “no rights which white men were bound to respect.” This was true, Taney explained, even though a few states had allowed African Americans to exercise voting rights. There were different levels of citizenship—state and national, Taney wrote—and the rights of citizenship in individual states did not confer national citizenship rights. If African Americans had no rights at the time of the founding of the United States, then they could not be considered citizens, ever.

The decision could have, and many argue should have, ended there. After all, if African Americans were not citizens and therefore not entitled to bring suit, then Dred Scott’s case was over. But Taney went further and ruled on whether or not the lower courts had been right. The remainder of his opinion was considered *obiter dictum* (incidental remarks) and therefore not truly part of the legal precedent of the case. The impact, however, was immense. Taney declared that Scott’s claim to freedom based on living in the free territory of Wisconsin was worthless because the Missouri Compromise, passed by Congress, was unconstitutional. Taney’s decision destroyed the shaky foundations of African-American rights and denied Congress the right to legislate slavery out of the territories.

Two justices, Benjamin Curtis and John McClean, dissented from the opinion. Curtis pointed out that the public records of many states demonstrated without a doubt that African Americans enjoyed the benefits of citizenship and that they were shown capable of exercising those rights from the time of the U.S. Constitution. McClean added to Curtis’s dissent by writing that Scott was free due to the time he spent in Illinois and the Wisconsin Territory because a “slave is not mere chattel. He bears the impress of his Maker and he is amenable to the laws of God and man.” McClean and Curtis were not the only people who disagreed with the majority Court’s decision.

A chorus of Northern-based denunciations began as soon as the press reported on the decision. Republican

Dred Scott (Library of Congress)

senator WILLIAM H. SEWARD of New York claimed that with “this ill-omened act, the Supreme Court forgot its own dignity.” The *Chicago Tribune* went even further by stating that they were “shocked at the violence and severity of the Judicial Revolution caused by the decision . . . and [could scarcely] fathom the wicked consequences which may flow from it.”

Northerners tended to view the *Dred Scott* decision as shocking evidence of a widespread slaveholding conspiracy. If Congress could not legislate against slavery in the territories, then certainly a territorial legislature, who drew their authority from a congressional grant, could not ban slavery either. Popular sovereignty, the last tie holding the Northern and Southern wings of the DEMOCRATIC PARTY together, was severed. Republicans had yet another issue with which to continue their drive toward the presidency in 1860.

The outcry against the Court’s opinion was analyzed in the popular press. *Harper’s Weekly* remarked: “However repugnant the *Dred Scott* decision may be to the feeling of a portion of the Northern States, it can have no practical effects injurious to our tranquility.” The South Carolina *Charleston Daily Courier* echoed a similar sentiment when it declared that *Dred Scott* would “settle these vexed questions forever, quiet the country, and relieve it of ABOLITION agitation.” Neither statement could have been further from the truth. *Dred Scott*—combined with BLEEDING KANSAS, the caning of CHARLES SUMNER, and JOHN BROWN’s raid

on HARPERS FERRY—only served to divide the nation further. More and more Northerners believed the South had corrupted a Court that was determined to nationalize slavery; more and more Southerners believed that the North was intent on destroying their property and inciting their slaves to violence and mayhem.

Dred Scott and his family were freed through private means. Scott became a Northern celebrity, and the family was photographed for *Frank Leslie's Illustrated Newspaper*. His immediate fame was short lived, as was his time as a free man. On September 17, 1858, Dred Scott died in St. Louis.

Dred Scott had an incredible impact on the course of the history of 19th-century America, and *Dred Scott v. John*

*F. A. Sandford* electrified a divided nation. Despite his controversial decision, Chief Justice Taney had not defused the slavery debate but had fanned the flames of sectionalism even higher.

**Early, Jubal A.** (1816–1894) *Confederate general, lawyer*

Lawyer, Confederate general, and architect of the “LOST CAUSE” ideology, Jubal Anderson Early was born on November 3, 1816, near Rocky Mount, Franklin County, Virginia. The son of Joab Early, a substantial holder of land and slaves, and Ruth Hairston Early, Jubal Early entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1833 and graduated 18th of 50 in the class of 1837. He resigned in 1838 to return to Rocky Mount, where he practiced law for the next 20 years. As a delegate to the Virginia SECESSION convention in 1861, he maintained a strong Unionist stance until ABRAHAM LINCOLN’s call for 75,000 volunteers to suppress the rebellion. Virginia’s secession on April 17 galvanized Early, who immediately accepted a colonel’s commission in the CONFEDERATE ARMY. Early quickly displayed marked aptitude as a soldier, playing an important role as a brigade commander at the FIRST BATTLE OF BULL RUN and winning promotion to brigadier general in August 1861. Badly wounded at the Battle of Williamsburg on May 5, 1862, he returned to the army to fight with distinction at the Battles of Malvern Hill, SECOND BULL RUN, ANTIETAM, and FREDERICKSBURG. Promotion to major general in April 1863 rewarded Early’s excellent service.

ROBERT E. LEE demonstrated confidence in Early by assigning him difficult tasks. During the Chancellorsville campaign, for example, Early held the front at Fredericksburg while most of the army marched west to confront JOSEPH HOOKER’s flanking force. At the BATTLE OF GETTYSBURG, Early participated in the successful Confederate assaults on the afternoon of July 1 and advocated a joint attack against Cemetery Hill by the corps of A. P. HILL and RICHARD S. EWELL that evening. Strong and steady leadership at the BATTLES OF THE WILDERNESS and SPOTSYLVANIA in May 1864 brought him promotion to lieutenant general and command of the Second Corps in Lee’s army. Poised to start his most famous operations, Early was a

respected if not beloved officer. A soldier described him in 1864 as “one of the greatest curiosities of the war,” a man “about six feet high” whose “voice sounds like a cracked Chinese fiddle, and comes from his mouth . . . with a long drawl, accompanied by an interpolation of oaths.” His men

Confederate general Jubal A. Early (Massachusetts Commandery Military Order of the Loyal Legion and the U.S. Army Military History Institute)

called him “Old Jube,” while Lee affectionately referred to him as “my bad old man.”

In mid-June 1864, Lee sent Early and his command to the Shenandoah Valley. Over the next month, Early cleared the valley of Federal troops, crossed the Potomac, won the Battle of the Monocacy near Frederick, Maryland, on July 9, and menaced WASHINGTON, D.C. A second phase of the valley campaign began in August, when ULYSSES S. GRANT ordered PHILIP H. SHERIDAN to crush Early and lay waste to the valley. Early’s small army, which never numbered as many as 18,000 men, lost decisively to Sheridan’s 35,000–40,000-man force at Third Winchester on September 19, at Fisher’s Hill three days later, and at Cedar Creek on October 19. Early suffered a final defeat at Waynesboro on March 2, 1865, which ended his career as a Confederate soldier.

After the war, Early remained thoroughly unreconstructed and devoted most of his energy to creating a favorable written record of the Confederate military experience. He wrote to Lee in 1868: “The most that is left to us is the history of our struggle. . . . We lost nearly everything but honor, and that should be religiously guarded.” As a leading proponent of the LOST CAUSE interpretation of Confederate history, Early stressed Lee’s greatness and the valor of outnumbered Confederates while also insisting that only superior numbers allowed the North to triumph. Early died on March 2, 1894, in Lynchburg, Virginia.

**Eaton, John, Jr.** (1829–1906) *Union chaplain, educator, government official*

John Eaton, Jr., is best known for his work as superintendent of freedmen in the Mississippi Valley during the CIVIL WAR and later as commissioner of the Bureau of Education. Born on December 5, 1829, in rural New Hampshire, his early life revolved around chores on the family farm and the occasional schooling common in the antebellum era. A job teaching in a nearby school at the age of 16 allowed him to attend Thetford Academy in Vermont and later to enroll at Dartmouth College. Graduating from Dartmouth in 1854, Eaton became principal of the Ward School in Cleveland, Ohio. In 1856, at the age of 27, Eaton accepted the position of superintendent of the city schools in Toledo, Ohio.

Resigning the school superintendence in 1859, he entered a seminary and was ordained in the spring of 1861.

Eaton joined the Union cause in August 1861 as chaplain of the 27th Ohio Volunteer Infantry. In November 1862 Gen. ULYSSES S. GRANT appointed Chaplain Eaton superintendent of CONTRABANDS for the Department of the Tennessee, a post he held for the remainder of the war. Eaton displayed extraordinary organizational ability in providing for the relief of thousands of liberated slaves and, following EMANCIPATION, coordinating the relief efforts of the Freedmen’s Aid Societies and organizing schools for the freedpeople. Eaton assumed command of the Ninth Louisiana Volunteers African Descent (later redesignated 63rd U.S. Colored Troops) in October 1863. Col. Eaton’s unstinting work on behalf of freed people in the Mississippi Valley earned him a brevet to brigadier general of volunteers in March 1865. John Eaton married Alice Shirley, the daughter of a Vicksburg Unionist in September 1864. Following the war, Eaton served as assistant commissioner of the FREEDMEN’S BUREAU and as state superintendent of schools for Tennessee.

When in 1867 Congress created the Department of Education, Dr. Henry Barnard was named its first commissioner, but Congress never appropriated the funds to print the department’s reports. Dr. Barnard spent much of his personal fortune printing the reports privately, but despite his best efforts, by 1879, the Department of Education had not only been reduced to a bureau in the Department of the Interior but its very existence was threatened. In 1870 President Grant appointed Eaton commissioner of the bureau, and Eaton set about a revitalization campaign. He established the annual collection of vital statistics on education as the bureau’s chief function and secured funds from Congress for printing annual reports. Under Eaton’s leadership, the Bureau of Education supported efforts to expand education for African Americans in the South, organized a training school for NURSES, and promoted agricultural, commercial, and industrial training. In 1886 Eaton also took a special interest in the educational opportunities available to NATIVE AMERICANS.

Eaton resigned as commissioner due to failing health, although, at the request of the administration, he remained for nearly a year after his official resignation. He later served as president of Marietta College in Ohio (1886–91) and Sheldon Jackson College in Salt Lake City (1895–99). In January 1899 the military appointed General Eaton superintendent of schools for Puerto Rico. During his brief tenure he established the first free school system for all children on the island and worked to ensure adequate educational opportunities for girls, particularly in rural areas. Eaton resigned the following May due to ill health and died on February 9, 1906, at the age of 76.

## economy

In 1850 the economy of the United States was booming. The South was exporting more than \$150 million worth of agricultural products a year. The North's factories were growing as the region industrialized. The nation's railroad mileage tripled between 1850 and 1855 to 30,000 miles. Meanwhile, thousands of new schools and churches were founded.

For the North, the bubble burst in the summer of 1857. In August, the Ohio Life Insurance Company of Cincinnati closed its doors. The unexpected collapse of one of the nation's most prominent businesses started a run on banks across the country and sent the nation into a depression that would last into the CIVIL WAR. The PANIC OF 1857 had a number of root causes: First, state banks, operating with only minimal oversight, had failed to keep their capital reserves at a high enough level. Second, RAILROADS had expanded too much and were unable to meet their costs. Third, the end of the Crimean War in Europe led to a resurgence of AGRICULTURE on that continent, with a resulting drop in the prices being paid for the crops of Midwestern farmers. Finally, gold prices had dropped due to an influx of gold from California.

The South was largely unaffected by the panic of 1857, since European demand for cotton remained high. At the same time, the South took advantage of new forms of TRANSPORTATION and new kinds of cotton seeds. As a result, cotton production doubled during the 1850s. In 1860 alone, the South grew 2 billion pounds of cotton with a value of \$250 million. The incredible profitability of "King Cotton" encouraged Southerners to invest nearly all of their money in more land and more slaves. As a result, the region failed to develop industrially and failed to build up meaningful cash reserves.

When the Civil War broke out, then, neither the Northern nor the Southern economies were ready for the financial demands of a war. The North was still suffering the effects of the panic of 1857 and was also handicapped by an antiquated banking system. The South had very little capital or credit and very little industrial capacity. Ultimately, the Union was able to overcome the economic obstacles it faced, and this success played an important part in the Northern victory. The Confederacy, on the other hand, made very little progress in addressing its economic challenges, and this failure played a major role in the South's defeat.

During the Civil War, the main economic issue that both the Union and Confederate governments faced, naturally, was paying for the war. There were three main options available for raising funds to pay the government's bills: TAXATION, bond issues, and printing currency. Northern authorities used all of these tools in an effective fashion. Early in the war, the Northern Congress authorized several bond issues. A bond is an agreement between the government and private businesses or citizens; money is loaned to the government with the promise that it will be repaid with interest at some agreed-upon point in the future. Before the Civil War, bonds had been sold only to bankers, but Treasury Secretary SALMON P. CHASE decided to open up bond purchases to the general public. This was a stroke of genius for two reasons: First, it gave the government access to a vastly larger pool of money. Second, it gave the citizenry a vested interest in the success of the Northern war effort and the Northern economy. The public responded slowly at first, but eventually talented bond salesmen, most notably JAY COOKE, succeeded in winning the people over. One family in four purchased at least one bond during the war, adding \$1.5 billion to the Union government's coffers.

The Congress also moved to increase taxation fairly early in the war. In March 1861, before the war had even begun, Congress passed the Morrill Tariff Act. The Morrill Act more than doubled the rates on goods coming into the country, raising them from 20 percent to 47 percent. In August 1861, Congress levied a tax of 3 percent on incomes more than \$800, the first income tax in American history. A

Comparison of Economies, 1860

succession of bills eventually expanded the tax to 5 percent on incomes more than \$600 up to 10 percent on incomes more than \$10,000. Income taxes and the high tariff helped keep inflation down in the North while adding \$600 million to the Union government's balance sheet.

The most controversial step the Northern Congress took in order to finance the war was the passage of the Legal Tender Act of 1862. Prior to the Civil War, currency was almost invariably backed by a quantity of silver or gold, known as specie, being held in a bank vault. At any time, paper money could be exchanged at the institution that had issued it for specie of equal value. By 1862, however, there was not enough specie in the North to keep this system viable. As such, the Legal Tender Act provided for the printing of \$150 million worth of what is known as fiat currency, which is backed not by specie but instead by the good credit of the government. The act also specified that this fiat currency would be legal tender, which meant that people and businesses were legally required to accept it as payment for debts.

There were a number of objections to the printing of fiat currency. Some congressmen argued that Congress was not empowered to print money that was not backed by gold or silver. Others felt that it was immoral to force Americans to accept this money. Still others argued that fiat currency would create runaway inflation. These fears proved to be unfounded. Most Northern citizens proved willing to accept GREENBACKS as a medium of exchange, and inflation was kept within reasonable limits. In total, the printing of greenbacks provided \$447 million for the Union war effort.

As it worked to finance the war, the Union government also took steps to shore up the foundations of its financial system. The National Banking Act of 1863 created a system of banks chartered by the federal government. These banks were allowed to print currency, as long as the currency was backed by government bonds. This created a market for government bonds and strengthened the Union's greenback currency by tying it to those bonds. It also gave the Union government more control over banks and the nation's money supply. The Congress went even further in this direction in 1864 when it passed a law establishing a 10 percent tax on money printed by state-chartered banks. This action effectively took these banks out of the business of printing money. By the end of 1865, a total of 1,294 national banks had been chartered, and they had more than five times the assets of the 349 state banks still in existence. This banking system would remain in place throughout the Civil War and RECONSTRUCTION.

Northern leaders, then, struck a balance between taxation, bond issues, and the printing of currency while taking steps to rectify problems within their financial system. Confederate authorities had the same options available to

them, but under the leadership of Treasury Secretary Christopher Memminger, they proved far less able to maintain an effective balance. The results were devastating for the Confederate economy.

Early in the war, the Confederate Congress considered the possibility of taxing its citizens. There was widespread opposition to the idea, however. Some congressmen opposed taxation because of their dislike of a strong central government. Others felt that such a step would undermine support for the war. Still others saw a tax as unnecessary, believing the war would end quickly. In August 1861, proponents of taxation finally persuaded the Congress to exact a nominal property tax, but it ended up adding very little money to the Confederate bottom line. In 1863 the poor state of the Confederate economy allowed for the passage of a more comprehensive tax, but it also did little to help the Confederate cause. The bill taxed incomes at rates from 1 percent to 15 percent and established a "tax-in-kind" for farmers that required them to turn over 10 percent of their crops to the government. Due to evasion and poor enforcement, these taxes provided less than \$150 million for the war effort, most of it in depreciated currency late in the war.

Among Confederate officials, the preferred means for financing the war was bond issues. An initial offering of \$15 million in 1861 was quickly purchased by patriotic Southerners. After that, however, bonds became increasingly difficult to sell as the available money in the South dried up. The Confederate Congress then authorized a "produce loan" of \$100 million, wherein farmers would be allowed to pledge a portion of their crops in exchange for bonds. Although an innovative idea, the produce loan failed to produce the desired results. Farmers were reluctant to take advantage of the program, preferring instead to hoard their crops or sell them to the Union soldiers. And when pledges were made, the Confederate government often had difficulty collecting the crops that were due. By the end of the war, the produce loan had generated only \$34 million.

Given how little money was being raised through taxes and bonds, the Confederate government had little choice but to begin printing fiat currency. The Congress authorized the printing of \$119 million worth of "bluebacks" in 1861 and \$400 million worth in 1862. This money quickly lost value, for a variety of reasons. The Confederate government was not nearly as stable as the Union government, thus Confederate fiat currency was far less trustworthy than Union fiat currency. Beyond that, there was far too much currency in circulation. By the end of 1862 the Confederate government had printed almost as much money as the Union government would print over the course of the entire war. The glut of paper money was made even worse by the fact that state and local governments were also compelled to print money to meet their obligations. Yet another

problem was that the Confederate government chose not to make Confederate currency legal tender; Southern citizens and businesses were not legally required to accept it as payment for goods and services. The purpose of this decision was to inspire confidence in Confederate paper money, but in the end it had the opposite effect. Southerners avoided Confederate money whenever possible, relying mostly on barter, on specie when it was available, and sometimes on Union currency.

In addition to establishing a poor balance between sources of money, the Confederate government also took steps that undermined its financial system. At the start of the war, the South had a system of branch banks that was much more stable and much more modern than the decentralized banking system of the North. Early in the war, the Confederate Congress required Southern banks to provide loans to the government, exchanging specie and bank notes for bonds. As the government's bonds declined in value, the banks were effectively drained of capital. The government continued to exacerbate the situation throughout the war through excessive taxation on banks and additional forced loans. Union armies also contributed to the banks' woes. A large portion of the assets of Southern banks was invested in land and slaves, and these assets were lost as the UNION ARMY marched across the South. By the end of the war, the Southern banking system had effectively collapsed.

The failure of the Confederate government's economic policies was evident on both the war front and the HOMEFRONT. Confederate soldiers were notoriously undersupplied, often going without proper UNIFORMS, modern weapons, sufficient ammunition, or adequate rations. In desperation, they took whatever steps possible—stealing, utilizing captured goods, even trading with the enemy—to obtain the needed supplies.

On the home front, the situation was arguably even worse. Inflation was out of control in the Confederacy—9,000 percent over the course of the war. By 1865 flour cost as much as \$500 a barrel, and a suit of clothes cost \$2,500. The Union's naval blockade contributed to the Confederacy's economic problems by curtailing the amount of goods flowing into the South while denying Southerners the opportunity to sell their cotton. Although the South had an agricultural economy, many Southerners starved over the course of the war. Railroads were in a state of disrepair, and food rotted in storage because it could not be transported to the locations where it was needed. The privations felt by the Southern people created DISEASE AND EPIDEMICS and even resulted in occasional rioting. The largest riot occurred in RICHMOND, VIRGINIA, on April 2, 1863, when several hundred women marched through the streets smashing store windows and chanting "Bread or Blood!" JEFFERSON DAVIS himself had to speak to the mob and convince them to disperse.

The failures of the Southern economy stood in stark contrast to the successes of the Northern economy. By 1862 the North had entirely recovered from the panic of 1857, and its economy was thriving. While the CONFEDERATE ARMY struggled to survive, the Union army was the best-supplied military force in history. Inflation in the North was kept in check as much as was possible in a wartime economy, only 80 percent compared with the South's rate of inflation, which exceeded 9,000 percent over the course of the war. A few Northern industries struggled due to the loss of Southern raw materials and customers, but others prospered. The agricultural sector performed especially well, with Northern farmers producing more wheat and corn in both 1862 and 1863 than the entire nation had produced in 1859. Between 1861 and 1865, American agricultural exports doubled, a remarkable accomplishment given that one-third of the workforce was in the army.

The successes of the Northern economy and the failures of the Southern economy had a clear impact on the outcome of the war. The Union government was able to put an extremely well-equipped army into the field throughout the course of the war while still satisfying the needs of civilians on the homefront. Meanwhile, the Confederacy was increasingly unable to provide for the needs of its soldiers and its civilians. This drained an already outnumbered Southern army of manpower as some soldiers succumbed to disease or starvation and others deserted to take care of needy family members. Meanwhile, suffering on the homefront deprived the Confederacy of valuable labor and undermined support for the war.

The long-term economic effects of the Civil War are harder to nail down. Some historians argue that the Civil War started the United States on the path to industrialization; others suggest that the Civil War simply hastened trends already in progress. What is certain is that the Civil War caused a major redistribution of wealth from the South to the North. In 1860 the South's share of national wealth had been 30 percent; by 1870 it was 12 percent. This disparity would endure for decades after the Civil War creating an almost constant state of economic deprivation in the South throughout the Reconstruction period and extending into the late 19th and early 20th centuries.

While the Southern economy struggled in the years immediately after the Civil War, the Northern economy prospered. Industrialization continued, and the national banking system established during the Civil War kept currency stable. A number of measures adopted by the Republican Congress during the war, particularly the PACIFIC RAILROAD ACT, pumped government money into the economy. Meanwhile, Northern farmers continued to fetch high prices for their crops as Europe suffered through a series of poor harvests.

In 1873 a financial panic once again undermined Northern prosperity. The panic of 1873 began with the closure of Jay Cooke and Company and resulted in a lengthy depression. Overextension of the RAILROADS once again played a part, as did the collapse of several European economies and the damage done by the great Chicago Fire of 1871. Ultimately, the panic of 1873 left 3 million people unemployed while causing the failure of businesses valued at \$500 million. The economy would not recover until 1878, when industrialization would once again begin to drive the economy forward at a breathtaking pace.

## education

Americans of the 19th century believed that the success of the Republic depended upon an educated citizenry. Education was a key component of national identity in the CIVIL WAR era. A unique program of education emerged, encompassing democratic hopes, Protestant piety, and utilitarian values.

The meaning of education and the types of schools changed dramatically over the course of the 19th century. In the early decades of the century, children and young adults acquired education in a variety of settings. Many received a rudimentary education at the kitchen table in the home. Girls obtained domestic skills there as well. Boys learned crafts such as carpentry, and young men studied law through a system of apprenticeships. Charity schools in cities taught the children of the poor. Small “dame” schools (usually taught by an unmarried female instructor) were opened for young children. Academies, usually boarding, offered higher education to those who could pay. And in church-sponsored schools, children learned religious tenets and how to read the Bible.

By the time of the Civil War, a more systematic and uniform public school system had become the backbone of American education in the North and Midwest. Horace Mann has been credited with the emergence of the public school in the United States. As head of the Massachusetts Board of Education from 1837 to 1849, he advocated schools that were publicly supported, publicly controlled, and available to children of all classes and races. In Mann’s

optimistic reform vision, the inclusiveness of the common schools would have a positive effect on the country as a whole by fostering social harmony and morality.

Although there were some regional differences, the public school movement spread across the country before and after the Civil War. New England was ahead of the nation in public schools, with more than 75 percent of school-age boys and girls attending school at mid-century. In most of the rural United States, the one-room schoolhouse prevailed, with one teacher responsible for instructing between 40 and 60 boys and girls. Strains on the teachers and students in this setting school were enormous. The teacher usually lived with his or her pupils, and disciplining the rowdy students was a trial, as was teaching a variety of age and skill levels.

Urban centers had designed a unitary system of education that gradually spread to other areas over the course of the century. A child was assigned to a grade according to age. Then the student would proceed from a primary school to some kind of intermediate school, to a high school or academy. The schools stressed reading, spelling, writing, arithmetic, geography, and history. Teaching was centered on textbooks such as McGuffey’s readers. High schools began to develop an expanded curriculum, offering vocational education such as bookkeeping in addition to their traditional subjects.

Advanced education was less available to girls than to boys, and those girls who sought an education usually went to a sex-segregated institution. Private female academies or seminaries offered a secondary education to middle-class girls who could afford to pay. Not only did girls go to separate schools, but the subjects they were taught were different than those taught boys, reflecting prevailing notions of girls’ abilities and the female role in society.

In the South, most states did not adopt tax-supported, state-regulated common schools by the time of the Civil War. A number of factors worked against public education in the South, including the perception that education was for the elite. Aristocratic PLANTATION owners regarded education their private concern and thus left it to tutors. It was illegal in the Southern states to teach slaves to read and write. There was also little support in the South for TAXATION for education purposes. Then too, much of the South was rural and sparsely populated, with a poor system of communication making education reform difficult.

The Civil War and RECONSTRUCTION brought dramatic changes to education in the South. During the war, education nearly came to a standstill. Schoolhouses were commandeered for military purposes; teachers and students were scattered. After the war, the most dramatic change in the South was the education of African Americans. Under the auspices of the FREEDMEN’S BUREAU, established in 1865, Northern teachers came to the South to teach thou-

sands of eager black children and adults. Ex-slaves were determined to learn, but white Southerners were unwilling to pay for their education. There was a drive to build colleges to provide higher education for African Americans, but the idea of universal public education continued to lag in the South after the war, in part because it was seen as a Northern concept imposed upon the defeated South.

Colleges, too, were transformed in the 19th century. At the beginning of the century there were only 18 colleges in the United States; 100 years later, there were more than 450 colleges and universities. The upsurge in colleges occurred after the Civil War. In 1862 the government set aside funding for land-grant colleges in the Morrill Act. Private colleges also expanded after the war as men who had accumulated large fortunes endowed private institutions. The number of women's colleges, such as Vassar, Wellesley, Smith, and Bryn Mawr, also increased after the war.

Although the number of colleges grew dramatically, only 1 percent of college-age Americans actually attended college in 1870. Men found more opportunities entering business or farming than in pursuing professions that demanded a liberal arts education. College reformers attempted to make colleges more relevant over the century. Choice was introduced in the curriculum, and some schools added utilitarian subjects such as chemistry, law, and the principles of AGRICULTURE.

## elections

Elections occur when qualified individuals choose candidates for public office. They are the principal mechanism through which a democratic system of government is instituted. National elections are governed by the rules laid down in the U.S. Constitution, but each state constitution contains provisions for its own voting procedures. Thus, every four years a president must be elected, and every two years congressional elections are held to elect all 435 members of the House of Representatives. U.S. senators are elected for six-year terms.

There are conditions for voting, which is a privilege and not a right. All voters must be U.S. citizens, have lived in the country for a specified period, and be of a certain age. For most of the 19th century, the right to vote was granted to most white male citizens and was expanded to include African-American males with the addition of the FIFTEENTH AMENDMENT, passed in 1872. Even though women were excluded from voting until the early 20th cen-

tury, the United States still had by far the largest number of voters in the world. By the election of 1860, Americans had developed a powerful tradition of partisan and colorful campaigns and electioneering.

Elections tend to produce opposing groups, and early in American history, these groups organized themselves into political parties. Lacking any official constitutional basis, political parties became vital to the workings of government on a national, state, and local level. Party organizations helped in the selection and nomination of candidates, supported their own candidates, and identified the issues around which each election revolved. Their goal was, and is, to win elections and control the government. Political parties in the 19th century relied upon a huge base of volunteer support that provided the “foot soldiers” in massive electoral campaigns marked by parades, demonstrations, and rallies. This kind of enthusiasm meant that for many of the national presidential elections in the 19th century, voter turnout reached incredibly high percentages, between 75 percent and 90 percent.

In the 1850s the two major political parties were the Whigs and the Democrats. The Whigs advocated a strong program of federally sponsored economic development, such as a transcontinental RAILROAD, a central bank, and a national currency. The REPUBLICAN PARTY later adopted this program. The Whigs's message appealed to the growing urban and capitalist class and commercial farmers, especially in the Northeast and many parts of the Midwest. The Democrats, on the other hand, viewed all government with suspicion and supported STATES' RIGHTS and individual liberties. The party of Southern slaveholders, yeoman farmers, and urban immigrants, Democrats for the most part controlled the presidency and Congress up until 1860. That election was the culmination of a reordering of the American political system. In the 1850s the North and South engaged in increasingly bitter debates over SLAVERY in the territories. The Whigs disbanded over internal dissension around slavery, and a new political party was born in 1854, the Republican Party.

The presidential election of 1860, which featured four candidates, shaped the course of national politics for a long time to come. ABRAHAM LINCOLN campaigned on an anti-slavery platform that appealed greatly to Northerners but was so abhorrent to Southern interests that his name did not even appear on the ballot there. The Democrats divided up into Northern, Southern, and Unionist wings and lost the election. Lincoln carried the North with a solid majority of 180 electoral votes. Southern states seceded because they were convinced that slavery would not be protected under a Republican administration. The outbreak of the CIVIL WAR brought many changes, but the governance of the United States by political parties marked by regular elections of public officials on every level remained in place.

The Northern wartime elections brought spirited, at times violent, discussion and debate over Lincoln's and the Republican Party's policies. Lincoln enjoyed the near-unanimous support of the public in the first year of the war. Defeat after defeat on the battlefield, however, gave rise to Democratic criticism of the way in which the war was being waged. Specifically, Northern Democrats, who were split into "war" and "peace" wings, expressed outrage at Lincoln's assumption of wartime powers that in their view violated the basic civil liberties of all citizens. The suspension of the writ of *HABEAS CORPUS*, the arrests of Southern sympathizers, the use of military trials, and *EMANCIPATION* provided Democrats with the issues they needed to mobilize voters against the Republican Party in 1862.

When the votes were tallied in 1862, Democrats gained 32 seats in the House of Representatives, won the governorships of New York and New Jersey, and achieved majorities in the state legislatures of Indiana and Illinois. Historians have traditionally described the outcome as a triumph for the Democrats, yet a closer look at the election results yields a different slant. The Republicans' loss in the House was smaller than expected, enabling them to retain a comfortable majority. They also remained very strong in New England, the upper North, and the border states. As the next set of elections approached, however, the opposition to Lincoln's policies increased as draft resistance turned into draft riots, and worries about emancipation among traditional Democratic groups, like the Irish, contributed to the antiwar feeling. "No Abolitionism, No Emancipation, No Negro Equality" became the rallying cry for many Democrats in the 1863 elections. *DEMOCRATIC PARTY* leaders, such as CLEMENT L. VALLANDIGHAM of Ohio, openly called the war a failure and demanded that it be stopped. Shortly before the elections, however, the Northern military achieved a series of stunning successes, including victories at VICKSBURG and the BATTLE OF GETTYSBURG. When the elections came, Northern voters once again decisively supported the Lincoln administration, as they would in the last major election to be held during the war, the presidential election of 1864.

That election pitted Lincoln against Gen. GEORGE B. MCCLELLAN, the Democratic candidate. In an odd twist, McClellan, a self-proclaimed "War Democrat," was asked by his party to run on a "peace" platform that advocated an immediate suspension of hostilities. He repudiated the platform and pledged Democrats to fight the war to victory over the South. Throughout the summer and fall of 1864, Northerners were asked if they wanted to continue the sacrifices of the war for union and *EMANCIPATION*. They also were asked to support, or denounce, Lincoln's plans for *RECONSTRUCTION*. Few campaigns in U.S. history have been as dramatic. The war had been going badly for the North, and many, including Lincoln himself,

believed throughout the summer that he would be defeated. A string of brilliant Union victories—beginning in August with Adm. DAVID GLASGOW FARRAGUT's victory at Mobile Bay, the September 1 fall of Atlanta engineered by Gen. WILLIAM T. SHERMAN, and later in the autumn, Gen. PHILIP H. SHERIDAN's sensational exploits in the Shenandoah Valley—helped to ensure Republican victory.

On November 8, 1864, Northern voters went to the polls and gave Lincoln a tremendous majority of 212 to 21 in the electoral college and 55 percent of the popular vote. The soldier vote was critical in reelecting Lincoln. Many states during the war had arranged for their "boys" to vote on the battlefield. For those states that did not, the federal government granted furloughs so that soldiers, by the thousands, could go home to cast their vote. Most chose Lincoln. "We can not have free government without elections," Lincoln stated, "and if the rebellion could force us to forego, or postpone a national election, it might fairly claim to have already conquered and ruined us."

The Confederacy continued to hold regular elections as well. In May 1861, the Provisional Confederate Congress announced that general elections—for president and for the national legislature—would be held the following November. This first national election, it was assumed, would confirm by popular vote the appointment of JEFFERSON DAVIS and other politicians that had taken place earlier. And so it did. The new government in RICHMOND enjoyed an overwhelming level of support from every Confederate state. If there was controversy in the elections of 1861, it arose out of local issues. One of the major differences between the Confederate States and the United States was the absence of formal political parties in the South. Voters tended to support or oppose candidates for office on the basis of their prewar political preferences—Whigs or Democrats—and whether or not the candidates were strong in their support of the current military effort. This favorable set of circumstances for the Davis government began to change for the worse by the spring of 1862 and affected the second set of national elections, held from June through November 1863.

By the summer of 1863, Davis was being attacked severely by critics of his war policy and called a dictator. Popular support for his government had declined dramatically from the early days of the war. Instead of political parties, dissent was organized around pro- and antiadministration issues, with Jefferson Davis the lightning rod for criticism. He was accused of violating *STATES' RIGHTS* through his support for the *CONSCRIPTION* laws, his policy on exempting slave owners from military service, his imposition of martial law, and his economic policies of *IMPRESSMENT* and *TAXATION*. All of the above together, Davis's opponents claimed, spelled out an extreme centralization of national power. This ran counter to the prin-

ciples of states' rights and limited government upon which the Confederacy was founded. Davis's own vice president, ALEXANDER H. STEPHENS, and the powerful GOVERNORS of North Carolina and Georgia, Zebulon Vance and JOSEPH E. BROWN, joined the swelling chorus of dissent, which included advocates of a truce with the North.

President Davis was not a noticeably eloquent speaker, but he ably defended his policies. He enjoyed a strong base of support throughout the South, especially in Virginia and his home state of Mississippi. Davis and his supporters made their message simple in the 1863 elections. They called upon the Southern population to remain loyal to the Confederate cause by supporting the government.

Traditional campaign practices had to be altered in time of war. The Confederate Congress passed a law approving voting by general ticket in areas such as Louisiana, Arkansas, and Tennessee, where federal troops occupied large amounts of territory. The government also arranged for the many thousands of REFUGEES to vote by absentee ballots. Finally, special arrangements were made for every soldier to have his vote count. The election results were mixed. Twelve of 26 senators who entered the second regular Congress in May 1864 were elected on the opposition platform. Jefferson Davis, however, still controlled the Congress and would maintain control until the ultimate collapse of the Confederacy in April 1865. Like his Northern counterpart, Davis owed his victory to the overwhelming support of the soldiers in the field. The votes from the occupied areas were also heavily pro-Davis.

In the 12 years after 1865, national elections revolved around Reconstruction issues. In 1868 and 1872, Republican ULYSSES S. GRANT won the presidency and promised to bring peace and reconciliation to the South and fairness and political equity to African Americans. Northerners attempted to uphold the political rights of the freedmen, which placed them on an equal basis with white people. Southerners resisted this equality, often with extreme violence surrounding elections, as evidenced by the growth of the KU KLUX KLAN. In the 1870s, white Southerners regained control of state governments while Democrats regained control of the House of Representatives. Combined with growing Northern indifference to Southern problems, the resurgence of the Democratic Party in the South resulted in the abandonment of the Republican Reconstruction program. That abandonment was cemented in the presidential election of 1876, in which Republican Rutherford B. Hayes of Ohio won a disputed election. The 1876 election brought an end to the bitter sectional dispute among white people with Hayes's peaceful inauguration. The national electoral process, which had failed to prevent war in 1860 and which had been dangerously unstable after the war, emerged validated and strengthened by the late 1870s.

**Elliot, Robert Brown** (1842–1884) *lawyer, politician*

Robert B. Elliot was one of the most respected and distinguished African-American legislators of the RECONSTRUCTION era. He was born a free man, either in Boston or England, to parents of West Indian heritage. Well educated and ambitious, Elliot decided to move to South Carolina after the CIVIL WAR. Shortly after settling in the Palmetto State, he married, opened a law office, and was employed as an associate editor of the *South Carolina Leader*. A Republican, Elliot staked out a political agenda that promised EDUCATION, equality, and prosperity for his race.

First as a member of the state's constitutional convention in 1868 and then as both a state and national legislator, Elliot pressed for laws that would enable all African-American children to receive the benefits of education, guarantee equal treatment to black citizens in public facilities, and ensure unrestricted male suffrage. Elected to Congress in 1870, Elliot was known for his passionate and eloquent speeches in favor of the KU KLUX KLAN ACT and Senator CHARLES SUMNER's Civil Rights bill.

As much as Elliot enjoyed the national spotlight, he became increasingly concerned with the fate of the REPUBLICAN PARTY in South Carolina. In 1874 he returned to that state and served as speaker of its state legislature until 1876. Faced with the withdrawal of Northern support for Reconstruction, Elliot fought desperately to save the only party that welcomed black participation. His fight was to no avail, however. Amid rising incidents of terrorism sponsored by the DEMOCRATIC PARTY, and plagued by corruption and internal dissension, the South Carolina Republican Party was finished when President Rutherford B. Hayes withdrew federal troops from the South in 1877.

Robert B. Elliot continued to practice law in South Carolina, and in 1879 he was appointed a special inspector of customs. He died in New Orleans in 1884.

## emancipation

Emancipation, the liberation of 4 million slaves, was a major legacy of the CIVIL WAR. The fundamental difference between the South and the North in 1861 was that one was a slave society and the other was not. At first, the Northern goal in the Civil War was to preserve the status quo, that

is, to maintain the Union as it was, which meant without interfering with Southern SLAVERY. As the war dragged on unexpectedly, and as Southern resistance seemed to grow stronger, emancipation for the slaves became both a military necessity and a moral imperative.

African Americans from the beginning realized that the war brought opportunity to gain their freedom. Both slaves in the South—and free African Americans in the North—agitated, lobbied, and fought for freedom, and in so doing, they challenged Northern leaders to end the institution of slavery. President ABRAHAM LINCOLN ensured slavery's doom when he issued the EMANCIPATION PROCLAMATION, and the UNION ARMY put the force behind the proclamation by defeating the Confederacy on the battlefield. The THIRTEENTH AMENDMENT finally completed the work that slaves, free African Americans, and abolitionists had begun so long before: the destruction of slavery in the United States of America.

A revolution bringing freedom to enslaved peoples emerged from the bloody battlefields of the Civil War, but the meaning of that freedom was not clear. Freed people of

the South, African Americans living in the North, and white people across the country had very different ideas about what black freedom should entail. In the decades following emancipation, the outward signs of freedom—civil rights, citizenship, suffrage, and economic independence—would become battlegrounds of a different kind.

At the time of the FORT SUMTER bombardment, Lincoln was clear that the Civil War would be fought only to restore the Union. Slaves, on the other hand, took advantage of the social disruption that the war engendered by fleeing from bondage. Wherever the Union army moved, slaves flocked to their lines. At first, some military leaders returned slaves to their owners, but others realized that these men constructed Confederate fortifications and provided many other services for the CONFEDERATE ARMY. To return fugitive slaves, then, would aid the Confederate cause and harm the Union's.

Thus, Gen. BENJAMIN FRANKLIN BUTLER declared fugitive slaves “contraband of war” and put them to work for the Union army. In the following months, thousands of slaves sought refuge with the army, which needed help

Thomas Nast's engraving celebrates the emancipation of the Southern slaves with the end of the Civil War. (Library of Congress)

in caring for them. Northern missionaries and benevolent associations provided aid and EDUCATION to fugitive slaves in crowded and filthy contraband camps. The sheer numbers of CONTRABANDS, however, soon demanded that the political and military leadership address the issue of slaves and slavery.

Congress helped push the Union toward emancipation. The first CONFISCATION ACT declared that slave owners would forfeit their rights to slaves if their slaves were used for Confederate military service. An article of war was adopted in March 1862 prohibiting the military from returning fugitive slaves to their owners. A month later, Congress banned slavery in the District of Columbia, the only area under direct jurisdiction by Congress. Slavery was also banned in all territorial land out west.

In a second Confiscation Act, Congress freed the slaves of any person who aided the rebellion while also authorizing the seizure and sale of any other property from disloyal citizens. Congress also issued a Militia Act, which stated that any slave who gave service to the U.S. military would be free, as would his family. For all of these measures, Lincoln and others doubted that Congress had the legal authority to make emancipation stick once the war ended.

Lincoln's greatest fear was that emancipation would provoke the border states to join the Confederacy, but by the summer of 1862, he had come to believe that the war could not be won without freeing the slaves. He favored compensated emancipation (paying owners for freeing their slaves) and colonization (the removal of African Americans to another part of the country or overseas), but the border states rejected both emphatically. On September 22, 1862, Lincoln issued a preliminary proclamation of emancipation. It declared that slaves in states still in rebellion as of January 1, 1863, would be freed.

The official EMANCIPATION PROCLAMATION, issued on New Year's Day, 1863, declared all slaves in the Confederate states to be free except for those areas under Union control. It did not apply to slaves in the border states. As such, the proclamation did not immediately free many slaves. Nonetheless, abolitionists and their supporters across the country hailed the Emancipation Proclamation as a document of freedom that signaled the end of slavery. For the first time, the interests of African Americans became the interest of the national government. Lincoln justified his emancipation order under his military powers, but he acknowledged the morality of his decision, declaring it "an act of justice." The Emancipation Proclamation changed the tenor of the Civil War. Instead of preserving the status quo, the goal of the war became the establishment of a new social order, what Lincoln called in his address at Gettysburg "a new birth of freedom."

In one of its most radical provisions, the Emancipation Proclamation declared the Union's intention to enlist

black soldiers and sailors. Lincoln worked hard to make sure that all Union commanders would aid in forming black units. This opportunity gave African Americans a chance to fight for their freedom and their family's freedom. Now, the Union army was explicitly an army of liberation. No other army in the history of warfare had such immense responsibilities thrust upon it. Among other things, emancipation would allow for the spread of free labor to the South. The Union army became an employer of sorts as it experimented with black free-labor colonies in PORT ROYAL, South Carolina, and DAVIS BEND, Mississippi. The results were mixed and demonstrated the complexities of trying to conduct a social revolution in the middle of a violent war.

Important as the agency of slaves was in forcing the issue of emancipation on the North, the fact remained that the vast majority of slaves could not, and did not, free themselves. Slavery was ultimately defeated through the force of arms first and then through the legal process, and the latter depended heavily on the former. Gen. WILLIAM T. SHERMAN's capture of Atlanta on September 2, 1864, provided the needed boost for Lincoln to defeat his Democratic opponent in the fall election. The Northern people voted in overwhelming numbers not just for Lincoln's reelection but for the war's twin goals of union and emancipation. The election's mandate meant that Lincoln would prosecute the war until all the Confederate armies were defeated. The new social order brought by emancipation would be enforced by the Union army, both during the war and for some time afterward.

Final emancipation came with the ratification of the Thirteenth Amendment on December 18, 1865. The story of freedom did not end there, because its meaning had not yet been agreed upon. Many white people in the North held to a narrow interpretation of freedom that did not include equal rights and suffrage privileges. Needless to say, white Southerners were horrified by the realities of freedom for their ex-slaves. Eliza Andrews, a Georgia plantation mistress, complained bitterly when a former slave would not move aside for her: "It is the first time in my life that I have ever had to give up the sidewalk to a man, much less to negroes!"

The freedmen and freedwomen held to an expansive interpretation of freedom. For black people recently enslaved, freedom first meant the absence of white control—the ability to go wherever, whenever, and do whatever they wanted. Consequently, thousands of freedmen clogged Southern roads, many searching for family members, others looking for a better place to settle down and make a living. In short, the freedpeople did all the things they could not do under slavery: hold mass meetings, learn to read and write, buy guns, and own dogs.

African Americans rushed to establish their own churches, schools, and re-form broken families. For example, ex-slaves were eager to marry legally in the months

after emancipation. By 1870 the two-parent household was common among a majority of African Americans. Legal recognition also meant control over one's household and prevented the removal of family members. Many thousands of emotional reunions took place. William Curtis of Georgia, whose father had been sold away, remembered, "That was the best thing about the war setting us free, he could come back to us." For Southern African Americans, freedom was especially to be found in independent ownership of land. Freedmen fought for land redistribution, believing that land would provide a solid foundation for lasting freedom.

Always trying to restrict and confine the meaning of freedom, or emancipation, Southern planters desired to return the freedmen to the fields as laborers in a system as close to slavery as possible. Northern officials, worried that the cotton crop would be wasted, collaborated with the planters, although always insisting on wages for the freedmen.

African-American leaders like FREDERICK DOUGLASS helped flesh out the meaning of freedom. Douglass, the famed abolitionist, asserted that the sacrifices made by African Americans in the war to bring emancipation entitled them to equality before the law. He worked toward an end of racial discrimination, the passage of black suffrage, and acceptance of black people as a part of American society and culture. African Americans did not struggle alone to make freedom work for themselves and their families; Congress created the FREEDMEN'S BUREAU in March 1865 to help ease the transition from slavery to freedom.

Emancipation was a fundamental change in Southern society and altered dramatically the position of African Americans in U.S. society and culture. Emancipation was also a part of a broader change in the Atlantic world. Within the span of a few decades, all of the slave regimes of the Western Hemisphere fell. Since the 1830s, the United States had ranked as the largest and most powerful slaveholding society. In 1834 Great Britain abolished slavery in its Caribbean colonies. Slavery persisted in Cuba and Brazil after the Civil War, but it was already a dying institution, lasting only into the 1890s.

When the peace agreement was signed at APPOMATTOX COURT HOUSE in April 1865, the two goals of the North's Civil War were achieved: reunion and emancipation. The guns had fallen silent, but both RECONSTRUCTION and freedom would remain deeply problematic issues for the reunited nation. The most fundamental change wrought by the war was the rapid transformation of 4 million people from chattel property to citizens. This revolutionary change brought with it a host of problems regarding how the freedmen would establish new lives and how emancipation would change the social, political, and economic future of a nation reeling from a devastating civil war. Emancipation

was the process of obtaining freedom. African Americans attained legal status as free and equal citizens of the United States, but this status, though enshrined in the Thirteenth, FOURTEENTH, and FIFTEENTH AMENDMENTS to the Constitution, would be contested and challenged well into the 20th century.

## Emancipation Proclamation

The Emancipation Proclamation, issued on January 1, 1863, by President ABRAHAM LINCOLN, has proven to be one of the landmark documents of American history. In it, Lincoln freed all of the slaves residing in Confederate territory not under UNION ARMY occupation. The Emancipation Proclamation changed the tenor of the CIVIL WAR by linking the Union cause with the liberation of the slaves.

The idea for an Emancipation Proclamation originated in the actions of slaves during the war. From the beginning of armed conflict, slaves near the battle lines crossed over to the Union army camps. Unwilling to return the slaves because the CONFEDERATE ARMY was using them to build forts and other armaments, Union army officials did not know at first what to do with fugitive slaves. Congress stepped in and passed the first Confiscation Act in August 1861. It declared that slave owners forfeited their rights to slaves if their slaves were used in military service. Nearly a year later, Congress passed a second Confiscation Act. This one was more emphatic, claiming that slaves of any person actively supporting rebellion would be "forever free of their servitude." Congress also issued a Militia Act, which stated that any slave who gave service to the military would be free, as would his family. Still, by the summer of 1862, there was no official EMANCIPATION, or freeing of slaves. The war was still for "union."

Lincoln detested SLAVERY, but early in the conflict, he feared that emancipation would provoke the border states into joining the Confederacy. He also had doubts about the legality of an emancipation act from Congress and hoped to provide monetary compensation to slave owners as a compromise measure. In the period between the two CONFISCATION ACTS, abolitionists, Republican politicians, newspaper editors, and various citizen groups pressured

Congress, and especially President Lincoln, to emancipate the slaves.

During the spring and summer of 1862, FREDERICK DOUGLASS, the most influential African American at the time, and CHARLES SUMNER, the abolitionist senator from Massachusetts, met with Lincoln, hoping to push him toward immediate and unconditional emancipation, but Lincoln remained steadfast. In a famous reply to newspaper editor HORACE GREELEY, Lincoln wrote, "If I could save the Union without freeing *any* slave I would do it, and if I could save it by freeing *all* the slaves I would do it, and if I could save it by freeing some and leaving others alone I would also do that." But even as he reaffirmed his primary public commitment to preserving the Union, privately Lincoln was beginning to fashion an emancipation order. He read an early draft to his cabinet in July 1862. Most cabinet members favored emancipation, but a few questioned the timing of the order. There was pressure for immediate emancipation to forestall foreign (especially British) aid and recognition of the Confederacy, but with the poor showing of the Union army in the field, the cabinet did not want emancipation to be seen as an act of desperation. Lincoln decided to wait for a military victory.

Lincoln got his victory at the BATTLE OF ANTIETAM, and issued a preliminary proclamation of emancipation five days later on September 22, 1862. Under his authority as commander in chief, Lincoln declared that as of January 1, 1863, slaves in those states still in rebellion would be freed. As a compromise measure, the preliminary proclamation included a compensation provision for loyal slave owners and suggested colonizing ex-slaves in another part of the country or overseas. Nonetheless, the impact of the proclamation was polarizing. Slaves in the border states, though unaffected by the terms of the order, began to act like freedmen, refusing to do work and demanding respect from white people. Abolitionists praised Lincoln's decision, but many more in the North were critical, contributing to Republican defeats in the fall ELECTIONS.

On New Year's Day 1863, Lincoln issued the official Emancipation Proclamation. "I do order," it stated, "and declare that all persons held as slaves within said designated States and parts of States are and henceforward shall be free." Unlike the preliminary proclamation, this one specified which areas were included by the order. All of Arkansas, Texas, Mississippi, Alabama, Florida, Georgia, South Carolina, and North Carolina fell under the authority of the Emancipation Proclamation, but Lincoln excluded 12 parishes in Louisiana, 53 counties in Virginia, all of Union-occupied Tennessee, and the border states of Delaware, Kentucky, Maryland, and Missouri.

Hundreds of thousands of African Americans remained in bondage, but the legalities of the Emancipation Procla-

mation made little difference to slaves across the country. The document actually freed very few slaves, since most areas under Union occupation were exempt and those under Confederate control were out of reach. However, the proclamation encouraged slaves to assert their freedom everywhere. Wherever the Union army moved, slavery effectively ended.

Besides the geographic boundaries, there were two other significant changes in the final Emancipation Proclamation. First, Lincoln left out any mention of compensation and colonization. Second and more important, the Emancipation Proclamation called for the enlistment of African-American soldiers: "And I further declare and make known that such persons, of suitable condition, will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service." Recruiters spread across the country, and by the war's end 180,000 African Americans had served in the Union armed forces. Lincoln had turned Confederate slave labor into Union fighting power.

The Emancipation Proclamation also represented a shift in focus for the war effort. By the time it was issued, Lincoln believed that the Civil War could not be won without emancipating the slaves. By arming former slaves, Lincoln gave them an opportunity to fight for their own freedom and, in so doing, to fight for their country. More than just adding muscle to the armed services, enrolling black soldiers implied that, at war's end, they would receive full citizenship rights by virtue of their service.

Celebrations erupted across the North to praise the Emancipation Proclamation. Few stopped to consider that only a tiny number of slaves were officially freed, since the Confederate government controlled most of the areas detailed in the document. Instead, the celebrants, mostly African Americans and abolitionists, insisted that the Emancipation Proclamation had injected a moral element into the war, giving it a new cause. Lincoln noted the morality of his decision, writing that he believed emancipation to be "an act of justice, warranted by the Constitution, upon military necessity." The document had immediate practical benefits as well, as the British government backed away from recognizing the Confederacy soon after Lincoln issued the Proclamation.

The THIRTEENTH AMENDMENT officially ended slavery in the United States in December 1865, but the Emancipation Proclamation was the crippling blow to the slave system in the United States.

## employment

The importance of labor to the CIVIL WAR can hardly be overstated. Workers served in the ranks and provided the materiel used to wage the war. Moreover, ideological and political conflicts over what form of labor was best for the United States played a critical role in precipitating the conflict.

For the first half-century or so of the United States's existence, two labor systems existed in a general state of harmony. Although not all of the laborers in the South were slaves, SLAVERY certainly formed the backbone of the Southern ECONOMY. Meanwhile, Northern factories and farms were worked by free laborers. The balance between these two systems was upset in the 1840s and 1850s as the North became increasingly industrialized. Northerners took pride in the freedom and upward mobility that being a free laborer could provide. Slavery came under attack for its inefficiency more than for its inhumanity. Southerners tried to defend slave labor, emphasizing how much more humanely slaves were treated in comparison with factory workers.

Ultimately, free labor versus slave labor became the dominant political issue of the 1850s. Over the course of the decade, advocates of free labor gathered into the REPUBLICAN PARTY, which celebrated free labor as its main issue. Prominent Republicans traveled around the country, arguing that the strength of the United States derived from the opportunity for advancement provided by the free-labor system. Slavery, meanwhile, posed a threat to the continued existence of free labor. WILLIAM H. SEWARD described the tension between the two as an "irrepressible conflict," and ABRAHAM LINCOLN warned that "a house divided upon itself cannot stand." The Republican platforms of 1856 and 1860 committed the party to a specific plan with regard to the future of slave and free labor. Both stated that the party had no intention of interfering with slavery where it existed, but the platforms also avowed that the institution would not be allowed to spread elsewhere in the country. When Republican Abraham Lincoln was elected president in 1860, Southerners correctly perceived this as a sign that slavery's future was in question, and SECESSION soon followed.

Ironically, as the country's focus was on a philosophical debate about labor, actual laborers themselves were not doing especially well. Although the conditions of their

work varied widely, slaves in the South were often subject to great cruelties. In both the North and the South, the PANIC OF 1857 had undermined wages and cost thousands of workers their jobs.

The South's white labor force was the first to feel the influence of the Civil War. Although many skilled laborers enlisted in the army, a substantial number took advantage of the draft exemption provided them and remained on the HOMEFRONT. Those who remained behind found themselves very busy with construction and manufacturing projects, and they helped to keep the Confederate war effort on track. The wages paid by both government and private jobs were quite good, but ultimately they did not match the runaway inflation that gripped the South in the latter half of the war. This resulted in a number of STRIKES, including an 1864 incident where workers from every branch of the government went on strike at the same time.

While white workers continued to provide most of the South's skilled labor during the Civil War, unskilled labor was increasingly the responsibility of slaves, women, and children. Agricultural work was the most important form of unskilled labor they performed, but they also played significant roles in the manufacturing sector. As much as skilled labor suffered from inflation, unskilled labor suffered even more. Slaves availed themselves of the opportunity to escape when they could. Other unskilled laborers, especially white women, did not have the option of escape, nor did they generally have the leverage to organize and go on strike. Sometimes the only recourse available was violence. The most famous incident in the Confederacy was the RICHMOND bread riots of 1863, when a mob of women marched through the capital, inflicting a great deal of damage along the way. JEFFERSON DAVIS intervened personally and broke the demonstration up.

The North also had its share of labor tension during the Civil War, although it was generally longer in coming. The economic malaise precipitated by the panic of 1857 lasted until the middle of the war, which meant that unemployment rates remained high in 1861 and 1862. As the North recovered, a similar division developed in the workforce there as in the South. Skilled jobs were monopolized by white Protestant men, and unskilled jobs went to Irish Catholics, African Americans, women, and children.

For most of the war, wage increases for both skilled and unskilled workers lagged 25 percent or more behind inflation-related price increases, despite the fact that Northern industry was doing a remarkably good job of sustaining the Union war machine. Between this and the high rates of unemployment, the North had a great deal of labor unrest during the war. Skilled workers generally chose to organize into unions and to strike. Their strikes were often successful, and by 1864 the wages of skilled workers generally paced increases in the cost of living. Unskilled

workers, on the other hand, fell further and further behind. Sometimes there were attempts to organize these workers. One notable example was the 1863 formation of the Workingwomen's Protective Union, a group of New York seamstresses. The union struck and was rewarded with a wage increase by order of Abraham Lincoln. This was the exception to the rule, however. In general, the only choice for unhappy unskilled workers was protest. The NEW YORK CITY DRAFT RIOT of 1863, for example, was in part caused by Irish workers who resented the threat posed by free African-American labor.

For many workers, the postwar era marked a return to the status quo. The number of women in war-related jobs dropped as men returned from the military. One exception was the white-collar jobs that women flocked to in WASHINGTON, D.C., and Richmond. African Americans in the North were still relegated to underpaid unskilled jobs, while a majority of African Americans in the South went from slavery to SHARECROPPING. Sharecropping may have been an improvement over slavery, but it still retained as many vestiges of the "peculiar institution" as white Southerners could get away with under the terms of the THIRTEENTH AMENDMENT.

The Civil War did bring one important change to employment patterns, namely the increased strength of the labor movement. Skilled laborers had organized frequently during the war, with some success. Their labor organizations survived the war and continued to grow. The most prominent was the NATIONAL LABOR UNION, which eventually came to be known as the American Federation of Labor. By the early 1870s, a larger percentage of the workforce was unionized than at any other point in the 19th century.

For the Republicans, the postwar relationship with labor was mixed. Although they had triumphed in the Civil War, and the free-labor ideology had won the day, there was an increasing divide between the party and labor. By 1870, two-thirds of Americans were wage earners, and they increasingly came to see the social and financial mobility promised by the free-labor ideology as an illusion. Through the rest of the 19th century, the Republican party became increasingly identified with the interests of the managerial class, while laborers moved into the Democratic fold, an arrangement that has lasted to the present day.

### Enforcement Acts (1870–1871)

At the conclusion of the CIVIL WAR, Congress moved to grant citizenship to African-American men. In ratifying the THIRTEENTH, FOURTEENTH, and FIFTEENTH AMENDMENTS to the Constitution, Congress ensured freedom, civil rights, and suffrage for former slaves but failed to anticipate the violent opposition of white Southerners. That opposition led to the passage of three measures, known as the Enforcement Acts, that protected the newly granted rights of African Americans in the South.

The first measure, passed on May 31, 1870, consisted of four parts: It provided considerable penalties for those who interfered with a citizen's right to vote; it turned cases pertaining to congressional ELECTIONS over to the jurisdiction of the federal courts; it assured impartial voting by outlawing conspiracies; and it gave President ULYSSES S. GRANT the power to use American armed forces to assist in protecting civil rights.

The second measure, passed on February 28, 1871, was an amendment to the first. Rather than give the federal courts complete control over congressional elections, this measure authorized federal supervisors to observe and intervene in congressional elections in towns with more than 20,000 inhabitants. In order to prevent these supervisory officers from taking too much control, the second measure also defined their role and specified their powers.

Congress passed the third, and last, measure, also known as the KU KLUX KLAN ACT, on April 20, 1871. This measure prohibited terrorist conspiracies, by which Congress meant the new groups of racist vigilantes calling themselves the KU KLUX KLAN. In addition, it gave the president the authority to suspend the writ of HABEAS CORPUS in areas where terrorist conspiracies took place.

The Enforcement Acts proved ineffective, except in breaking the power of the Ku Klux Klan in South Carolina. Throughout the decade after the passage of the acts, Southern resistance to voting by African-American people only intensified.

By 1876 support for the Enforcement Acts was beginning to fade. Two cases argued before the Supreme Court (*United States v. Reese et al.* and *United States v. Cruikshank*) challenged the constitutionality of aspects of the first enforcement measure. The Court declared that voting rights were best regulated by state power, not federal authority. In addition, the Court claimed that the language of the statutes was too vague. In 1890 Senator Henry Cabot Lodge of Maine made one last effort to strengthen the Enforcement Acts. His bill would have bolstered some provisions of the Enforcement Acts, but the Senate rejected the measure. The federal government would not again take an active role in protecting freedmen's rights in the South until the 1960s.

## espionage

For both the Union and the Confederacy, information was essential to political and military strategy. Although espionage was an evolving art during the CIVIL WAR, it proved invaluable and was actively undertaken throughout the war.

Initially, Union forces did not organize an official intelligence-gathering effort. Espionage was not a part of the art of war as understood and taught at military academies, such as the UNITED STATES MILITARY ACADEMY AT WEST POINT. As such, spying was initially left to civilians. A private detective agency, operated by Scottish immigrant Allan Pinkerton, organized the first Union espionage, and eventually the foundation he built became the United States Secret Service. On several occasions Pinkerton him-

self undertook dangerous operations, as when he scouted alone as far as Jackson, Mississippi, to ascertain Confederate military preparations.

Pinkerton's agents were best at identifying Confederate spies in WASHINGTON, D.C., where they mounted counterintelligence operations. One of their most visible captures was the celebrated Southern spy and socialite ROSE O'NEAL GREENHOW, who had been gleaning vital information from her suitor, Senator Henry Wilson of the Military Affairs Committee. Less effective was their military work, especially in the field. Pinkerton's inflated estimates of Confederate troop strength played to the fears of Lincoln's "do nothing" General GEORGE B. MCCLELLAN. When Lincoln removed McClellan from command of the Army of the Potomac in November 1862, Pinkerton, too, was removed from battlefield intelligence.

At roughly the same time, Gen. ULYSSES S. GRANT commissioned Brig. Gen. Grenville M. Dodge to gather intelligence in the western theater. Dodge assembled an assortment of civilian agents and assigned them to various positions throughout the Confederacy. These men supplied information to Grant regarding Confederate troop movements and sometimes engaged in counterintelligence work as well.

In 1863, when Grant moved east, he appointed Col. George H. Sharpe to oversee espionage in the eastern theater. Sharpe proved much better than Pinkerton at determining Confederate troop strength and location. Utilizing female operatives, Sharpe gained valuable information from within the Confederacy. RICHMOND, VIRGINIA aristocrat ELIZABETH VAN LEW, for example, smuggled information to Northern officials in her clothing and in the shoes of her slaves. Her most celebrated feat was placing an African-American operative in the Confederate White House, who posed as a butler while spying on President JEFFERSON DAVIS and his entourage. S. Emma E. Edmonds used her skill at impersonation to obtain information. She disguised herself as both an African-American slave and a soldier, experiences she wrote about after the war in her memoir *Nurse and Spy in the Union Army*. Toward the end of the war, Edmonds became a counterintelligence operative in St. Louis, Missouri. Another successful Union operative was the actress Pauline Cushman, who functioned as a double agent and was subsequently dubbed the "Spy of the Cumberland."

Confederate efforts at espionage surpassed those of the Union in some respects. The Confederacy established a "Special and Secret Service Bureau" that managed both their spy network in Washington as well as other clandestine activities. Through this bureau, the Confederacy spent approximately \$2 million on intelligence activities during the war. The bureau also helped the CONFEDERATE ARMY and CONFEDERATE NAVY preserve secrecy on major

Allan Pinkerton, Abraham Lincoln, and General John A. McClelland at the Union campgrounds at Antietam, Maryland (1862) (Library of Congress)

technological advancements such as their development of underwater mines.

Confederate investments in espionage proved essential in several respects. Because of operatives in Washington, the Confederate military knew in advance that Union forces were moving toward Manassas, and this helped the Confederates to secure a victory there in 1861. It was a female spy, Greenhow, who gathered the information that so hurt the UNION ARMY at the FIRST BATTLE OF BULL RUN. She was a Washington hostess with wide social connections that she used to help the Confederacy. Later, Pinkerton's men discovered her work and arrested her. Greenhow was by no means the only female spy for the Confederacy, however. Another prominent woman to engage in espionage was BELLE BOYD, who was famous for her ability to avoid capture and cross back and forth across enemy lines. She spied for the South throughout the war and was especially valued by THOMAS J. (STONEWALL) JACKSON. Equally famous at the time was Richmond actor James Harrison, who functioned as a scout. In late June 1863 he brought Gen. ROBERT E. LEE the unwelcome news that Union forces had entered Pennsylvania and were close at hand, pursuing him. Based on this information, Lee sent out orders to consolidate his scattered forces in the vicinity of Gettysburg, where a major clash developed. The celebrated Confederate raider John S. Mosby also routinely performed intelligence-gathering missions in Virginia.

The most elaborate and expensive Confederate secret operations were those headed by the Confederacy's official representative to Canada, Jacob Thompson. With \$1 million in gold, Thompson funded a Northern peace movement run by the Knights of the Golden Circle, a secret organization. He also attempted to free Confederate prisoners held in PRISONS near the Canadian border. Thompson even contacted JOHN WILKES BOOTH in 1864 with a plan to kidnap President ABRAHAM LINCOLN and ransom him in exchange for Southern prisoners. Another grandiose scheme that failed was an attempt to burn down NEW YORK CITY by setting several hotels ablaze. Several of the perpetrators were apprehended, and one was hanged.

Although the Union was not as quick to organize its intelligence-gathering efforts as the Confederacy, it succeeded in establishing a variety of sources for secret information by the end of the war. Southern espionage, too, proved useful repeatedly. Most important, the idea of spying itself was made acceptable by the recognition that the pragmatism of war required the use of all available tools. The successful employment of balloonists, signalmen, and TELEGRAPH intercepts also foreshadowed modern espionage techniques of the 20th century, in which the United States proved itself extremely adept.

### **Ewell, Richard Stoddert** (1817–1872) *Confederate general*

Richard Stoddert Ewell was born in Virginia. He attended the UNITED STATES MILITARY ACADEMY AT WEST POINT as a member of the Class of 1840, graduating 13th. In the U.S. Army, Ewell served mostly with the cavalry in the West, including limited action in the Mexican-American War. In 1861 he resigned his commission in the U.S. Army to join the Confederacy.

Although Ewell eventually reached the rank of lieutenant general, he began his service as a relatively low-ranking division commander under Gen. THOMAS J. (STONEWALL) JACKSON. Ewell's units distinguished themselves in 1862 in both the Shenandoah Valley campaign and in the defense of RICHMOND, VIRGINIA. In August of that year Ewell traveled north with Jackson to the SECOND BATTLE OF BULL RUN. There he was shot in the right knee, an injury that eventually resulted in the loss of his leg. Recuperating in Richmond, Ewell, called "Old Bald Head" by his soldiers, was reunited with his childhood sweetheart, Lizinka Campbell Brown, who nursed him back to health. On May 24, 1863, Ewell married Brown and then returned to duty with the army.

In early May, while Ewell was recovering in Richmond, Stonewall Jackson was wounded at the BATTLE OF CHANCELLORSVILLE. He died on May 10, and as a result Ewell assumed command of Lee's Second Corps. On June 14, 1863, in his first battle after returning to duty, Ewell won a spectacular victory at Winchester, Virginia. He was then ordered to join Gen. ROBERT E. LEE's army in Pennsylvania.

Ewell's corps successfully drove back Union forces on July 1, 1863, but his failure to attack Union troops on Cemetery Hill led to severe criticism of his generalship. By the third day, the Union victory at the BATTLE OF GETTYSBURG was secured, and Lee returned to Virginia. Ewell served in the OVERLAND CAMPAIGN of 1864, but illness led to his temporary retirement in May 1864. His last assignment was to command the defenses of Richmond. Ewell was captured at Sayler's Creek on April 5, 1865, in the Appomattox campaign.

Released in July 1865, Ewell retired to Spring Hill, Tennessee. There, on a farm owned by his wife, Ewell lived

the life of a gentleman farmer until contracting pneumonia in the winter of 1872. Lizinka tried again to nurse him back to health, but instead she fell ill and died on January 22. Ewell followed her two days later.

**Farragut, David Glasgow** (1801–1870) *Union admiral*  
Widely admired for his innovative tactics and operational skills, Union admiral David Glasgow Farragut was born near Knoxville, Tennessee, on July 5, 1801. The family moved to New Orleans in 1807, where Farragut's mother died. After his father enlisted in the navy, Comdr. David Porter (head of the New Orleans Naval Station) adopted the boy. Destined for the sea, the nine-year-old Farragut began working as a midshipman with the U.S. Navy Department. Most of his youth was spent on board various ships in the Pacific, the Mediterranean, and the West Indies, and he saw action in the War of 1812. Farragut assumed his first naval command in 1842, and during the Mexican-American War he commanded the *Saratoga*.

Farragut's loyalty was questioned early in the CIVIL WAR, but he remained steadfastly attached to the Union. To his secessionist friends, Farragut said: "Mind what I tell you. You fellows will catch the devil before you get through with this business." In January 1862 he was placed in charge of the West Gulf Blockading Squadron with two goals in mind. The first was to assure Union control of the MISSISSIPPI RIVER, and the second was to take the South's greatest port city, New Orleans.

Farragut captured New Orleans in a dazzling display of Union naval power. After passing the heavily armed Fort Jackson and Fort Saint Phillip and defeating Confederate defenses, Farragut arrived at New Orleans on April 25, 1862. The victory, a rare bloodless affair, was critical to controlling Louisiana and the Mississippi River. Now a rear admiral, he turned his attention to the "river war." In June and July 1862 Farragut attempted to fight the Vicksburg defenses for the Mississippi above Port Hudson, but to no avail. He returned to the Gulf Coast to implement and strengthen the naval blockade from August to February 1863. In March, Farragut's ships attacked the batteries at Port Hudson, Louisiana. By July and August 1863 the Mississippi River was under Union control.

Perhaps his finest moment as a naval strategist came on August 5, 1864, at the Battle of Mobile in Alabama. Three impressive forts protected the last major port still in Confederate hands. Farragut sailed 18 ships into Mobile Bay and smashed into the enemy fleet. At this point Farragut was so afflicted with vertigo that he had himself lashed to the rigging of his flagship, the *Hartford*. It was at this

David Glasgow Farragut (National Archives)

battle that he uttered his immortal phrase. After a mine (called torpedoes during the Civil War) had sunk one of the ships ahead of Farragut's, several men expressed great reservations about proceeding. Farragut responded by saying, "Damn the torpedoes, full speed ahead!" The Confederate fleet surrendered, and Farragut had another magnificent victory to his credit.

Farragut was promoted twice after the war, making him the navy's first full admiral. He died at age 69 in Portsmouth, New Hampshire, on August 14, 1870.

## fashion

Mid-19th century American women in the countryside and in the cities were eager to learn of fashion trends. European, especially French, style dominated fashion. One of the most popular features of women's magazines were fashion plates, illustrations of the latest styles of clothing. Some of the most popular magazines of the mid-19th century, like *Godey's Lady's Book*, *Harper's Bazaar*, and *Frank Leslie's Gazette of Fashion*, focused most if not all of their attention on fashion. Despite the great popularity of these publications, the extent to which these fashion dictates were followed in 19th-century America depended largely on economics and geography.

In the 19th century men's fashions, which received less public notice or press attention than women's fashions did, underwent a significant change. In earlier eras, fashionable men's clothing was as showy and decorative as women's, but by the mid-19th century, men's fashions had settled into a more staid and somber appearance. The standard costume for America's gentlemen from the 1850s through the 1860s included a redingote or frock coat (long, tailored jackets with wide, sometimes rolled lapels, and flared hems), usually worn over a fitted vest. Trousers were worn long and over boots. By the 1870s the big transformation in men's clothing was the rise in popularity of the sack coat, a less-fitted option to the tailored lines of the redingote and frock coat for the "modern man." But tailored or not, not all men wore the typical gentleman's outfit. Slaves, as well as working men in American cities and farms, had costumes more appropriate to the daily rigors of butchering, manufacturing, blacksmithing, and plowing—coarser, more hard-wearing fabrics, bibbed trousers, and loose shirts were more conducive to their daily labors.

Also, the westward movement of American settlers and entrepreneurs brought to men's clothing the "Western style" more suitable to life on the frontier. Leather trousers and shirts and hard-wearing fabrics were necessities for trappers, miners, railroad workers, and frontier settlers.

While men's clothing became more somber over the 19th century, upper-middle-class women's fashion continued to be fanciful and decorated. Mainstream fashion for women before the Civil War dictated in physical appearance a slight, rounded, submissive figure. The ideal female, according to portrayals in lithographs, journals, and fiction, was dark-haired with a small oval-shaped face, a soft chin, cupid bow lips, pale white skin, and a frail and delicate physique. According to the ideal, a woman's hands and feet were delicate and tapered and no part of her body should be strong or forceful. Even her movements and posture were to be curved and bent.

Clothing emphasized these physical ideals. Dresses created a curved, bell-shaped figure, with the overall appearance of a triangle from the tiny hats or hair ornaments trailing outward, with the interruption of a tiny, cinched-in waist, to a wide, belled-out hem. Necklines were wide and rounded. The waist was tightly constricted by using corsets that could be tightened by stays that tied in the back. In contrast to the small waist, skirts were long, touching the floor, and were capacious, using yards of fabric. In 1856 hoops, metal frames worn under the skirt to enhance its fullness, came into fashion. Despite its weight, the hoop was considered a fashion boon for women because it replaced the innumerable layers of crinoline petticoats that were even heavier and more restrictive of movement. In the 1860s skirts were at their widest, held out by a few layers of crinoline underskirts over the hoop. With her hoop, the well-dressed woman wore a shawl, rather than a coat. Women were counseled by *Godey's* to wear their shawls to their best advantage—generally to be seen as if they were just putting the shawl on, which ostensibly gave the most pleasing presentation of perfect, rounded shoulders.

After the Civil War, the ideal silhouette changed. *Harper's Bazaar* counseled women in 1875 that the "ideal at present is the greatest possible flatness and straightness: a woman is a pencil covered with raiment." Clothes were tighter fitting in the front with a bustle in the back, beginning a trend away from voluminous skirts. The rising popularity of bustles created in the 1870s a distorted appearance of women's posture—pushing the bust up, flattening the front of the woman's figure from the bust down to the feet, and swaying out the woman's back in an exaggerated bubble of crinolines and bows.

Alongside the ideal fashion was a range of alternatives for women that largely hinged on the geography and economic position of the women involved. Like men, women of the working classes invented their own styles to meet

Woman and girl in fashionable clothing, 1862 (Library of Congress)

their needs. Some working women had strict constraints about the fashions available to them; for instance, women working in U.S. textile mills were forbidden from wearing hoops because they posed a danger around the manufacturing machinery. Rural and frontier women were also generally hoopless and bustleless and made clothing of sturdy, wearable fabrics including canvas, muslin, and calico. The 1870s saw the rise of paper-pattern publication and the ever-increasing availability of sewing machines for women of most economic levels, thus allowing women across the expanding nation to fashion their own versions of the magazine ideals.

Notwithstanding the general acceptance of the “ideal” figure and fashion for women in the mid-19th century, mainstream women’s fashion did have its detractors. From the 1820s through the end of the 19th century, the United States had a burgeoning “dress reform movement.” Feminists and health reformers criticized fashion trends and advocated less restrictive clothing for women. They were

largely concerned about the harmful health effects of cinching at the waist, which constricted breathing, and of the impact of the heavy underskirts. Also, feminists argued for a less gender-segregated fashion standard. Reformers advocated the shortened dress with long pantaloons (to be cut like men’s trousers) for women; the outfit generally became known as the “bloomer costume.” One of the health publications of the day, the *Water-Cure Journal* summed up reform attitudes and poked fun at the restrictiveness of the ideal for women’s attire in 1853 with a bit of verse:

To breathe, or not to breathe; that’s the question  
Whether ’tis nobler in the mind to suffer  
The slings and arrows of outrageous fashion,  
Or to bear the scoffs and ridicule of those  
Who despise the Bloomer dresses.

A coalition of dress reformers formed the National Dress Reform Association (NDRA), which met for the first time in New York in 1856. The NDRA used their association magazine, *The Sybil: A Review of the Tastes, Errors and Fashions of Society*, to promote their campaign on the health aspects of the bloomer costume. By 1866, however, the NDRA had dispersed, and support for the bloomer movement was dwindling.

### field fortifications (1861–1865)

Field fortifications are improvised structures and excavated areas that are used to enhance a military’s defensive position in the field. Such works are constructed in haste, and in this respect they differ from formal masonry fortifications, which often take years to construct. Throughout the CIVIL WAR armies used field fortifications either to provide troops with protection or to fend off enemy attacks from specific sectors.

The field fortifications used in the Civil War generally consisted of a steep bank of dirt called a rampart, typically 12 feet in height and depth, behind which infantry, artillery, or both would be deployed. The area immediately before the rampart would be cleared of any trees or bushes that might obstruct the field of fire. This basic form might be augmented with palisades, a series of sharp wooden stakes arranged in a loose wall pointed toward the enemy, or the more elaborate chevaux-de-frise, consisting of long timber studded with metal spikes. By 1864 Union troops employed wire entanglements, a primitive form of barbed wire, to trip up infantry attacks. Depending on the situation, the time involved, and the number of troops present, such

defenses could also include semipermanent structures, such as magazines to house gunpowder or “bombproofs” (bomb shelters) to protect soldiers from enemy ordnance. Usually built from heavy wooden beams and compacted dirt, these additions were effective against everything but a direct hit from heavy artillery fire.

Fieldworks varied tremendously in design but were all employed to enhance defenses at select locations across a given line. Siege cannon or field artillery frequently figured prominently in such arrangements. These weapons were usually deployed in redans (V-shaped angles) or lunettes (half-circular formations) protruding from the main earth-work, pointed toward the enemy and presenting them with

Field fortifications, including chevaux-de-frise, in Atlanta, Georgia (1864) (*Library of Congress*)

deadly, interlocking fields of fire. If infantry formed the bulk of defenses, the construction was called a redoubt, and it allowed soldiers to fire at an advancing enemy from behind earthen protection. If time was at a premium, infantry might resort to constructing simple foxholes, or rifle pits, usually in conjunction with wooden structures known as blockhouses or occasionally with long wooden fences called stockades. It fell upon the engineering component of an army to design defenses that were adapted to both the terrain and the soldiers who would employ them.

By 1864–65 both the UNION ARMY and the CONFEDERATE ARMY had grown adept in the design and construction of field fortifications, so much so that the lowly spade had acquired a tactical significance heretofore reserved for the rifled musket and cannon. In 1864 the BATTLES OF SPOTSYLVANIA, COLD HARBOR, and the Crater, and the siege of PETERSBURG, all of which produced immense carnage, testified to the effectiveness of field fortifications in channeling and rebuffing infantry attacks. This approach was a far cry from the massed Napoleonic-type formations used early in the war, with banners flying and bands playing, and anticipated the extensive trench warfare characteristic of World War I, although on a lesser scale.

### Fifteenth Amendment (March 30, 1870)

The Fifteenth Amendment to the U.S. Constitution, ratified on March 30, 1870, specifically guaranteed the right to vote to all males regardless of “race, color or previous condition of servitude.” Section 2 of the amendment also firmly locates the power “to enforce this article by appropriate legislation” in Congress. While Section 2 of the FOURTEENTH AMENDMENT dealt with the denial of suffrage, the Fifteenth Amendment stated Congress’s position on African-American voting rights more clearly and forcefully.

African Americans began agitating for the right to vote immediately after the end of the CIVIL WAR. Black citizens organized mass meetings, marched in parades, and signed petitions insisting that freedom meant suffrage and civic equality. They went to WASHINGTON, D.C., to lobby for suffrage, reminding congressmen that those who took up arms in defense of their nation deserved the right to vote.

In the South, African-American conventions made public their request for suffrage, and thousands deluged the FREEDMEN’S BUREAU, military leaders, and state officials with petitions and LETTERS.

These protests for black suffrage made little progress at first. Only five states allowed African-American men to vote by the end of 1865, and in those states there were additional qualifications that white males did not have to meet. For instance, New York had a property requirement. However, the BLACK CODES, racial violence, and an upsurge of unrepentant Southern nationalism encouraged congressional Republicans to take RECONSTRUCTION into their own hands and make black suffrage a hallmark of the radical effort. The attainment of the vote for freedmen seemed to be the answer to several problems. Some supporters liked the idea because it removed the federal government from the primary responsibility of providing for the welfare of African Americans; others envisioned black voters as a key Republican voting bloc and a barrier to Democratic domination in the South. The challenge was how to best establish black suffrage.

Republicans recognized the importance of black voters in the election of 1868, in which freedmen participated, thanks to the Fourteenth Amendment. Without black votes, ULYSSES S. GRANT would have lost the popular vote. Facing violence and intimidation from white Democrats, Southern African Americans voted overwhelmingly for the REPUBLICAN PARTY. Constitutional protection of black suffrage would help Republican candidates while ending the party’s hypocrisy of supporting voting rights in the South when most Northern African Americans also faced racial restrictions on voting rights. In addition, a constitutional amendment would hopefully establish black political power in the South.

In its final form, the Fifteenth Amendment was a moderate measure. The Senate rejected language that would have prohibited discrimination based on nativity, RELIGION, property, and EDUCATION, as well as a provision claiming the right to hold political office. While most states seemed content to allow African Americans to vote, others wished to keep restrictions on certain immigrant groups. California, for instance, denied Chinese immigrants the right to vote.

Reaction to the amendment was mixed. Ratification was fiercely contested in the border states, the Midwest, and the mid-Atlantic states. Feminists opposed ratification and were incensed by the language of abolitionist reformers. “One question at a time,” declared Wendell Phillips, “This hour belongs to the Negro.” By advocating universal manhood suffrage, the amendment implicitly recognized suffrage discrimination based on sex. Abolitionists were elated by its results. Constitutional protection for black male voters was almost unthinkable just five years before.

However, the traditional alliance of abolitionist and feminist reformers permanently split over the ratification of the Fifteenth Amendment.

Though secured in the Constitution, black suffrage had a short life in the 19th century. Violence and intimidation continued in Southern ELECTIONS because the federal government failed to protect black voting rights: With the rise of REDEMPTION governments beginning in the 1870s, Southern states took steps to systematically disenfranchise black voters through literacy tests, poll taxes, and other measures. With the end of Reconstruction in 1876–77, white Democrats were well on their way to once again controlling Southern politics, and African Americans would not vote again in large numbers in the South until the late 1960s.

### 54th Massachusetts Regiment

Few stories about the CIVIL WAR carry more emotional importance for African Americans than the assault on Fort Wagner, Morris Island, South Carolina, on July 18, 1863. The assault was led by the 54th Massachusetts Colored Volunteer Infantry Regiment under the command of 26-year-old Col. Robert Gould Shaw. Like many massed infantry charges, it failed, and the soldiers fell back after suffering heavy losses. But the courage of the 54th's African-American troops and the heroic death of Colonel Shaw made the regiment instantly famous, and its history is the subject of poems, songs, books, documentaries, and a movie. Augustus Saint-Gaudens, a well-known American sculptor, designed a beautiful monument to honor the regiment that was unveiled in Boston in 1897. Ralph Waldo Emerson wrote a poem that is inscribed on the monument's granite base: "So nigh is grandeur to our dust, So near to God is man, When Duty whispers low, THOU MUST, The youth replies, I can."

The origins of the 54th lie with Massachusetts's wartime abolitionist governor, Republican John A. Andrew. His dream was to see AFRICAN-AMERICAN REGIMENTS in battle, fighting for their rights as citizens and their dignity as men. He wanted to prove wrong the commonly held stereotype of black incapacity to train and fight as soldiers. Andrew had plotted and agitated for an all-black regiment from the beginning of the war, to no avail for nearly two years. But finally the EMANCIPATION PROCLAMATION, issued on January 1, 1863, made the enrollment of African-American soldiers possible. The majority of African-

American regiments were organized under the auspices of the federal government and were called the United States Colored Troops. Three colored regiments, however, were raised in the same fashion as the majority of white regiments, that is, by state. Two were from Massachusetts and one was from Connecticut. The 54th was the first of the three.

In early January 1863 Andrew received permission from President ABRAHAM LINCOLN and Secretary of War EDWIN STANTON to raise an all-black Northern regiment from men living in the Bay State. For the officers, Andrew was required to choose white men only. Lincoln had refused his request to commission black officers in fear that Northern public opinion would not support that advancement. Andrew was disappointed but did what he thought was the next best thing: He recruited officers with an antiSLAVERY background. "Such officers," Andrew explained, "must be necessarily gentlemen of the highest tone and honor; and I shall look for them in those circles of educated Anti-Slavery Society, which next to the colored race itself have the greatest interest in the success of this experiment." True to his words, Andrew offered the colonelcy of the regiment to Bostonian Robert Gould Shaw of the Second Massachusetts, with the lieutenant colonelcy going to a captain of the 20th Massachusetts, Norwood Hallowell of Philadelphia. Both were sons of prominent abolitionist families. Other white officers included Lts. Edward Emerson and Wilkie James and Cpts. Luis F. Emilio and Cabot Russel.

It soon became clear that Massachusetts alone could not begin to fill the regimental requirement for 1,000 men. Andrew formed a committee of concerned citizens, headed by George L. Stearns, a wealthy Boston industrialist, to raise money for the hiring of speakers who would travel across the North to recruit for the regiment. Andrew needed the wholehearted support of the black Northern leadership for this task, and he received it. WILLIAM WELLS BROWN, John Mercer Langston, MARTIN R. DELANY, Robert Purvis, Henry Highland Garnet, and FREDERICK DOUGLASS all persuaded men from the tiny Northern population of free African Americans to become Union soldiers. In a stirring speech, Douglass explained to his audiences why African Americans should fight in what had previously been a white man's war: "Once let the black man get upon his person the brass letters, U.S., get an eagle on his button and a musket on his shoulder and bullets in his pocket; and there is no power on the earth or under the earth which can deny that he has earned the right of citizenship in the United States." The recruiters had other, more tangible, rewards to offer, namely a generous bounty, \$8-per-month salary from the state, and \$13-per-month salary from the federal government, the same as for white soldiers.

By February 1863, volunteers were pouring into the 54th's training camp in Readville, near Boston. The bulk

The 54th Massachusetts Colored Volunteer Infantry Regiment fighting on Morris Island, where their heroic actions in battle helped dispel skepticism in those who believed that African Americans could not be good soldiers (*The National Guard Heritage*)

of them hailed from Massachusetts, Pennsylvania, New York, Ohio, Michigan, Illinois, and Indiana. There were more than 1,000 men; the rest filled up the ranks of the 55th Massachusetts Colored Regiment. The men of the 54th represented the cream of the black Northern society. Most could read and write, and many were married with families. They were barbers, cooks, teamsters, farmers, laborers, and students. Pennsylvanian George E. Stephens was a cabinetmaker, while Joseph Sulsey from New Jersey was a dentist. The vast majority of enlisted men in the 54th were working class. More than a quarter were born into slavery, and their average age was 24. Several men achieved distinction as noncommissioned officers. One of the two sons of Frederick Douglass who volunteered for the 54th was Sgt. Maj. Lewis Douglass, the highest-ranking noncommissioned officer in the unit. Sgt. WILLIAM H. CARNEY of New Bedford, Massachusetts, won the congressional MEDAL OF HONOR for his courage in rescu-

ing the regimental flag at Fort Wagner, and Sgt. Robert J. Simmons of New York was also cited for his bravery in that battle.

The young men in the 54th naturally shared a sense of pride in themselves and their mission, which was to serve as an example for all other black units. No expense was spared for the 54th. They received UNIFORMS, shoes, rifles, and a great deal of training. Although difficult and sometimes discouraging, the effects of discipline and daily drill made the 54th come together as a group. Thousands flocked to view their dress parades, which demonstrated the capability of the black man to be a soldier. There was great disappointment in the ranks when the federal government went back on its promise to pay African-American soldiers equally for their service. White soldiers received \$13 per month in addition to clothing; black soldiers received \$10 per month, from which they were expected to deduct \$3 for clothing. Most of the enlisted men in the 54th refused

to accept their pay until Congress corrected the injustice in early 1865.

After several months of training, orders arrived in May 1863 requiring the 54th Massachusetts to report to Maj. Gen. David Hunter, commander of the Department of the South, in Hilton Head, South Carolina. Before they left, a huge parade was held in honor of the 54th in Boston. In his parting words, Governor Andrew said “I know not . . . when, in all human history, to any given thousand men in arms there has been committed a work at once so proud, so precious, so full of hope and glory as the work committed to you.” From the Boston Harbor, the men of the 54th sailed down to the South Carolina seacoast and disembarked at St. Simons Island. The regiment was to take part in a movement of Union forces to seize FORT SUMTER, SOUTH CAROLINA, and conquer Charleston, where the rebellion had begun. Eager to participate in combat action, the men of the 54th were instead relegated to labor duties as May turned into June and July. Col. Robert Gould Shaw was furious and began a letter-writing campaign to members of his influential family, who in turn, forwarded his letters to President Lincoln and other major political leaders. For Shaw, the reputation of black units would be irreparably harmed if the flagship regiment did not experience combat, and soon.

Finally, on July 16, 1863, three companies of the 54th were ordered to proceed to nearby James Island, where they met, fought, and defeated a much larger Confederate force. Exhausted but extremely proud, the men, now joined by the rest of the regiment, marched straight to Morris Island, the site of battery Wagner, one of the forts that offered protection to Charleston. Arriving with their colonel on the morning of July 18, the men of the 54th learned that heavy federal artillery had been shelling Fort Wagner for hours. Wrongly assuming that the Confederates within the battery were wounded, killed, or demoralized, the Union commander planned an assault for that evening. Colonel Shaw reported for duty and was asked by the commanding general if the 54th would consider leading the infantry charge. Shaw did not hesitate in accepting and was pleased that the good fighting reputation of his men had already reached the general's ears. “I trust God will give me the strength to do my duty,” he confided to a friend.

Shaw positioned his regiment at the front of the line, and as they marched up the shore the men were cheered loudly by thousands of Union soldiers who were to follow them in battle. Shaw made a speech in which he told the soldiers to “prove themselves as men.” The signal to begin the charge was given, and Colonel Shaw led the 54th to the top of the fort, where an enemy bullet killed him. Nearly half of the regiment made it inside the fort, and the soldiers outside held their ground for over an hour. Shortly after, the Federals were forced to withdraw, paying a heavy price for

the failed assault. Seventy-five men of the 54th died at the battle of Fort Wagner, including Shaw and two other officers; overall the unit's casualty rate was 272 out of 650 men. Total Union losses were also severe: 1,505 dead, wounded, or captured, while the Rebels lost 174 men. Charleston was not captured until the end of the war.

The performance of the 54th was widely covered by the Northern press. All agreed that Colonel Shaw and his men, both officers and enlisted, had conducted themselves with an impressive display of courage and daring. Overnight, the regiment became a powerful symbol for African-American manliness and readiness for citizenship. After Fort Wagner, the men of the 54th Massachusetts were used in campaigns in Florida, most notably the Battle of Olustee, waged in early 1864. In total, they fought in four battles and several skirmishes. When the war ended, a little over half of the regiment returned to Boston. The men of the 54th happily resumed their normal lives, confident that they had fulfilled the bright promise of the regiment envisioned by Governor Andrew and others. VETERANS of the 54th commemorated their wartime achievements by voting Republican, and many joined the Grand Army of the Republic. The fight for justice and equality for African Americans was not by any means secured after the Civil War, but the soldiers of the 54th Massachusetts Colored Regiment advanced the cause considerably.

## **filibustering**

*Filibustering* was a term used in the antebellum period to describe privately organized military expeditions into the Caribbean and Central America in the 19th century. Though most participants in filibustering expeditions of the 1840s and 1850s were generally sympathetic to Manifest Destiny and Southern proslavery extremism, filibustering

also attracted men who hoped to make their fortunes or who simply needed work.

The most famous of the filibusterers was Tennessean William Walker. While studying medicine in Europe, Walker was deeply influenced by the first flowering of European revolutionary nationalism. Though he briefly practiced medicine, he became an impassioned advocate of further U.S. expansion into Mexico, resolving that if the U.S. government would not build on its successes in the Mexican-American War, he would do so personally.

Moving to San Francisco in the early 1850s, Walker made good on his commitment. He gathered a volunteer force, journeyed south, and took control of the northwestern Mexican town of La Paz. There he proclaimed the establishment of the Republic of Lower California. When Mexican forces threatened his position in La Paz, Walker moved his men north to Ensenada, declaring that he had founded the Republic of Sonora. Though Mexico had abolished slavery, Walker's would-be countries both protected it.

The U.S. government, wary of renewing its divisive conflict with Mexico, did not provide Walker with any assistance. DESERTION, poor organization, and harsh conditions all undermined Walker's efforts, and he finally fled Mexico. U.S. officials sympathetic with Walker's venture saw to it that the federal government did not charge Walker with any crime.

Several years later, Walker led another expedition, this time to intervene in a Nicaraguan civil war. Victories there led Walker to declare himself Nicaragua's president. To the delight of Southern plantation owners, Walker repealed the country's antislavery laws. Southern advocates of Manifest Destiny now spoke of annexing Nicaragua and perhaps all of Central America.

While Walker's proslavery stance thrilled many Southerners, it infuriated most Nicaraguans and deeply concerned other Central Americans who feared that Walker—or the United States itself—might threaten the entire isthmus. Walker made his situation more precarious when he angered RAILROAD financier Cornelius Vanderbilt, who had contracted with Nicaragua's previous government to build and manage a railroad that would carry passengers and freight between Nicaragua's Caribbean and Pacific coasts. Believing that the contract had benefited Vanderbilt more than it had Nicaragua, Walker canceled the arrangement. When Costa Rica declared war against Walker's Nicaragua, Vanderbilt lent his support. In 1857 Walker was forced out of Nicaragua.

Walker's Nicaraguan adventure deeply divided American officials. Some, like Secretary of War JEFFERSON DAVIS, openly sympathized with Walker's objectives. Some proslavery officials saw Walker as taking the first necessary steps toward the U.S. conquest of the entire Caribbean, creating a "golden circle" of slavery.

At the same time, a number of American politicians, even those sympathetic to the expansion of SLAVERY within U.S. territory, worried that Walker and other filibusterers might entangle the United States in dangerous conflicts, not only with Latin American and Caribbean states but also with Britain and France. In addition, the prospect of an aggressively expanding "slaveocracy" hardened antislavery opinion in the North and contributed to the growth of the new REPUBLICAN PARTY. It was for such reasons that President JAMES BUCHANAN, a Pennsylvania Democrat allied with proslavery Southerners, ultimately refused U.S. support for Walker.

Walker returned to Central America twice, but each time he was repulsed. After his last incursion, into Honduras, Walker surrendered to a British naval commander, who turned the prisoner over to Honduran authorities. In 1860 the Hondurans executed Walker before a firing squad.

With a Union victory in the CIVIL WAR, much of the impetus for filibustering ended. Though some American politicians continued to harbor ambitions for Central America and the Caribbean, privately financed attacks ceased. For the peoples of Central America and the Caribbean, however, the image of Americans shooting their way into power persisted, influencing their response to American intervention in regional affairs well into the 20th century.

## fire-eaters

The term *fire-eaters* was applied by Northerners to proslavery extremists in the South during the two decades prior to the outbreak of the CIVIL WAR in 1861. Fire-eaters attempted to use the political process to protect the South from what they perceived as Northern political aggression. They consistently promoted SECESSION as the only solution to what Southern moderates and conservatives considered at the time a temporary problem of sectional discord. Despite the high profile and notoriety of the fire-eaters, their subsequent impact was minimal.

Secession had been an issue facing the nation since South Carolina's aborted efforts of 1832. As of 1850, with sectional tensions rising over the admission of California as a free state, a small, regional clique of fire-eaters adopted a much more vocal stance. They were strident, uncompromising ideologues who were belligerent toward the federal government. Their central thesis maintained that the South, in defense of STATES' RIGHTS and Southern honor, must preserve and protect the institution of SLAVERY and brook no outside interference on the matter. They

militantly opposed compromise of any kind, advocating a separate nation.

The most notable of this group of radical Southern nationalists were Edmund Ruffin, Robert B. Rhett, and WILLIAM LOWNDES YANCEY. Ruffin, a Virginian, was an ardent supporter of states' rights and the secession of the South. Prior to the outbreak of the Civil War, Ruffin left Virginia for the more congenial political milieu of South Carolina, and on April 12, 1861, he was given the privilege of firing the first shot against FORT SUMTER, thus starting the Civil War. The ultimate fire-eater, a devastated Ruffin committed suicide when ROBERT E. LEE surrendered at APPOMATTOX COURT HOUSE in 1865.

Rhett, from South Carolina, was known as the "father of secession." He was one of the earliest proponents of secession in his home state of South Carolina and spent much of his life working for an independent South. Convinced that the Southern way of life was doomed if the South remained in the Union after ABRAHAM LINCOLN and the REPUBLICAN PARTY won the presidential election in 1860, Rhett drafted South Carolina's Ordinance of Secession. In 1861 Rhett took part in writing the Confederate Constitution. Because of his extremist position, Rhett was not selected for the presidency of the Confederacy, and in 1863 he was defeated in a race for a seat in Congress. When the Civil War ended he refused to apply for a pardon from his Yankee enemies.

The third big gun in the fire-eater arsenal, Yancey, the "orator of secession," was one of the most fervent advocates of states' rights and slavery. Yancey demanded that Southerners have the right to take their slaves into western territories and, as the years passed, his belief in the inalienable rights of states grew. He strongly opposed the Compromise of 1850 and proposed a Southern Confederacy as early as 1858. Yancey helped create Alabama's Secession Ordinance after Lincoln was elected president, and he served as a Confederate senator.

As early as 1850, at a political convention in Nashville, Tennessee, these three men along with the rest of the fire-eaters urged secession upon the South. They succeeded in publicizing but not popularizing their stance. The fire-eaters were shunned by the majority of moderates present and then basically ignored. After the Compromise of 1850, a more moderate council met and managed to compromise enough to postpone secession for another 10 years. In 1856, the same year JAMES BUCHANAN was elected president, a number of secessionist candidates were decisively defeated throughout the region. Their appeal to Southern nationalism having failed, the fire-eaters temporarily suspended their agitation. It was not until 1860 that they reemerged as a force in regional politics.

As the 1850s ground on, sectional strife mounted. Events such as passage of the KANSAS-NEBRASKA ACT

of 1854, the open hostilities of "BLEEDING KANSAS," and JOHN BROWN's raid at HARPERS FERRY reignited the political fortunes of the fire-eaters. By 1860 they wielded a disruptive influence on the DEMOCRATIC PARTY, which resulted in its breakup. The fire-eaters pointed to the anti-slavery platform of Lincoln and the Republicans as proof that the North was conspiring to abolish slavery, and they used speeches, pamphlets, editorials, and committees of correspondence to advance the cause of secession. This time they found fellow Southerners more receptive to their message. Such agitation proved decisive in convincing South Carolina to approve a secession ordinance in December 1860. Although the fire-eaters were in large measure responsible for the movement to organize a separate Southern government, they filled only minor offices in the CONFEDERATE STATES OF AMERICA. In the end the fire-eaters played only a minor role in the very large conflict that they had spent a decade fomenting.

**Fitzhugh, George** (1806–1881) *proslavery advocate, writer, lawyer*

George Fitzhugh was born in Prince William County, Virginia, on November 4, 1806. He married Mary Metcalf Brockenbrough in 1829 and obtained a small PLANTATION in Virginia.

In the 1850s Fitzhugh became known as one of the fiercest defenders of slavery. He wrote dozens of essays for the *Richmond Enquirer* and *De Bow's Review* that attacked modern capitalist society and defended SLAVERY. Fitzhugh republished several of these essays in *Sociology for the South: or the Failure of Free Society* (1854) and later expanded on other articles in *Cannibals All!, or, Slaves without Masters* (1857). These writings defended and promoted the institution of slavery on moral and economic terms.

In *Sociology for the South*, Fitzhugh argued that not only had slavery “produced the same results in elevating the character of the master that it did in Greece and Rome” but that slaves were “as happy as a human being can be” under the Southern slave system. Fitzhugh contended that, unlike the free-labor North, in “the slaveholding South all is peace, quiet, plenty and contentment. We have no mobs, no trades unions, no strikes for higher wages, no armed resistance to the law, [and] but little jealousy of the rich by the poor.” In *Cannibals All!* Fitzhugh continued his argument against free labor, contending that a “free laborer must work or starve. He is more of a slave than the Negro, because he works longer and harder for less allowance.”

Fitzhugh’s theories about slavery stemmed from his personal experiences as a slaveowner, his reading about the conditions in English factories, and a trip to Boston, Massachusetts, in 1855. There, after delivering a series of lectures and discussing slavery with abolitionists such as HARRIET BEECHER STOWE, Fitzhugh became even more convinced of the virtue of slavery. Fitzhugh used his writings to explain the evils of the Industrial Revolution and the comparative morality of slavery over free-labor systems.

Fitzhugh did not devote his entire life to the writings for which he is most remembered. In 1857 and 1858 he worked as a law clerk in WASHINGTON, D.C., for Attorney General Jeremiah Sullivan Black. When the CIVIL WAR began, Fitzhugh supported the Confederacy, and in 1862 he moved to RICHMOND, VIRGINIA, where he served as a clerk in the Confederate Treasury Department.

When the war ended, he worked for the FREEDMEN’S BUREAU as a judge and continued to write articles on AGRICULTURE for *De Bow’s Review* and other periodicals. Fitzhugh died on July 30, 1881, after suffering from near-blindness and insomnia.

### Five Forks, Battle of (March 30–April 1, 1865)

The Battle at Five Forks, Virginia, was the first engagement in Gen. ULYSSES S. GRANT’s Appomattox campaign. The goal of the battle was to cut Gen. ROBERT E. LEE’s supply lines coming down the South Side Railroad into Petersburg. If the Union succeeded, they would gain Petersburg, force the evacuation of RICHMOND, VIRGINIA, and place themselves between Lee and JOSEPH EGGLESTON JOHNSTON’s

Confederate armies, thus preventing Lee from moving south. Grant placed Maj. Gen. PHILIP H. SHERIDAN at the head of the Union forces, while Maj. Gen. GEORGE E. PICKETT was placed at the head of the Confederate forces. Lee’s instructions to Pickett were clear: “Hold Five Forks at all hazards.”

Lee positioned 19,000 soldiers at the Five Forks road junction, a mere three miles from the South Side Railroad. Pickett had at his command a division of his own along with three mounted cavalry divisions commanded by Maj. Gen. Fitzhugh Lee (nephew of Gen. Robert E. Lee). Sheridan commanded the Union cavalry as well as being given the V Corps, which was commanded by Maj. Gen. Gouverneur K. Warren, totaling almost 50,000 men.

At 1 P.M. on April 1, Sheridan ordered the cavalry divisions of Brig. Gens. George A. Custer and Thomas A. Devin to attack Pickett’s right flank, which was held by Confederate cavalry. The plan was to then have the V Corps jointly attack on Pickett’s left, which was held by his own infantry division. Unfortunately, Warren was slow to act and the opportunity to crush Pickett nearly slipped by. By 4 P.M., out of Warren’s three divisions, commanded by Generals Ayers, Griffen, and Crawford, only Ayers’s division was in place to attack the 90-degree angle in Pickett’s line. Griffen’s and Crawford’s divisions had swung too far to their right to be effective. In a moment of overconfidence during the battle, Pickett and Fitzhugh Lee left the battle briefly to have a drink, only to return to a surprise. Ayers’ division had been enough to breach Pickett’s line.

The rebels were captured in large numbers, and Grant was able to interpose his force between the two main Confederate armies. The victory, which came to be called the “Confederate Waterloo,” was such a great success for the Union that when on April 2 Gen. Grant ordered an attack on the center of the rebel lines at Petersburg, they broke easily, and the Confederates were forced to evacuate the city in a rush. Five Forks also caused Lee to remove Pickett from command, while Sheridan, despite the Union victory, removed Warren from command due to his sluggish action in the battle.

### food riots

One of the most serious problems facing the CONFEDERATE STATES OF AMERICA during the CIVIL WAR was supplying its armies and its civilians. Although most

Southerners lived on farms and PLANTATIONS, by the end of the war many parts of the Confederacy simply did not have enough food.

There were a number of reasons for shortages in cities and specific regions of the Confederacy. A major factor was simply the occupation of farming country and the destruction or confiscation of crops and livestock by Union troops. Other important reasons included the presence of hundreds of thousands of hungry Union and Confederate soldiers in places such as northern Virginia, western Tennessee, and central Mississippi, making it almost impossible for civilians living in those areas to get enough food; the inability of the South to keep roads open and RAILROADS operating; the crowding of thousands of REFUGEES into towns and cities; the enrollment of many farmers in the CONFEDERATE ARMY; and the tightening blockade of Southern ports. All of these caused people to go hungry and, in some cases, to starve in many parts of the Confederacy. To make matters worse, rising prices made it hard for people to buy the goods that were available. With inflation rates in the four figures, one Virginia woman discovered late in the war that \$100 in Confederate money bought a few pounds of fatty bacon, three candles, and a pound of poor butter.

The Confederate government tried to force planters to raise food crops rather than cotton, and local governments sometimes set up markets at which poor people or the families of soldiers could buy necessities at relatively low prices. In addition, Southerners found a number of clever substitutes for their normal diet, with unusual replacements for coffee, salt, sugar, and other basics. But none of these actions solved the problem of hunger in the Confederacy. Not surprisingly, many Southern civilians grew angry about this state of affairs. When residents of towns or cities believed that Confederate government or military officials were keeping food from them, riots broke out. Disturbances occurred in large cities such as Atlanta, Macon, Columbus, and Augusta, Georgia, and in smaller towns like Salisbury and High Point, North Carolina, and Sherman, Texas. Even in Mobile, Alabama, one of the last ports in the Confederacy to be captured by the Union, residents feared in the fall of 1864 that there would not be enough food to last through the winter. A mob waving signs that demanded “bread or blood” looted the stores on one of the city’s main streets. Eventually, almost every Confederate state had experienced at least one riot over food shortages.

The most famous food riot took place in RICHMOND, VIRGINIA, in April 1863. With a population that grew larger every week, with its nearby farmland frequently occupied or fought over by both armies, and with sometimes unreliable TRANSPORTATION links to other parts of the Confederacy, Richmond was one of the most crowded and most expensive cities in the Confederacy. A complicated pass system—the army wanted to make sure that

spies did not enter the Confederate capital—discouraged farmers from coming into the city to sell their products. A heavy snowfall in mid-March was the last straw, and hard-pressed women, desperate to feed their families, began gathering at a Baptist church on April 2. They decided to march to the state capital to ask for help from Governor John Letcher. Along the way, other women—and a number of men and boys—joined them. Letcher spoke briefly to the several hundred people gathered outside the governor’s mansion, but when he went back inside without giving them any answers, the crowd turned violent: Some took out hatchets, a few pulled pistols out of their pockets. The mob spread over a 10-square-block area, breaking into stores, taking not only bread and meat but also jewelry, clothes, and other items. The governor and mayor failed to calm them, and the mob did not pause until a small unit of Confederate troops and President JEFFERSON DAVIS appeared in their path. Davis threw all of the money he had in his pockets at the rioters, then took out his pocket watch and declared that if they did not disperse in five minutes, the soldiers would fire on them. When the captain commanding the men loudly ordered them to load their rifles, the rioters went home.

Sometimes riots did not end so peacefully. Late in the war, when a group of Galveston, Texas, residents and a few soldiers stationed in the city demanded that local officials share the military provisions stored in the city, a Confederate regiment fired over the heads of the protesters, accidentally killing one of the protesting soldiers.

The food riots were minor episodes in the history of the Confederacy, but they exemplify how economic problems and political and social differences weakened the Confederate war effort.

## foraging

Foraging during the CIVIL WAR was widespread and controversial. There are two kinds of foraging: unofficial and official. The unofficial occurred when soldiers on the march or in camp indulged in unauthorized raids on civilian property. For example, soldiers would seize pigs, chickens, eggs, and other foodstuffs to ease their hunger. This type of foraging occurred with as much regularity in the CONFEDERATE ARMY as it did in the UNION ARMY, and often with little care as to whether the civilians were friends or enemies. Southern families at times had as much to fear

from their own countrymen as from Union soldiers. ROBERT E. LEE's men foraged liberally off the rich Pennsylvania farming countryside during the Gettysburg campaign of June and July 1863, as did ULYSSES S. GRANT's soldiers in Mississippi during the VICKSBURG CAMPAIGN at exactly the same time. Occasionally, groups of soldiers would go far beyond feasting and plunder the countryside. They would deliberately steal money, jewels, silver, and other valuables from helpless civilians. This type of behavior was branded as criminal, and soldiers caught in such acts were punished by military courts.

Official foraging, by contrast, was allowed under the international RULES OF WAR. Military commanders had the right to sustain their armies from goods taken from the countryside. This type of foraging was supposed to be conducted under strict rules and regulations. Even so, in the first two years of the war most Union commanders discouraged or prohibited foraging, fearing rightly that the behavior could degenerate into simple theft. WILLIAM T. SHERMAN, the Northern general most associated with the successful use of foraging, commented on the dangers: "The feeling of pillage and booty will injure the morale of the troops, and bring disgrace to their cause." As the war became harder, however, foraging became much more of a military necessity than expected and especially affected the TACTICS of the Northern side.

The most famous example of the dramatic expansion of the use of authorized foraging was in Sherman's "March to the Sea," begun in September 1864. His western soldiers confiscated and/or destroyed crops, food, livestock, and other valuables in an attempt to end the war by undermining the Southern ECONOMY and morale. Although Sherman's March became notorious for its supposedly wanton destruction, his raid was conducted under strict guidelines. The Union policy was to differentiate between sympathetic and hostile Southerners and act accordingly. It mattered, therefore, whether families in any one area were Unionist, took a neutral stance, or professed to be rabid SECESSIONISTS. The "secesh" fared by far the worst. Admittedly, there were times when soldiers ignored their orders and engaged in behavior far outside the regulations, sometimes with the approval of their officers. This was especially true in South Carolina, where many Union soldiers expressed an intense desire to punish the place "where treason began." Yet most historians now agree that far from being an uncontrolled spree, Sherman's soldiers acted with restraint and well within the bounds of the rules of war.

versity Press, 1995); Bell Irvin Wiley, *The Common Soldier of the Civil War* (New York: Scribner, 1973).

## foreign policy

Historians of American diplomatic affairs tend to use 1898, the date of the Spanish-American War, as the beginning date for the history of U.S. foreign policy. While it is true that the contours of U.S. diplomacy after this point are more familiar to modern Americans, the mid-19th-century United States was no stranger to foreign affairs. U.S. foreign policy from 1850 to 1880 was concerned with two main issues: American expansion and the CIVIL WAR.

As was the case with much of antebellum American politics, U.S. foreign affairs before the Civil War focused on territorial expansion. In the 1850s, while domestic political debates surrounded the potential expansion of SLAVERY in the West, U.S. diplomatic efforts focused on expanding the United States's influence and territorial holdings beyond continental boundaries. Throughout the mid to late 19th century, U.S. diplomatic overtures concentrated on three main areas: Hawaii, the Caribbean, and Latin America.

In Hawaii, the United States was interested in annexing the island kingdom or at the very least establishing favorable trade agreements and possibly a naval base and coaling depot for the United States in the Pacific. In August 1854, a treaty allowing for the annexation of the island chain was signed but later withdrawn by Hawaii's King Kamehameha IV. Hawaii would eventually be annexed, but not until the end of the century.

While the Hawaiian negotiations were souring, the United States was also making overtures in the Caribbean, especially Cuba, for a similar deal but with more emphasis on an American naval installation and coaling depot. In November 1854 the OSTEND MANIFESTO, a note to the secretary of state from the American foreign ministers to Britain, Spain, and France, suggested that the United States make every effort to secure Cuba from Spain. Shortly thereafter, the minister to Britain returned to the United States and was elected to the presidency. In his annual message to Congress in 1858, President JAMES BUCHANAN reiterated his belief that the United States should buy Cuba from Spain. The next year, Louisiana senator John Slidell proposed a plan to buy Cuba for \$30 million, but his plan was soundly defeated.

The third area of American diplomatic concern, Latin America, saw the most action and intrigue in the years before the Civil War. In 1848 the U.S. Senate approved a treaty with Colombia, which was then called New Grenada. A year later, a treaty with Nicaragua was signed. In April 1850, the United States signed the Clayton-Bulwer Treaty in hopes of constructing an isthmian canal linking

the Atlantic and Pacific Oceans. The treaty guaranteed the neutrality of the proposed canal and declared that neither the United States nor Britain would have solitary control of the project. Ultimately, the canal plan did not come to fruition as quickly as hoped. The canal proposal was a tremendous undertaking whose location and engineering had yet to be worked out. At the same time, the actions of the FRANKLIN PIERCE and Buchanan administrations left many Northerners convinced that the plan was just an excuse to spread slavery.

With the outbreak of the Civil War, U.S. foreign policy had one goal: reuniting the Union. To this end, the United States worked diplomatically to see that foreign nations recognized the war as an internal affair and did not support the efforts of the Confederacy. The CONFEDERATE STATES OF AMERICA, on the other hand, lobbied the powers of Europe diligently, first for “belligerent status,” then for recognition, and finally for assistance and supplies.

The chief architect of the United States’s foreign policy during the war years was Secretary of State WILLIAM H. SEWARD. Seward was entrusted with the important and often difficult task of keeping the French and British, Europe’s two main superpowers, from aiding the Confederacy. Among Seward’s first and most important goal was attaining British and French recognition of the U.S. blockade of Southern ports. The 1856 Declaration of Paris stated that only effective blockades would be honored, and the debate raged between the North, the South, and Europe as to whether or not the Union blockade was effective. In the early years of the war, blockade running was frequent and lucrative, and this seemed proof enough of Southern claims that the blockade need not be honored. But the South hurt its case by playing its “King Cotton” card. The Confederacy felt that its strongest international bargaining chip was its cotton crop, because Southern cotton fueled the British textile industry and kept Europe supplied with cotton cloth. As such, the Confederacy embargoed cotton, refusing to export it to the European market until Britain and France agreed to ignore the blockade. Unfortunately for the Confederacy, bumper cotton crops in previous years had left Europe with an abundance of warehoused cotton, and the Civil War was well underway by the time the embargo had any impact. Ultimately, rather than gaining the support of Britain and France, the embargo motivated Europe to explore other options, including cotton from Egypt, to fill their needs.

Confederate missteps played into the hands of the United States, which, under the leadership of Seward, worked to keep Europe from coming into the war by alternately threatening and cajoling. Seward advised Britain and France that war would be declared if they recognized or assisted the Confederacy. Seward also rebuffed European

efforts to mediate the conflict early in the war, arguing that this was an internal dispute and not a case for international arbitration. The United States’s concern was that any movement to arbitrate the war would give, at the very least, unofficial recognition to the Confederacy. Ultimately, in mid-1861, both Britain and France declared themselves to be neutral. These decisions were not welcomed by either the Union or the Confederacy, since Seward had fought hard for European powers to support the Union’s cause alone, while the Confederacy badly needed European backing to make their war effort tenable.

Shortly after Britain and France declared their neutrality, a dramatic incident occurred that could have drastically altered the course of international relations during the Civil War. The “*Trent* affair,” as it came to be called, began in the summer of 1861 with French pressure on the United States to ease the blockade restrictions, thus allowing an exchange of goods between the Confederacy and Europe. The French sought British assistance on the issue, but at that point the British were more dependent on Northern exports of grain than they were on Southern cotton, and so the French were on their own.

Confederate officials put further pressure on France by sending former U.S. senators James Mason and John Slidell to France to negotiate for formal recognition and assistance. Slidell and Mason’s ship out of Charleston successfully evaded the Northern blockade ships, but once they transferred to the British ship *Trent* in Cuba, their luck ran out. The *Trent* was captured on November 8, 1861, by the USS *San Jacinto*, captained by Charles Wilkes. Wilkes claimed the ship as a prize of war and arrested Mason, Slidell, and their secretaries. The British were outraged, but the North lionized Wilkes as a hero. Tempers flared as the British made plans to bolster troop strength in Canada and send warships to the West Indies. Britain threatened to sever relations, and for some time it appeared as if they were on the brink of joining the war against the North. Seward convinced President ABRAHAM LINCOLN that complying with British demands for the Confederate officials’ release was the wisest course of action, and the tensions passed.

Beyond recognition and issues of neutrality, Seward also had to prevent Britain and France from helping the Confederacy to build a navy. One of the key concerns of foreign ministers for the Confederacy was to secure naval-class ships for their war effort. With the seeming inability of Gen. GEORGE B. MCCLELLAN to secure Union victories early in the war, some British officials began to doubt that the North would prevail. In that climate, it seemed prudent to help outfit a rebel navy. Confederate president JEFFERSON DAVIS sent James D. Bulloch to England in 1861 to gain British help in refitting existing Confederate vessels into IRONCLADS and to commission new battleships. Brit-

ish shipbuilding concerns built the commerce raiders, CSS *ALABAMA* and *Florida*, and converted an existing vessel into the rebel ram CSS *Atlanta*.

Such actions on the part of British manufacturers were in direct violation of Britain's declaration of neutrality, but they continued nonetheless. The *Alabama* eventually became extremely successful as a commerce raider, so much so that its name was given to the postwar claims lodged by the United States against Britain for losses due to commerce raiding. The "*Alabama* claims" went to an arbitration panel in Geneva in 1871. The United States argued that Britain should be held accountable for the entire cost of the Civil War from the BATTLE OF GETTYSBURG forward plus seven percent interest. The British, appalled at the American claim, were angry when the tribunal awarded the United States \$15 million in 1872.

Seward regularly leveraged the United States's status as a member of the international community, as well as the country's economic might, to his advantage. He also had one other card to play: the slavery issue. Both Britain and France took issue with the Southern slave system, and once Lincoln issued the EMANCIPATION PROCLAMATION, British and French politicians found their ability to support the Confederacy circumscribed.

Even with all of the advantages the United States enjoyed, the Union faced a difficult road in European affairs. England and much of the rest of Europe wanted peace and the restoration of prewar trading. France had designs on Mexico, and it seemed to Napoleon III that the Confederacy would be willing to let him "have" Mexico in exchange for formal recognition. Mexico, in the mid-19th century, was having internal political trouble and was facing problems with foreign debt. In June 1863, Napoleon's 35,000 troops in Mexico captured Mexico City. In 1864, Archduke Maximilian was installed as emperor of Mexico with Napoleon's support. France might well have recognized the Confederacy at this point, but the war had turned against the South. By 1867, with continuing U.S. pressure, French support of Maximilian was removed, and the emperor was deposed and executed.

With the Civil War at an end and RECONSTRUCTION underway, U.S. diplomatic efforts once again focused on expansion and trade. With Secretary of State Seward still managing matters, the United States redoubled its efforts to gain bases and an isthmian canal. Seward wanted to build an American commercial empire, and for that he required strategic bases, trade treaties, and the ability to transport goods safely. Most notable of Seward's diplomatic maneuvers was the purchase of Alaska from Russia in 1867. Although the deal seemed rife with scandal, Seward pushed it through and the Senate ratified the purchase in April 1867. The acquisition of "Russian America" was attacked by some in the press, and the new territory was

often labeled "Seward's Folly" or "Seward's Ice Box." The *New York Herald* called Alaska a "worthless desert," while the *New York World* ran headlines proclaiming "A Great Opening for Soda-Water Fountains and Skating Ponds." But Seward ran a countercampaign of LETTERS to the press, extolling the virtues of Alaska.

Seward's postwar diplomatic maneuvers were complicated by strained British-American relations. Not only was there anger over the *Alabama* claims and unofficial British support for the Confederate cause but Irish-American "Fenians" twice invaded British Canada after the Civil War, first in 1866 and then again in 1870. Despite these problems with Britain, by the 1870s the United States was attempting to make progress in all three of its key regions of interest. In 1870 the ULYSSES S. GRANT administration began its campaign for an American base in the Caribbean by attempting to buy Santo Domingo. Grant's representative, General Orville E. Babcock, successfully negotiated a treaty of annexation in November 1869, but CHARLES SUMNER, chairman of the Foreign Relation Committee, saw to it that the treaty was voted down by the Senate.

Defeated on the Santo Domingo issue, the Grant administration turned its attention to Cuba. From 1868 to 1878, Cuban insurgents rebelled against Spanish control with the help of the Cuban-American community. On several occasions, the United States and Spain came to the brink of war over Cuban insurgency. Tensions peaked in 1873 when Spain captured what the United States believed to be an American ship, killing her captain and some of the passengers and crew. An investigation later proved it was a Cuban ship, but Spain defused the situation by releasing the ship and paying \$80,000 in reparations. Tensions between the United States and Spain over Cuba ultimately led to the 1898 Spanish-American War.

Also in the post-Civil War years, the United States continued to work on plans for an isthmian canal. In 1867 the Dickinson-Ayon Treaty with Nicaragua granted the United States transit rights through Nicaragua. In 1869 the United States secured a treaty with Colombia that allowed the United States the right to build a canal across the Colombian state of Panama. In 1872 President Grant appointed the Inter-oceanic Canal Commission to recommend a route for the canal. The Commission's report, released in 1876, said that the route through Nicaragua was preferable, but the United States lacked building rights to the Nicaragua route. Ultimately, the canal would not be built until the early 20th century.

In the Pacific, the United States continued to pursue its interest in Hawaii after the Civil War. In 1870 and 1871, Secretary of State Hamilton Fish once again laid the groundwork for the annexation of Hawaii by the United States. In 1873, when annexation plans fell through, Hawaii offered to cede Pearl Harbor to the United States for use as

a base and coaling station in exchange for preferential tariff rates. In January 1875, the United States finally signed a treaty of reciprocity with Hawaii, although the treaty lacked an agreement about Pearl Harbor due to growing Hawaiian opposition to American control.

The mid-19th century, then, was a busy time in America's diplomatic history. The United States managed to keep the great powers of Europe at bay while settling the difficult issues of what "United States" really meant. The United States also made forays into expansionism, which laid the groundwork for subsequent moves in the Caribbean, Latin America, the Pacific, and Asia.

**Forrest, Nathan Bedford** (1821–1877) *Confederate general and cavalry leader*

Businessman, planter, slave trader, politician, CONFEDERATE STATES OF AMERICA general, cavalry commander, and first grand wizard of the KU KLUX KLAN, Nathan Bedford Forrest has long been regarded as both a military genius and one of the most controversial figures of the CIVIL WAR. Although overrated in military skills, Forrest's cavalry consistently represented a major thorn in the side of Union forces. At one point, General WILLIAM T. SHERMAN exclaimed that Union soldiers must capture and kill Forrest even "if it costs ten thousand lives and breaks the treasury." At the end of the war, Forrest boasted that he had killed 30 men in hand-to-hand combat while having had only 29 horses shot out from under him. Forrest noted with pride that he remained one horse ahead.

Forrest was born in Tennessee and moved to Mississippi at the age of 21. His roots were in the Southern yeomanry and his EDUCATION was scanty, but his ambitious nature and his activities as a slave trader and planter brought

him a large fortune. Immediately upon Tennessee's SECESSION from the Union, the 40-year-old Forrest enlisted as a private in the Seventh Tennessee Cavalry. However, under protest from the governor of Tennessee, Forrest was given the rank of lieutenant colonel and the opportunity to raise his own cavalry battalion. Forrest recruited and equipped a command at his own expense.

Forrest distinguished himself in battles at Fort Donelson and Shiloh, both Union victories, and in a raid directed at Union forces in the area of Murfreesboro, Tennessee. In late 1862, Forrest and his men devoted their energies to disrupting Grant's line of supply in west Tennessee. It was this raid, along with two others later that year, that made Forrest a hero throughout the South. His simple motto, "get there first with the most men," belied his growing reputation as a brilliant and daring commander who could strike fear into the heart of numerically superior forces.

In spite of Forrest's successful raids in Tennessee, the Confederate forces led by BRAXTON BRAGG retreated from the area. Forrest resented Bragg's decision to evacuate Tennessee. Moreover, he swore that if he ever met Bragg he would kill him. Because of the mutual animosities between these men, JEFFERSON DAVIS gave Forrest an independent command in Mississippi.

In April 1864, Forrest and his men attacked FORT PILLOW, TENNESSEE. The sacking of Fort Pillow marks the most controversial moment in Forrest's career. On April 12, Confederate marksmen had surrounded the fort and made life extremely difficult for the Union soldiers inside. After Forrest's men had control of the perimeter of the fort, Forrest offered the Union commander an opportunity to surrender. Forrest also stated that he could not be responsible for the safety of the Union soldiers if their commander refused. Since no surrender seemed forthcoming, Forrest's men seized the fort. In the ensuing melee, the 262 black Tennessee Unionists who composed the majority of the garrison suffered the most. Forrest's soldiers took 58 black prisoners; they killed the remainder, many of whom tried to surrender.

In June 1864, Forrest was victorious in two notable battles waged in the northeastern part of Mississippi. Historians generally regard these battles, known as Brice's Crossroads and the Battle of Tupelo, as Forrest's masterpieces. In the latter battle, Forrest was injured and unable to lead his men from horseback. Instead, he moved about the battlefield in a horsecart, giving orders that kept his men one step ahead of all Union movements.

After the battle at Tupelo, Forrest and his men ranged over northern Alabama and Tennessee harassing Union soldiers, raiding various supply depots, and destroying RAILROADS. Forrest also accompanied Gen. JOHN BELL HOOD in his unsuccessful attempt to take back Tennessee for the Confederacy. When Hood's men retreated from Nashville,

Forrest displayed his ferocity in protecting the Confederate retreat.

Forrest was promoted to lieutenant general in February 1865 and spent the last months of the war trying to put together a force of men in Mississippi. However, Union cavalry outnumbered his command to such an extent that it was no longer possible to engage them successfully. Forrest finally surrendered his forces in May 1865, a little over a month after Appomattox. "I went into the army worth a million and a half dollars," he said, "and came out a beggar."

Forrest's postwar career is nearly as controversial as his wartime career. Forrest tried to regain his fortune through railroad building and insurance enterprises, but he was not successful. In 1867 Forrest became the first grand wizard of the Ku Klux Klan. Forrest demanded that the Klan operate to defend the people of Tennessee, that it only use violence in self-defense, and that it keep within the bounds of chivalry. Because he was unable to control Klan activity within those guidelines, Forrest disbanded the organization and gave up his command. His disbandment order had little effect outside Tennessee, and the Klan has continued

to exist in one form or another ever since. In 1871 Congress called an uncooperative Forrest to testify concerning his involvement with the Klan.

In his last years, Forrest's physical health deteriorated, in particular due to diabetes. He died in Memphis on October 29, 1877, at the age of 56.

### Fort Pillow, Tennessee (April 12, 1864)

Fort Pillow was the site of an 1864 massacre of mostly African-American Union soldiers by troops under the command of Confederate general NATHAN BEDFORD FORREST. Located 40 miles north of Memphis on the Chickasaw Bluffs, Fort Pillow was built in 1861 as a Confederate fortification overlooking the MISSISSIPPI RIVER. Confederate troops abandoned the fort in June 1862 after Union victories in the area jeopardized their position. For the next two years Union troops intermittently occupied the site.

On April 12, 1864, Confederate general Nathan Bedford Forrest led about 1,500 troops in an attack on the fort, then garrisoned by just over 500 Union soldiers, nearly half of them black. During the initial fighting, Forrest's sharpshooters killed Maj. Lionel F. Booth, the fort's commander. Forrest then demanded that the fort surrender, guaranteeing the safety of Union soldiers inside—an offer which, Forrest's representatives avowed, included black soldiers as well. Maj. William E. Bradford, who took command on Booth's death, refused to give up the fort. Forrest's men, positioned in well-protected ravines below the fortification's low earth walls, now attacked. In about 20 minutes they had overrun the works.

As Union soldiers surrendered, Bedford ordered that they be cut down. Wrote one Confederate soldier, "The poor deluded Negroes would run up to our men, fall upon their knees . . . for mercy, but they were ordered to their feet and then shot down. . . . The fort turned out to be a great slaughter pen. . . . Gen. Forrest ordered them shot down like dogs. . . . Finally our men became sick of blood and the firing ceased." By the end of the battle, 64 percent of black and 33 percent of white Union soldiers had been killed. Bedford had lost 14 men.

The massacre instantly outraged Northerners. Congressman BENJAMIN WADE demanded an investigation, while President ABRAHAM LINCOLN considered executing selected Southern prisoners of war. Fearing a cycle of

Nathan Bedford Forrest (Library of Congress)

retaliatory violence, Lincoln decided against that extremity; even so, the phrase “Remember Fort Pillow!” became a battle cry among white soldiers as well as black.

Forrest later denied any massacre had taken place, claiming that his troops faced gunfire even after the fort had raised the white flag of surrender and that he had acted accordingly. Some historians have argued that Forrest and his soldiers were enraged at the extortion, lawlessness, and destruction they believed that Union soldiers had visited on Tennessee. Some of the worst offenders, Forrest believed, were Tennessee Unionists at Fort Pillow. Others argue that Forrest himself tried to halt the bloodshed but was unsuccessful.

Historians note that it was Confederate policy to execute African Americans wearing the Union blue. Though enforced inconsistently, many Confederate officials believed the policy was a necessary defense against “servile rebellion” and a rebuke to Northerners intent on sending “savages” against the South. The policy extended to white officers commanding black regiments, a fact that may explain the shooting death of Major Bradford in Confederate custody a few days after the battle.

No one disputes that it was Forrest’s practice to offer protection to besieged adversaries if they surrendered, while promising dire consequences if they refused. At Fort Pillow, Forrest was true to his word.

### Fort Sumter, South Carolina (April 11–12, 1861)

Located on a man-made island at the entrance to Charleston Harbor, Fort Sumter was the site of the first shots of the CIVIL WAR. Attention was first drawn to this federal outpost immediately following the election of ABRAHAM LINCOLN in November 1860. Fort Sumter was owned by the federal government but was not yet occupied by U.S. troops due to its construction having just been completed. South Carolinians, who had recently seceded from the Union, found the garrison to be a threat to their security and a challenge to their sovereignty. The *Charleston Mercury* explained to its readers that other Southern states would never take the cause seriously until “we have proven that a garrison of seventy men cannot hold the portal of our commerce.”

South Carolina’s governor, Francis Pickens, claimed he had an unwritten agreement with President JAMES BUCHANAN. The agreement was that U.S. major ROBERT ANDERSON (who commanded the federal forces in Charleston Harbor) and his men would remain at Fort Moultrie,

another fort in the Charleston Harbor. Anderson, however, viewed Fort Moultrie as indefensible from land and therefore considered moving his men to the more secure location provided by Fort Sumter. Immediately after Anderson received authorization to do just that from the Buchanan administration, he moved his small force onto boats and occupied Fort Sumter on the night of December 26, 1860.

When the news broke, Governor Pickens immediately sent his military aide, Col. J. Johnston Pettigrew, to meet with Anderson and to request that he and his men return to Fort Moultrie. Anderson refused his request, and in response Pickens assembled battery units on Morris Island. Anderson sent word to the Buchanan administration that his men needed reinforcements and supplies if they were to hold Fort Sumter. Buchanan decided to send an unarmed merchant ship, the *Star of the West*, loaded with 200 civilian-dressed recruits, thus reinforcing the fort without overtly threatening South Carolina authorities. However, despite the efforts to remain secret, news about the ship’s mission and destination quickly spread after its departure from NEW YORK CITY on January 5, 1861. As a result, when the ship neared the Charleston Harbor on January 9, it was unable to make it past the guns at Fort Moultrie, and it was forced to turn back and leave Anderson and his men without their reinforcements and supplies. Following the *Star of the West* incident, Pickens added to the ring of battery units that surrounded Fort Sumter. On January 11, Pickens sent a note to Anderson requesting the surrender of the fort. Once again, Anderson refused, and the opposing forces remained stalemated for two months.

On March 1, 1861, three days before Abraham Lincoln took his oath of office, Confederate president JEFFERSON DAVIS assigned Confederate brigadier general PIERRE GUSTAVE TOUTANT BEAUREGARD command of the military situation in Charleston. Immediately, Beauregard strengthened the defenses of both the harbor entrance and the battery units facing Fort Sumter. Shortly after Lincoln’s inauguration, Anderson reported to the president that the garrison was very low on supplies and would need reinforcements as well as naval support to successfully hold the fort. Meanwhile, the Lincoln administration could not come to an agreement about the current situation at Fort Sumter. WILLIAM H. SEWARD, Lincoln’s secretary of state, and Gen. Winfield Scott, commanding general of the U.S. Army agreed that Anderson and his men should evacuate the island, but Lincoln felt he needed to learn more about the situation before making a decision. As a result, the Lincoln administration sent a number of unofficial delegates to determine the situation of the fort and its occupants.

Despite the pleas of many of his advisors, President Lincoln decided to send relief to Fort Sumter. On April 6,

Interior view of Fort Sumter on April 14, 1861, after its evacuation (National Archives)

Lincoln sent word to Governor Pickens that reinforcements were being sent to Fort Sumter. The administration felt that this warning left it up to the Confederate authorities as to whether or not a war would take place, therefore supporting their defensive strategy concerning the outbreak of the war. On April 10, the USS *Powhatan* left for Fort Sumter.

Following Lincoln's message to Pickens, the Confederate secretary of war, Leroy Pope Walker, instructed Beauregard to demand that Anderson surrender the fort and to conquer the fort if Anderson refused the request for surrender. Upon receiving these instructions, Beauregard began positioning his men and equipment to prepare adequately for an artillery assault on Fort Sumter as well as to prevent any reinforcements from successfully landing and resupplying the fort.

On the afternoon of April 11, 1861, a Confederate delegation was sent by Beauregard to Fort Sumter to demand the immediate surrender of the fort. After a unanimous vote by the federal officers, Anderson once again refused to evacuate. The rebels advised Anderson that firing would begin early the next morning. At 4:30 A.M. on April 12, 1861, a signal gun was fired, alerting all the batteries to begin firing—the Civil War had begun.

Despite a hard first day's fight for Anderson and his men, the end seemed in sight when the garrison spotted three U.S. ships off the harbor. However, unbeknownst to them at the time, the reinforcement ships would never be able to make it past the harbor entrance batteries and, therefore, would not be able to assist Anderson. As a result, after deliberating with Beauregard's delegates, Anderson set the time for the surrender for the following day, April 14, 1861.

The first shots had been fired in the Civil War. Though the opening volleys were not deadly, they opened the door to a conflict that cost both North and South dearly in both lives and money. On April 15, 1861, President Lincoln issued a call for 75,000 volunteers to help restore the Union, and Jefferson Davis responded in kind. Preparations began in earnest for America's Civil War.

**Foster, Stephen C.** (1826–1864) *songwriter*

Songwriter and composer Stephen Collins Foster wrote MUSIC that represented the heartfelt sentiments and folksy way of life of most 19th-century Americans. Enduring classics such as “Oh! Susannah” (“I come from Alabama, with my banjo on my knee”) and “Camptown Races” remain beloved tunes to the present day. Among other distinctions, Foster was the first “professional” songwriter in the United States. From 1850 to his death, he lived only off the income he earned from the sale of his music. A contemporary critic summed up Foster’s impact in this way: “The air is full of his melodies. They are our national music.”

Foster was born on July 4, 1826, in Lawrenceville, Pennsylvania, the 10th of 11 children. His father was a politician and merchant who fell on hard times but managed to maintain his family’s middle-class existence. Foster’s parents encouraged their children’s love of music with piano lessons and recitals. Stephen received a good EDUCATION and was tutored in music by a teacher in Pittsburgh.

Foster’s parents expected their talented son to take a job in the business world, which he did, at first. Hired as a bookkeeper, Foster felt out of place in an office. He quit and dedicated himself to music. Foster’s first published song, “Open Thy Lattice Love,” was in print by the time he was 20. In 1850 he had 12 compositions in print and felt secure enough to marry his sweetheart, Jane MacDowell, with whom he had a daughter, Marion. His income was based on 10 percent royalties of his sheet-music sales. Foster’s compositions were not protected by copyright. Thus, while arrangers and publishers made thousands of dollars from his music, his own income remained limited, and he and his family struggled at near-poverty levels for much of the time.

Possessed of a sensitive ear for the cadence of language and style, Foster began his career in Pittsburgh, where he lived for most of his short but productive life. Writing tender, lyrical ballads for parlor singers and pianists, such as “Jeanie with the Light Brown Hair,” Foster studied the various musical and poetic styles of immigrant populations. The first songwriter to weave African-American, German, Irish, Italian, Scottish, and English music into one style, Foster created a distinctly American type of song.

Soon, Foster’s music was wildly popular among the growing middle-class families who had a piano in their newly added parlor. But his influence was also widely felt in the musical THEATER, as well, and reached out to large immigrant and working-class audiences. Many of his most well-known songs were composed for minstrel shows, where white actors posed as African Americans in black face. Foster’s songs for minstrel shows were written in dialect. This genre of songs exposed white audiences to the slaves’ point of view, to their cruel treatment, and to the fact that African Americans were capable of the same feelings

as white people. “My Old Kentucky Home, Good Night” is deeply evocative of the pain slaves endured. Another famous example is “Way Down upon the Swanee River.”

Foster was the first songwriter to refer to an African-American woman as a “lady” in “Nellie Was a Lady” (1849). Although the dialect he created for minstrel shows was vulgar, Foster attempted to provide a more human view of African Americans to counteract the racism of the time. With this approach, Foster also made minstrel music more acceptable to the middle class and to female audiences.

When the approach of the CIVIL WAR found Foster bankrupt, he combined forces with George Cooper to produce two Civil War songs, “Willie Has Gone to War” and “For the Dear Old Flag I Die.” However, by the age of 37, Foster was separated from his family, in ill health, penniless, and living alone in NEW YORK CITY. Weakened by fever, he fell and cut himself on his washbasin, which led to his death on January 13, 1864.

**Fourteenth Amendment** (July 28, 1868)

The Fourteenth Amendment to the U.S. Constitution was ratified July 28, 1868, and was designed to extend the rights of citizenship to African Americans and to enfranchise black men. Section 1 was the key to the amendment; it declared that

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2 enforced Section 1 by stating that any denial or abridgement of voting rights to eligible men would lead to a reduction in the offending state’s national political representation.

Beyond the rights of citizenship and their bearing on suffrage, the other provisions of the Fourteenth Amendment barred any person from office who had previously held office and later “engaged in insurrection or rebellion.” It targeted those individuals who had violated their oaths of office; however, such persons could be pardoned by a

two-thirds vote from each house of the Congress. Section 4 rejected the Confederate debt while acknowledging the “validity” of the U.S. debt from the CIVIL WAR. It also invalidated claims for the “loss or emancipation of any slave.” Finally, Section 5 gave Congress power to enforce these provisions.

The first two sections of the Fourteenth Amendment were enormously important because they moved to guarantee equality before the law. The intent of Section 1 was to reinforce and give meaning to the THIRTEENTH AMENDMENT by making states accountable for upholding all of the rights set forth in the Constitution. The Republican-dominated Congress was motivated by ideals of equality before the law and outrage at the BLACK CODES, legislation passed by Southern governments that deprived African Americans of their basic civil rights. Section 1 also superseded the notorious *DRED SCOTT DECISION*, where the Supreme Court declared that black people were not citizens of the United States. Suddenly, with the African-American population of the South no longer being counted as three-fifths of a person (as set forth in the Constitution’s three-fifths clause) in population apportionments for seats in the House of Representatives, the South’s population exploded, allowing them far greater representation in the House. Northern Republicans feared these additional Southern seats in the House and were wary that this resurgent power would come at the cost of denying the vote to African Americans in the South. Section 2 was designed to counter this perceived Southern advantage. Representation now would be based upon the number of actual voters and not just the potential number of voters. This was a roundabout way of encouraging Southern states to allow black suffrage, but it also implied that states could determine who qualified to vote, earning the anger of abolitionists campaigning for universal suffrage.

Abolitionists were not the only angry voices raised over the wording of the Fourteenth Amendment. Feminists were outraged because for the first time the word *male* was added to the Constitution. Since representation was to be based on “male inhabitants,” it indirectly sanctioned sexual discrimination at the ballot box. For many suffragists, the Fourteenth Amendment marked a critical moment in the history of feminism. It taught leaders, such as ELIZABETH CADY STANTON and Susan B. Anthony, that women could not rely on men for the advocacy of their rights.

The far-reaching consequences of the Fourteenth Amendment’s equal protection clause, privileges and immunities clause, and due process clause were blunted by the Supreme Court’s early interpretations of the amendment. In the *Slaughterhouse* cases (1873), the Court ruled that basic civil rights and liberties fell under the authority of state governments, not the federal government.

The Court further limited the scope of the amendment in *United States v. Cruikshank* (1876) by ruling that the federal government could only prohibit state government violations of black rights, not the actions of individuals. In 1896 the Fourteenth Amendment was further weakened; in *Plessy v. Ferguson*, the Court held that segregated railroad cars did not violate the equal protection clause. However, in the 20th century, the Supreme Court has reevaluated the Fourteenth Amendment. Though still controversial, it is considered one of the strongest Constitutional bulwarks in the defense of freedom and equality for all citizens.

### Fredericksburg, Battle of (December 11–15, 1862)

The Battle of Fredericksburg in December 1862 was a tactical victory for the South. But rather than being a major cause for celebration, Fredericksburg only slowed rather than stopped the Union push toward RICHMOND, VIRGINIA.

The battle had its origins in a change in leadership on the Union side of the war effort. Frustrated with Gen. GEORGE B. MCCLELLAN’s sluggishness in moving against ROBERT E. LEE’s Army of Northern Virginia in the weeks following the Northern victory at the BATTLE OF ANTIETAM in September 1862, Lincoln decided to replace him as commander of the Army of the Potomac for the second and final time. His successor, Gen. AMBROSE E. BURNSIDE, assumed command on November 7. Urged on by impatient superiors, Burnside converted the army’s cautious march southwest into a 40-mile quick march across the Virginia countryside to Fredericksburg in an attempt to secure a direct route to the Confederate capital at Richmond before Lee could re-form his army and respond. Burnside was quick to implement his plans, and by November 17 the lead units of his army arrived on Stafford Heights on the north bank of the Rappahannock River, opposite the town of Fredericksburg.

Burnside called for pontoon bridge equipment; however, due to a combination of bad weather and bureaucracy, the pontoons did not arrive until November 25. The delay gave Lee the time necessary to move Gen. JAMES LONGSTREET’s corps to take up positions along the terraced slopes south of town. Lee did not know where the Union army would cross the river, so, when Gen. THOMAS

J. (STONEWALL) JACKSON's troops arrived a few days later, he sent them as far as 20 miles downriver to cover all potential crossings.

Reasoning that if he moved quickly he could concentrate his superior force on Longstreet's corps alone, Burnside ordered two pontoon spans erected opposite the city and another a mile downstream. In the early morning hours of December 11, Union engineers began laying pontoons but soon gave up the effort in the face of withering musket fire from Mississippians on the southern bank. After nine unsuccessful attempts to complete the bridges throughout the day, a small force of volunteers finally managed to cross the river at dusk and drive the rebel sharpshooters from the town. Burnside's army began crossing into Fredericksburg during the night.

Burnside issued no orders for an attack on the morning of December 12; instead, the Union troops spent the day looting the town. Meanwhile, having observed the enemy crossing, Lee sent for Jackson's scattered corps. A quick march brought the corps to the field and in position on Longstreet's right by dawn on December 13.

Burnside planned to attack Longstreet's positions with part of his army while launching a strong flanking

attack on Lee's right with 55,000 men. At 8:30 A.M., Gen. GEORGE G. MEADE's brigade of Pennsylvanians moved against Jackson, only to be beaten back by both frontal and flanking artillery fire. Resuming their attack, Meade's men stumbled into a section of woods that had been left unprotected by Jackson and briefly managed to pierce the rebel lines. Having anticipated the possibility of a break along his lines, Jackson counterattacked with his reserves, driving the Federals back to their original positions.

On the Union right, Burnside ordered a series of assaults over the plain south of town toward a sunken road and stone wall along the base of Marye's Heights. Over the course of the afternoon, one Union brigade after another was hurled against the stone wall, only to be shattered and repulsed by the artillery on the crest of Marye's Heights and the musketry of Longstreet's infantry, standing four deep in the sunken road along its base. In one 600-yard section of the line, more than 30,000 Federals were sent against a position occupied by 7,000 Confederates, who shot them down en masse, leaving 9,000 dead and wounded in their front. It was at this point in the battle that Lee turned to Longstreet and uttered his famous

Battle of Fredericksburg, December 13, 1862. Lithograph by Currier & Ives (Library of Congress)

comment, "It is well that war is so terrible! We should grow too fond of it!"

As the day came to a close, Burnside withdrew his battered brigades to the town while the cries of the wounded, "weird, unearthly, terrible to hear and bear," rose in the bitter-cold winter night. Burnside's determination to personally lead a resumption of the attacks the next day met with stubborn resistance from all of his subordinates, who saw no better prospects for success. Burnside reluctantly withdrew his army across the river over the next two days, pulling up his bridges behind him.

As the armies settled into winter camps, the tactical victory of the Battle of Fredericksburg belonged to Lee. However, the Confederates had lost more than 5,000 men whom they could not easily replace. While the Federals had lost more than twice that number, the steady stream of replacements from the North soon brought the Army of the Potomac back to its original strength. The real legacy of the battle was the devastating impact on the morale of the Northern populace and its army. Hearing of the terrible, tragic losses of men, Lincoln sadly remarked, "If there is a worse place than Hell, I am in it." Seven months would pass, two more commanders would succeed Burnside, and the BATTLES OF CHANCELLORSVILLE and GETTYSBURG would be fought before the Army of the Potomac would regain its *esprit de corps*.

### **Freedman's Savings Bank (Freedman's Saving and Trust Company) (1865–1874)**

Also known as the Freedman's Savings and Trust Company, the Freedman's Savings Bank was chartered as a private corporation in March 1865. The bank was the first financial institution specifically meant for the savings of recently emancipated African Americans. The mutual savings bank was undertaken with a dual mission of providing financial stability for freedpeople and inculcating the middle-class habits needed for them to succeed in a system of free labor. As such, many prominent African Americans and their supporters in Congress welcomed the bank and its educative agenda. Henry Wilson, vice president of the United States under ULYSSES S. GRANT, remarked enthusiastically that the hard-earned dollars of freed people were "just as safe there as if it were in the Treasury of the United States."

Headquartered in WASHINGTON, D.C., the Freedman's Savings Bank opened 37 branches throughout the

South. Each office employed African-American tellers and appointed leaders of the local community to the advisory boards of the various branches. The bank worked hand in hand with other respected black institutions, such as the FREEDMEN'S BUREAU and churches, to encourage customers to use its services. Newspaper advertisements often prominently featured ABRAHAM LINCOLN in the background, giving the distinct impression of government endorsement. John W. Alvord, president of the bank, presided over a conservative institution that received depositors' money and invested in government securities but did not make any loans. This sensible policy won the respect and the business of 100,000 customers and assets of \$4 million. Deposits ranged anywhere from a few pennies to around \$50, but all were welcomed. In addition to individual deposits, many African-American organizations eagerly put their treasuries into the bank.

In 1870 Congress amended the bank's charter to allow speculative investments and loans. Unfortunately, a combination of bad investments, corrupt practices, and the effects of the panic of 1873 led to financial insolvency. In 1875 the Freedman's Savings Bank closed its doors forever. Attempts made by friends of the bank failed to secure full financial restitution to investors. "I pray you to consider us old People," wrote one former customer, "our best life spent in Slavery. . . . Just asking for what we worked for." The failure of the Freedman's Bank, and the inability of former slaves to regain their deposits, explained why many African Americans distrusted financial institutions for decades afterwards.

### **Freedmen's Bureau (Bureau of Refugees, Freedmen and Abandoned Lands) (1865–1872)**

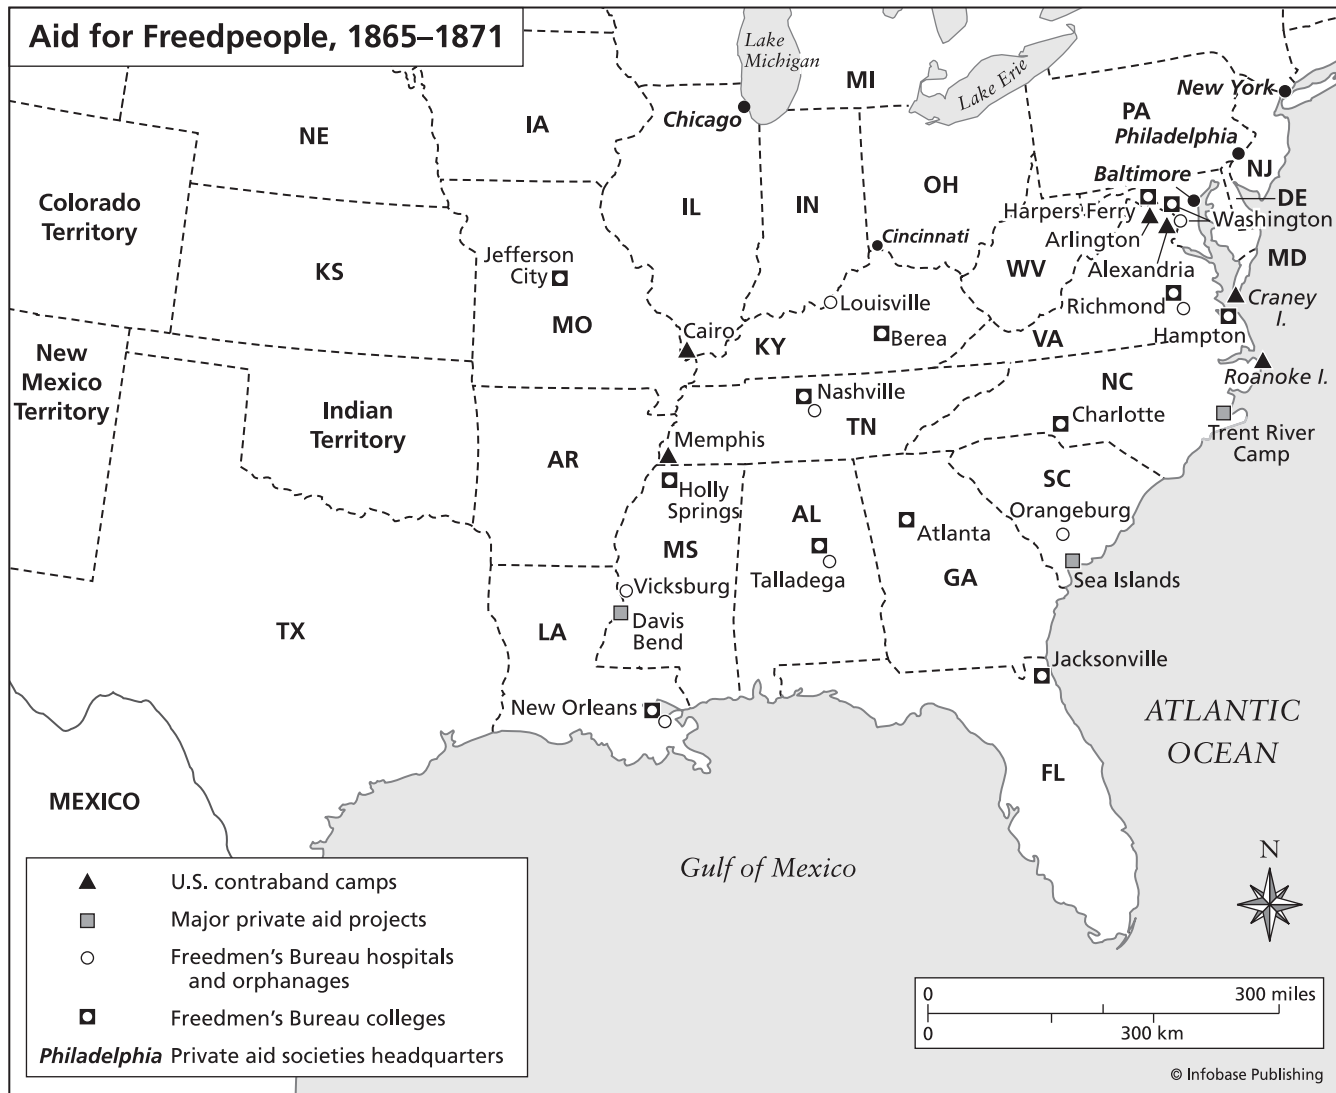

Congress created the Bureau of Refugees, Freedmen and Abandoned Lands, commonly known as the Freedmen's Bureau, on March 4, 1865, to help ex-slaves negotiate the transition from SLAVERY to freedom. The primary task of the Freedmen's Bureau was to transform the South into a free-labor society. The bureau's 900 agents had the nearly impossible task of introducing a free-labor system; educating the freedmen; aiding the ill, insane, aged, and poor; passing judgment on interracial quarrels; and instituting an impartial justice system. The bureau was continually understaffed, underfunded, and subject to opposition from hostile Southern whites. For all of its limitations and weaknesses, however, the Freedmen's Bureau demonstrated the federal government's commitment to making freedom a reality for ex-slaves.

The bureau was designed to meet the needs of ex-slaves at the end of the war. CONTRABAND camps throughout the South strained under the burden of provisioning thousands of freedpeople who had fled their masters. In 1863 the American Freedmen's Inquiry Commission suggested the creation of a permanent institution to meet the needs of war REFUGEES and to help ex-slaves become self-reliant. As a measure of the enormity of the endeavor, more than 21 million rations were distributed to destitute black and white Southerners over the life of the Freedmen's Bureau.

Attached to the War Department, the bureau was charged with distributing aid and helping the former slaves attain land ownership. Commissioner General O. O. HOWARD headed the agency and was assisted by 10 assistant commissioners, one commissioner for each of the

11 former Confederate states. Howard was a CIVIL WAR general, a devout Christian, and a strong advocate of civil rights for recently emancipated slaves. The Freedmen's Bureau legislation authorized Howard, as commissioner, to divide abandoned lands into 40-acre plots for settlement by freedmen families and to set up lease agreements for a term of three years at a low interest rate. At the end of the term, the freedman could purchase the land.

In the South Carolina Sea Islands and along the MISSISSIPPI RIVER, experiments in black landownership during the war sought to establish patterns for settlement. On January 16, 1865, Gen. WILLIAM T. SHERMAN issued SPECIAL FIELD ORDER NO. 15, which set aside the coastal areas of South Carolina, Georgia, and Florida for the freedmen. Within six months, 40,000 freedmen had been

settled on 400,000 acres. In DAVIS BEND, Mississippi, the Freedmen's Bureau established a black colony by leasing land that ex-Confederate president JEFFERSON DAVIS had once occupied to ex-slaves. In Louisiana, bureau agents converted abandoned PLANTATIONS into black communities. Though these settlement plans were temporary measures, the freedmen worked the land, produced profits, and claimed ownership.

Land redistribution was the single most contentious issue during the existence of the Freedmen's Bureau. Not only was land an economic asset and a means for self-sufficiency, but in the mid-19th century, land ownership was equated with independence and citizenship. At its peak, however, the Freedmen's Bureau controlled only 800,000 acres of land, enough to settle just 20,000 families on 40-acre plots, not nearly enough for 4 million former slaves. Compounding the problem of land redistribution was a vigorous campaign by white Southerners to regain titles to the small amount of land that the bureau did possess.

Plans to place freedmen families on 40-acre plots also ran into significant opposition from President ANDREW JOHNSON, who issued an Amnesty Proclamation on May 29, 1865, pardoning former Confederates (except the wealthy and certain political leaders) and restoring their confiscated land. The proclamation specifically ignored the fact that freedmen already occupied much of this land and were working it for themselves. This decision also threatened the solvency of the bureau, since much of its revenue was derived from leased land. Commissioner Howard moved to absorb all confiscated land controlled by other federal agencies into the Freedmen's Bureau and to immediately distribute the land. President Johnson, however, countered by issuing executive orders to restore the land to the original owners.

Understandably, the freedmen felt betrayed by the rescinding of their land grants. They believed that the land belonged to them, since they had made it productive. Congress subsequently took up the issue of land redistribution in the Southern Homestead Act of 1866. It set aside more than 3 million acres of federal land for settlement by the freedmen; however, few were able to secure a homestead. When the law went into effect on the first day of 1867, many freedmen were already tied to yearlong labor contracts that prevented them from making a claim. Others lacked the capital needed for tools and animals or the time needed to clear unimproved land. BLACK CODES also forbade black land ownership and, in some states, restricted leasing. Even the actual land held problems for the freedmen, since most of the federal land was of poor quality. In the end, only 4,000 families settled in Southern homesteads.

Despite failed attempts at land redistribution, the freedmen remained loyal supporters of the Freedmen's Bureau. Although most agents deferred to local planters in

disputes over working conditions or labor contracts, agents like the ones in the South Carolina Sea Islands had the true interests of the freedmen in mind and consistently sided with them against the planters. The freedmen used the bureau as their advocate to resist the power of planters and local white people. Planters pushed for a labor system similar to slavery, with yearlong contracts that tied freedmen to the land. The freedmen resisted by withholding their labor and eventually settling on a system of SHARECROPPING. The Freedmen's Bureau attempted a moderate approach in the transition to free labor. They placed African Americans at work on plantations while providing for schools and protecting them from white violence.

EDUCATION was the greatest achievement of the Freedmen's Bureau. Although it was not among the original directives from Congress, the bureau, along with Northern benevolent societies and state governments, funded black education because the freedmen demanded it. Three thousand schools were constructed by 1869, enrolling 150,000 students. The bureau also assisted in establishing black colleges designed to train African-American teachers for the new schools. The bureau's attempt to protect African Americans from white violence was less successful than its educational program; they were never able to assemble enough troops to prevent violence against African Americans. Furthermore, they relied on Southern state courts for judicial proceedings instead of Freedmen's Bureau courts, which were authorized to intervene in civil rights cases when African Americans were not treated equally.

The Freedmen's Bureau lasted until 1872. However, with the passage of the RECONSTRUCTION ACTS of 1867, most of the responsibilities of the bureau passed over to the military. Foreshadowing the shift toward Radical Reconstruction, Congress passed a bill extending the life of the Freedmen's Bureau over President Johnson's veto in 1866. In one of its last major initiatives, the bureau registered thousands of black voters across the South. The Freedmen's Bureau and the federal government failed to provide land for freedpeople, but many hoped that acquiring the vote would provide the foundation for lasting freedom.

Institutionally, the Freedmen's Bureau was an example of the expanding powers of the nation-state in the wake of the Civil War. It marked one of the first times that federal power was used to provide for the general welfare of a segment of the population. Despite its pioneering mandate, the bureau was less than successful in its goal to help freedmen make themselves into free and equal citizens. In fairness, material resources and manpower were never sufficient to meet the needs of the 4 million ex-slaves, and most white Southerners fought the bureau's efforts to up-lift the freed people at every step. Though slavery was destroyed, white planters hoped to recreate a subservient labor force to work the cotton fields. Even Freedmen's Bureau agents

## 162 Free-Soil Party

denigrated the capacity of freedmen to become independent proprietors. Nevertheless, the bureau established a legacy of federal commitment to the welfare of African Americans.

### **Galveston, Battle of** (January 1, 1863)

At the outset of the CIVIL WAR, Galveston was the second largest city in Texas. Home to 7,000 people, the seaport was a major exporter of cotton—more than 200,000 bales in 1860. It was also one of the South's leading industrial centers, with two iron foundries and several facilities capable of manufacturing boats and other equipment for shipping and fishing.

During the Civil War, Galveston continued to be economically important, serving as a major port for receiving imported goods from blockade runners. Galveston also had strategic importance to both the Confederacy and the Union: As the South's westernmost major port, it had the potential to be an important base of operations for the UNION NAVY's blockade, if captured. Despite its significance, Galveston received scant military attention for the early part of the war. Given the Confederacy's manpower needs, there were no troops to spare for the town's defense, and by late 1861 it was guarded by only a handful of local militiamen. Union ships would occasionally bombard the town, but they made no serious attempt at capture until October 1862. Finally, in that month, a small contingent of Union ships and soldiers managed to overtake Galveston with relatively little bloodshed.

Once Galveston had been taken, 260 members of the 42nd Massachusetts Infantry Regiment were sent to fortify the town and prepare for a Confederate counterattack, which came in the early hours of New Year's Day, 1863. A small and disorganized group of Confederate troops and ships under Maj. John Magruder invaded from both land and sea. After a brief period of intense fighting, the Battle of Galveston ended with a Union retreat. The Confederate losses were 30 killed, 130 wounded. The Union had 21 killed, 36 wounded, and 250 captured.

Confederate troops held the city for the rest of the war. The last two years of the war were marked by a series of crises in Galveston: There were two near-revolts of underfed and undersupplied Confederate troops and a severe out-

break of yellow fever in 1864 that killed 250 people. Nonetheless, it continued to be an important port for blockade runners, with as many as nine or 10 ships in port at any given time. Galveston remained open for business until it surrendered on June 5, 1865. The town's story illustrates the logistical difficulties the Union faced in effectively blockading a coastline as long as the Confederacy's.

### **Garnett, Richard B.** (1817–1863) *Confederate general*

Confederate general Richard Brooke Garnett was born on November 21, 1817, at the family mansion at Rose Hill in Essex County, Virginia. His family was part of Virginia's influential Tidewater gentry. He graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1841. He served as an infantry officer in Florida's Second Seminole War and was considered a capable and affable leader.

Garnett was commissioned a major of artillery in the Confederate service on November 14, 1861. He rose to brigadier general in the provisional army and then succeeded Gen. THOMAS J. JACKSON as head of the "Stonewall Brigade." Garnett engaged in his first action at Kernstown, Virginia, on March 23, 1862. Out of ammunition and nearly surrounded by Union forces, he ordered an unauthorized retreat that forced Jackson's entire army to fall back. He was consequently arrested by Jackson and removed from command. A court-martial was pending but was never officially sanctioned.

Garnett resumed command in August 1862, taking charge of a Virginia brigade in Gen. GEORGE E. PICKETT's division. Vowing to clear his reputation, he fought with

distinction at the Battles of South Mountain and ANTIETAM in September 1862. Garnett was next engaged at the BATTLE OF GETTYSBURG, where he was so ill that he wore a heavy topcoat despite the summer heat. On July 3, 1863, Pickett's division was ordered to spearhead a final charge against the Union line, and Garnett, unwilling to remain a passive spectator, painfully mounted his horse and accompanied his brigade. He was apparently killed at the head of his men, only 20 yards from Union positions atop Cemetery Ridge, but his body was never recovered. It is assumed that Garnett's remains were stripped by Union forces and buried in a common grave. Many years later his sword turned up at an antique shop in Baltimore, Maryland.

**Garrison, William Lloyd** (1805–1879) *abolitionist, journalist*

Militant abolitionist William Lloyd Garrison was born in 1805 in Newburyport, Massachusetts, the son of Abijah Garrison and Frances “Fanny” Lloyd. Abijah abandoned the family when William was young, and Fanny was left to raise three young children on her own. The family's finances were tight, and young William was regularly dispatched to beg for scraps from neighbors' tables. From this he developed a strong sense of compassion for the poor. He was also heavily influenced by his mother's devout Baptist convictions.

In 1818 the 13-year old Garrison was apprenticed to the editor of the *Newburyport Herald*. He completed his apprenticeship in the mid-1820s and moved on to serve as editor of a series of newspapers in Massachusetts and Vermont. Each of these ventures failed, as readers were put off by Garrison's antigovernment editorials. In 1829 Garrison accepted a post as the editor of *The Genius of Universal Emancipation*, published in Baltimore, Maryland. In that capacity, Garrison wrote an editorial that condemned Massachusetts businessman Francis Todd as a “murderer” because he had participated in the slave trade. Todd sued, and Garrison was jailed.

Garrison's imprisonment changed his fortunes. For 49 days, Garrison remained in his cell, publicizing his “martyrdom.” By the time he was released, he had become a hero among New England's rapidly growing abolitionist community. Garrison returned to Boston and promptly founded a newspaper, *The Liberator*. In his first issue,

published in January 1831, Garrison promised to be “harsh as truth, and uncompromising as justice.” He served notice that “I will not retreat an inch, AND I WILL BE HEARD.” *The Liberator* quickly became the preeminent abolitionist newspaper, and it would remain so throughout the 1840s and 1850s.

Garrison's message to readers of *The Liberator* was that SLAVERY had to be eliminated through immediate EMANCIPATION of the slaves. He believed that to enslave human beings was a sin and that both Northerners and Southerners were complicit. Garrison rejected colonization, which was the relocation of freed slaves back to Africa. In his 1832 pamphlet “Thoughts on African Colonization,” Garrison explained that he found colonization to be both impractical and racist. Instead, he thought the slave problem should be solved through “moral suasion,” the use of petitions, speeches, newspapers, and pamphlets to peacefully turn public opinion against slavery.

In 1833, Garrison reached the height of his influence. He helped to found the American Anti-Slavery Society, a biracial, gender-inclusive organization dedicated to promoting abolitionist activities throughout the United States. Garrison authored the society's Declaration of Sentiments, which emphasized nonviolence and urged abolitionists to do whatever necessary to cause their message to be heard. In 1834, shortly after completing the Declaration of Sentiments, Garrison married Helen Benson.

During the latter part of the 1830s, Garrison grew increasingly radical. He was attacked by a mob in 1835 and had to be rescued from being lynched. A number of other events—including the murder of abolitionist Elijah Lovejoy, Congress's tabling of all antislavery petitions, and the failure of church leaders to join in the abolition movement—left Garrison disillusioned. He came to believe that government and religious institutions had become corrupted and needed to be overthrown. He condemned Christian scripture as “superstition” and vowed that he would only follow the “pure religion of Jesus' perfect example.” He called the U.S. Constitution “a covenant with death—an agreement from hell” and suggested that the states without slavery should secede from the Union.

Garrison's increased militancy created serious tensions within the abolitionist movement. A number of prominent Garrison supporters were put off by what they saw as blasphemy. Others disagreed with Garrison's unwillingness to work within the political system. Some abolitionists did not approve of Garrison's belief in women's suffrage. And a number of African-American abolitionists, including FREDERICK DOUGLASS, were angered by Garrison's paternalism. He was willing to fight for African-Americans' freedom but was generally unwilling to make them equal partners in the struggle by appointing them to leadership positions within the American Anti-Slavery Society.

William Lloyd Garrison (Library of Congress)

In 1840 the split between “Garrisonian” and “anti-Garrisonian” factions became official, as a number of prominent abolitionists resigned from the American Anti-Slavery Society and founded the Foreign Anti-Slavery Society. Others left to found the Liberty Party, the United States’s first antislavery political party. In seven years, Garrison had gone from being the leader of the ABOLITION movement to being on the fringes. He continued to generate attention with *The Liberator* and with outrageous gestures like publicly burning copies of the U.S. Constitution, but he had little influence on the antislavery movement.

During the CIVIL WAR, Garrison began to back off from his nonviolent philosophy, conceding that the use of force was sometimes necessary. He also came to be a supporter of ABRAHAM LINCOLN. When the war ended and the THIRTEENTH AMENDMENT was adopted, Garrison told the readers of *The Liberator* that his work was at an end. Although he supported Radical RECONSTRUCTION, he evinced little interest in joining the fight for African-American civil rights. At the end of 1865, Garrison shut down his newspaper and resigned from the American Anti-Slavery Society. By 1866 his career as a public figure was essentially over. Garrison devoted the rest of his life

to the care of his wife and four sons before dying in New York in 1879.

### German-American regiments

In 1860 ethnic Germans in the United States numbered about 1.3 million, the large majority of whom lived in Northern urban areas, and many thousands of whom were recent immigrants. The substantial and visible participation of German Americans in the CIVIL WAR helped to unite the German-speaking communities in many cities and contributed substantially to the preservation of the German identity in America.

Perhaps the largest impetus in the formation of all-German military units in the Union was the persuasion of ethnic political leaders, although language, social ties, community spirit, and location surely contributed. Immigrants who were not actually from Germany but who spoke German or Germanic languages (such as Swiss, Austrians, Poles, Hungarians, Czechs) had similar experiences or participated in the larger “German” context. German-American sports clubs, or Turnvereine, were particularly active in the formation of ethnic German units. “Turners,” as members were called, were well geared for the task; they were men of youthful vigor, used to physical training, organized, and involved. Some all-German units were composed solely of Turners.

The vast majority (85 percent) of ethnic Germans who served the Union cause fought in nonethnic units under American officers. However, at least 145 units were either all German or nearly so. They were formed mostly in Northern American cities, namely NEW YORK CITY, Chicago, St. Louis, Cincinnati, Pittsburgh, PHILADELPHIA, Milwaukee, and Indianapolis. Of the approximately 200,000 Germans who participated in the Civil War for the Union, about 5,000 were known as “48ers.” These men had fought for German unification and democracy in Europe during insurrections of 1848–49. Several 48ers rose through the ranks of the UNION ARMY and led all-German regiments. Friedrich Hecker led the 24th and 82nd Illinois Infantries, raised in Chicago. August Willich commanded the 32nd Indiana, possibly the most distinguished German unit. Franz Sigel led the Third Missouri Infantry and

eventually rose to the rank of brigadier general. He was a hero to the ethnic Germans, who often sang, "I fights mit Sigel." Peter Osterhaus's 12th Infantry, perhaps the most distinguished of the 18 German units of Missouri, included Henry Kircher, who left LETTERS written in German and English revealing daily life in a German unit.

Although Germans were the second-largest ethnic group in the Confederacy, behind the Irish, there were no all-German Confederate units. However, many units, especially from New Orleans, Charleston, RICHMOND, and Memphis, contained large numbers of Germans.

The ethnic German units of the Union received both criticism and praise. At Chancellorsville, two-thirds of the XI Corps were German or "mixed nationality" regiments and, when routed, they were tagged the "Flying Dutchmen," non-Germans included. The *New York Times* credited German soldiers from preventing a total rout at the SECOND BATTLE OF BULL RUN by remaining to fight amidst a chaotic retreat, and WILLIAM T. SHERMAN singled out the 32nd Indiana at the BATTLE OF SHILOH for its valiant efforts.

### Gettysburg, Battle of (July 1–3, 1863)

In a major battle at Gettysburg, Pennsylvania, the UNION ARMY of the Potomac under Gen. GEORGE GORDON MEADE defeated the CONFEDERATE ARMY of Northern Virginia commanded by Gen. ROBERT E. LEE. By reputation the most important Union victory of the war and the most crushing Confederate defeat, Gettysburg was dubbed the "High Water Mark of the Confederacy" and was seen by many observers as a turning point in the fortunes of both sides.

In May 1863 Confederate president JEFFERSON DAVIS, his cabinet, and Gen. Lee met in RICHMOND, VIRGINIA, to address the South's deteriorating strategic situation. The majority of the group voted to detach reinforcements from the Army of Northern Virginia and send them west to help lift the siege of Vicksburg. But Lee disagreed. He pressed for a second invasion of the North, arguing that an offensive would draw Union forces far away from the Confederate capital and allow his troops to gather provisions in the lush agricultural regions of Pennsylvania. Davis was persuaded, and preparations began for a second offensive through enemy territory.

In June 1863 Lee marched his army into Maryland and Pennsylvania to forage for supplies and to draw the Army

of the Potomac, then under Gen. JOSEPH HOOKER, away from Virginia. Lee hoped to win a decisive battle on Northern soil that would undermine Northern morale and hasten the end of the war. His army of about 75,000 men consisted of three infantry corps (each with five artillery battalions attached) under the command, respectively, of Gens. JAMES LONGSTREET, RICHARD S. EWELL, and AMBROSE P. HILL, along with two cavalry brigades (each with artillery attached) under Gen. J. E. B. STUART.

Hooker's army numbered roughly 90,000 men organized into seven corps of infantry and artillery, one corps of cavalry and artillery, and 21 batteries of reserve artillery. When Lee moved north, Hooker cautiously followed, keeping his forces between Lee and WASHINGTON, D.C. The Confederates, their morale high, marched up the Shenandoah Valley and captured the Union garrison at Winchester on June 14. Ewell's infantrymen crossed the Potomac River at Williamsport on June 15, advancing toward the Cumberland Valley and plundering Northern towns and farms as they went.

Although its cavalry corps nearly defeated Stuart's troopers in the Battle of Brandy Station on June 9, the Union army was not able to impede Lee's northward movement. On June 25, Hooker sent three corps into Maryland under the command of Gen. John F. Reynolds, but he had moved too late, and by June 27, Hill's and Longstreet's corps reached Pennsylvania. However, Lee had lost track of Stuart, whose cavalry took an indirect route around the Union army and failed to provide Lee with intelligence about enemy movements. In fact, Stuart was responding to discretionary and somewhat ambiguous orders from Lee, which allowed him a certain strategic latitude. Some have contended that this was one of the biggest blunders of Lee's career, while others have put the blame squarely on Stuart's shoulders.

On June 28 President ABRAHAM LINCOLN replaced Hooker with Gen. Meade, the able V Corps commander. While Meade gathered his forces in northern Maryland, Lee ordered his own corps to concentrate in southern Pennsylvania. He had no idea that Union forces were perilously close and less scattered than his own deployments. On June 30 Confederate infantry encountered Union cavalry in Gettysburg, a town of about 2,400. Two Confederate divisions, commanded by Gens. Henry Heth and William Dorsey Pender, returned to Gettysburg on July 1. At about 10 A.M., Heth's men exchanged fire with dismounted Union cavalry, commanded by Gen. John Buford, west of town. Meade's field commander, Gen. John Reynolds, who had ordered the I and XI Corps to Gettysburg in support of Buford, was killed while hurrying his infantry into action near Herbst's Woods. Gen. Abner Doubleday, commander of the III Corps, assumed command of the I Corps. Gen. O. O.

HOWARD of the XI Corps, who had not yet reached Gettysburg, assumed field command of the Union left wing.

Reynolds had earlier sent word to Meade that he would hold off the Confederates as long as possible to allow the Union infantry time to arrive in force and occupy a defensive position on the hills south and east of Gettysburg. Gen. Howard, arriving with the XI Corps at about noon, sent two I Corps divisions to reinforce Doubleday on McPherson's Ridge, positioned two XI Corps divisions to guard the approaches north of town, and kept a third division in reserve on Cemetery Hill. Like Reynolds, Howard recognized that in a full-scale battle the advantage would go to the side that held the hills south of Gettysburg.

Gen. Lee, arriving on the field at about 2 P.M., ordered Heth and Pender to renew their assault on McPherson's Ridge. In some of the deadliest fighting of the war, Union forces stoutly resisted successive Confederate attacks before falling back. Reaching Gettysburg from the north, two divisions of Ewell's corps launched coordinated assaults on divisions from the Union I and XI Corps. With his lines hard pressed and no sign of reinforcements, Howard ordered a Union retreat through town to Cemetery Hill. Gen. WINFIELD SCOTT HANCOCK of the II Corps, Meade's choice to replace the fallen Reynolds as field commander, arrived in time to help rally the Union troops against a renewed Confederate attack. In light of the battered condition of Hill's corps, however, Ewell decided to forgo an assault. This hesitancy proved another major Confederate mistake, because it granted retreating Federal forces a badly needed respite to rally along a nearby rise of hilly, rocky terrain.

Meade reached the field late on July 1. By the next morning, all of the Union army except for the VI Corps was at or near Gettysburg. The Union forces occupied an excellent defensive position—a hook-shaped line extending from Culp's Hill southeast of town, north and west through Cemetery Hill, then south down the length of Cemetery Ridge, and ending on a rocky prominence called Little Round Top. Meade, an engineer by training, used his “surveyor's eye” to deploy his forces to maximum advantage across the rough terrain they occupied and make it work against the enemy. A mile to the west, two Confederate corps, those of Hill and Longstreet, occupied Seminary Ridge, which paralleled Cemetery Ridge, while Ewell's corps occupied the town of Gettysburg itself. Determined to remain on the offensive after the success of the previous day, on July 2 Lee ordered Longstreet to attack the Union left with two fresh divisions. Ewell was ordered to launch a simultaneous assault against the Union right. The entire operation came over the strenuous objections of Longstreet, who had argued against fighting Union forces on ground of their choosing. He instead sought a wide flanking movement around the enemy's left to turn them. Lee would not hear of it, however, and the attack went forward as planned.

Battle of Gettysburg, July 1–3, 1863 (*Library of Congress*)

In a vain attempt to avoid detection by Union signalmen, Longstreet's divisions took a circuitous route to the south end of the field that delayed the Confederate assault until late afternoon. When Longstreet's men finally attacked the enemy's left, they unexpectedly encountered Gen. DANIEL E. SICKLES's III Corps at the Peach Orchard and the Emmitsburg Road. Against orders, Sickles had advanced his corps to what he believed was a better defensive position than the one Meade had assigned him on Cemetery Ridge. Discovering the situation as the Confederate attack began, Meade ordered George Sykes's V Corps to support Sickles's vulnerable line. When Meade's chief engineer, Brig. Gen. Gouverneur K. Warren, reported that Little Round Top was undefended, Sykes quickly sent Col. Strong Vincent's brigade to occupy the hill. This critical position was saved for the Union by the courageous stand of Vincent's outnumbered brigade, including Lt. Col. JOSHUA LAWRENCE CHAMBERLAIN's 20th Maine Regiment, which held the hill until reinforcements arrived. Part of this gallant stand included a surprise bayonet charge down the bloodied slope by the 20th Maine; the charge broke the exhausted Confederates and prevented the Union flank from being turned.

In front of Cemetery Ridge, Sickles's infantry was overwhelmed by the Confederate onslaught and suffered heavy casualties. Reinforcements from the V Corps delayed the III Corps's retreat from its forward position long enough for Meade to reestablish a thin defensive line on Cemetery Ridge. Gen. Hancock sent regiments from his II Corps into the fray to stem the Confederate charge on the left, leaving an opening in the Union line that the Confederates were unable to exploit. Hancock and Meade rushed troops from the I and II Corps to repair the broken Union line and turn back the Confederate assault.

On the Union right, Ewell was unable to coordinate his attack with Longstreet's and so his troops did not take advantage of weaknesses in the federal line. Henry Slocum's XII Corps had occupied breastworks on Culp's Hill, but Meade borrowed two of its divisions to help shore up his line on Cemetery Ridge, leaving a single brigade to defend the Union works. When Ewell finally attacked at 8 P.M., darkness and the inherent strength of the Union position allowed the outnumbered Federals to hold off three Confederate brigades until reinforcements from the I and XI Corps arrived. Meanwhile, on Cemetery Hill, Union defenders turned back an attack by Early's division.

The Confederates had fought hard on July 2 but could not dislodge the Union army from its strong defensive position. Lee intended to try again on the following day to launch simultaneous assaults on Culp's Hill and on the Union left. Meade disrupted Lee's plan by attacking first. The Union XII Corps, reinforced by men from the I and VI Corps, had reoccupied the breastworks on Culp's Hill, and at dawn Union guns opened a barrage on the Confederates at their front.

Forced to change course, Lee decided to attack the Union center, which had been briefly breached the day before. However, Meade had anticipated Lee's move at a strategy meeting the night before and had strengthened this vulnerable section of the Union defensive line with fresh infantry and artillery units. Preparations for an artillery barrage and infantry assault took all morning. At 1 P.M., as many as 170 Confederate guns opened a massive two-hour barrage on the Union line. Confederate gunners damaged some of their targets in the Union center, but many shells overshot their targets. Returning fire, Union gunners caused significant casualties among Confederate infantry massed for the assault. When Union artillery chief Henry J. Hunt stopped firing to conserve ammunition, Confederate artillery commander Col. E. P. ALEXANDER signaled Longstreet to begin the assault.

Longstreet reluctantly sent the infantry forward across nearly a mile of open ground. Three Confederate divisions—commanded by Gens. GEORGE E. PICKETT, James Pettigrew, and Isaac Trimble—took part in the attack, which became known to history as "Pickett's Charge." The 12,000 men who participated in the famous assault suffered casualties in excess of 50 percent. Faced with deadly canister fire the moment they came within range of Union artillery, only a few thousand Confederates made it to the Union line on Cemetery Ridge. Those who did make it were met with rifle fire and double canister. As his infantry retreated back toward Seminary Ridge, Lee told them, "The fault is mine, but it will be right in the end."

The Battle of Gettysburg ended with a cavalry engagement three miles east of town. At about 3 P.M. on July 3, Stuart's cavalry, which had arrived the day before, attempted

to attack the Union rear. In one of the largest cavalry fights of the war, Brig. Gen. David M. Gregg's Union troopers fought Stuart's brigades to a draw. The Michigan brigade of Gen. GEORGE A. CUSTER particularly distinguished itself throughout this encounter with several hard charges that brought Confederate advances to a halt and convinced the otherwise indomitable Stuart to retreat.

On July 4, Lee's army waited in the rain for a possible counterattack. After none materialized, the Confederates began their retreat to Virginia that night. By July 7 Lee had reached the rain-swollen Potomac River but was unable to cross. Meade followed Lee by way of Frederick, Maryland, where he met his supply trains. The slow-moving Union army reached the Potomac too late to prevent the Confederates from crossing on July 14.

Casualties during the Gettysburg campaign totaled more than 20,000 for the Confederate army and more than 23,000 for the Union army. In the battle's aftermath, the question of why the Confederate army lost took precedence over the question of how the Union army won. Southern loyalists were slow to blame Lee for his costly decision to take the tactical offensive. Lee apologists condemned Stuart for being absent during most of the campaign and criticized Longstreet for launching his July 2 attack on the Union left later than Lee had intended. Confederate blunders do not entirely explain the Union victory, however. Meade and his army won the battle because of effective leadership and tenacious fighting. Wrongly accused of wanting to abandon the field, criticized for allowing Lee's defeated army to return to Virginia, and embroiled in controversy over the merits of Sickles's actions on July 2, Meade never received the credit he deserved for his leadership at Gettysburg. President Lincoln made little effort to disguise his disappointment that Meade did not vigorously pursue the defeated enemy. But Meade, cognizant of his own heavy losses and his highly capable opponent, never regretted his decision.

In November 1863, the Union states established a federal cemetery at Gettysburg that was dedicated by Lincoln. After the war, the battlefield became a popular tourist site, covered with MONUMENTS and preserved as a national military park.

**Gettysburg Address** (November 19, 1863)

President ABRAHAM LINCOLN delivered the Gettysburg Address, one of his most memorable public speeches, on November 19, 1863. Lincoln's brief remarks officially dedicated the Soldiers' National Cemetery at Gettysburg, Pennsylvania, where in July 1863 the UNION ARMY of the Potomac had won a major victory over the CONFEDERATE ARMY of Northern Virginia. The federal cemetery that Lincoln dedicated on the battlefield would hold the bodies of thousands of Union soldiers who had died as a result of the fighting.

Contrary to popular myth, Lincoln wrote his address several days in advance of his trip to Gettysburg, carefully crafting his remarks in the full knowledge that they would be widely reported in the Northern press. Published accounts of the speech contained slight variations in wording, and Lincoln continued to edit the text when he copied it out for admirers. Lincoln's final version read:

Four score and seven years ago our fathers brought forth on this continent a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field, as the final-resting place of those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense we can not dedicate—we can not consecrate—we can not hallow this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.

Lincoln used the Gettysburg Address to place his interpretation of the battle and the war before the American people. He framed the war with his own vision of the future—a reunited country grounded in its Revolutionary heritage but different from what had gone before. By proclaiming a devotion to freedom, equality, and republican

government as the nation's guiding philosophy, he defined the principles for which Union soldiers had died and around which he hoped the country might be rebuilt. In speaking of “the unfinished work” that the soldiers at Gettysburg had begun, he expressed optimism that something profoundly good might yet come from the CIVIL WAR's horrible devastation.

This good, though, would result only from Americans' commitment to the cause of freedom within a restored republic. Lincoln admonished his fellow Americans that preserving the Union through victory on the field would not be enough. A rededication to first principles, “a new birth of freedom,” would be required to make the victory worthy of its awful price. Americans, Lincoln urged, must resolve to fight on in the cause of freedom so that Gettysburg's dead “shall not have died in vain.”

If Lincoln sought to rededicate the United States to the ideals of liberty and equality, however, his expansive constitutional interpretation quickly foundered on the political compromises of the postwar period and the romantic lure of sectional reconciliation. In the end, Lincoln's attempt to remake the country on the basis of a broad interpretation of the Declaration of Independence faltered in the face of white Americans' eagerness to remember the war as a tale of glory rather than a struggle for freedom.

**Gone With the Wind** (1939)

The motion picture *Gone With the Wind* depicted Southern life in the antebellum and CIVIL WAR years. It was based on Margaret Mitchell's romantic novel *Gone with the Wind* (1936). An immediate best seller, the book naturally caught the attention of various Hollywood producers, who began a bidding war to obtain the film rights. These were won by David O. Selznick, who paid an unprecedented \$50,000 to make the film through United Artists. Because the leading man of his choice, Clark Gable, was contracted to Metro-Goldwyn-Mayer at the time, Selznick agreed to distribute the film through MGM and grant it an equal share of the profits.

In a much-publicized campaign to cast an appropriate leading lady, several known actresses such as Katharine Hepburn and Bette Davis were turned down in favor of a relatively unknown British contestant, Vivien Leigh. The film itself was known as a producer's movie because the demanding Selznick went through three directors—George Cukor, Victor Fleming, and Sam Wood—and

several scriptwriters before production was finished. He closely monitored day-to-day production, insisting on last-minute changes to dialogue, photography, and other facets to give the final product a distinct, “handcrafted” look. The expensive process of three-strip Technicolor was chosen to enhance the sumptuous sets and visuals.

The movie debuted in Atlanta, Georgia, on December 15, 1939. It garnered rave reviews despite its two-and-a-half-hour length and general compression of the novel. Within a year it had established itself as a Hollywood classic, winning nine Academy Awards (including best picture), the most any film had received to that time. For many years *Gone With the Wind* reigned as the world’s most profitable motion picture, being continually rereleased in 1947, 1954, 1961, and 1967, 1989, and 1998. It was not eclipsed as a moneymaker until the release of *The Sound of Music* (1965). Despite the worldwide popularity of *Gone With the Wind*, historians and sociologists have condemned its condescending depiction of antebellum PLANTATION life as demeaning and naive if not outright racist. Union soldiers are portrayed as butchers, African Americans are shown as happily servile to whites, and women—with the exception of fiery Scarlett O’Hara—are little more than decoration for a male-dominated society.

Still, the story resonated with film audiences, regardless of gender and racial composition, and stirred them with magnificent panoramas of a sanitized “Old South” and the highly impressive sequence of Atlanta in flames. More than any other film, *Gone With the Wind* has shaped moviegoers’ perception of the Civil War in a pro-Confederate light. Despite its racial baggage, in 1977 it outpolled such classics as *Citizen Kane* (1941) and *Casablanca* (1942) as the greatest American film in a vote by the American Film Institute. The original 35-mm negative is stored in a golden canister.

**Gordon, John B.** (1832–1904) *Confederate general, politician*

John Brown Gordon was one of the Confederacy’s most respected generals and a politician who became a symbol for the newly reunited United States. Gordon was born in Upson County, Georgia, on February 6, 1832. Briefly a stu-

dent at the University of Georgia, he quit school to study law. When the CIVIL WAR erupted in April 1861, he joined a company of mountain men called the “Raccoon Roughs” as their captain. Despite his lack of professional military training, Gordon adjusted well to military life, and in April 1862 he advanced to colonel.

He fought in the PENINSULAR CAMPAIGN of 1862 under Gen. Richard Rodes and saw active duty at the Battles of South Mountain and ANTIETAM. At the latter, on September 17, 1862, a seriously wounded Gordon and his brigade held the Sunken Road and fended off repeated attacks by numerically superior Union troops. He fought at the BATTLES OF CHANCELLORSVILLE and GETTYSBURG in 1863 and performed exceptionally well during the 1864 OVERLAND CAMPAIGN against Gen. ULYSSES S. GRANT. In the Battle of SPOTSYLVANIA on May 12, 1864, Federals under Gen. WINFIELD S. HANCOCK overran the Confederate salient at the “Mule Shoe” and threatened to break their line. Gordon’s prompt counterattack drove them back, earning a promotion to major general. He accompanied JUBAL A. EARLY’s II Corps throughout the famous Shenandoah campaign of the summer and fall of 1864.

Gordon led the final Confederate offensive of the war against Fort Stedman on March 25, 1865. Defeat here signaled the collapse of RICHMOND, VIRGINIA’s defenses, and he conducted a tenacious rearguard action that allowed the Army of Northern Virginia to escape intact. He next fought at Saylor’s Creek on April 6, where most of the II Corps was captured or destroyed. Afterward Gen. ROBERT E. LEE appointed Gordon to draw up his documents of surrender to Gen. Grant on April 12, 1865. He also had the distinction of leading the bedraggled Confederates out of camp at APPOMATTOX, COURT HOUSE, VIRGINIA, where they exchanged salutes with the Union troops lining the roads.

Returning to Georgia, Democrat Gordon embarked on a long and successful political career. Elected to the U.S. Senate in 1873, he was the first former Confederate to serve in that body. He became a leading voice for national reconciliation and urged fellow Southerners to work wholeheartedly for reunification. As a spokesman for the “New South,” Gordon was also a proponent of modernization and industrialization, helping his region expand beyond its long agrarian tradition. In 1886 Gordon was elected GOVERNOR of Georgia, and two years later he served again in the Senate. Preserving his links to wartime service, Gordon also became the first commander in chief of the United Confederate Veterans in 1890. He still functioned in this capacity at the time of his death in Miami, Florida, on January 9, 1904.

**Gorgas, Josiah** (1818–1883) *educator, Confederate general*

Confederate brigadier general and educator, Josiah Gorgas was born on July 1, 1818, in Running Pumps, Pennsylvania, to Joseph Gorgas and Sophia Atkinson Gorgas. He graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1841, ranking sixth in his class, and was assigned to the Corps of Ordnance, the branch of the army concerned with military supplies and materials. In the Mexican-American War he played a major role in positioning the American guns used to bombard Mexican positions at Veracruz, and he also commanded the Ordnance Depot supporting Scott's campaign to Mexico City.

Following the war, he served at several arsenals including Mount Vernon, Alabama, where he met and married Amelia Gayle, daughter of a prominent state politician. Dissatisfied by internal U.S. Army politics and strongly pro-Southern, he resigned his commission in the U.S. Army and accepted appointment as Confederate chief of ordnance in April 1861.

Faced with major difficulties from the beginning, Gorgas worked hard to coordinate the several Southern states' ordnance agencies into a unified system. He worked quickly to establish Confederate-controlled arsenals and armories and to coordinate the contracts of various private firms. He based his department on a decentralized model that depended on the talents of subordinate officers who had wide discretion in the administration of their depots and arsenals. By 1863 Gorgas had done as well as anyone could to supply the Confederacy with arms and equipment. Proudly, he recorded in his diary: "Where three years ago we were not making a gun, pistol nor a sabre, no shot nor shell—a pound of powder—we now make all these in quantities to meet the demand of our large armies." As the war dragged on, however, Gorgas encountered increasingly difficult problems as raw materials became less available, labor shortages became acute, and important sites of production fell to Union advances.

Following the war, Gorgas purchased and ran the Briarfield Iron Works in Alabama. He sold the facility in 1869 and accepted appointment at the University of the South, where he played a vital role in establishing the school's curriculum and physical plant. In August 1878 he accepted the presidency of the University of Alabama. Gorgas died in Tuscaloosa, Alabama, on May 15, 1883.

## governors

The chief executives of a state, governors are elected every four years (in a few states, every two years), and the position involves a combination of executive, legislative, and judicial duties. Like most of the top political leadership during the 19th century, governors were likely to be former lawyers, with extensive political experience in local and state offices, and more than a few would have seen some military action. Every governor had control over his state's militias, and during the CIVIL WAR, this power made them indispensable to the national war effort in both the CONFEDERATE STATES OF AMERICA and the United States of America.

Governors, Northern and Southern, exercised great power during the war. Among other duties, they were commanders in chiefs of their state forces. As such, they were responsible for marshalling the state's manpower, resources, and population for the war effort. The midwestern governors were notable for their drive to enlist troops for the Union. In 1861 early volunteer regiments raised by Governor William Dennison of Ohio and Governor Oliver Morton of Indiana entered western Virginia. GEORGE B. MCCLELLAN of Ohio led the force, which helped West Virginia separate itself from Virginia during the war. The fact is that going into the war, most CITIZEN SOLDIERS had a stronger allegiance to their state than the national government. The regiment, identified by state, was the basic fighting unit of the Civil War.

Just like President ABRAHAM LINCOLN in WASHINGTON, D.C., and President JEFFERSON DAVIS in RICHMOND, VIRGINIA, the governors were also charged with explaining to the people of the state why men should enlist, why they should continue to fight, and why they should continue to support and to pay for the war. In the four years of the Civil War, governors raised money and troops, appointed officers, fostered and encouraged manufacturing, and enlarged and expanded social welfare programs for soldiers and soldiers' families.

Southern governors were mainly former Democrats who were strong secessionists before the war. Several Southern governors seized federal property in their state,

such as Governor Henry Rector of Arkansas, who captured a federal arsenal and allowed the placement of Confederate guns even before his legislature convened to consider SECESSION. The governor of North Carolina seized three forts and the arsenal in Fayetteville.

On the other hand, in slave Maryland, Unionist governor Thomas Hicks delayed action by the Southern-rights legislature by refusing to call it into session, thus helping to save his state for the Union. In the border state of Missouri, proslavery governor Claiborne Fox Jackson squared off with Congressman FRANCIS P. BLAIR, a Unionist; violence and confusion reigned in the divided state. In fact, Jackson's government existed in exile for most of the Civil War, and Missouri remained in the Union column. Governor Beriah Magoffin of Kentucky hoped to uphold his state's tradition of mediation by requesting a conference of border states that could seek a peaceful solution. Southern invasion early in the war brought the state over to the North's side.

The powerful STATES' RIGHTS sentiments that led to secession from the Union hindered centralization efforts by President Davis and the Confederate command. Governors such as JOSEPH E. BROWN of Georgia and Zebulon Vance of North Carolina supported the war aims of the Confederacy but vigorously opposed several of the total-war measures used to attain them, which each man saw as occurring at the expense of his state and its population. Despite their resistance to many of President Jefferson Davis's nationalizing ordinances, both Brown and Vance were popular and effective governors of their respective states. In particular, they took excellent care of their states' soldiers and the folks left behind by dramatically expanding programs for relief and welfare.

When Davis enacted the first CONSCRIPTION law in American history (1862), it exempted certain civil servants. Brown and Vance vociferously opposed the draft and vastly increased the number of exempt civil servants in their states. In fact, the two states eventually contained 92 percent of all such exemptions. Brown went even further by unilaterally extending the exemption clause of the draft, insisting that militia officers be included. He then appointed hundreds of new officers.

States' rights governors often refused to share their resources and supplies with the national army. Armaments seized from federal arsenals were a particular sore point. Southern governors maintained that they needed to keep guns and troops in their own states to guard their borders and deter slave uprisings rather than sending them to the fronts in Virginia or Tennessee. The same was true with food, clothes, and other military necessities.

The governors often insisted that they were acting in defense of the people against Davis's "despotism." Governor Brown led others against Davis's harsh martial law in

Richmond and other Virginia cities. He strongly advocated aid to families of poor soldiers and decried mistreatment of civilians by Confederate cavalry and other military units. Conversely, the two wartime governors of Virginia, John Letcher and "Extra Billy" Smith, strongly supported Davis's policies. It was in their states' interest to do so, as so much of the war was fought in Virginia; the same was true for the governors of Louisiana and Mississippi.

Unlike his counterpart, President Abraham Lincoln could depend upon the strong support and cooperation of the majority of governors in the North. Mainly Republican, the governors knew that their political fortunes rested upon the course of the war going as smoothly as possible. Upon setting quotas for volunteer regiments at the beginning of the war, several governors sent pleas to increase their quotas so that they could accept all those seeking to enlist. While Lincoln mobilized the national army and the government on war-alert status, the governors convened their legislatures and appropriated funds to supply regiments at state expense until late 1861, when the army could incorporate the troops.

The main problem in the Union in the beginning (as in the Confederacy) was the clash of local fervor with national disorganization. Recruitment was so successful, in fact, that it was temporarily suspended in the spring of 1862. This proved a mistake later in the year, when ROBERT E. LEE defeated GEORGE B. MCCLELLAN in the PENINSULAR CAMPAIGN, creating a severe manpower shortage. Coming on the heels of loss in battle, a drive for recruitment was especially difficult. Northern governors quickly joined forces with Secretary of War EDWIN M. STANTON to backdate a statement asking Lincoln to follow up recent successes with another call to arms. Lincoln pretended compliance with the request in calling for 300,000 new volunteers.

The president did encounter political setbacks and difficulties regarding challenges to key Republican governorships, mainly after the 1863 EMANCIPATION PROCLAMATION, especially in New York, Illinois, and Indiana. For example, anti-emancipation sentiment in Indiana led to the election of a majority Democratic legislature that threatened to cut off support for the war. Republican governor Oliver P. Morton consulted the state constitution and found that a two-thirds quorum was necessary for the legislature to conduct its business. Dismissing Republican legislators, he ran the state for two years with the help of loans from the federal government. This kind of extraordinary (and, in Morton's case extralegal) action on the part of most Northern governors ensured that problems arising in the states never significantly affected Lincoln's national leadership.

The increased prominence of governors during the Civil War set a precedent from which few states retreated. Today, governors wield much more power than they did

in the past, and at least some of that authority began to be shaped when they were called upon to serve their states' interests during the sectional conflict.

## Grand Army of the Republic See VOLUME VI.

### Grant, Julia Dent (1826–1902) *first lady*

Julia Dent was born at White Haven, Missouri, on January 26, 1826. Daughter of a slaveholding planter, she grew up in a close and affectionate family that included seven siblings. After attending an elite boarding school in nearby St. Louis, the 18-year-old Julia was introduced to her older brother's West Point roommate, ULYSSES S. GRANT, aged 22. Their two-year courtship and four-year engagement were conducted in the midst of Grant's frequent absences in army service, including the Mexican-American War. Finally married in 1848, Julia accompanied Ulysses to an obscure military outpost near Sackets Harbor, New York. The life of an army wife was filled with uncertainty and loneliness, but Julia worked hard to ensure a happy family. A fun, lively, and charming woman, her great love and affection for Ulysses was returned in full. Within 10 years of their marriage she was busy raising four children.

Julia experienced many disappointments in the 1850s. Bored and frustrated with the professional military life, Ulysses resigned from the army in 1854. Returning to St. Louis, he tried his hand at various occupations, including farming. Almost totally dependent upon her father's charity, Julia and Ulysses struggled with poverty and his depression. Despite a record of failure, Julia stoutly defended her husband, believing that one day his talent and intelligence would find an outlet. In 1859 they moved their family to Galena, Illinois, so that Ulysses could work in his father's leather-goods store. When the war broke out in 1861, Ulysses volunteered his services immediately, and the next few years saw his swift rise to fame and glory as the Union's top general.

If everyone else was surprised by her husband's rapid elevation to hero of the Northern army, the ever-loyal Julia was not. She basked in his reflected glory and expanded her role as his helper and confidante. No other wife of a

prominent general spent more time with her husband on campaigns. At the end of the war, Julia had developed a confidence that would impress citizens when she served as first lady during the eight years of her husband's presidency, 1868–76. "My life at the White House was like a bright and beautiful dream and we were immeasurably happy," she later said. The Grants and their young children became the object of a country's adoration as they set a new style of friendly, casual, and constant entertaining. Julia also shared the setbacks of the Grant presidency as corruption and scandal marked their last years in WASHINGTON, D.C.

A few years after leaving the White House, the Grants retired to New York, where they expected to live out their lives in comfort. Unfortunately, in 1884, Grant lost all the family money in a financial disaster. Shortly afterward, he developed the throat cancer that led to his death in 1885. In his dying days, Grant completed his *Personal Memoirs*, which left Julia and the children financially secure. After his death, Julia lived for 17 years with her daughter in Washington, D.C., where she wrote her own *Memoirs*. She died on December 14, 1902. Julia Dent Grant is interred alongside her husband in General Grant's National Monument (Grant's Tomb) in NEW YORK CITY.

### Grant, Ulysses S. (1822–1885) *commanding general of the Union army, 18th president of the United States*

Ulysses S. Grant was born on April 27, 1822, in Point Pleasant, Ohio. The oldest child of Jesse and Hannah Simpson Grant was raised on the rough-hewn Ohio frontier, first in Point Pleasant and then in nearby Georgetown. The young Hiram Ulysses (his first and middle names were later changed to Ulysses Simpson) struggled to live up to his ambitious father's high expectations. Hiram was sensitive, moody, and well educated for his time and place. The decision to send "Lyss" to the UNITED STATES MILITARY ACADEMY AT WEST POINT was ultimately a wise one. During his four years at West Point (1839–43) Grant was a middling student but a superb horseman. He clearly enjoyed the military life. A few years after graduation from West Point, Lieutenant Grant fought in the Mexican-American War, where he showed great courage and skill as a soldier, winning promotion and accolades. The young soldier had a talent for fighting and, even more, an impressive knowledge of the strategy and tactics of warfare learned from experience, not textbooks.

Despite his good record in the war and a solid marriage to the sister of one of his West Point classmates, Grant did not do well in the peacetime army of the late 1840s and early 1850s. Assigned to remote forts, Grant took to drinking and resigned from the army under a cloud of suspicion. The civilian world proved just as difficult. Grant failed as a provider for his family, as a farmer, and as a businessman. He lived on his father-in-law's land outside of St. Louis, Missouri, until moving in 1859 to Galena, Illinois, to work as a clerk in his father's store. Although these years were a low point in his life, there were some happy times. He was a loving husband to JULIA DENT GRANT and an unusually attentive and affectionate father to their four children. When the guns of FORT SUMTER fired, Grant was eager to serve his country.

After briefly holding a series of low-level positions, Lt. Col. Grant was given command of the 21st Illinois Volunteer Infantry Regiment. Rising swiftly through the ranks, Brigadier General Grant was placed in command of the large Union supply and training camp at Cairo, Illinois. In the fall and winter of 1861–62, Grant used his troops aggressively and, in conjunction with the U.S. Navy, captured the strategically important Fort Henry on the Tennessee River and Fort Donelson on the Cumberland River. When the Confederate commander of Fort Donelson sent Grant a note to discuss the terms of surrender for his army of 21,000 men, Grant replied: "No terms except unconditional and immediate surrender can be accepted." Now famous as "Unconditional Surrender" Grant, he continued to display the winning ways that would bring him to the favorable attention of President ABRAHAM LINCOLN and the victory-starved North. Grant's hard-won victories at Shiloh, Tennessee (April 6–7, 1862); Vicksburg, Mississippi (January–July 1863); and Chattanooga, Tennessee (October–November 1863) made him the leading Northern general of the CIVIL WAR.

Grant and Lincoln enjoyed an unusually close relationship, and Grant developed political skills that complemented his military abilities. Unlike many Union generals, Grant believed firmly that the president's role as commander in chief of the war was never to be questioned, even if he disagreed with an order. For example, Grant did not like the fact that many "political" generals were appointed simply because they were popular figures back home whose support Lincoln thought important to cultivate. Nevertheless, he accepted the reality and worked with the situation. Grant was an enthusiastic supporter of most of Lincoln's policies, however, especially the use of black soldiers. Most importantly, the popular Grant denied emphatically that he had any interest in running for the office of the president. By the end of 1863, Lincoln realized that he had found the general that would lead the country to victory. In January 1864, Lieutenant

General Grant came to WASHINGTON, D.C., to accept command of all the Union armies.

Grant did not rise to his position without controversy. As he progressed up the chain of command, he was increasingly subject to attacks on his character and generalship. Charges of drinking, incompetence, and a brutal indifference to death and suffering dogged him throughout his career and affected his reputation after the war as well. There is no doubt that Grant did make mistakes. He was caught unprepared for the Confederate attacks at Shiloh, for example. He also quickly regretted an ill-advised order that banned Jews from trading cotton. As to the reports of Grant's drunkenness, the historical evidence on his drinking shows that he rarely imbibed during the Civil War and never when it counted.

Grant began to implement his grand strategic vision during the spring and summer campaign of 1864. The plan, which involved the movement of all Union armies at the same time to attack and defeat the Confederates, drew Lincoln's warm support and raised the hopes of the Northern nation for a quick end to the war. Unfortunately, it took longer than expected. The battles of the OVERLAND CAMPAIGN, where Grant and ROBERT E. LEE's armies fought to bloody stalemate in the BATTLES OF THE WILDERNESS, SPOTSYLVANIA, and COLD HARBOR, gave rise to the nickname of "butcher" for the general in chief whose main strategy seemed to be throwing bodies at the enemy. Subsequent military historians have ably defended Grant against the butcher charge, pointing out that Lee lost many more men in proportion than did Grant, but Northern citizens were unaware of this fact. Fortunately, Grant's trusted western comrades, Gen. WILLIAM T. SHERMAN and Gen. PHILIP H. SHERIDAN, under Grant's direction, led victorious armies that made possible Lincoln's reelection in the fall of 1864. On April 9, 1865, at APPOMATTOX COURT HOUSE, VIRGINIA, Grant dictated the terms upon which the war ended and upon which the nation could begin the process of reconciliation.

Having led the Union army to victory, Grant emerged from the Civil War a popular hero, appearing to most of the people as a man who had character and upright morality. Like many, if not most, of his fellow countrymen, Grant had tasted the bitterness of defeat and failure. He also had a sharp intelligence that served him well in both plotting strategy and in dealing with the CITIZEN-SOLDIER of the Civil War. Grant had made many mistakes, but he had learned from them. Moreover, he had a deep and abiding faith in democracy and democratic institutions. Even his lack of political experience was, in the eyes of those who viewed politicians with contempt, a virtue. By 1866, the battles between President ANDREW JOHNSON and Congress had left Grant as the most powerful man in the country. Nominated for president by the REPUBLICAN PARTY

in 1868, Grant swept to victory. He was aided by newly enfranchised Southern African Americans in states reconstructed by Congress as well as by his famous campaign slogan “Let Us Have Peace.”

When Grant took office in 1869, RECONSTRUCTION governments in which African Americans participated existed in all of the former Confederate states except Tennessee. Although Grant did his best to uphold these “Black Republican” governments, violence-prone white supremacists gradually overthrew them everywhere except in South Carolina and Louisiana before Grant left office. Even in South Carolina and Louisiana, which had black majorities, the Republican governments were sustained only by the presence of army detachments. Black Republicanism during Reconstruction failed not because of Grant but because of growing Southern white resistance matched by growing Northern white apathy.

In foreign affairs, Grant was obsessed with the idea of annexing Santo Domingo but was frustrated by opposition in the Senate. Grant’s greatest success in this area came when Secretary of State Hamilton Fish negotiated the Treaty of Washington (1871) and prevented intervention in a Cuban revolution before and after the *Virginius* affair (1873).

Although rank-and-file Republicans stuck by Grant, Republican intellectuals were disillusioned by his presidency. They had hoped that he would be above partisanship and appoint the “best people” (like themselves) to office. Indeed, Grant did ignore politics initially in his cabinet and other major appointments, but having gratified no one in particular by his independent course, he soon learned to please spoils-minded Republican senators like Roscoe Conkling of New York and representatives like BENJAMIN FRANKLIN BUTLER of Massachusetts. Grant also proved to be too trusting, and while personally honest, he could be duped by unscrupulous friends and relations.

Reform Republicans were hostile to the spoilsmen and thus increasingly hostile to Grant. They disliked corruption in government circles and were opposed to special favors to corporations, whether in the form of land grants for RAILROADS or protective TARIFFS for manufacturers. Ultimately, the reform Republicans split with the administration and formed a new Liberal Republican Party. The party’s laissez-faire program included civil service reform, low tariffs, gold-backed currency, and no legislation aiding special groups, be they wealthy corporations or poor African Americans. Grant could not stand the self-righteousness and superior airs of many reformers, but he recognized that some civil service reform would benefit the nation. He approved tariff reductions, and he endorsed gold-backed “sound money.” These actions somewhat undermined the Liberal Republicans. To the dismay

Ulysses S. Grant (National Archives)

of the party’s leaders like Carl Schurz, the 1872 Liberal Republican convention nominated for president HORACE GREELEY, the eccentric editor of the *New York Tribune*. Although the Democrats also nominated Greeley, Grant triumphed handily in the election.

Grant’s second term was marred by a severe economic depression following the panic of 1873 and by the exposure of widespread corruption. For example, Orville E. Babcock, Grant’s personal secretary, was implicated in the WHISKEY RING that defrauded the government of millions of dollars in internal revenues. Grant’s secretary of war, William Worth Belknap, illegally sold an Indian-post tradership. The Republican Party was already disintegrating in the South, and the scandals and economic stagnation

also caused it to decline in the North. Grant backed two important measures that bucked the ebbing tide: Despite financial struggles, Grant opposed even mildly inflationary measures and approved the Specie Resumption Act (1875) that would put the United States back on the gold standard on January 1, 1879. And despite flagging interest in aiding African Americans, he signed the Civil Rights Act (1875) that guaranteed African Americans equal rights in public places such as streetcars, THEATERS, and hotels and prevented their exclusion from juries. When the outcome of the presidential election of 1876 was in dispute from November 1876 to March 1877, Grant behaved circumspectly, supported the Electoral Commission Act (1877), and never once hinted that he would use his control of the army to declare fellow Republican Rutherford B. Hayes the winner.

Throughout his presidency, Grant remained steadfast in the belief that the goals of the war should be preserved, even as the country's enthusiasm for Reconstruction of the South in the North's image faded away. Grant's final task as president harked back to his first, and perhaps most important, achievement: to ensure a stable transition between presidents. He succeeded in 1876, just as he had succeeded in 1868, and the country was reconciled for good. Few professional politicians could have done better, and most might have done far worse.

In retirement, Grant went on a world tour (1877–79), lobbied unsuccessfully for nomination to a third term as president, and went into the brokerage business. His firm, Grant & Ward, went bankrupt in 1884, leaving him broke. Mortally ill with throat cancer, Grant retreated to his home to write his *Personal Memoirs*, regarded by many as the greatest military memoirs since Caesar's *Commentaries*. Grant was in a great deal of pain as he raced against the clock to complete his book, and he died within weeks of finishing the task. Upon publication, Grant's memoirs sold hundreds of thousands of copies and recouped his fortune for his family. His memory as one of America's greatest generals, if not one of its greatest presidents, was secured.

Grant's legacy is deep and wide. By the time of his death on July 23, 1885, at Mount McGregor, New York, Ulysses S. Grant was an icon in the historical memory of the Civil War shared by a whole generation of men and women. Americans of that time compared Grant favorably to Washington and Lincoln. They believed that an appreciation of Grant could only come with the recognition that he was both the general that saved the Union and the president who made sure that it stayed together. On the same day that 1.5 million Americans attended Grant's funeral in NEW YORK CITY and countless others commemorated his life in cities and towns across the country, a newspaper headline provided the perfect epitaph for the accomplish-

ments of General and President Ulysses S. Grant: "The Union, His Monument."

**Greeley, Horace** (1811–1872) *journalist, reformer, politician*

Newspaper editor Horace Greeley was born in Amherst, New Hampshire, on February 3, 1811. In 1826 he entered into the world of JOURNALISM, serving as a printer's apprentice for the *Northern Spectator* of East Poultney, Vermont. Over the next several years, Greeley worked for many different newspapers in the Northeast, editing several and forming a political partnership with two powerful figures in New York state politics, Thurlow Weed and WILLIAM H. SEWARD. Greeley's most important opportunity, however, arrived in 1841 when he founded and became editor of the *New York Tribune*.

Greeley's role as editor of the *Tribune* not only established his legacy but also allowed him to promote his interests in reform, writing, and politics. He used his editorials over the course of three decades to battle against numerous vices and social problems, including tobacco, alcohol, gambling, PROSTITUTION, and SLAVERY. He also pushed for land reform and a protective TARIFF that would aid the American worker. Above all else, he strove for his vision of national unity and harmony. As a result, his support for labor did not encompass the encouragement of what he saw as divisive STRIKES. He stood for freedom and against slavery, yet in the 1840s and early 1850s he expressed his opinions carefully, for he saw radical abolitionism as a threat that could destroy the nation.

Greeley's expansive nationalism found expression in his vision for the western lands. Although he did not invent the phrase, Greeley has long been credited with first saying, "Go west, young man." He became a strong proponent of the development of RAILROADS. In his mind, the open lands of the West would provide land for numerous free-labor settlers and bring prosperity for all, as long as the

Southern institution of slavery was not allowed to expand as well. Long a “Conscience” Whig who stood against the “Cotton” Whigs, Greeley helped found the REPUBLICAN PARTY in 1854. His newspaper took a powerful stand against the KANSAS-NEBRASKA ACT and popular sovereignty, which he believed would aid in the growth of slavery. Heading into the crisis of the late 1850s, Greeley promoted peace and harmony above all else. Greeley was intent on keeping the nation together, even as he attacked slavery.

While he remained involved in New York state politics throughout his life, Greeley ended his partnership with Weed and Seward in 1854. He campaigned for John C. Frémont in 1856, and although he did not initially support ABRAHAM LINCOLN in 1859 for the Republican nomination, neither did he support Seward, whom he believed lacked the necessary national appeal. Throughout the years of the CIVIL WAR, Greeley maintained an alternately supportive and adversarial relationship with Lincoln through his editorials in the *Tribune*. In the hope of avoiding war in 1860, Greeley advocated letting the Southern states secede, for he believed that most Southerners did not support SECESSION and that these “erring sisters” would soon be forced to return.

After the war began, the *Tribune* editorials revealed a shift in Greeley’s thinking. He began to advocate the abolition of slavery as a primary war objective and encouraged Lincoln to formulate an EMANCIPATION policy. Although his political positions aligned him with the RADICAL REPUBLICANS, Greeley still looked to find a compromise to end the war. As a result, in July 1864, he found himself in Niagara Falls, meeting with several Southern “peace commissioners.” Given permission to participate by an extremely skeptical President Lincoln, the *Tribune* editor failed to bring anything but derision upon himself for his efforts. As the war came to a close, Greeley stated his support for a moderate RECONSTRUCTION, one that allowed for universal amnesty and impartial suffrage while promoting the long-range goal of Republican predominance in national politics.

A man of principles, Greeley helped post bail for JEFFERSON DAVIS in 1867. This decision not only hurt his standing in the public eye but also dealt a blow to sales of the second volume of his history of the Civil War, *The American Conflict*. In the last years of his life, Greeley grew disenchanted with the Republican Party and was only a reluctant supporter of ULYSSES S. GRANT in the 1868 election. In 1871 he completely broke ranks with the party he helped found and joined the rising Liberal Republican movement. With his principles and national recognition firmly in place, Greeley became the Liberal Republican and Democratic nominee for president in 1872. In two emotionally crushing losses, Greeley suffered the

death of his wife and defeat at the hands of Grant in early November.

Horace Greeley died in Pleasantville, New York, on November 29, 1872.

## greenbacks

In early 1862, after the CIVIL WAR caused a great crisis for the Northern ECONOMY, the U.S. government began printing “greenbacks,” a legal-tender currency that partially underwrote the costs of the Civil War.

Throughout the country, citizens used various paper currencies issued by many different banks and redeemable in specie (gold and silver), but the federal government was required by law to pay its debts in specie only. The enormous costs of the war seriously depleted the Treasury’s reserves of gold, and the uncertainties of the military conflict were causing private citizens to hoard vast amounts of the precious metals. When the dwindling precious metal reserves of banks in New York, Philadelphia, and Boston caused those institutions to suspend paying out specie to back their notes, the Union was on the verge of a terrible financial disaster. This, in turn, would result in a shutdown for the war effort, and then the Union.

Treasury Secretary SALMON P. CHASE recognized the urgency of the situation and told Congress on February 3, 1862, that America’s financial policies must be altered quickly. New York congressman Elbridge G. Spaulding suggested that the government begin issuing its own paper currency. This newly created currency would be “fiat money,” meaning that it was not redeemable in gold or silver of equivalent value but would act as legal tender for all public and private debts except import duties and interest due on government bonds, both of which would continue to be paid in specie. Because the Constitution empowered Congress only to “coin money,” there was much debate over the legality of Spaulding’s proposal. There was also concern that a national paper currency would initiate rampant inflation.

Nevertheless, those were extraordinary times, and exceptions had to be made. Spaulding’s proposal passed Congress on February 12, 1862, and became known as the first Legal Tender Act. It authorized the printing of

\$150 million in Treasury notes. The currency was issued in denominations ranging from \$1 to \$10,000. The bills were printed on one side only with green ink and quickly became known as "greenbacks." The value of greenbacks fluctuated with the Union's fortunes in the war. At one point after the Union had suffered a great defeat, they were worth no more than 40 cents in gold. For the most part, however, greenbacks proved to be universally popular and remarkably sound.

### Greenhow, Rose O'Neal (ca. 1815–1864)

*Confederate spy*

Confederate spy Rose O'Neal was born in Montgomery County, Maryland, and grew up in WASHINGTON, D.C. In 1835 she married Virginian Robert Greenhow, and the couple had four children. As the wife of a politician in the State Department, Rose entertained diplomats and cultivated relationships with future politicians. Rose's work with Robert researching American land claims in the Pacific Northwest gave her experience with map skills and analysis. In 1850 she supported John C. Calhoun's efforts against sectional compromise. Robert left the State Department in 1850, and the family moved to San Francisco. Rose returned to Washington after his death in 1854.

Once the CIVIL WAR began, Thomas Jordan, Confederate general PIERRE GUSTAVE TOUTANT BEAUREGARD's adjutant, recruited Greenhow to head an ESPIONAGE ring in Washington. As a socially prominent widow, Greenhow easily gathered information from new officers and government workers, all eager to show their importance. This information proved particularly valuable in July 1861, when intelligence Greenhow relayed to Beauregard at the FIRST BATTLE OF BULL RUN contributed to Confederate victory.

The Union secret service placed Greenhow under house arrest on August 23, 1861, but she continued to send information South and published LETTERS criticizing the Union's treatment of women. To stop these activities, the federal government transferred Greenhow to the Old Capitol Prison in January 1862. In June she was exiled to the Confederacy in a prisoner exchange. Greenhow departed for RICHMOND, VIRGINIA wrapped in a Confederate flag and

carrying a diary of her imprisonment. President JEFFERSON DAVIS and Beauregard rewarded her espionage activities.

Greenhow traveled to Europe in August 1863 as an unofficial diplomat for the Confederacy. There she published her diary, *My Imprisonment and the First Year of Abolition Rule in Washington*. After unsuccessfully pleading her case for Confederate support, she started home in August 1864. Chased by Union blockaders, Greenhow's ship ran aground near North Carolina on October 1, 1864; Greenhow insisted on being rowed ashore. Her boat overturned and she drowned, weighed down by the gold she was carrying for the Confederate government. Greenhow was buried with military honors.

### Grimké, Charlotte Forten (1837–1914) *educator, author, civil rights leader*

African-American author, educator, and civil rights advocate Charlotte Forten was born on August 17, 1837, into a prominent and wealthy abolitionist family in PHILADELPHIA. The family wealth allowed Forten to be tutored at home until she was 16 years old, at which time she was sent to Higginson Grammar School in Salem, Massachusetts. Upon graduation from Higginson, Forten enrolled at Salem Normal School to become a teacher. In 1856 Forten accepted a teaching position at Epes Grammar School in Salem. Ill health caused her to return to Philadelphia in 1858. Besides teaching, Forten was a gifted poet, most often with an antislavery subject.

By the spring of 1862, Union forces had pushed Confederate planters out of the South Carolina Sea Islands. Left behind upon the rebel retreat were thousands of slaves. On October 21, 1862, Forten received her assignment as the first black teacher hired for the Sea Islands Mission. From noon until 3 P.M., nearly 100 students attended the school. Classes resumed in the evening. In 1864 Forten's continued poor health caused her to leave the mission, but she published essays about her experiences in the South Sea Islands in *Atlantic Monthly*.

During RECONSTRUCTION, Forten worked as secretary of the Freedmen's Relief Association, and she continued to write. She also taught high school and was one of 15 people selected for a position as a clerk at the U.S. Treasury Department out of a field of nearly 500 candidates. At age 41, she married Francis J. Grimké, a Presbyterian minister also from a prominent abolitionist family.

When Charlotte Forten Grimké died in 1914, she had served as a groundbreaker and a role model for her generation. Her diaries, probably her greatest legacy to history, were first published in 1953 and tell the story of a well-educated, self-possessed, and motivated woman who did much to forward the cause of African-American rights.

### **habeas corpus, writ of**

According to the U.S. Constitution, when any citizen is imprisoned, a court must issue a writ of habeas corpus, which requires the government to produce the suspect in open court and to charge him or her with a specific crime. The Confederate Constitution had a similar clause. Intended to prevent arbitrary and indefinite imprisonment, habeas corpus was suspended by both the Confederacy and the Union during the CIVIL WAR.

In the CONFEDERATE STATES OF AMERICA, the suspension of habeas corpus was short lived and usually ineffective. JEFFERSON DAVIS, motivated partly by his personal commitment to having a weak central government, refused to suspend habeas corpus without congressional approval. Violence by Union sympathizers and a general perception that opposition to the Confederate cause required repression led the Confederate Congress, in early spring 1862, to give Davis that power. Moving quickly, Davis enacted martial law, including the right to hold suspects indefinitely without charge in Norfolk, Portsmouth, and RICHMOND. In those cities, the suspension of habeas corpus was intended to legitimize the existing practice of imprisoning Union sympathizers in the “Castle Thunder” Prison at Richmond and to free Confederate military governors to destroy local dissent.

Because the Confederate Congress had only provided Davis with suspension power for a limited period, the president lobbied repeatedly for votes to renew his authority. In addition to Unionist sentiment, the Confederate government pointed to local opposition as a reason why suspension was necessary. In several states, especially North Carolina and Georgia, GOVERNORS and local judges opposed the use of various federal powers, including CONSCRIPTION. Using writs of habeas corpus, judges freed local men from the control of military recruiters and military courts. In effect, habeas corpus served as a way for state judicial authority to override military power. Although the Confederate Congress enacted legislation, in February 1864, intended

to prevent local judges from interfering with military tribunals or martial law, it was never able to assert federal control completely.

Ultimately, the suspension of habeas corpus in the Confederacy had little beneficial effect. Unlike ABRAHAM LINCOLN, Davis was unwilling to act zealously in this regard. He was caught—as he was in policies on BANKING AND CURRENCY and conscription—between what was expedient and what served the philosophical purpose of SECESSION. If the purpose of the Confederacy was to protect the right of states to avoid domination by a central government, then Davis could hardly use federal power to impose a national view on municipalities and local judiciaries. Instead, the suspension of habeas corpus was used sparingly and rarely made a positive difference for the Confederate cause.

In the Union, by contrast, habeas corpus was suspended for much of the war, and thousands of people were imprisoned. Before the Civil War, only once had a president suspended habeas corpus. Even then, the suspension had been short lived. President Lincoln, however, sought to use his executive power in a much more expansive and pragmatic way. Arguing that no single law was worth the failure of the Union, Lincoln believed that suspending habeas corpus allowed him to achieve several goals.

The first goal, and the reason for which the writ was suspended initially, was keeping Maryland in the Union. Faced with the possibility that Maryland would secede, which would cut WASHINGTON, D.C., off from the rest of the North, Lincoln allowed Winfield Scott to arrest Confederate sympathizers at every level of Maryland society, including Baltimore’s chief of police and mayor. One of those arrested was John Merryman, who sued for release based on his constitutional right to be charged or released. Although the Supreme Court agreed that he should be freed (in *Ex Parte Merryman*), Merryman remained in prison.

Throughout the war, the issue of whether the executive branch was empowered to suspend habeas corpus

or whether it required the approval of another branch remained unclear. The Constitution says that the writ can be suspended, but not by whom, in what circumstances, or how. While lawyers, congressmen, and citizens debated executive authority, at least 13,535 Americans were arrested. Finally, in March 1863, Congress passed the Habeas Corpus Indemnity Act, which gave Lincoln the power to suspend the writ. By assenting to the power of the president, however, Congress effectively moved to assert its own power to approve any executive use of suspension. In addition, Congress insisted that all those arrested must be identified in regular lists of prisoners within 20 days of their arrest.

While the Confederacy had used the suspension of habeas corpus to prevent ESPIONAGE and to assert its right to conscription, the Union's suspension of habeas corpus served mostly to suppress political dissent. Although some Confederate collaborators and spies were arrested, the majority of those detained were Democrats and other opponents of Lincoln administration policies. Democratic candidates for office were quick to label Lincoln a tyrant, and in some cases their rhetoric hurt Republicans, including the president, at the ballot box. For his part, Lincoln perceived the value of a unified HOMEFRONT, and he was willing to silence some dissenting voices to achieve that unity, at least on the surface.

**Halleck, Henry Wager** (1815–1872) *Union general*  
A renowned military theoretician, Henry W. Halleck served the Union as field general, general in chief, and army chief of staff. While he failed to provide innovative and decisive leadership in battlefield strategy, Halleck excelled at organizing the army. Born on January 16, 1815, in New York, Halleck became discontented with farm life and left home to attend the UNITED STATES MILITARY ACADEMY AT WEST POINT, where he graduated third in the class of 1839.

After a six-month tour of European military establishments, Halleck published *Elements of Military Art and Science* in 1846, a text that incorporated ANTOINE-HENRI, BARON DE JOMINI's approach to war. Halleck's work spread Jomini's theories beyond the professional military when it was read by President ABRAHAM LINCOLN and volunteer officers during the CIVIL WAR.

During the Mexican-American War (1846–48), Halleck was assigned to California. He resigned from the army in

1854 to focus on his law practice and land and mining interests. By 1861, Halleck had amassed a fortune of \$500,000. But in August 1861, Halleck left his successful private pursuits and returned to the army. He replaced Gen. John Frémont in the Department of the Missouri, where he quickly instilled order to the disorganized and corrupt command. His curt manner facilitated rapid reform but did not foster positive personal relationships, traits that continued to shape Halleck's reputation during the Civil War. Halleck proved to be a tentative commander, reluctant to authorize advances until all risks could be minimized. Yet when General ULYSSES S. GRANT's forces captured Forts Henry and Donelson in early 1862, Halleck eagerly claimed credit for the victories of his subordinate, who had operated beyond Halleck's orders.

Lincoln brought Halleck to WASHINGTON, D.C., as general in chief of the army in July 1862 in the hope that Halleck's theoretical expertise would provide much needed coordination to the Union war effort. Halleck relayed Lincoln's desires for more aggressive efforts against Confederate troops, but his lack of innovative battlefield strategies and his deference to the field generals disappointed Lincoln. Halleck convinced Lincoln that Grant's forces in the western theater should continue to follow Jomini's principle of seizing strategic property, but by 1863 he was willing to compromise Jomini's genteel method of war and concentrate on destroying ROBERT E. LEE's Army of Northern Virginia.

Lincoln utilized Halleck as an intermediary to avoid conflicts with field generals, to deflect criticism when popular officers were dismissed, and to avoid responsibility when victory eluded Union troops. Much criticism was directed at Halleck by the press, politicians, dissatisfied officers, and the general public, even when disappointing results were due to the failure to follow Halleck's orders.

Ultimately, Grant's successes led to his promotion to general in chief of the army on March 9, 1864. Halleck became chief of staff and continued his duties: forwarding orders from Lincoln and Grant; overseeing the administrative aspects of the army; and bearing the brunt of criticism from soldiers, politicians, and the public.

Halleck's successes were less publicized. He instilled order, efficiency, and discipline in a largely VOLUNTEER ARMY. Halleck organized the mobilization of troops; the TRANSPORTATION of men and material; and the acquisition and distribution of food, clothing, and ammunition. He centralized the administration of an army that had been formed largely through state-sponsored units, and he professionalized the army by working for the replacement of political generals with West Point graduates.

After Lincoln's death, Halleck was stripped of his chief of staff title and ordered out of Washington. Assigned first to RICHMOND, then to San Francisco, and finally to Louisville, Kentucky, Halleck remained with the army until his

death on January 9, 1872. He was vilified in the memoirs of Union generals, with few people defending his contributions. While Halleck was not a great military strategist, his administrative efforts made many Union victories possible and created the first national army in the United States.

**Hancock, Winfield Scott** (1824–1886) *Union general, politician*

Union general and Democratic politician, Winfield Scott Hancock was born on February 14, 1824, in Montgomery County, Pennsylvania, to Elizabeth and Benjamin Franklin Hancock. Hancock used his family's DEMOCRATIC PARTY connections to secure an appointment to the UNITED STATES MILITARY ACADEMY AT WEST POINT, graduating in 1844 in the bottom third of his class. Brevetted a second lieutenant, Hancock served effectively as an infantry recruiter on the western frontier. He first experienced combat in 1847 during the Mexican-American War. Hancock commanded a company at Chapultepec and discovered that he enjoyed battle. Brevetted first lieutenant, the gregarious Hancock became friends with his fellow officers, including Virginian LEWIS A. ARMISTEAD. Returning to garrison duty in St. Louis, Hancock married Almira Russell, a supportive wife who saw him through the disappointments of peacetime army service. In 1861 Hancock, a captain of infantry, was stationed in Los Angeles as chief quartermaster for the southern district of California.

A Democrat and Southern sympathizer, Hancock favored STATES' RIGHTS, but he never considered taking up arms against the Union. After hosting a bittersweet farewell dinner for friends who had decided to fight for the Confederacy, Hancock traveled east to seek an infantry command. Fellow Democrat Gen. GEORGE B. MCCLELLAN gave Hancock the Third Brigade, Smith's division, army of the Potomac, which in 1862 was assigned to the Second Division, Fourth Corps. In May, the new brigadier general skillfully led his men at the Battle of Williamsburg, earning the nickname "Hancock the Superb." In September, he assumed command of the First Division, II Corps, when its senior officer was mortally wounded at the BATTLE OF ANTIETAM.

Brevetted to major general, Hancock was a stickler for military procedure whose men admired his geniality and dashing appearance. In December 1862, he demonstrated

Union general Winfield S. Hancock (Library of Congress)

his outstanding leadership abilities and conspicuous personal bravery during the futile Union assault on Marye's Heights at the BATTLE OF FREDERICKSBURG. In May 1863, he valiantly held his division in an exposed position while the rest of the UNION ARMY retreated from the BATTLE OF CHANCELLORSVILLE. Hancock succeeded to the command of II Corps in June, just before the Army of the Potomac, under Gen. GEORGE GORDON MEADE, marched north in pursuit of the Army of Northern Virginia and Gen. ROBERT E. LEE.

Word arrived at Meade's Maryland headquarters on July 1 that the Confederates had been engaged near Gettysburg, Pennsylvania, and that Union First Corps commander, Gen. John F. Reynolds, had been killed. Meade, ignoring military protocol, sent Hancock ahead to take command on the field while the rest of the army came up. Hancock's main contribution that day was to restore order to the Union forces and place the troops in defensive positions along Cemetery Ridge and Culp's Hill. His steadiness under fire was evident the next day, when he commanded his own Second Corps at the center of the Union line and shored up the exposed Third Corps to his left. On July 3

Hancock was again in the thick of the action, commanding the Union defense during Pickett's Charge, an assault in which his friend, Confederate general Lewis Armistead, was mortally wounded. Hancock, also wounded, refused to leave the field until victory was assured.

Despite nursing a painful, unhealed thigh wound, Hancock returned to the Second Corps in March 1864. He fought well in the WILDERNESS campaign and the BATTLES OF SPOTSYLVANIA, but his corps suffered heavy losses at the BATTLE OF COLD HARBOR during frontal attacks on entrenched Confederate positions. Hancock uncharacteristically declined to assume field command at Petersburg on June 15, missing a potential opportunity to overrun the then lightly defended city. Hancock gave up his Second Corps command in November 1864, and after attempting unsuccessfully to recruit volunteers for a new veteran corps, he finished the war as commander of the Department of West Virginia and the Middle Military Division.

In 1866 Congress awarded Hancock the postwar rank of major general. He returned to the regular army, serving stints as commander of the Military Department of the Missouri and the Fifth Military District. Stationed in New Orleans, Hancock, an opponent of Radical RECONSTRUCTION, issued orders designed to keep free African Americans off juries and voter-registration lists. Gen. ULYSSES S. GRANT recalled Hancock to WASHINGTON, D.C., and briefly appointed him commander of the Division of the Atlantic. After Grant became president in 1869, Hancock was assigned to the remote Department of Dakota. Meade's death in 1872 entitled Hancock, as the army's senior major general, to reclaim command of the Division of the Atlantic. From division headquarters in NEW YORK CITY, Hancock pursued his long-standing political ambitions. In 1880 Hancock won the Democratic presidential nomination but lost the general election to Republican James A. Garfield. During the campaign, Grant condemned Hancock's postwar administration of the Fifth District, so it was ironic that Hancock's last public duty was to plan and direct Grant's 1885 funeral. Hancock died in New York on February 9, 1886.

**Harper, Frances Ellen Watkins** (1825–1911) *author, lecturer, reformer, abolitionist*

An advocate of African-American civil rights, EDUCATION, temperance, ABOLITION, and civic morality, poet

and author Frances Ellen Watkins Harper was also a prominent leader of the women's club movement of the late 19th century. Born in Baltimore, Maryland, in 1825, Frances Watkins was the only child of free African-American parents. At three years of age, she was orphaned and adopted into the family of her uncle, Rev. William Watkins. Frances attended her uncle's school, where she received significantly more intellectual training than was common for African-American children at the time. At 14 years of age, Watkins began an informal apprenticeship in sewing with a Baltimore man named Armstrong. Sewing provided an income for Watkins, who taught the craft at the Union Seminary in Columbus, Ohio, and in Little York, Pennsylvania. By the time she began teaching in the late 1840s, she had also achieved her first major success as an author, publishing a collection of poetry, *Forest Leaves* (1845).

Although sewing provided an adequate income, teaching became unnecessary once Watkins began to speak publicly about her strong antislavery sentiments. Her first public comment was a lecture in New Bedford, Massachusetts, in 1854. Watkins's passionate speeches quickly made her popular on the speaking circuit. She also became one of the most widely read African-American poets in America. She would continue to be a prolific and popular writer for the next half century, publishing a number of volumes of poetry as well as novels, most famously *Iola Leroy* (1892).

On November 22, 1860, Frances Watkins married Fenton Harper, and the couple began farming a property in Columbus, Ohio. Following his death in May 1864, Frances Harper resumed lecturing, focusing in particular on the effects of the CIVIL WAR on African-Americans. While lecturing, Harper stressed the importance of education, moderation in alcohol consumption, and morality within the African-American community.

In 1871 Harper and her daughter Mary moved to PHILADELPHIA, PENNSYLVANIA. There, Harper continued to lecture, concentrating largely on two subjects: moral issues among African Americans and temperance. Joining the National Woman's Christian Temperance Union (WCTU), Harper spearheaded work among African Americans. In addition, she established Sunday schools for African-American children in Philadelphia. In 1894, at age 69, she became the director of the American Association of Education of Colored Youth. She was also a member, and later vice president, of the National Association of Colored Women. Like many of the most prominent reformist women of her time, advancing age did not deter Harper from participating in civic causes. She continued to fight for a variety of reforms until her death in 1911.

### Harpers Ferry, West Virginia (Harper's Ferry, Virginia)

Best known as the site of JOHN BROWN's raid in 1859, Harpers Ferry (then in Virginia and spelled Harper's Ferry) was an essential strategic possession for both the Union and Confederate armies during the CIVIL WAR, changing hands eight times between 1861 and 1865.

A place of great natural beauty, Harpers Ferry is located on a wedge of land that separates the Shenandoah and Potomac Rivers at the northern end of Virginia's rich Shenandoah Valley. In 1796 President George Washington selected the town for one of the federal armories, and the manufacture of weapons became the basis of its ECONOMY.

Bordering on Pennsylvania and Maryland, Harpers Ferry in the late 1850s was a prosperous and growing place of nearly 3,000 people. The U.S. Armory was the biggest employer, and the 250 men who worked in the factories turned out roughly 10,000 rifles and muskets per year. There were other industrial concerns as well—an iron foundry, a flour mill, and cotton mill—all powered by the water flowing from the Shenandoah River. Goods and people were transported in and out of town courtesy of the Baltimore and Ohio Railroad. In short, Harpers Ferry was one of the rare industrial villages in the South. Its citizens were a diverse group of small businessmen, native-born working class, immigrants, slaves, and 150 free African Americans. PLANTATIONS and farms were in the surrounding countryside.

Harpers Ferry was also a quiet and harmonious place until 1859, when radical abolitionist Brown selected it as the target for his infamous raid. Attracted by the armory, the slaves, and the geography, Brown and his men planned to seize the munitions and ignite a revolution that would end SLAVERY. His scheme was cut short when armed

Engraving of the Harpers Ferry insurrection depicting the U.S. Marines storming the engine house while John Brown and his followers fire through holes in the doors (Library of Congress)

townsmen, local militia, and the U.S. Marines led by Lt. Col. ROBERT E. LEE ended the ill-fated invasion. Brown and several members of his party were tried and hanged for the attack. The incident at Harpers Ferry gripped the nation and further polarized North and South.

When the Civil War broke out, Harpers Ferry became a tragic victim of the “BROTHERS’ WAR.” Forced to choose between fighting for the North or the South, most of its citizens fled, leaving the town almost empty. In April 1861 Union forces decided to abandon the arsenal. Union lieutenant Roger Jones, garrison commander at Harpers Ferry, ordered his men to set the armory on fire and retreat to the north. Jones and his men successfully destroyed the main arsenal and 15,000 guns. However, the local citizens put out the fire before it spread to the remainder of the armory. Virginia forces led by THOMAS J. (STONEWALL) JACKSON entered the town and saved the remaining firearms and factory equipment. They shipped the valuable materials to the Confederate armories in RICHMOND, VIRGINIA, and Fayetteville, North Carolina.

Harpers Ferry would change hands seven more times over the course of the war. The Battle of Harpers Ferry on September 15, 1862, was a vital part of Robert E. Lee’s Maryland campaign. Stonewall Jackson, Maj. Gen. Lafayette McLaws, and Brig. Gen. John G. Walker directed a successful assault on Harpers Ferry, which was occupied by thousands of Union soldiers. The largest surrender of Union forces during the war, Confederate troops captured 12,419 men, thousands of firearms, and 70 artillery pieces. The Battle of Harpers Ferry proved a crucial morale boost for the Confederates, who would lose the BATTLE OF ANTIETAM two days later.

The rebels moved out of Harpers Ferry after Antietam, and Union troops again occupied the town. On October 1–2, 1862, President ABRAHAM LINCOLN visited Harpers Ferry, as well as his troops positioned on the craggy mountains called Maryland Heights above the town. Toward the end of the war, Harpers Ferry became an important supply base for Union operations in the Shenandoah Valley.

After 1865 Harpers Ferry was abandoned, since the war had left the town in ruins. By the late 19th and early 20th centuries, Harpers Ferry had become an important stop for African-American leaders such as FREDERICK DOUGLASS and W. E. B. Du Bois, who proclaimed the importance of black people’s contribution to the Civil War and to the American nation. Significantly, the memory of John Brown as an abolitionist hero and martyr to the cause of freedom was commemorated in positive ways. Today, the National Park Service preserves the past of Harpers Ferry by operating museums, tours, and demonstrations for the thousands of tourists who crowd the narrow winding streets of this historic place.

### Harvard Regiment (20th Massachusetts Volunteer Infantry) (1861–1865)

The 20th Massachusetts Volunteer Infantry was a CIVIL WAR unit celebrated for its ferocious fighting and remembered for its heavy losses. It mustered 750 men at Readville, Massachusetts, between August 29 and September 4, 1861, in response to an appeal by Governor John Albion Andrew for soldiers to defend the Union. Among those who flocked to the colors were Paul Revere, Jr., grandson of the famous Revolutionary War rider, and Oliver Wendell Holmes, Jr., a future Supreme Court justice. The officer corps represented a cross-section of Boston’s Brahmin class, including several graduates from Harvard University, hence its popular nickname as the “Harvard Regiment.” It also gained notoriety in abolitionist circles as the “COPPERHEAD Regiment” because many officers were indifferent toward EMANCIPATION, although two full companies consisted of abolitionist German immigrants.

On September 4, 1861, the 20th Massachusetts deployed to the WASHINGTON, D.C., area to secure the national capital. Assigned to General Lander’s brigade, Division of the Potomac, under Col. William Raymond Lee, the unit had its baptism of fire at the disaster of Ball’s Bluff, Virginia, on October 21, 1861. Despite defeat, the 20th displayed hard-fighting qualities that would make it among the best-regarded units in the Army of the Potomac.

In March 1862 the 20th Massachusetts became part of General John Sedgwick’s division, the Army of the Potomac. In this capacity it played a conspicuous role in heavy fighting throughout the ill-fated PENINSULAR CAMPAIGN waged in Virginia. After more severe combat at Second Manassas and ANTIETAM in summer and fall 1862, the regiment was called upon to perform its most celebrated action: serving as the advance guard of the Federals at FREDERICKSBURG, Virginia, on December 11, 1862. The 20th Massachusetts rowed across the Rappahannock River under heavy fire and executed a determined bayonet charge through the town, taking prohibitive losses yet flushing Confederate defenders from houses lining their path. On July 3, 1863, the 20th

performed another critical role at GETTYSBURG by occupying the famous “copse of trees” that was the focal point of Confederate forces during GEORGE EDWARD PICKETT’s charge. Here the regiment lost 127 men out of 218 present for combat.

By 1864 casualties and enlistment expirations in the 20th Massachusetts, along with an influx of new men, effectively removed its identity as the “Harvard Regiment.” The reconstituted unit soldiered on as part of the 2nd Division, II Corps, until the end of the war. It rendered effective—if costly—service in the OVERLAND CAMPAIGN and siege of PETERSBURG and was present at surrender ceremonies at APPOMATTOX COURT HOUSE, VIRGINIA. In terms of casualties, the 20th Massachusetts sustained the highest losses of any Bay State regiment and the fifth greatest of the 1,000-plus regiments mustered by the UNION ARMY: Seventeen officers and 243 enlisted men were killed in battle, and one officer and 148 enlisted men were lost to disease, for a total of 408 dead. By dint of hard fighting it became one of the most widely respected regiments in the entire Army of the Potomac.

Root, *“Isn’t This Glorious!”: The 15th, 19th, and 20th Massachusetts Volunteer Infantry Regiments at Gettysburg’s Copse of Trees* (Bethlehem, Pa.: Moon Trail Books, 2006).

—John C. Fredriksen

**Hayes, Rutherford B.** See VOLUME VI.

**Herndon, William H.** (1818–1891) *author, lawyer*  
William Henry Herndon was best known as ABRAHAM LINCOLN’s law partner and biographer. He was born on Christmas Day in 1818 in Greensburg, Kentucky, and in 1820 his family moved to Illinois. Herndon attended Illinois College, where he learned strong antislavery principles. To earn money, he worked briefly as a clerk in a Springfield store, renting the room above the store for living quarters, which he shared with a number of friends at different times, including Lincoln.

Herndon was admitted to the Illinois bar and in 1844 joined Lincoln’s law firm. They remained partners until 1861, when president-elect Lincoln left Springfield for WASHINGTON, D.C. Lincoln and Herndon comple-

mented each other well. Herndon managed the office and provided stability while Lincoln was gone for months at a time working the law circuit. They shared similar political convictions. Both were passionate Whigs and then Republicans; both were also protemperance, supported federal programs to aid economic growth, and opposed the expansion of slavery into the territories. Indeed, Herndon was one of Lincoln’s most enthusiastic political supporters.

After Lincoln’s death in 1865, Herndon’s business failed. Married with eight children, he struggled with alcoholism and depression. He became obsessed with the idea of writing a “true” history of Lincoln’s life, as opposed to the worshipful biographies so popular at the time. Determined to publish an accurate representation, he traveled to Kentucky and Indiana, where he recorded numerous oral interviews with surviving Lincoln relatives and friends. His three-volume biography, *Herndon’s Lincoln: The True Story of a Great Life*, was published in 1889.

Many people attacked *Herndon’s Lincoln*. Herndon claimed that Lincoln loved only one woman in his life, Ann Rutledge. Her early death, according to Herndon, caused Lincoln’s lifelong melancholy. Family members, including MARY TODD LINCOLN, denied this story. Other controversies erupted over Herndon’s revelation that Nancy Hanks Lincoln was illegitimate. Historians have proved this assertion to be erroneous and found many other errors as well. Nevertheless, the collected reminiscences have been invaluable to generations of Lincoln scholars. Herndon died on March 18, 1891.

## Heroes of America (1863–1865)

Heroes of America (HOA) was a secret, Southern-based ESPIONAGE ring for the Union. The outbreak of civil war in 1861 gave rise to numerous “peace societies” throughout the South, founded to oppose Confederate military and political goals and facilitate Union victory. The largest and most influential of these was the so-called Heroes of America (HOA). Begun in North Carolina in 1863 with a small group of determined Unionists, HOA gradually spread its membership to regions in southwestern Virginia, West Virginia, and eastern Tennessee.

Like other clandestine wartime organizations, the HOA assumed all the trappings of a secret society, including hidden meeting places and passwords. Members were informally known as the “red strings” after the piece of red string each wore on his lapel to signify membership. The HOA did everything within its limited means to provide military intelligence to Union authorities and to encourage

dissent and DESERTION in Southern ranks so as to hobble the Confederate war effort. In practice, members provided food, shelter, and access to the safety of Union lines for those choosing to desert. They also encouraged class conflict by promising poor whites a share of wealthy landowners' property in the postwar period. As the war ground on and Confederate hopes waned, membership in the HOA and the extent of its disruptive activities increased proportionally.

In North Carolina, some HOA activities took place openly. William W. Holden, editor of Raleigh's *North Carolina Standard*, publicly demanded a peaceful end to the war and reunification with the United States. In September 1863 Confederate soldiers burned his press and offices, and the following year President JEFFERSON DAVIS suspended the writ of HABEAS CORPUS in North Carolina, largely in response to Holden's unstinting agitation. Undaunted, Holden challenged Confederate governor ZEBULON B. VANCE on a peace platform; he lost badly, demonstrating the weakness of the movement even in the face of Confederate hardships. The organization performed similar activities in southwestern Virginia, where Montgomery County boasted 800 members, including the sheriff and several justices of the peace.

By winter 1864, with Confederate collapse only months away, bands of armed HOA members controlled selected territories, suppressed Confederate sympathizers, and necessitated the deployment of Southern manpower, badly needed elsewhere, to contain them. By war's end HOA membership numbered several thousand, supposedly including President ABRAHAM LINCOLN and Gen. ULYSSES S. GRANT. While not a major cause in the Confederacy's downfall, the organization was a conduit for the energies of disaffected citizens, draft dodgers, deserters, and spies who in a small way furthered the ultimate Union victory.

### Hicks, Thomas H. (1798–1865) *politician*

Thomas Holliday Hicks was GOVERNOR of Maryland during the CIVIL WAR. He was born in Dorchester City, Maryland, on September 2, 1798. At the age of 21 he was elected on the Democratic ticket as a constable. In 1830 he changed his political affiliation to the new Whig Party.

After serving as a presidential elector in 1836 he again held public office, serving in the state House of Delegates and the governor's council. From 1838 he served 17 years as the registrar of wills in Dorchester County. In 1854 Hicks changed parties again, to the American, or Know-Nothing, Party, and three years later he was elected governor of his preponderantly Democratic state. He steered a middle course between secessionism and abolitionism, lambasting North and South alike for their inability to find common ground.

In spring 1861 Hicks faced an increasingly hostile, Democratic-controlled legislature, which was agitating for a special session to discuss SECESSION from the Union. Despite public clamor and mass meetings held to denounce him, Hicks refused to call the special session. The tempo of confrontation increased after FORT SUMTER's fall in April 1861. President ABRAHAM LINCOLN called for volunteers and nearby Virginia seceded, but Hicks did nothing to encourage action on either side.

On April 19 a Baltimore mob attacked men of the 6th Massachusetts Volunteers as they changed trains en route for WASHINGTON, D.C. Throngs of pro-secessionists then began threatening Hicks's life, and the governor finally assented to a special session of the legislature. It convened in Frederick, a Unionist stronghold, on April 26. Legislators there ultimately decided that they lacked the constitutional authority to secede. The effort then died, mainly because of the influx of Union forces under Gen. BENJAMIN FRANKLIN BUTLER. Hicks thus kept Maryland out of the hands of Confederate sympathizers. After his term expired in spring 1862, he filled a vacancy in the U.S. Senate caused by the death of a Maryland senator. Hicks died in office on February 13, 1865.

### Higginson, Thomas Wentworth (1823–1911) *Union colonel, abolitionist, reformer, writer, minister*

During his long life, Thomas Wentworth Higginson was a Unitarian minister, educator, writer, and public speaker. He published numerous books and countless articles on a many different subjects. He led riots, wrote about children's books and slave spirituals, edited a magazine, and introduced the poems of Emily Dickinson to the world. He was also a colonel in the UNION ARMY.

Higginson was born in Cambridge, Massachusetts, and attended Harvard College and Harvard Divinity School.

In the 1850s he served churches in Newburyport and Worcester, Massachusetts. He made his mark as a radical ABOLITIONIST—in fact, he left his first church because his antiSLAVERY lectures were unpopular with the congregation. He traveled to “BLEEDING KANSAS” in 1856, where he approved of the sometimes violent actions of fellow abolitionists; he helped lead the attempt to free a fugitive slave named Anthony Burns from the Boston Court House (he was wounded in the fight that broke out); and he helped finance JOHN BROWN’s raid on HARPERS FERRY.

His commitment to racial justice made him an enthusiastic supporter of the Union when the CIVIL WAR began. He was also in favor of allowing African Americans to join the Union army. In the fall of 1862, he took command of the First South Carolina Volunteer Infantry (later called the 33rd U.S. Colored Troops), one of the first regiments composed of black troops. Most of the men in his unit were former slaves from South Carolina. In fact, the First South Carolina had been formed just before Higginson joined it. With the new colonel in command, the regiment reached its full strength and became a well-trained and effective military force. During the year or so that Higginson was in charge, the regiment made a raid up the St. Mary’s River on the Georgia-Florida state line, where Higginson and his men fought their first skirmish. They suffered several casualties but won the short fight. During the winter they served on the picket line for the Union army and, in March 1863, briefly occupied Jacksonville, Florida. Although they fought off several Confederate attacks, the regiment eventually abandoned the town.

Higginson was wounded during a raid in the spring of 1863, and although he returned to the regiment later in the year, he left the army in 1864. He spent the next 40-plus years lecturing all over the country on behalf of social justice and writing literary and other articles for magazines like *The Nation*, *Atlantic Monthly*, and *Harper’s Bazaar*. He remained interested in the plight of the former slaves, advocating voting rights and economic equality for them. Shortly after the war, he lost an election for a seat on the local school board because he wanted to end the practice of teaching white and black students in separate schools. Unlike most men, he also argued in favor of extending the vote to women.

His experiences as a Civil War commander led him to write the book for which he is best remembered—*Army Life in a Black Regiment* (first published in 1870 and still in print more than a century later). Although Higginson published 30 books in his lifetime—including novels, literary criticism, and several autobiographies—*Army Life in a Black Regiment* stands out for its kindness, humor, and sympathetic descriptions of the African-American men who served under him during the war. Although the former colonel accepted some of the negative racial stereotypes shared

by most Americans at the time—he suggested that African Americans were quite emotional and less able to think independently than white soldiers—he generally presented a very positive image of the former slaves serving in the Union army. They made brave and disciplined soldiers and were less likely to cause problems than white soldiers. They were extremely religious, and Higginson loved to listen to the men sing old plantation spirituals around campfires at night. They were polite and kind to him and to everyone else they met, including—to Higginson’s surprise—former slave owners. Higginson’s book was intended to show that African Americans were hardworking, as capable of learning as any other person, and certainly deserving of their freedom.

Despite accomplishing many things during his 88 years, Higginson is probably best remembered for his year of service during the Civil War and for his classic description of the African-American men who fought for the union.

**Hill, Ambrose P.** (1825–1865) *Confederate general*  
Confederate general Ambrose Powell Hill was born in Culpepper, Virginia, on November 9, 1825. In 1842 he was accepted to the UNITED STATES MILITARY ACADEMY AT WEST POINT, where he trained as an artillery officer. After having to repeat his third year due to illness, he graduated 15th in a class of 38. Hill’s original graduation class included such notables as GEORGE B. MCCLELLAN, GEORGE E. PICKETT, and THOMAS J. (STONEWALL) JACKSON. Leaving West Point, Hill was commissioned as a second lieutenant in the First Artillery.

Like so many West Point graduates of his era, Hill’s first experience of battle was as a commissioned officer in the Mexican-American War. During the last moments of the war, Hill participated in the capture of Mexico City. He was then stationed at Fort McHenry, Maryland. Later, he would put down an insurrection by the Seminole Indians in Florida. At the outbreak of the CIVIL WAR, Hill felt obligated to defend his home state, and he resigned his commission on March 1, 1861. He was made colonel of the 13th Virginia Volunteer Infantry. In February 1862, Hill was promoted to brigadier general. In command, Hill saw action at Williamsburg, Virginia, and in the

PENINSULAR CAMPAIGN. He was promoted in May 1862 to major general and was made a division commander in the new Army of Northern Virginia.

Hill's division came to be known as "Hill's Light Division" because they could quickly move into emplacements and organize into fighting positions. Hill distinguished himself and his command at engagements such as the BATTLES OF CEDAR MOUNTAIN, SECOND BULL RUN, ANTIETAM, FREDERICKSBURG, and CHANCELLORSVILLE. Throughout all these engagements, Hill became famous for leading his division wearing his bright red battle shirt.

After the death of Stonewall Jackson at the BATTLE OF CHANCELLORSVILLE, Hill was promoted to lieutenant general and was given command of the III Corps. As a corps commander, Hill enjoyed limited success. Due to constant illness, Hill was often lacking the fervor that had previously distinguished him. His leadership in the BATTLES OF GETTYSBURG and THE WILDERNESS campaigns was seriously flawed. Due to his continuing health problems, Hill took a leave of absence in May 1864 and missed the BATTLES OF SPOTSYLVANIA. He reclaimed command during the Battles of North Anna and COLD HARBOR.

On April 2, 1865, at the siege of PETERSBURG, when his command's lines had collapsed, Hill charged a group of Pennsylvania volunteers. After drawing his pistol he was shot dead. Hearing of his death, ROBERT E. LEE said, "He is at rest . . . and we who are left are the ones to suffer."

### **Hill, Daniel H.** (1821–1889) *Confederate general*

Daniel Harvey Hill was a Confederate general. Hill was born into a farming family in York District, South Carolina, on July 12, 1821. He graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1842 in the middle of his class. As a second lieutenant in the 1st U.S. Artillery, he fulfilled a long stint of garrison duty in the Southwest before fighting in the Mexican-American War (1846–48). Skilled in combat, Hill marched with the army under Gen. Winfield Scott and garnered two brevet promotions for gallantry at the Battles of Contreras, Churubusco, and Chapultepec. After the war he married Isabella Morrison, whose younger sister later married THOMAS J. (STONEWALL) JACKSON. In February 1849 Hill terminated his promising military career to work as a mathematics instructor at Washington College, Virginia. In 1854 he transferred to Davidson College, North Carolina, where his administrative talent rescued that institution from insolvency.

When North Carolina seceded from the Union on May 20, 1861, Hill was appointed colonel of the 1st North Carolina Volunteers. On June 10, 1861, he helped Colonel John B. Magruder win the CIVIL WAR's first sizable encounter at Big Bethel, Virginia, against Federal troops under Gen. BENJAMIN FRANKLIN BUTLER. In spring 1862 Hill advanced to major general, and he commanded a division under Gen. JOSEPH E. JOHNSTON early in the PENINSULAR CAMPAIGN. He served with distinction in the Seven Days' Battle under Gen. ROBERT E. LEE, especially at the bloody engagement at Malvern Hill on July 1, 1862, although he impolitely criticized Lee's generalship. He further distinguished himself at Crampton's Gap (South Mountain) on September 13, 1862. Lee, still smarting from Hill's inopportune remarks, did not recommend him for promotion to lieutenant general, but President JEFFERSON DAVIS was so impressed by his performance that he transferred Hill to the western theater as a corps commander.

Hill again fought well at the bloody battle of CHICKAMAUGA on September 19, 1863, but was again impolitic: He criticized Gen. BRAXTON BRAGG, one of Davis's closest friends. He did not resume field operations until spring 1865, when he commanded a division in Gen. Stephen D. Lee's corps. In this capacity he fought at Bentonville, North Carolina, on March 19–21, 1865.

After the war Hill worked as an administrator at Arkansas Industrial University (now the University of Arkansas). He also edited and published several Confederate-oriented magazines for Southern consumption. In 1885 he transferred to the Middle Georgia Military and Agricultural College, becoming its president. He died in Charlotte, North Carolina, on September 24, 1889.

### **H. L. Hunley, CSS**

The *H. L. Hunley* was a Confederate submarine. Named after its inventor, Horace Lawson Hunley, CSS *H. L. Hunley* was constructed in Mobile, Alabama, in 1863. It consisted of a 40-foot-long, waterproofed boiler; a hand-driven crankshaft propeller; manually operated diving planes to control depth; and various sea valves to take on or discharge ballast in the form of water. It was also equipped with two topside hatches through which the eight-man crew entered and exited. For offensive purposes the craft was outfitted with a 90-pound explosive charge mounted at the end of

Sepia wash drawing of CSS *Hunley* by R. G. Skerrett, 1902, after a painting then held by the Confederate Memorial Literary Society Museum, Richmond, Virginia (Naval Historical Foundation)

a spar, which could be rammed under the waterline of an enemy ship. Hunley had developed and tested the craft in Mobile Bay and obtained a letter of recommendation from Admiral Franklin Buchanan testifying to its potential as a weapon. This was forwarded to Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD at Charleston, South Carolina, who commissioned the vessel to break the Union blockade of that strategic port. The *Hunley* was secretly transported by rail to Charleston on August 12, 1863, and trial runs began at once.

Tragedy struck in August and October 1863, when the craft foundered in Charleston Harbor and killed two successive crews, including its inventor. Beauregard remained convinced of its utility as a weapon, however, and ordered the *Hunley* recovered, refitted, and pressed into service. A new crew of volunteers under Lt. George E. Dixon was recruited. On the evening of February 17, 1864, they mounted an attack on the Union fleet offshore. Dixon stealthily led his craft into the harbor and toward the USS *Housatonic*, a steam sloop. He successfully struck and sank the *Housatonic* in shallow water, giving it the melancholy distinction of being the first warship sunk in a submarine attack. However, the *Hunley* flooded a third time and again killed its crew. In 1995 the remains of the *Hunley* were discovered in Charleston Harbor, and it was raised

on August 8, 2000. It has been restored and is on display at the Charleston History Museum.

### Hollywood Cemetery

Hollywood Cemetery is a parklike burial ground in RICHMOND, VIRGINIA, where numerous Confederate dead are buried. In 1847 Richmond residents Joshua Fry and William Hexall purchased a 43-acre tract of land known as Harvie's Woods. A strip of land previously owned by William Byrd II, it sat on a bluff overlooking the James River. Fry and Hexall had decided to turn the area into a cemetery for the city rivaling the Mount Auburn Cemetery in Cambridge, Massachusetts. The following year they hired noted architect John Notman to design the landscape in a parklike, pastoral mode, which he furnished with several romantic structures in the prevailing Victorian style. The

cemetery was christened Holly Wood owing to the groves of holly trees dotting the area. The first burial, a young girl, took place in 1848.

At first mainly Richmond gentry were buried there, but in 1858 the remains of former president James Monroe, who had died in 1831, were transported from New York and interred at Hollywood. Governor Henry A. Wise selected an intricate wrought-iron birdcage design for Monroe's tomb, which initiated the tradition of sometimes elaborate monuments dotting the landscape. Monroe was joined shortly after by another U.S. president from Virginia, John Tyler, who died in Richmond in 1862.

Throughout the CIVIL WAR, Hollywood Cemetery was used to bury the mounting toll of Confederate dead, whose bodies came from nearby Richmond hospitals. After the war thousands more bodies were reinterred from Northern battlefields such as GETTYSBURG and ANTIETAM, bringing the total to 18,000. Also buried there are the bodies of JEFFERSON DAVIS, former president of the CONFEDERATE STATES OF AMERICA, and his wife, VARINA HOWELL DAVIS, along with no fewer than 25 leading Confederate generals, including J. E. B. STUART, Henry Heth, Fitzhugh Lee, and GEORGE EDWARD PICKETT.

In 1869 the local LADIES MEMORIAL ASSOCIATION collected funds to construct a massive, 90-foot granite pyramid, as a monument to the South's fallen. It was designed by Charles Dimmock and built by convict labor. Hollywood Cemetery quickly became a cherished place to commemorate the Confederate Memorial Day, drawing thousands to honor the fallen Southern soldiers. Five Virginia GOVERNORS and local dignitaries are also buried or enshrined on the grounds, along with distinguished writer Mary Johnson and musician Polk Miller. The cemetery currently contains the remains of nearly 80,000 people. It remains one of Richmond's leading attractions, visited by thousands every year.

## homefront

Northerners and Southerners living far from the fighting—on the “homefront,” as it is called—shared a number of experiences and proved critical to their nation's war efforts. Food and other supplies became more expensive during

the war. Because so many men were in the army, women and children worked on farms and in factories, and thousands of wives became widows and thousands of children became orphans. But there were vast differences between the regions as well. These differences are clearly demonstrated in the diaries of two children.

Gerald Norcross, who turned seven when the CIVIL WAR started, lived in Boston, Massachusetts, where his father owned a store. The war barely affected him; he continued going to school, his family went on long summer vacations, and he never mentions a relative or friend being killed or wounded in the army. Gerald experienced the war through books and games and exciting events held in Boston. He read about the war in “dime novels” (cheaply made paperbacks that cost only a dime) with names like *Old Hal Williams; or, the Spy of Atlanta* and *The Vicksburg Spy; or Found and Lost*. He and his classmates sang war songs and read war news from the newspapers at school. He bought and made an army of paper soldiers, whom he named after famous officers from Massachusetts. Gerald also took part in all sorts of activities related to the Civil War. He watched army regiments parade through the city and drill on Boston Common; he went to Boston Harbor to view an ironclad ship; he attended a huge “Soldiers and Sailors' Fair,” which had exciting displays of guns and flags and lots of food and toys to buy; and he played soldier. The war was an important part of Gerald's life, but it was a source of excitement and interest rather than danger and loss.

The Southern homefront was very different for many children. During the siege of Atlanta in 1864, 10-year-old Carrie Berry wrote about hiding from Yankee shells in her family's “bombproof.” Her school and church were frequently disrupted; she was rarely able to play with her friends, and on her birthday she wrote that “I did not have a cake times were too hard.” Food was in such short supply that one day she was thrilled when her aunt gave her a bunch of grapes. After the battle for Atlanta ended and much of the city had burned to the ground, she helped out by combing through the ashes of destroyed buildings, looking for nails or anything else that might be of use.

Gerald's and Carrie's wartime lives symbolized the homefront experiences of all Americans. In the South, although cities like Atlanta, Georgia and RICHMOND, VIRGINIA, briefly prospered because of military and government activities, in general life got steadily harder. Food became so scarce in some places that residents rioted, roads and RAILROADS wore out, inflation made it difficult to buy even the most basic goods, schools often closed, many newspapers had to stop publishing, and a large percentage of women and children had to go to work simply to survive. The North, on the other hand, generally prospered during the war. Although there was a period of economic distress in the first year and a half of the war, factories and

farms produced record quantities of manufactured goods and food. In fact, they grew so much wheat and corn that Northern farmers exported more grain to Europe during the war than the entire country had before the war. Schools and universities flourished, fast-growing cities like Chicago expanded their street and sewer systems, and migrants continued to move to the West. By the end of the war, many Southern cities lay in ruins, the plantation ECONOMY was destroyed, and most people were living a hand-to-mouth existence. In contrast, most Northerners, aside from those families who had lost loved ones, were probably better off at the end of the war than at the beginning.

Although differences between the Union and Confederate homefronts were vast, there were also important similarities. Northerners and Southerners worked to aid the soldiers in their respective armies, often disagreed over military strategy and government policies, and found their morale changing drastically depending on how well their armies did in the field.

Most Northerners and Southerners worked to help the soldiers. Churches, schools, and soldiers' aid societies raised money, collected supplies, and sewed and knitted clothes and socks for the soldiers. Children in both sections spent some of their spare time "picking lint" from rags for packing around wounds. Although Southerners' efforts to aid the soldiers remained locally controlled, in the North a number of prominent men created a national organization called the UNITED STATES SANITARY COMMISSION (USSC) to coordinate fund-raising and other activities on behalf of the soldiers. The USSC sent supplies to the army, hired NURSES and doctors and sent them to army hospitals, and helped soldiers get mail and fill out discharge forms. To support this work, giant "Sanitary Fairs" were held in towns and cities all over the North. Attendees bought homemade food, clothing, toys, and other goods donated by businessmen and by individuals; attended concerts and demonstrations by schools and churches; marveled at the huge displays of historical artifacts and war-related relics from the American Revolution as well as the current "Rebellion;" and enjoyed appearances by famous generals and politicians. Altogether, the Sanitary Fairs raised more than \$4 million for the Union war effort.

Even though the North and South were engaged in a desperate war, there were many people in each region who disagreed with the policies of their governments. In the North, the DEMOCRATIC PARTY continued to oppose the Republicans. Without their Southern allies, the Democrats had little power in Congress, but they did demonstrate considerable strength in parts of the Midwest and in cities like NEW YORK CITY. Most Democrats remained loyal to the U.S. government, but some, like Ohio congressman CLEMENT L. VALLANDIGHAM, were so extreme in their criticism that Republicans nicknamed them COPPERHEADS, after

the poisonous snake. Also causing problems for President ABRAHAM LINCOLN were the "radicals" in his own REPUBLICAN PARTY, who believed for the first year or two of the war that the government was moving too slow in attacking SLAVERY. Political parties never actually formed in the Confederacy, but an opposition to the administration of JEFFERSON DAVIS arose by 1863.

The opponents of Lincoln and Davis expressed similar complaints: They did not like the way that the central governments were conducting the war. In both regions, the governments wielded far more power than the antebellum federal government had ever exerted. Both governments resorted to CONSCRIPTION to raise troops, levied high taxes to pay for the war, and jailed men who criticized the government.

The most serious resistance in the Confederacy came after the military draft went into effect in spring 1862. By the end of the Civil War, thousands of deserters and draft evaders were hiding in isolated parts of the South. The Union waited another year before beginning to conscript soldiers, but the reaction was the same. Public meetings condemned the policy and riots broke out around the country. The biggest was the NEW YORK CITY DRAFT RIOTS in July 1863, which resulted in the deaths of more than 100 people. Attacks on African Americans during the riot indicated the extent to which many Northerners opposed the EMANCIPATION PROCLAMATION. In fact, the Democratic Party gained a number of seats in the U.S. Congress in 1862, largely because of Lincoln's decision to issue the Preliminary Emancipation Proclamation in the fall of that year. Many Southerners also opposed the centralization of power as the Confederate government, in addition to raising taxes and drafting soldiers, limited the freedom of planters to grow cotton and, by the end of the war, had begun the process of recruiting and arming African Americans for the CONFEDERATE ARMY. The most organized resistance groups in the Confederacy were the so-called Peace Parties that appeared during the 1864 election, most notably in North Carolina. A few members of these groups won election to state legislatures and to the Confederate Congress.

Opposition to the Lincoln administration also grew in strength as the war progressed, and by the late summer of 1864 the president believed that he would lose the election to the Democratic candidate Gen. GEORGE B. MCCLELLAN in November, primarily because Lincoln's armies were doing so badly. The Army of the Potomac had failed to capture Richmond in its OVERLAND CAMPAIGN, losing tens of thousands of men in the BATTLES OF THE WILDERNESS, SPOTSYLVANIA, and COLD HARBOR. Gen. WILLIAM T. SHERMAN's summer campaign to capture Atlanta had also gotten bogged down in northwestern Georgia. Nothing seemed to be going right, and

the Democratic “peace platform” seemed attractive to Northern voters. Ultimately, Lincoln won reelection by a comfortable margin, mainly because of the soldiers’ vote and because Sherman and his army captured Atlanta while Grant laid siege to Petersburg, causing Northern morale to rise. Similar swings in morale occurred in the Confederacy, where victories in the FIRST and SECOND BATTLES OF BULL RUN, the Seven Days’ Battles, and the BATTLE OF CHICKAMAUGA brought confidence and high levels of patriotism, while defeats at the BATTLE OF SHILOH and the VICKSBURG CAMPAIGN and the deaths of popular generals like THOMAS J. (STONEWALL) JACKSON caused morale to fall.

As the ups and downs of civilian morale show, the Civil War homefront, rather than being removed from the military events of the war, was closely linked to its battles and campaigns. Some historians have called the Civil War the first “total war,” and to the extent that the Confederate and Union homefronts—their economies, their political systems, and their societies—were part of the war efforts of the North and South, that label is accurate.

## homespun

As materials became increasingly scarce, Confederate women turned to homemade thread and cloth during the CIVIL WAR. Women who had previously engaged only in ornamental sewing and embroidery found themselves learning how to spin thread and weave cloth to keep their families clothed. These methods, which in antebellum years had been used primarily by slaves, became commonplace for all women in the Confederacy, white and black. The materials manufactured by Southern women during the war served as the basis for clothing, undergarments, shoes, and other cloth items.

Homespun cloth had many different forms. Some women made it in solids, some in stripes or plaids. In addition, the quality of homespun cloth varied widely, ranging from very tight weaves to extremely coarse materials. Opinions on the FASHIONS created from these materials varied,

with some decrying the shabby look of wartime women and others praising the ingenuity and creativity of the homespun weavers and seamstresses.

White Southern women took pride in their manufacture of homespun as well as in their use of it. Indeed, the wearing of Confederate homespun became a badge of patriotism throughout the South because it represented a sacrifice of luxury for the benefit of the war effort. It also demonstrated the resourcefulness of Southern women. In 1862 one Southern woman wrote “The Homespun Dress,” a song that exulted in women’s use of the homemade fabric; according to the lyrics, the wearing of homespun “shows what Southern girls / For Southern rights will do.”

Men, too, proudly wore outfits made from homespun cloth. Vice President ALEXANDER H. STEPHENS wore a homespun suit to his inauguration. Other dignitaries—including North Carolina governor JOSEPH E. BROWN, Edmund Ruffin, and other members of the Confederate Congress—commonly wore homespun as a symbol of their dedication to the Confederate war effort.

## Homestead Act (1862)

The Homestead Act, adopted by Congress in 1862, provided for the settlement of the nation’s vast public western lands by farmers.

During the first half-century of its existence, the American government used the sale of public lands as one of its primary sources of income. Officials encouraged settlers to move to western lands and used the sale of those lands to fund numerous government activities. As farmers struggled to deal with the costs of purchasing and settling these new areas, and as the eastern populations grew, land reformers sought to make the government change its policies. Men like HORACE GREELEY wanted to make it easier and less expensive for settlers to occupy the West and kept the issue before Congress from 1845 to 1862. Although the House of Representatives passed homestead bills three times in the 1850s and twice in 1860 alone, the bills either died in the Senate or at the hands of the president.

However, JAMES BUCHANAN’s veto of the Homestead Bill in 1860 raised the ire of land reformers and settlers throughout the country, and the passage of this legislation became a central piece of the Republican platform in the 1860 ELECTIONS. The resulting support of Westerners

Engraving showing potential homesteaders scoping out plots of land on a map of a county in Kansas (Library of Congress)

for this measure contributed in no small part to Lincoln's victory in November of that year. Representative Galusha Grow reintroduced the Homestead Bill in Congress early in Lincoln's first term, and on May 20, 1862, the president officially signed it into law. As written, the Homestead Act provided 160 acres for any head of household and the right to acquire title to that land for a minimal fee once the individual had occupied the land for five years. In theory, the act provided the means for farmers to obtain land virtually free, and it also created an outlet for the growing populations in the cities and towns throughout the East.

While the number of homesteaders grew at a slow pace during the years of the CIVIL WAR, their numbers increased significantly following the surrender at APPOMATTOX COURT HOUSE, VIRGINIA. However, land reformers soon realized that the bill contained several deficiencies.

First, designed to avoid the avid speculation that occurred throughout the 19th century, the bill contained a loophole that allowed the homesteader to acquire a pre-emption claim to his property after only six months residence. Such a claim conferred the title to the land and thus allowed the homesteader to sell to private interests long before the designated five-year period elapsed. Cattle

ranchers, lumber companies, and speculators all participated in the process of hiring agents to obtain titles or bribing government employees to ignore the activity.

Second, the designation of 160 acres had been sufficient for lands settled in more humid regions, but for the semiarid lands of the West, such a small amount of land maximized the room for error for prospective farmers. Third, a significant amount of the land designated for settlers had already been apportioned to various private and public interests by the time the act went into effect in the beginning of 1863. Railroad companies, state schools, and universities occupied and utilized acreage sufficient for almost 2 million individual homesteads. Finally, by encouraging settlement throughout the western territories, the act created conflict between the settlers and the American Indians who lived in the western plains, resulting in warfare and ultimately government-sponsored removal of the Indians from reservation lands.

The Homestead Act and subsequent legislation continued to provide public lands for individuals looking for a new start in the West well into the 20th century. By 1900, approximately 70 million acres of land had been claimed under the auspices of the 1862 edict.

### **Hood, John Bell** (1831–1879) *Confederate general*

Confederate general John Bell Hood was born to a prominent family in rural Owingsville, Kentucky, on June 29, 1831. Hood's parents had high expectations for him. At the UNITED STATES MILITARY ACADEMY AT WEST POINT, Hood proved a mediocre student and barely managed to graduate. ROBERT E. LEE commented that "Hood is a bold fighter . . . very industrious on the battlefield, careless off . . . I am doubtful as to the other qualities necessary." Confederate president JEFFERSON DAVIS nonetheless selected Hood to command the Army of Tennessee in July 1864. Lee's evaluation, however, proved both accurate and prophetic. Despite his early successes at the brigade and divisional levels, Hood was unable to meet the challenges of higher responsibility. Hood's battlefield errors destroyed the Army of Tennessee and ruined Confederate aspirations in the West. Perhaps no other commander during the CIVIL WAR experienced such adulation only to be followed by utter disgrace.

The outbreak of the Civil War found First Lieutenant Hood in Texas, serving with the Second Cavalry. After resigning his U.S. Army commission, Hood traveled east as a Confederate major in the Fourth Texas Infantry Regiment. Over the next five months Hood's aggressive fighting earned him the favor of President Davis and a promotion to colonel, in command of his own regiment. When the position of brigade commander became available in March 1862, Hood was elevated to brigadier general.

Hood's reputation continued to grow as he and his "Texas Brigade" impressed Gens. Robert E. Lee and THOMAS J. (STONEWALL) JACKSON with outstanding performances at the BATTLES of Gaines Mill, SECOND BULL RUN, and ANTIETAM. Promotion to major general followed, and Hood and his Texans became heroes throughout the South.

A ferocious fighter, Hood's reputation continued to grow. At the BATTLE OF GETTYSBURG in July 1863 his left arm was permanently disabled during the assault on the Devil's Den. The following September, Hood's division spearheaded Gen. JAMES LONGSTREET's successful attack at the BATTLE OF CHICKAMAUGA, Georgia. Hood was again seriously wounded, losing his right leg. His bravery was recognized a few weeks later with a promotion to lieutenant general when he returned to RICHMOND. During this time Hood became a close confidant to Jefferson Davis, a friendship that would yield negative consequences for their nation.

Requesting reassignment, Hood was appointed a corps commander under Gen. JOSEPH E. JOHNSTON in the Army of Tennessee. As Gen. WILLIAM T. SHERMAN pushed the Confederates south through Georgia, Hood used his influence with Jefferson Davis to argue for Johnston's removal, making the case that he, Hood, would conduct a more aggressive campaign. Davis eventually acquiesced, naming Hood commander of the Army of Tennessee in July 1864.

Hood lost no time in taking the initiative, with disastrous results. Suffering the loss of one-third of his army in a series of reckless assaults on Gen. William T. Sherman's army, Hood was forced to abandon Atlanta by late August 1864. As Sherman embarked on his famous "march to the sea," Hood led his army in the opposite direction, intending to threaten Sherman's supply lines in Tennessee. After missing an opportunity to destroy a portion of Gen. GEORGE HENRY THOMAS's forces at Spring Hill, Tennessee, Hood recklessly threw his army against the Federals at Franklin, Tennessee, on November 30, 1864. Suffering crippling casualties, Hood would not give up his campaign. Instead, he moved to Nashville with a force that was no longer adequate to the task. On December 15 and 16 Thomas attacked and destroyed the Army of Tennessee. Hood was relieved of command at his own request and returned to Richmond in February 1865.

After the war, Hood established an insurance business in New Orleans, where he married and had 11 children. In the mid-1870s his business failed and a yellow-fever epidemic swept through New Orleans, taking his wife and eldest daughter before claiming the general himself on August 30, 1879, at the age of 48.

### **Hooker, Joseph** (1814–1879) *Union general*

Union general and commander of the Union's Army of the Potomac for a brief time, Joseph Hooker was born on November 13, 1814, in Hadley, Massachusetts. Hooker was educated at the UNITED STATES MILITARY ACADEMY AT WEST POINT, where he graduated 29th of 50 in the class of 1837. Shortly afterward, he received his first army combat assignment as a staff officer during the Mexican-American War. A tall, well-proportioned man, Hooker possessed a contentious and prickly personality. After several arguments marred his early career, he resigned from the military and settled in California as a farmer and landowner in the 1850s.

Hooker reentered the army after the FIRST BATTLE OF BULL RUN. Appointed a brigadier general, Hooker commanded a brigade of U.S. volunteers charged with the defense of WASHINGTON, D.C. He demonstrated great competence in battle and was rewarded for his performance during the PENINSULAR CAMPAIGN and the SECOND BATTLE OF BULL RUN in spring and summer of 1862 with the grade of major general.

Called "Fighting Joe" by a newspaper correspondent, Hooker led the I Corps of the Army of the Potomac in the Antietam campaign, again demonstrating his military capabilities. His action in charge of a division was one of the few bright spots during the Union loss at the BATTLE OF FREDERICKSBURG. As a result of the disaster there, Lincoln turned to Hooker to command the Army of the Potomac, despite rumors of his heavy drinking and womanizing. Lincoln knew of Hooker's rash remark that what the country needed was a good dictator to run the war. He wrote "I have heard, in such a way as to believe it, of your recently saying that both the Army and the government needed a dictator. Of course it was not for this, but in spite of it, that I have given you the command. Only those generals who gain success can set

up dictators. What I now ask of you is military success, and I will risk the dictatorship.”

Unfortunately, Hooker would prove as ineffective against Lee as many of his predecessors had. Despite reinvigorating the morale of the Army of the Potomac and planning an excellent campaign, Hooker was outthought, outflanked, and outfought by Lee. One reporter commented: “Not the Army of the Potomac was beaten at Chancellorsville, but its commander.” On June 28, 1863, Hooker resigned as commander of the Army of the Potomac and was replaced by Gen. GEORGE GORDON MEADE, who led the army to its greatest victory at the BATTLE OF GETTYSBURG.

Hooker was reassigned to command of the XI and XII Corps of the Army of the Cumberland in September 1863. In a well-executed attack, Hooker and his men took the Confederate position on Lookout Mountain during the BATTLE OF CHATTANOOGA. Hooker played a part in the ATLANTA CAMPAIGN, but after being passed over for the command of the Army of the Tennessee, he resigned and spent the rest of the war carrying out administrative duties. Hooker retired from the professional military in 1868 and died on October 31, 1879, in Garden City, New York.

**Howard, Oliver Otis** (1830–1909) *Union general, government official*

Major general in the CIVIL WAR, commissioner of the FREEDMEN’S BUREAU, and MEDAL OF HONOR winner O. O. Howard was born in Leeds, Maine, on November 8, 1830. Graduating from Bowdoin College in 1850, Howard also attended the UNITED STATES MILITARY ACADEMY AT WEST POINT, where he taught mathematics until 1861. A strikingly handsome man, Howard served as colonel of the Third Maine Infantry at the FIRST BATTLE OF BULL RUN and then was promoted to brigadier general and assigned to the II Corps in the Army of the Potomac. Accompanying Gen. GEORGE B. MCCLELLAN on the PENINSULAR CAMPAIGN, he lost an arm fighting in the battle of Fair Oaks on May 31, 1862. Returning to duty in time to fight at the BATTLE OF ANTIETAM, Howard distinguished himself enough to be appointed, at age 32, major general in command of the XI Corps. Howard’s leadership was criticized in the BATTLE OF CHANCELLORSVILLE, in May 1863, and at the BATTLE OF GETTYSBURG, in July of the same year. At the former, Howard’s evident inattentiveness led to a

rout of his men by THOMAS J. (STONEWALL) JACKSON’s famous flank attack and was a major factor in the devastating defeat of the UNION ARMY.

After the death of Gen. John Reynolds, Howard was in command of all Union forces at Gettysburg, Pennsylvania, on the afternoon of July 1, 1863. Outnumbered and increasingly outflanked by the Confederates, Howard made a number of ill-advised decisions that resulted in the collapse of the IX Corps and then the rest of the Union forces on Oak Ridge. Driven back through the town to Cemetery Hill, thousands of panicked soldiers were re-formed by Howard and others for a new stand against their attackers. Howard subsequently claimed credit for the excellent Union defensive position along Cemetery Hill and Ridge, although the new commander on the field, Gen. WINFIELD SCOTT HANCOCK, disputed this. The following September, Howard was sent to the western army, where he was a corps commander under Gen. ULYSSES S. GRANT and Gen. WILLIAM T. SHERMAN in several notable battles, including the BATTLE OF CHATTANOOGA. Sherman appointed Howard commander of the Army of the Tennessee before the march through Georgia and the Carolinas. Despite his high rank and continued advancement, Howard was never particularly well regarded either by his men or his peers and was judged at best a mediocre general.

After the war, Howard continued to serve the country. A devout Christian and a strong supporter of African-American freedom and advancement, Howard was singled out by President ABRAHAM LINCOLN to head the newly created FREEDMEN’S BUREAU in 1865. Howard had a strong vision for the bureau that included providing EDUCATION, protection, and economic security in the form of land for the masses of freed people in the South. Disappointed by the lack of enthusiasm and support from the Johnson administration, Howard struggled to maintain the integrity of the bureau’s work against a hostile and often-times violent environment in the Southern states. His administration was attacked for inefficiency, and some of his financial dealings were subject to congressional investigations. Despite immense difficulties, the bureau under Howard’s direction was able to establish and support schools and provide some protection for black freedom through its system of courts. Howard personally expanded opportunities for African Americans when he helped to found Howard University, becoming its first president in 1869 and serving in that capacity until 1874. Later, he also founded Lincoln Memorial University in Harrowgate, Tennessee.

The demise of the Freedmen’s Bureau in the early 1870s brought Howard, still in the regular army, out west again, this time to serve in the frontier wars against the Indians. He was peace commissioner to the Apache, and in 1877 he led the campaign against Chief Joseph and the

Nez Perce, earning criticism for his inept handling of men and supplies. Before Howard ended his military career in 1894, he served as superintendent of West Point and commanded the Division of the East. An active supporter of the REPUBLICAN PARTY and of educational and philanthropic organizations and a popular speaker on the lecture circuit, Howard kept himself busy in retirement. He was an accomplished writer and published widely on many military and historical topics. Oliver Otis Howard died on October 26, 1909, in Burlington, Vermont.

**Howe, Julia Ward** (1819–1910) *author, abolitionist, women's rights activist*

Julia Ward Howe was a poet, lecturer, abolitionist, and advocate for women's rights, but she is best remembered for writing the song "Battle Hymn of the Republic."

She was born Julia Ward into a respected family, descended from Revolutionary War heroes and Rhode Island GOVERNORS. She lost her mother at a young age but enjoyed the benefits of a privileged upbringing. She threw herself wholeheartedly into her studies as well as a social life that included visits to and from many noted authors, politicians, and scholars. While still very young, Ward began her career as an author, publishing several articles and reviews.

She married Dr. Samuel Howe in 1843. The couple made their home at an estate Howe called "Green Peace" in Boston, where she had six children. The Howes were actively involved in the abolitionist movement and edited

an antislavery newspaper. Dr. Howe disapproved of his wife's writing, however, and to try to hide it from him she began to publish anonymously. In 1854 he discovered that she was the author of *Passion Flowers*, her first full volume of poems. The couple separated soon after, although they never divorced.

In 1861 Howe wrote the "Battle Hymn of the Republic" after a friend suggested that she compose "good words" for the tune of "John Brown's Body," which was already a popular song. As Howe described it afterward, she awoke in her room at the Willard Hotel in the nation's capital with the words in her head. Getting up, she "began to scrawl the lines almost without looking." She then went back to sleep, "but not without feeling that something important had happened to me."

The "Battle Hymn of the Republic" was published in 1862. Chaplain Charles McCabe became linked with the poem, singing it before President ABRAHAM LINCOLN and at many public occasions. It continued to grow in popularity long after the war had ended and is as well known today as it was in the 1860s.

After the CIVIL WAR, Howe became active in the struggle for women's voting rights. The war, she said, had "brought many of us out of the ruts of established ways" and "forced us to take a larger outlook into the possibilities of the future." Howe founded and led several women's organizations on both the local and national level. She continued to write, travel, and speak on many issues. Her prominence led to her being the first woman elected to the American Academy of Arts and Sciences in 1908. Howe served only briefly before dying in 1910 at the age of 91.

## immigration

Between 1850 and 1880, nearly 8 million immigrants arrived in the United States, and as a percentage of the population, the foreign-born rose from 9.7 to 13.3 percent. Immigration on that large a scale had important impacts, not only on the immigrants but also on American political, social, and economic life.
